Sixth. A diamond on every dime. If this statement seems at all odd at first glance, I hope that upon reflection it will occur to you that it is most significant and indicative of the fact that the American people, by and large, thought of him in his lifetime and always will, as a genuine diamond. Genuine diamonds being what they are in fact and in the minds of people, I submit the phrase I am using as psychological strength and reason for putting into effect this suggestion.

Shortly after the death of our great leader, I had intended to file a bill to effectuate the purpose of my suggestion to you, but feeling it was a matter which should logically be put into effect by our agreements between the proper Government officials, rather than by congressional legislation; and that it should be put into effect long before congressional action might be concluded, I am going to make remarks and put them in the CONGRESSIONAL RECORD in the next day or two.

Another suggestion I have is that if you do put the likeness of this diamond of democracy on the dime, then there should be nationwide—yes, worldwide recognition of your doing so. It might be that an extra March of Dimes campaign be conducted to raise additional money for the infantile-paralysis program, or conduct other or additional appropriate national and even world recognition thereof.

I have the honor to be
Respectfully yours,
CLYDE DOYLE,
Member of Congress.

Taps for a President

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a poem written by Charlotte Levin, of Des Moines, Iowa, who is now a sergeant in the WAC, stationed in New Guinea:

TAPS FOR A PRESIDENT

Sad is this hour, torn every tear
  Loose from its hiding.
Saddened the Nation. Darkened night
  In death abiding.

Magnificent imprint etching
  Clearly heart's vision
Deep in the souls of all mankind.
  Courage, decision.

Leading a people through storm's stress,
  Safeguarding freedom,
Lighting a way through valleyed dark
  To commoner's kingdom.

Stature towering, aiming, reaching,
  Wind-swept head held high,
Unscathed by elements beating,
  Greatness none could deny.

By death alone was vanquished.
  Indelible hand
Writing, "Never forgotten
  His name shall stand.

Serving in death to live, inspire
  Those who must man lead,
Guiding their footsteps through darkened hours,
  Cherishing liberty's creed."

Sound the taps, half mast the colors' glory.
Sad is our hour, dynamic its story.
—*C. C. Levin.*

APRIL 13, 1945.

Studies and Reports To Be Made on Columbia River Development

EXTENSION OF REMARKS
OF
HON. HAL HOLMES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. HOLMES of Washington. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in Civil Engineering, written by Col. Ralph A. Tudor, Corps of Engineers, United States Army, who is district engineer in the Portland, Oreg., office. This article contains much valuable information concerning various studies being conducted by Government agencies for the development of the Columbia River that should be available, in my judgment, through the pages of the RECORD. It reads as follows:

SEVENTEEN-POINT STUDY OF COLUMBIA RIVER DEVELOPMENT UNDERTAKEN

(By Ralph A. Tudor, A. M. A. S. C. E., Colonel, Corps of Engineers, Portland District Engineer, Portland, Oreg.)

(An engineer's plan to take care of navigation, irrigation, flood control, power, and related benefits is the objective of the investigation of the Columbia River system by the Corps of Engineers. Potentially the greatest river system of the United States, the Columbia offers at least 25,000,000 kilowatts of cheap power yet to be developed. That such development is to be orderly and well planned, the Senate specified when it authorized this study. Several United States Government agencies are cooperating with

the Corps of Engineers, and Canada has agreed to join in the study and investigate waters north of the boundary. Because of the multiplicity of data to be collected, Colonel Tudor states, the report will not be completed until 1948.)

The Columbia River was one of the great attractions that drew explorers and settlers to the Pacific Northwest, and for more than a century it has served them and their children after them well. Although it remains relatively undeveloped today, it is known to be one of the most valuable natural resources of the North American Continent. It possesses latent ability to irrigate several million acres of otherwise desert land, to support a system of inland waterways for navigation, to generate vast quantities of cheap power, and otherwise to benefit the extensive frontier of the Pacific Northwest. Some development has already been realized, but the potentialities have only been touched. In fact, the full possibilities can only be estimated at this time.

Many studies and reports have been made and the most comprehensive are the "308" reports of the Corps of Engineers. These cover the main stem of the Columbia River below the Canadian border and portions of several of the principal United States tributaries. There remain, however, virtually the entire Canadian portion of the river system and many tributary sections in the United States which have not been studied in coordination with the rest of the system. With the relatively meager actual development that has so far been accomplished, no harm has come and no loss has been suffered, but with the more intense activity projected for the future, it is essential that the existing reports be extended and revised. Only thus will it be possible to obtain the greatest value for this water system at the least cost and at the earliest time compatible with proper development.

The need for such additional planning has been apparent for some time and has been the subject of much thought and discussion. The first positive action to this end was taken on September 24, 1943, when the Senate Commerce Committee adopted a resolution that directed the Corps of Engineers, United States Army, to proceed forthwith to extend and revise the "308" reports and to prepare a plan for the development and use of the water resources of the Columbia River system. The second important step was accomplished when, by an exchange of notes between the Canadian and the United States Governments, the international aspects of the problem were referred to the International Joint Commission on March 3, 1944. In this manner, one of the most important and intensly interesting engineering investigations yet undertaken in this country has been started, and after approximately 1 year, it is well under way.

The importance of the study and the magnitude of the work involved can be comprehended only from a brief description of the Columbia River system. It is one of the great river systems of the world, exceeded in this country only by the Mississippi. In fact, the Columbia surpasses the Mississippi insofar as potential power development and irrigation are concerned. The principal tributaries are the Kootenai, Clark Fork, Okanogan, Wenatchee, Spokane, Yakima, Snake, Deschutes, Klickitat, Williamette, Lewis, and Cowlitz. The drainage area includes some 259,000 square miles, of which 39,000 are in Canada. In the United States, waters from Wyoming, Montana, Idaho, Nevada, Washington, and Oregon flow to the sea by this route.

Most of the tributaries have their origin in the high Rockies and tumble through several thousand feet, the largest part of this fall being concentrated in the headwaters. Sufficient fall, however, remains below Spokane, Wash. (elevation 1,870), Lewiston, Idaho (elevation 738), Pasco, Wash. (elevation 388), and other downstream points to permit the development of large blocks of power and to create significant navigation problems.

Rainfall and runoff characteristics of the area are unusual. Storms moving in from the Pacific Ocean, principally from November to April inclusive, are forced to drop most of their moisture when they cross the coast and Cascade ranges. West of The Dalles, the annual rainfall varies from 30 to 100 inches. Between the Cascades and the Rockies is a vast semi-arid plateau with a rainfall generally of less than 14 inches Finally, the Rockies gather in from 15 to 50 inches of precipitation per year.

That this last is almost wholly snow and melts in the summer is attested by the fact that the city of Portland has two high-water periods each year. In midwinter, the Willamette reaches its high stage, while in midsummer, peak flow in the Columbia backs water up the Willamette to produce a higher stage at Portland. The maximum flow of the Columbia near its mouth reaches about 1,250,000 cubic feet per second, while the minimum uncontrolled flow is 55,000 cubic feet per second. Each year, an average of 189,000,000 acre-feet flows to the Pacific via the Columbia.

The region drained by this vast river system is rich in resources. In a few areas some of these gifts of nature are developed quite extensively, but on the whole the potentialities remain for the future. The reclamation of irrigable land has advanced perhaps the fastest, and today, out of some 16,000,000 acres under cultivation in the United States portion of the basin, approximately 4,120,000 acres are irrigated. From surveys at hand, it appears that at least another 4,000,000 could be successfully irrigated. The value of this potential acreage to the Nation is illustrated by a typical development of the Bureau of Reclamation in southern Idaho, where land once desert yields crops valued at $75 per acre.

Deep-water navigation is provided from the Pacific Ocean to Portland and Vancouver (35 feet), and is authorized, but not yet dredged, to The Dalles (27 feet). Barges can be moved to Albany on the Willamette and to Pasco on the Columbia; and in recent years traffic on these waterways has been increasing rapidly. However, even in these up-river stretches serious obstacles to economic operation remain. In the Columbia there are several sections of fast rapids, and except at Bonneville Dam all locks are antiquated. In addition to vast improvement of the channels now available, future navigation will undoubtedly require new extensions up the Snake to Lewiston, further up the Columbia at least to Priest Rapids, to Corvallis on the Willamette, and possibly elsewhere.

The development of industry and of agriculture in the basin has already created the need for extensive flood protection in many areas. Some areas have already been made free from hazard. A great many more have been or are being investigated, and the comprehensive study will doubtless disclose others.

Development of hydroelectric power is still in its infancy, and future possibilities have not been determined. In fact, a great amount of investigation and planning is yet to be done in this field. An inventory of power plants shows that 67 of more than 500 kilowatts are now operating, with a total generating capacity of 2,022,600 kilowatts. Except for Bonneville and Grand Coulee Dams, built and operated by the Army engineers and the Bureau of Reclamation, respectively, the existing plants are not large, having an average capacity of only 10,860 kilowatts. At the present time, it is not possible to do more than estimate the amount of power that the Columbia River system can economically generate. However, it is believed that at least 25,000,000 kilowatts of cheap power is to be had as the need is created. By comparison, all the hydroelectric power now generated in the United States, including the great plants Boulder, Shasta, Bonneville, Grand Coulee, and in the T. V. A. system, totals approximately 25,000,000 kilowatts.

METHOD OF STUDY

An investigation of the Columbia River system is so large in scope that it requires very careful and thoughtful planning, as well as the cooperation and advice of all interested parties. While it must be pursued vigorously and diligently, it should not be carelessly rushed to furnish a premature report. Preliminary discussions have shown that the study must be progressive in nature and that it must move successively from one problem to another. This will be more clearly understood from a statement of the various problems into which the study has been divided.

Furthermore, it was recognized that if the comprehensive plan is to meet with ultimate success, it must be generally acceptable to the several States involved. This is a difficult assignment, as the rights of the individual States are a matter of real concern to them. They are properly fearful of any general statements, but they have repeatedly concurred in the belief that a sound engineering plan can be worked out that will be mutually beneficial, without depriving any of them of their individual rights.

It is evident that nothing less than a good and complete job must be done in full cooperation with the States. For all these reasons, it was determined that 5 years should be devoted to the work, and a completion date of July 1, 1948, was established. In the meantime, development of the area will not be delayed, since enough projects have already been reported on and are ready for prosecution, if Congress desires, to bridge the gap.

SEVENTEEN SEPARATE PROBLEMS

In planning the study, it seemed best to divide the work into a number of separate problems. Each of these is to be the subject of a partial report, and all are later to be combined into a single comprehensive report. Many of the problems cannot be started until others are at least partially completed, and this is provided for by proper scheduling. A brief résumé of each of the problems follows:

Problem 1. Inventory of projects and investigations: Much development, already accomplished or planned in the area, has been inventoried in detail. The inventory includes both public and private projects for irrigation, flood control, power generation, navigation, and other purposes in the United States. This was completed on July 1, 1944.

Problem 2. Stream flow, hydrological and meteorological data: A great volume of stream flow, flood, storm, snow survey, and meteorological records has been accumulated, and an inventory of these was completed on September 1, 1944. A study of these records indicates the need for additional data, and these that can be accumulated during the preparation of the report are being obtained.

Problem 3. Mapping: Many areas have been mapped by various agencies, and a complete inventory of this work has been made. It has now been determined that rather extensive additional areas must be surveyed and mapped to permit a proper engineering study of the area. It is intended to map only the necessary streams, not the entire basin. During the past summer, aerial photographs were completed. Ground control and maps will be expedited, but the task is so great that it is not expected to be completed until January 1, 1948.

Problem 4. Natural resources: Innumerable surveys have heretofore been made of the natural resources of the basin. These data will be combined to produce a comprehensive

picture. This is scheduled for completion on January 1, 1945. It may develop that certain additional surveys should be made to complete the information.

Problem 5. Power market: A study of the existing and probable future uses of electric energy will be made. This will cover load centers, rapidity of development, power demands, and load-curve characteristics. Completion of a preliminary report is scheduled for July 1, 1945, and that of the final report for January 1, 1948.

Problem 6. Economic studies: It is intended that the plan finally developed will be economically sound and above reproach. Many general rules for measuring the economic propriety of projects have been established by Congress and by the several Federal agencies. However, it is possible that, because of the interdependence of projects and the interstate and international aspects of the basin, some changes or additions to these rules would be advisable. A report on this is scheduled for completion on July 1, 1945.

Problem 7. Irrigation: It is recognized that the West must have adequate water for irrigation. To insure this, the first step in planning the use of the waters of the Columbia Basin will be to determine all areas that can ultimately be irrigated, the amount of water needed, and the source of this water. This report is scheduled for completion on July 1, 1945.

Problem 8. Navigation: This study will include potential water-borne commerce and the probable character and dimensions of barges and tugs so that it may be possible to determine the proper channel depths and widths and the stretches of the rivers that should be improved. This report is also scheduled for completion on July 1, 1945.

Problem 9. Flood control: Many areas in the basin are still subject to destructive floods. It will be necessary to determine which of these should be protected and the proper means for so doing. September 1, 1947, has been fixed as the date for this report.

Problem 10. Power generation: While subject to the rights of irrigation and navigation, and to the needs for flood control, power generation is one of the most difficult as well as one of the most important problems to be studied. Answers to the preceding problems will very largely control the solution of this problem. However, so many possible solutions still remain that it will be necessary to resort to a certain amount of cut-and-try to produce a proper plan. This will be one of the last studies completed and is scheduled for January 1, 1948.

Problem 11. Recreational development: In many instances, it will be possible and advisable to provide recreational facilities in conjunction with reservoirs or other projects. These possibilities will be investigated concurrently with other work and reported on January 1, 1948.

Problem 12. Power distribution: The physical difficulties and the cost of distributing electric power from river plants to points of consumption will be direct factors in the development of the river system. A report on this problem is scheduled for July 1, 1947.

Problem 13. Fish life: It is essential that all feasible means be provided for the protection and perpetuation of fish life, which is unusually important in the Northwest. A study will be made of facilities for enabling fish to pass dams, of the possible reservation of certain streams, and of other means to accomplish this end. A report is scheduled for January 1, 1946.

Problem 14. Miscellaneous: Domestic water supply, stream pollution, little reservoirs for range stock, and other miscellaneous problems will be the subject of a report due January 1, 1948.

Problem 15. Cooperation with Canada: Since a large share of the headwaters of the Columbia lie in Canada, it is essential that coordination be accomplished between the studies made by the two governments.

Problem 16. Legal problems: The area concerned involves five States and two nations, and each of these has laws of its own relative to the use of waters. An inventory is to be made of these laws so that they may be studied and, insofar as possible, coordinated. It may be advisable to note the need for certain changes to permit proper and agreeable development of the river system. This report is scheduled for January 1, 1947.

Problem 17. Priority of construction: In the light of current and anticipated needs for irrigation, navigation, flood control, and power, and giving due consideration to economic feasibility and to balanced development of the area, a tentative priority of construction will be proposed. This will be undertaken at the conclusion of other studies.

COOPERATION WITH OTHERS

Many agencies other than the Corps of Engineers have a proper interest in and responsibility for one or more of the problems that have been outlined. For this reason, their advice and cooperation are being sought. In some instances these agencies are preparing parts of the report, while in others they are furnishing information and advice. Not all such arrangements have been completed as yet, owing to the progressive nature of the work. Principal among the Federal agencies concerned are the following:

Bureau of Reclamation, Federal Power Commission, Bonneville Power Administration, Department of Agriculture, United States Fish and Wildlife Service, United States Coast and Geodetic Survey, United States Geological Survey, United States Weather Bureau, United States Bureau of Mines, United States Indian Service, United States Forest Service, National Park Service, and Public Roads Administration.

Of the foregoing, the Bureau of Reclamation, the Federal Power Commission, and the Department of Agriculture (Land Use Coordinator) are, together with the Corps of Engineers, parties to the Inter-Agency River Basin Committee. The report will be finally reviewed by this committee, in keeping with its agreement, to assure proper coordination.

The States of Montana, Wyoming, Idaho, Washington, and Oregon are all vitally concerned in this matter, and the success of any plan will be largely measured by its acceptability to them. They are, therefore, being kept fully informed of progress, and their advice and assistance are sought whenever their respective interests are involved.

Since a large proportion of the Columbia River system lies in Canada, coordination with that country is likewise essential. As already indicated, this is being accomplished through the medium of the International Joint Commission, which has been charged with reporting to the two countries on all matters of joint interest. The Commission made a very extensive field trip through the basin during the past summer. It has set up a technical committee to assist in coordination, and the machinery is now functioning. Canada proposes to study her portion of the river system in a manner very similar to that being pursued by the Corps of Engineers in the United States. She has much work to do, but it appears that her studies will meet the proposed completion date of July 1, 1948.

It should be borne in mind that the investigations which have been discussed are for the purpose of making a plan for the economical and balanced development of the Columbia River system. This plan will be the conclusion of the report to be submitted to Congress. It is then anticipated that, whether future projects are built by private or by public agencies, they will be in accordance with the blueprint thus established. In this manner, a proper and orderly development of the vast and invaluable Columbia River system will be realized.

National Rehabilitation Week

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. KELLEY of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to include a proclamation by the President of the United States calling for observance of national rehabilitation week. The date has been set to mark the twenty-fifth anniversary of the passage of the Vocational Rehabilitation Act of 1920.

Vocational rehabilitation is a sound and wise activity of this Government, and I am glad that the Congress extended its usefulnes. by enacting the Barden-La Follette Act in 1943. We are learning new things about it in the work of rehabilitating our war disabled, and I look forward to the time when every disabled man and woman in the country will have an opportunity to be trained and refitted for useful and productive lives.

The proclamation follows:

PROCLAMATION 2650—NATIONAL REHABILITATION WEEK

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA, A PROCLAMATION

With the attention of the Nation rightly focused on the welfare of men and women returning from service in the armed forces and the emphasis placed on benefits provided for them through congressional action, we must not let our interest flag in discharging our obligations to the increasing thousands among our civilian population who through accident, disease, or congential conditions are unable to hold a place in the ranks of the American working force. Even in the midst of war their condition calls to us for renewed effort to bring about their restoration that they, too, may maintain their self-respect through self-supporting work.

On June 2, our Nation-wide program for the vocational rehabilitation of such disabled men and women will have been in operation a quarter of a century. Less than 2 years ago, the Congress expanded this program by amending the Vocational Rehabilitation Act of 1920. The new law—the Barden-La Follette Act, passed in 1943—makes it possible for the Federal and State governments, working as a team, to bring to the mentally disabled and the blind and all other groups of the disabled, the many services necessary to make them employable, including physical restoration, vocational training and placement in suitable employment.

Over the past 25 years it has been demonstrated that this program for the restoration of disabled men and women is paying dividends not only in humanitarian terms but in dollars and cents. Thousands of men and women annually apply to the rehabilitation service for help. Because of disabilities they are able to contribute little to the national income. Many of them are forced to accept public aid. Refitted for work, they begin to pay their own way. No longer then are they tax consumers; they are taxpayers.

That we may not fail to discharge our obligation to help every man and woman who needs vocational rehabilitation services in order to become self-supporting, it appears appropriate at this time that I should urge the able-bodied citizenry of the United

States to unite in a concerted effort to bring about wider knowledge and use of the services for physical and mental restoration of the handicapped provided under the Barden-La Follette Act, which applies to all civilians disabled. Now, therefore,

I, Harry S. Truman, President of the United States of America, do hereby declare the week beginning June 2, 1945, as National Rehabilitation Week.

And I urge all churches, educational institutions, health and welfare services, civic organizations, chambers of commerce, boards of trade, industry, labor, public-spirited citizens, and the radio and press throughout the United States to observe National Rehabilitation Week, to the end that handicapped men and women throughout our Nation may be located and advised of the benefits to which they may be entitled.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 5th day of May in the year of our Lord [SEAL] 1945, and of the Independence of the United States of America the one hundred and sixty-ninth.

HARRY S. TRUMAN.

By the President:

JOSEPH C. GREW,
Acting Secretary of State.

Food Almost Gone, United States Locks Pantry

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. LYNCH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I desire to include an article by Malcolm Logan, which appeared in the New York Post on April 10, 1945. The article is entitled "Food Almost Gone, United States Locks Pantry," and is the second of a series of six articles which have been written by him on the food situation and which have been published in the New York Post.

As against a food stock pile to take care of the possible wants of the American people or the fear of a post-war food surplus, which might have hurt the farmers, it is evident that the authorities succumbed to the fear of the surplus. The result is the scarcity of food for the people in the consuming areas. The article follows:

FOOD ALMOST GONE, UNITED STATES LOCKS PANTRY

(By Malcolm Logan)

Throughout 1944 a long and bitter fight went on in Washington over the question of food stock-piling.

One of the contending groups did not want to save up our excess food supplies because it feared a post-war food surplus which would hurt the industry and farmers.

The other group wanted stock piles so that there would be plenty of food when it was needed for our armed forces, our civilians, our fighting allies, and the people of Europe who were to be liberated from the Axis.

In the group that was afraid of surpluses were the powerful American Farm Bureau Federation and the National Grange, most of the farm-bloc Congressmen, the food trades and top officials of the War Food Administration.

Against them stood the labor unions, the National Farmers Union representing the smaller farmers, and some consumer and religious groups working through an organization called Food for Freedom, Inc., and some officials of W. F. A. and other departments concerned with food supplies.

On July 31, 1943, a special food advisory committee of Government experts headed by E. W. Gaumnitz, of the Office of Economic Warfare, said in a report (which was made public only after it had leaked out to a newspaper) that creation of a food stock pile was imperative.

"A thorough food program requires creation of a single contingency reserve to cover unusual and unpredictable demands for the United States armed forces, United States civilians, and foreign claimants," the report said.

That recommendation was never adopted. Instead the W. F. A. made a determined and successful effort last year to cut down food reserves.

The W. F. A. not only refused to create its own stock piles but would not let U. N. R. R. A. and Allied Governments, whose requests for food allocations had to have W. F. A. approval, build up their own reserves.

W. F. A. officials were able to create fears of post-war surpluses because the amount of Army food reserves were a military secret. The public was never given a true and complete picture of our food situation because of this great unknown quantity.

Last February 15 Lt. Col. Ralph W. Olmstead, Deputy War Food Administrator, testified before a House Appropriations subcommittee that "the stocks accumulated for military reserves" would be used to help feed Europe.

ARMY HAS VAST SURPLUSES

In answer to a question by Representative CANNON (Democrat, of Missouri), he agreed that there were vast surpluses on hand in the Army warehouses and pipelines.

At this hearing Olmstead also made the extraordinary statement, "I have never been permitted to see what the military inventories show."

Last week another spokesman for the F. W. A. told this reporter that the F. W. A. had been constantly kept informed as to the amount of Army food reserves. It was pointed out that since the W. F. A. is responsible for allocating our food supplies, it could not do its job without this information. Yet Olmstead said he did not know how much food the Army had on hand.

NO STOCK PILE, BUT—

The carefully cultivated reports of great Army stock piles were finally denied by Assistant War Secretary Patterson last March 23.

"We have no stock pile in the Army, as the word is commonly used," he said.

Last week in a more explicit statement he revealed for the first time just how much food the Army has. A year ago, he said, it had a 90-day supply for troops in this country, a 68-day supply here at depots and ports for troops overseas and a 108-day supply at overseas ports and depots. These levels have since been reduced, he said, to 75 days, 60 days and 70 days.

The entire reserve, he said, is so low that if it were all suddenly released it would not be enough to feed our civilian population for a week.

But by the time the veil of military secrecy was lifted, the battle for stock piling had been lost, and Olmstead had admitted to Senate food investigators that serious shortages were rapidly developing in meat, fats, and oils, sugar, dairy products, and other foods.

O. P. A. FOUGHT FOR RATIONING

Last July, in order to preserve our dwindling supplies, the O. P. A. began a fight to restore to rationing the canned goods and meats taken off points in the spring.

But the W. F. A. convinced War Mobilizer Byrnes that it wasn't necessary, and apparently Byrnes, like many other high officials, thought the war in Europe was almost won last summer.

On September 9 he forecast removal of virtually all food rationing in the first 6 months of this year and helped along the surplus scare by saying that a surplus was in sight. The Government, he predicted, would have to buy excess foods to prevent a collapse of prices.

Even when it became apparent later in the year that our optimism about the military outlook was unfounded, the W. F. A. did nothing to conserve stocks of food.

DEMANDED AN ABOUT-FACE

On October 3 Food for Freedom sent War Food Administrator Jones a memorandum asking an immediate about-face in policy. He ignored it.

On November 30 Howard Tolley, head of the Bureau of Agricultural Economics, disclosed that we were unable to supply Europe's essential relief needs in four of six major food categories—meat, fats and oils, sugar, and milk. Still nothing was done.

Finally, Food for Freedom and 22 allied organizations took their fight to the White House on December 22. Two days later, canned vegetables and nearly all meats were put back on points, and because supplies were so low, millions of red and blue stamps were canceled.

We had at last locked our pantry door. But by that time, thanks to W. F. A., there was not enough food left to go around.

Victory

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following excellent editorial which appeared in the victory edition of the May 7, 1945, Daily Evening Item, Lynn, Mass.:

VICTORY

It is here at last, the day of victory. It is a day of spontaneous, heartfelt rejoicing, of deliverance and profound thankfulness. It is also a day of questioning and of stock taking. The celebration will pass and be forgotten. The deliverance will soon be taken for granted. But the answers to the questioning and the result of the stock taking are still to be determined.

What has been accomplished? Europe has gained liberation and peace. America has come halfway, perhaps the hardest half, in its fight for survival as a free and decent nation in a free and decent world. The paralyzing grip of nazism has been broken. Greater Lynn has played a glorious part in that achievement.

It has taken 5 years of struggle in the greatest, most terrible war ever known to

achieve this victory. They have been 5 bitter years of blood, toil, tears, and sweat. Their cost has been staggering, counted today in the millions of combatants and civilians who died for the victory we celebrate today. For years to come we shall count a further cost in broken lives, families, property, and fortunes. Some of these can be rebuilt, others are gone forever, like the monuments of earlier and prouder cultures than ours which have vanished in the wake of battle and vandalism.

And for what has this price been paid? To curb the murderous ambitions of one man, a criminal paranoiac permitted by a myopic world to hypnotize his country into a frenzy approaching his own.

Never in history was a man more personally responsible for a great war than Adolf Hitler. And never in history was one so unworthy of the sacrifices that he exacted. Yet these sacrifices have surpassed their cause in countless examples of transcendent heroism which have now reached a triumphant climax.

The victory is certainly a triumph of American strength and courage, American production and strategy and leadership. Without them there could have been no victory. But without the equal strength and courage of Dunkirk and Stalingrad and Alamein, without the hope and spirit of the patriots of all the occupied lands and of Britain in the desperate days of the blitz, Europe would not have survived to receive the American contribution that turned the tide.

America has learned through her sacrifices that she can live in harmony with herself and in mutual friendliness and understanding with other nations when the goal demands the effort. That effort must be continued and increased toward the military victory still to be won over an enemy as cruel and ruthless as the one now fallen.

But are the goals of freedom and prosperity and lasting peace any less desirable and demanding than the goal of victory in war? Do military victories mean that we may now forget their lessons and return to selfishness, suspicion, disunity, and hatred at home and abroad?

We were given the answer to that question 26 years ago, and we did not heed it. If we and the other great powers again fail to heed, then we shall be no better than Adolf Hitler, who said death of millions in this war was "merely an episode."

Sacrifices of the American Home

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. McGREGOR. Mr. Speaker, May 8, 1945, was VE-day, but it was accepted in our Nation as a challenge, and not with a spirit of celebration. We must look ahead to the terrific task of total victory and we cannot stop now with any intent of victorious celebrations.

I am certain that all Members of Congress, as do I as Representative from the Seventeenth Ohio District, receive many letters from parents who have known human sacrifice in the casualties of sons and daughters in World War No. 2. I am particularly impressed with the comments sent me by a father in Ohio when he received word of the death of his son in the European theater of war. It is with tribute to the sacrifices of the American home that I pass on to the Members of Congress my constituent's statements:

Regardless of the fact that war is far-searching in its effects to nations and individuals, and casualties of various kinds are to be expected, when a loved one gives his life, a person no longer doubts General Sherman's definition of war.

After receipt of that dreaded wire from the War Department, we, like a great many others, experienced that feeling of heartbreak and despair. The sorrow will be of long duration, but courage is stronger than despair, as we realize that our struggle with life must continue.

In facing today's chaos, the majority of us humans are completely helpless. We realize that the Nazi creed offers a new conception of civilization—it embraces all the wrong things with terrific zeal; then, if honesty is in evidence, we must realize that here in America we embrace all the right things—with minute enthusiasm and no action.

It is difficult to realize that more than 300,000 American boys are sleeping in foreign lands at this moment, solely due to the weakness of goodness in man. Because of this status, man has failed to shoulder his obligation as a citizen—man has, likewise, been blind to the fact that freedom is much more spiritual than political.

We are prayerful that supreme sacrifices will not have been in vain. World War No. 3 is in the making, and if it is to be averted a closer approach to right thinking is imperative. Humanity must learn to live—and help others to live.

Officials Fear Land of Plenty, Spread Gospel of Eat-It-All-Up

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. LYNCH. Mr. Speaker, the question of food for the home front is one of the greatest problems of the day. In a series of six articles which were published in the New York Post, Malcolm Logan gives the causes of the food shortage. Under leave to extend my remarks, I include the third of these articles, which appeared in the New York Post on April 11, 1945, under the title "Officials Fear Land of Plenty, Spread Gospel of Eat-It-All-Up" and which reads as follows:

OFFICIALS FEAR LAND OF PLENTY, SPREAD GOSPEL OF EAT-IT-ALL-UP

(By Malcolm Logan)

The War Food Administration was created to do two things:

To raise food production as high as possible and to distribute it in such a way that we could feed our armed forces and civilians, our fighting allies, and the hungry people freed from Nazi and Japanese conquest.

Yet when we had a record production of pork, eggs, lard, and other foods last year, top W. F. A. officials did not rejoice. They were frightened to death.

They did not try to save as much of that food as possible for the day when our own supplies might be short and we would be called upon to help the starving people of Europe. They deliberately encouraged our civilians to eat it up as fast as they could.

THE W. F. A. ASSURANCES

That can be proved by the acts and the words of high W. F. A. officials.

Lee Marshall, W. F. A. Director of Distribution, repeatedly assured the food trade last year that it was W. F. A. policy to keep food reserves to a minimum so there would be no post-war surplus.

In a speech in Cincinnati, May 4, he said: "From here on out we must exercise the greatest possible care with regard to food procurement in order that we may come out as even as possible at the end of the war."

The W. F. A. carried out the "bare shelf" policy announced by Marshall by taking lard off rationing on March 3, 1944, putting eight canned vegetables on the point-free list at the end of April, and ending rationing on all meats except steaks and beef roasts on May 3.

It is the W. F. A. which decides how our food supplies are divided among the armed forces, civilians, and our allies. It is also the W. F. A.—not the O. P. A.—which decides what foods shall be rationed or taken off rationing.

AND THE MEAT PILED UP

The official explanation of the removal of nearly all meat from rationing was that the record run of hogs and other animals, combined with a drought and a decline in Army and lease-lend demands, had jammed slaughterhouses and cold-storage warehouses with meat.

At that time the Army was using every available ship to rush to England the weapons needed for the invasion of France. Army and lease-lend food was piling up in storage plants here at the very time that meat, lard, and eggs were being marketed in record quantities.

In March 1944 the Nation's freezer warehouses in which meat, fowl, and butter are stored at zero temperatures were filled to about 92 percent of their capacity, which is just about the top limit.

But when meat was taken off rationing in May freezer occupancy had dropped to around 85 percent. It rose slowly after that until September, when it was again near the March peak. Since then it has been dropping steadily, and on March 1 of this year stood at 69 percent.

BUT EAT MORE WAS THE WORD

Every drop of 1 percent represents roughly a million feet of available space. If meat rationing had been resumed last summer, or even last fall, when meat began to get scarce again, we could have stored a tremendous quantity of meat in those millions of empty cubic feet.

Instead of doing that the W. F. A. encouraged us to eat more meat than we had ever eaten before.

Lard was taken off rationing months before a combination of a huge lard surplus, resulting from the record hog slaughter of 1943–44, and a glut of eggs filled cooler warehouses to their highest practical occupancy level of about 85 percent in July 1944.

Not only was lard taken off rationing but soap manufacturers were allowed to buy all they wanted, and so were other industrial users.

The W. F. A., through its Commodity Credit Corporation, did buy 336,000,000 pounds of lard during the year and stored it, with a preservative, in steel drums. But it continued to hand out lard to all comers

after cooler space became vacant last summer.

AS FATS AND OILS DWINDLED

Last fall it became apparent to Government experts that we were running into a shortage of fats and oils. Yet until November 13 soap manufacturers were allowed to continue buying lard, and lard rationing was not resumed until last January 22. Point values have risen twice since then.

Moreover, last January, 2 months after purchase of lard for soap had been prohibited, the C. C. C. sold 20,000,000 pounds of lard to the Army, which promptly turned it over to five soap companies. The reason given was that the lard had turned rancid.

However, when it was last inspected, it was in such condition that 98 percent of it could have been recovered for use as food. Both the food trade and U. N. R. R. A. offered to buy it, but it was turned into soap.

Disclosing this deal on the floor of the House last March 12, Representative HOOK (Democrat; Michigan) charged that the soap manufacturers demanded this lard as their price for filling military requirements for cheap yellow bar soap, which is far less profitable than perfumed toilet soaps which are still in abundant supply here.

Even now, with the fats and oil supply steadily decreasing, no attempt has been made to restrict the amount of expensive soaps sold to the public and increase supplies of cheap laundry soap.

Many Government experts believe we could get much more lard if the W. F. A. would order packers to trim pork more closely, so that the fat would go into lard instead of pork chops. At the big packing plants, which are under constant Federal inspection, enforcement of such an order would be easy.

It is reported that such an order was actually drawn up some time ago, but it has never been issued.

THE SUMMER OF OUR OVERCONFIDENCE

Beginning in July, the O. P. A. began demanding that the F. W. A. resume meat and lard rationing. But that was the summer of overconfidence. Many of our highest officials believed that VE-day was almost at hand.

The W. F. A., more concerned about possible surpluses of food than possible shortages, stubbornly refused to resume rationing. Our accumulated stocks melted away, and when rationing was put into effect again last December, there was so little food left that we must now go in slimmer rations if we are to keep our promises to feed hungry Europe.

San Francisco Conference

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Star of Wednesday, May 9, 1945:

TODAY AT SAN FRANCISCO

(By David Lawrence)

SAN FRANCISCO, May 9—This is a strange place to be writing about VE-day, but perhaps, after all, it is the most significant location in the whole world from which to express one's dissent from the prevailing concept of VE-day.

As encouragement for the future, as satisfaction over what has already been achieved, as an opportunity for prayer and thanksgiving that a big milestone has been reached—as President Truman has so eloquently proclaimed—there is reason for applause. But what real reason is there for rejoicing, for shouting, for carousing, for stopping work?

Will rejoicing bring back the hundreds of thousands who have been killed? Will it restore the limbs of the maimed, or heal the wounds of the sick? Will it stop the fighting against Japan? Will it help to prevent the next world war?

These are the questions that one asks today as the celebrations all around us seem so drab and artificial. But it is precisely because we camouflage truth on VE-days that we have such things as wars. We like to sweep along with so-called popular tides and let emotion appear as the substitute for reason. And that's why we keep on ignoring the facts that lead to wars.

Today, as I write this in a high building which overlooks for miles around the entire bay of San Francisco, I see so many ships moving slowly out to sea, so many kinds of ships, so many loaded down and so many coming back to be reloaded, that I can think only of the war out there in the Pacific—10,000 miles away from our shores. We have won a war 3,500 miles away in Europe, but to win a war nearly three times as far away in the Pacific means an unsung yet unprecedented operation of supply and transportation so colossal that it is really indescribable.

Here in San Francisco, too, the United Nations Conference is going on. Millions of words are being written about its phrases and its maneuverings. Again, emotion prevails—and a limitation on truth-telling. It is popular, of course, to speak of the conference here as one that is to make a "lasting peace." It is considered desirable to emphasize such progress as is being made and to avoid telling the people the unpleasant truth, which is that the charter being written here is weaker by far and endeavors, at least on paper, to do much less to restrain the evil passions of would-be aggressors and selfish powers than the document drawn up 26 years ago in Paris.

To those who make such observations about the charter is flung back the misleading retort that they are "perfectionists." They are told that the old league "tried to do too much" and hence failed. Excuses and more excuses, alibis and more alibis, and still not the whole truth.

What is the truth? It is that men with pride and devilish passion, with selfishness and greed, with an exaggerated sense of what military might can do to make peace and a scorn for the power of moral force and spiritual understanding, still rule this world and run its conference.

Timidity such as men on the battlefield never show, hesitancy and even fear are the characteristics in and about the United Nations Conference. Realism, which requires that the facts of international intercourse be fully published, is met with the same old-fashioned cautions of diplomacy, namely that the press must remain polite and conform to the official line and that critics must not speak lest someone somewhere be offended. This is the reactionary type of thinking which creates, in time, the festering situations that eventually bring on wars.

One had hoped that here at San Francisco, after all the sacrifices of heroic men, there would be a new spirit, that the swashbuckling attitudes of power would be abandoned and that governments would sit down together in all humbleness and examine their own consciences before they asked for political or economic terms of special advantage to themselves. But they boldly proclaim here that might makes right, that the weak have less voice because their armament is less, and that the strong must be trusted to be benevolent even when actuated by self-interest.

Here they proclaim that human rights are to be granted on paper, but to be brushed aside if they conflict with the internal policies of any nation. Here they state the same old doctrine that "internal" affairs are sacrosanct, which means that another Hitler and another Nazi party can arise, suppress freedom of speech and freedom of worship and mislead millions of people into war. Must the charter of a conference of nations ignore all this as purely an "internal" and hence a forbidden question for world-wide inquiry and condemnation?

Some day the truth may force its way through. It must first make a shambles of this edifice of pretense called diplomacy and this mechanism of camouflage called expediency which permits quibble and equivocation. Then it will be revealed clearly that because powerful nations, like individuals, often wish to become a law unto themselves, there has been no universal peace. We shall have peace only when peoples—the ones who shed their blood—are permitted to have complete access to each other through freedom of the press and speech, and when the right to insist on the truth is not impaired by the coercive hand of totalitarian governments or dictatorships anywhere in the world. Peoples can make peace and keep the peace if they will make governments their servants and not their masters.

Thoughts

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Rev. Dr. James H. Cotter, published recently in the Irish World:

THOUGHTS

(Specially written for the Irish World by Rev. Dr. James H. Cotter, LL. D., Litt. D.)

I turned from my radio, on the evening of the twenty-sixth, stunned by the San Francisco proceedings that never mentioned the name of God. God, whose hands have shed blessings, dear and numberless, on this land, blessings that have made America for the world, a land of promise. Secretary Stettinius began his introductory speech by devoting 1 minute to solemn meditation. Strange substitute this for prayer and un-American to a marked degree, for since its struggling infancy America has opened its every session of Congress, its every national convention with prayer. What was the solemn meditation about? If, on God, why did the chairman not say so? Was it but a cowardly and hypocritical shift for prayer, done out of consideration for Russia that ignores God?—a course that politicians would call diplomatic. This last gained credence, as his speech proceeded, for it showed the omission of God's name was formal, deliberate, and by design. In enumerating realties, he ignored the greatest, the supremely powerful reality—God, and immediately focused thought on faith in man. Faith in man! How he could have that, in contradistinction to faith in God, was hard to understand for man gives man, right now, a horrible picture, rivers of blood and hills of slain, the while God's command pronounces solemnly, "thou shalt not kill"; and Christ, in kindly solicitude, gives mankind the precept, "love thy neighbor as thyself."

The omission of all recognition of and dependence on the Almighty was an insult to Catholic, Protestant, and Jew alike, and woefully out of tune with the popular song, God Bless America. In no way was it fashioned to reach the high purpose for which men have yearned as the goal of the Conference. Our brave boys, bleeding and dying above the clouds and in the depths of the sea, in foxholes and jungles, are not resting their faith in man but in the God whom nations and warlords have forgotten or defied.

Chili's representative, too, in his zestful politeness, praising, honoring, and giving thanks to the dead President, forgot the Divine from whom all blessings flow.

England's delegate, Secretary Eden, omitted all mention of God and yet dared to express his confidence in the Conference, that it would conduct itself "with courage, modesty and dispatch." To reach this he gave no formula. Like the geographers of old was he who declared that Atlas supported the world but were unable to tell us on what the giant Atlas stood.

The redeeming feature of the preliminary opening of the Conference was President Truman's address in which he invoked divine guidance and was thus happily in touch with the great fathers of our country who unashamedly believed that without religion there is no morality and without morality there is anarchy.

And now a word to the American delegates, appointed by President Roosevelt. The unabridged dictionary will be no help to you at the Conference, as the Russian dictionary is based on a new diplomacy that would have words, manners, and morals strangers in the world by destroying with communistic glamour the hallowed use of words with which time has endowed them. Liberty and democracy and their derivatives have strange meanings in the mouth of Russia. Be not deceived, then, by the sophistry deduced therefrom. Stand firmly for America and American ideals, remembering "there are no tricks in plain and simple truth."

General Eisenhower

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of Thursday, May 10, 1945:

GENERAL EISENHOWER

To President Roosevelt and to General Marshall, with the full concurrence of Winston Churchill, must go the praise for having selected General Eisenhower for the assignment which he has now so brilliantly carried out. It took more than normal insight into human nature to discern in this modest brigadier the array of qualities necessary for the organization and carrying out of the most difficult military campaign in history.

But it is to General Eisenhower himself that tribute must be paid today. No military man in the history of our country has shown more indomitability. None has ever so successfully guided disparate forces and achieved with them an overpowering resultant. None has solved better than he the difficult personal questions which incessantly arise when high-spirited men, representing not merely differing points of view but, in some instances, differing national aspirations, are brought together and bidden to work as a team with a single objective. If all that General Eisenhower had done was to coach this team and imbue it with a unanimity of purpose, he would deserve all the encomiums which are now being heaped upon him.

He did much more than this. He took the raw human material which was lifted from the farms, the factories, the mines, the offices, and even the schoolhouses of this country and the British Empire and, by meticulous training, welded it into a great fighting machine capable of withstanding the heaviest blows of the supposedly invincible German Wehrmacht without losing courage or discipline. To that same human machine he gave something even greater. He gave it the urge to go ahead against obstacles, in the face of prepared death, and to stop at no obstacle, however lethal. This building of an army, too, must be credited to General Eisenhower. And it adds to his achievement to recall that, in large part, his army was trained on British soil, a long way from home and the solace of friends and family.

While this training was going on, General Eisenhower had to devise and plan for the execution of an amphibious operation across the English Channel, most treacherous of waters. For almost a thousand years the channel had been the impregnable bastion of Britain. There was an ingrained conviction in the minds of millions of Americans and Europeans that carrying an army across it and landing it on a defended beach was something no general could hope to do.

Quietly and methodically, against the pressure of prejudice and fear, General Eisenhower planned this operation. When it became known that he contemplated it, only the ignorant cheered. The prudent felt a chill of apprehension, and these apprehensions were voiced in high places. But General Eisenhower, using the best brains the Anglo-Saxon world commanded, went ahead with his planning, neither hurrying at the pressures of the ignorant nor faltering before the fears of the prudent. It was a job that had to be done, and he was determined that it be done efficiently, which in the Army means at the least cost in blood. We all know how well it was done despite the additional handicap of unprecedented storms.

From then on we could watch another aspect of the Eisenhower genius. We saw the development of the plan for the conquest of Normandy, with Montgomery at the northern hinge and the almost legendary Patton assigned to follow the break-through at St. Lo with that rush across France. The liberation of Paris was but an incident in this great maneuver, as it should be. The objective was to pursue and destroy as much of the fleeing enemy's army as possible. Only the west wall stopped this unprecedented movement.

We also saw the methodical mind of Eisenhower working at the business of cracking that impregnable defense, hardly slackening even when in a last spasmodic plunge the Germans hit back in the battle of the Belgian bulge. We saw the approach to the Rhine, the cool decision merely to develop at slight cost the fortuitous Remagen bridgehead rather than alter the greater plan to fit this development. We saw the envelopment of the Ruhr and the continuing pursuit of the Germans beyond it, the shattering of the mythical Bavarian redoubt and the final plunge to the North Sea, the Elbe and the Danube.

We saw all these far-reaching maneuvers completed with almost uncanny precision. We saw the complexities of the meeting with the Russian onrush smoothed out and passed over with no ripple; and we saw, finally, the grand climax of unconditional surrender, a denouement in which, characteristically, the main actor was not on the stage. His role, in fact, was but to speak the few concluding lines which rang the curtain down. But his presence brooded over that historic scene as it had brooded over every single incident in the long drama.

The strength of General Eisenhower is baffling when the effort is made to put it into words. His appearance is likewise baffling, for in his features and in his men there is little of that jutting cragginess which we have come to expect in great leaders. The adjective kindly more nearly describes the effect he makes upon men than any more melodramatic term. Gentleness and a kind of poetic sensibility are there, surely. But whatever the words used, the impression of greatness persists. In her hour of need, the country once more found the right man.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Alfred C. Gaunt at the reciprocal trade agreements hearing before the Ways and Means Committee:

My name is Alfred C. Gaunt, of Methuen, Mass. I am an owner of a small worsted mill. I was the first president of the N. E. Smaller Business Association and chairman of the National Advisory Council of Independent Small Business. I come as a private citizen interested in the promotion and preservation of small independent business in America.

You gentlemen of the committee possibly have not had presented to you the particular angle of the so-called reciprocity program as it affects small business, and I should like to lay before you some facts that may help you in arriving at a sound decision.

You may be interested to note that the remonstrants against lowered tariffs are almost without exception from industries which are not monopolistic, but primarily made up of small owner-operated units, and among whom exists full, free, and fair competition.

Some of them are the following:

	Concerns	Employees
Surgical instrument manufacturers	541	14,339
Hothouse vegetable growers	2,000	50,000
Toys and athletic goods manufacturers	821	36,797
Lumber manufacturers	11,520	360,613
Cutlery, tools, and hardware manufacturers	1,196	73,664
Hat manufacturers	254	23,369
Glass cutters	213	67,000
Lace manufacturers	63	7,254
Paper and allied products	3,279	264,716
Cotton mills	1,248	409,317
Clock and watch manufacturers	116	20,287
Woolen mills	583	190,000
Chemicals	9,203	287,136
Potteries	290	33,105

If to these are added such of the owner-operated farms and farm-products processors and the shoe manufacturers and miners and others, not on this list, who ask or need protection, it is unquestionably fair to say that tens of thousands of small business concerns and the jobs of several millions of their employees will be adversely affected by any reduction of tariff which permits increased imports of lower labor-cost products from abroad to undercut them. The long period of depression followed by tariff cuts had already put multitudes of small industries out of business, and many others, like

myself, were hanging on the ropes when we were saved by the cessation of imports when war came.

To demonstrate to you that these industries are genuinely small business, may I give you the break-down of the business I know the best, the woolen business, which I think is largely typical of these small businesses listed. In the woolen business there were in 1937—

Plants employing from 1 to 100 persons	241
Plants employing from 101 to 500 persons	293
Plants employing from 500 to 2,500 persons	43
Plants employing over 2,500 persons	6
Total	583

There are no restrictive practices or patent or price agreements among the woolen mills. The largest single concern in the business by no means dominates, having less than 10 percent of the looms of the industry. There exists full, free, and fair competition and free enterprise in its true sense. The units are generally located in small communities of which they are the chief support. They are over 95 percent resident-owner operated.

Cotton textile mills also belong in the same category. The potteries, the lumber manufacturers, the hat and shoe and lace manufacturers and others, and their employees are likewise all of the type and geographical distribution that are essential to the healthy economic and social life of America as a whole.

The point which I would like to make, which I feel sure has not occurred to you is that the sufferers from lowered tariffs will not be aluminum or steel or General Electric, or automobile big business.

WOLVES

It will be the little fellows and their employees who will be thrown to the wolves. It is the existence of innumerable small businesses that is now threatened by the advent of peace.

Congress has universally and uniformly been friendly to small business. Congress passed by a unanimous vote of both Houses the bill creating Smaller War Plants Corporation. Most of the gentlemen on this committee are on record as being for the promotion and preservation of independent small business.

SACRIFICE

The glib answer of those who espouse lower tariff, that "it may be necessary to sacrifice one industry to promote another" overlooks entirely the importance to the Nation of the small industries they propose to sacrifice.

Most small businesses and farms cannot be moved. It would be uneconomic and antisocial to move them to Detroit, even if Detroit is booming with export orders. Moreover, not all small businessmen and their workers wish to uproot themselves and their families from their small communities.

Wool growing, for instance, is an occupation in almost every State, and the most important occupation of 11 States, which have a rural population and small towns.

To increase the activity and congestion and concentration in big centers, while small communities go on W. P. A., is certainly a condition we, all of us, wish to avoid.

So also the policy of snuffing out what some may call an inefficient industry is at direct variance with that of President Woodrow Wilson when he said, "We were absolutely at the mercy of the world on chemicals. We are not going to get caught that way again." A wise tariff policy launched shortly thereafter turned what many thought was an inefficient industry—chemicals and dyestuffs—into one that now leads the world. Without this industry our country would have been placed in a disastrous position for rubber and ammunition. Without the textile industry—also erroneously characterized by some as inefficient—our boys would have gone cold and short of shelter.

Any definition of "inefficient industry which should be sacrificed" as being "one which pays low wages" ought to be examined, especially if it is an industry marked for extinction. The textile industry would almost immediately qualify under this definition as inefficient unless one gets the whole story. If we say, for instance, that the automobile industry is efficient because it pays an average of $1.25 an hour then the textile industry is inefficient as its average is $0.81 an hour.

But here is the fallacy. In the automobile industry there is normally one worker in each family—the man. The variety and lightness of work in the textile industry makes it possible for not only the man to work but perhaps several of his unmarried daughters. I know of one typical family where the mother holds out her apron, and the husband and daughters and a crippled son toss in over $200 every weekly pay day. The average family income in textile communities is as great or greater than the average family income in the automobile industry or the mining industry or others where the rates per hour are apparently higher.

Condemnation or sacrifice of any such industry is a disservice to our plans for full employment.

The problem of survival of small business because of war conditions has been over 500,000. Big business meanwhile has thrived and grown greater.

You gentlemen of the committee are naturally turning your eyes to the post-war period in your study of this trade agreement bill.

HISTORY

After the Napoleonic wars with the low protective duties then existing in our country, England sent shipload after shipload of products into the United States and nearly ruined what little industry we had at that time. We were saved by erecting tariff barriers, as the Hollanders have been saved from the sea by raising their dikes.

You perhaps remember the period after the last war. The replacement of destroyed material kept all industries booming, until the tumble that came about 18 months after Armistice Day. We were at that time operating under the low tariff Underwood bill of 1913. A tremendous flood of foreign goods started to overwhelm this country. We pulled out of that slump by raising the tariff. The Underwood low tariff was replaced with an antidumping bill and an emergency tariff in 1921, followed by the Fordney-McCumber tariff in 1922.

While the world-wide destruction of goods will keep productive facilities going at top speed for a period after the war, we know that the world's productive capacities will soon overtake the demand. It is time right now to put our tariff house in order.

The British Board of Trade already has sent scouts and "research men" to this market. They have appropriated substantial sums of money to place agents here who have already canvassed the users of fine woolens and worsted goods.

These British propaganda missionaries are earnestly working to revive the old idea that something imported from abroad is better than can be made in this country, notwithstanding the fact that it has been demonstrated now over many years that the American craftsmen and workmen are as skilled as any that exist anywhere. They used to tell us that only from Germany could be had such wonderful dyestuffs. Today our laboratories produce products which surpass any thing that Germany ever did. It used to be that if a man wanted a fine automobile he went after a foreign make. Today our automobiles lead the world in beauty and value and serviceability. Certain interests still promote the propaganda that imported woolens are superior to American woolens. They even go so far as putting a tag on certain fine American woolens and stamp them "imported." I have seen where this very thing had been done on products of our own mill by some unscrupulous person. Today American ingenuity and skill and good taste produce woolens as fine or finer than those made anywhere in the world, and in sufficient volume to serve this greatest luxury market in the world.

Headlines in British papers frankly state they are looking to the "rich American market." In the pre-war year 1939, the first year Britain got the benefit of reduced tariff on woolens, she jumped her shipments to us over 350 percent. Only the war prevented further distress to our woolen mills, most of which are owner-operated small, independent businesses. Britain already is "squared away" to jump in at the advent of peace, even under the present 50-percent concession. She needs no further 50 percent. She should get less than 50 percent. This drive of hers is going to hit most especially the smaller mills like my own. You see the finer goods requiring higher skills are mostly made in the smaller units; and inasmuch as the finer cloths have the greater labor content, Britain with her much lower standard of living for workers is in a preferred position on finer goods to knock out our smaller mills. Our wage scale is more than double that of Britain. Czechoslovak and Italian and Japanese wage rates are still lower, and they all have the same modern machinery that we have.

The tariff rates as now in effect under the Reciprocity Act on the products of these small mills are today lower than those which prevailed at the time the Underwood Act was in force, and when the 1920 post-war flood of foreign goods submerged us.

VETERANS

Under no circumstances should the power of making still further reductions be granted, unless you wish to kill off more small independent businesses. Hopeful as we are that the return of the veteran will open up many new small businesses, we must be concerned with seeing that he gets a fair start and fair show. In Sunday's New York Times is an ad of a returned veteran seeking to buy a small woolen mill. What a tragedy if we hand him one that must stand idle while Britain's mills run night and day.

The small businessman does not ask subsidies. He does not fear fair competition from big business neighbor or from abroad, but you note I say fair competition. As labor has protection from unfair labor practices, so must small business have protection from unfair business practices. The foreigner has no 40-hour week. He does not pay time and a half. He pays his labor low wages. Small business has a right to expect from its elected representatives laws that will shield it from this unfair competition. You may remember that as between North and South N. R. A. said that it was unfair competition for industry to make profits out of lower wage rates. Exactly the same sort of fair parity as that directed between North and South should be established as between foreign producers and domestic producers. What the small businessman asks is a parity tariff—one that takes care of the cost differential (principally labor) and other artificial or unfair advantages that foreigners employ.

The farmer has a formula for agricultural parity, but we do not have any accepted standard of practice or policy of establishing a parity tariff for industry.

The reciprocal trade agreement law gives no practicable rule or standard by which changes in any tariff rates can be determined. They are left to the uncontrolled direction of the President—the only present limit being that he may not increase or decrease any duty by more than 50 percent. Although we have numerous studies of costs here and abroad and information on comparative labor rates, we make no use of these figures

in arriving at changes. I know of no study that has ever been made, however, of the relative impact of so-called reciprocity reductions on Small Business versus Big or Monopoly Businesses.

If you say "Well, why does not small business develop its export trade?"—you have the answer when you note that the principal manufactured exports that interest foreign buyers are our mass production products; and small business does not and cannot make mass-production items. Moreover small business is not organized with export branches as is big business. The natural markets for small businesses are the nearby or home markets to which it should have access on at least as fair a basis as any foreigner. Big exporting business would in effect be given a further subsidy of tariff favors with further lowering as proposed.

PEACE AND WAR AND TARIFF

The absurdity of some arguments for a reduced tariff have doubtless already impressed you. For instance, the statement to the effect that anyone against continued or further reduced tariffs contemplated in this bill "is advocating another war." In fact when one examines the record, he is impressed by the regularity of war following a decreased tariff. In the 1890's we had the Cleveland low tariff bill followed by the Spanish War. In 1914 World War No. 1 followed the tariff cuts of the Underwood bill. In 1934 to 1937 came the so-called reciprocity reductions followed by World War No. 2.

Does it not lie nearer to the truth for us to conclude that friction and irritation and disruptions and wars are more often caused by violent or radical shifts or changes in tariff policies and levels? Was not the reversal of Britain's free trade policy and establishment of protection and Empire preference a restriction of world trade and a source of world irritation? And did not Britain attribute that change of her policy to our American "weather vane" policy?

RECIPROCITY

As to foreign trade, of course, we want foreign trade. But it should be true reciprocity on the basis of our buying from the other fellow what we can use without detriment to ourselves; and selling to the other fellow what he wants to buy. This can be done either in direct trade or in the so-called three-way trade. Rubber or tin or coffee or a certain amount of Australian wool imported do not displace American labor, and such imports promote prosperity in the countries of the exporters. In return we sell them what they want—machinery, automobiles, gadgets. That produces prosperity and employment in our country. That is true reciprocity.

Then as they raise their standard of living and the labor differential is narrowed we gradually, not violently, reduce our tariffs, keeping them at a level where there is a basis for them to enter our market in fair competition, not with an overwhelming flood such as hit and prostrated us in 1921.

The tariff should not be a football of politics or diplomats. A policy having been laid down, it should be consistent, based on scientific determination; and subject to supervision not by the State Department or bureaucrats far removed from public control, but by our Senators and Congress, who are the elected representatives of the interests and workers affected.

DECREE

You gentlemen, the duly elected representatives of the people themselves, are in a far superior position to know what is good for your constituents than are any bureaucrats or State Department officials trading behind closed doors. Opposition to referring back for ratification to you or the Senate is either a reflection on you or the assumption of a very great superiority on their part. If they fear to submit their agreements to you, they should not make them. If they are for the good of the country and its small independent businesses, they will be ratified. If they are not, they should not be ratified. No one man should have the power to decree the death of any industry and the unemployment of its workers; and no few big exporting industries should be artificially giantized by killing off small businesses which supply our domestic market and do not need to export.

The State Department is open to severe criticism because of the method used in negotiating these treaties. Interested parties of small business or agriculture were not invited to attend preliminary mapping out of concessions to be discussed. Formal negotiations on the last British agreement began 3 weeks before the public hearings opened. The hearings given were so perfunctory and apparently so boring to our officials that everyone in attendance felt that the stage was already set. Announcement of the final agreements only confirmed our worst fears. The small businesses and small farmers had been made the sacrificial goats. And we had no forum of our elected representatives to whom we could appeal.

It is, of course, the hope of some that the lowering of tariff on imports will afford markets for increased American production, but the lowering should not be haphazard. It is little consolation to a small-business industry and its employees that is crippled or destroyed by foreign competition, that some big industry in some other section of the country is profiting.

I feel sure that this committee and the State Department have not fully appreciated the fact that the use of the authority to reduce tariff protection has been highly discriminatory and has been unwittingly applied to the detriment of small, independent, competitive business. Not only should there be no further cut of another 50 percent of existing rates, but a policy of protection of small business having been established, let there be a reappraisal of all rates to the end that reciprocity like charity shall begin at home, with fair play and fair trade first of all to our own small industries and their employees.

If shortness of time and expediency indicate temporary measures, may I suggest that renewal be for but 1 year; and with rates frozen right where they are against any further reduction that will harm any independent competitive small business. Then during this ensuing year let a survey be made and recommendations be brought in for a parity tariff that will not discriminate against American independent competitive small businesses and their employees.

The Mothers of America

REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. SPRINGER. Mr. Speaker, my purpose in rising is to pay a tribute to the American mothers during this war. They have given much and they have contributed much to the final victory in Europe. They will continue to make their outstanding contribution to the end that this war with Japan will soon be over, and the happiest day of a lifetime will be ours, and then our fighting forces will come home again.

In Decatur County, which is located in the Tenth Congressional District of Indiana, there is reason for the people of that community to be proud of the contributions made to victory in this war. Every community is proud of their achievements in this emergency, and justly so. I wish especially to speak today of the fine record of this one county, in the district which I have the honor to represent, which has a population of some 18,000 people, and which county has furnished more than 1,800 men and women for our fighting forces for this war. There are some very outstanding contributions recorded in that county, and I wish to mention them here for the record.

One mother, Mrs. Alvie G. Pratt, has given six of her children for the service in this war. Four mothers, Mrs. Irvin Wells, Mrs. Emma Harmon, Mrs. Wallace DeMoss, and Mrs. Cort Barnes, each have five in the service. Fifteen mothers, Mrs. Grover Smith, Mrs. Hugh D. Wickens, Mrs. Hester M. Porter, Mrs. Fred Klene, Mrs. Olin Gommel, Mrs. Clyde E. Holtzlider, Mrs. Lillian McGinn, Mrs. George Gray, Mrs. Melvin Cox, Mrs. Mabel McCullough, Mrs. Adelade Welage, Mrs. Mamie Croddy, Mrs. Lena Nesbitt, Mrs. Anna Wynkoop, and Mrs. Bertha Schoeff each have four in the service.

Four of these are Gold Star Mothers. These mothers have contributed ensigns, seamen, lieutenant commanders, privates, and all grades of commissioned officers to and including major in the Army. The 20 mothers to whom I have referred have given 86 boys and girls to our Army and Navy, and they are serving in every branch of the service and on every battlefront throughout the world.

Decatur County, Ind., has an outstanding war record. That county, in addition to contributing more than 10 percent of her entire population for military or naval service, she has oversubscribed every war loan drive and every drive for funds for our armed forces; that was true in World War No. 1 just as it is true in World War No. 2. Fifty-one of the brave lads of that community have made the supreme sacrifice in this war.

Mr. Speaker, as we approach Mother's Day this year, I can visualize the happiness of every mother who has a son or daughter in the service to realize that the war is over in Europe; every mother who has made a contribution to our victory, including the 20 mothers herein mentioned, will offer their prayers to the Prince of Peace for the final victory and the unconditional surrender in Europe. That one phase of this cruel and terrible war is over. We have the unfinished task in the Pacific, and they will offer their prayers—as the people of this Nation will likewise pray—that the final victory may soon come, and that this war will be over; that the sons and daughters of our Nation may come home again safe from the ravages of war.

Mr. Speaker, in the light of these great contributions made throughout our Nation, on Mother's Day our prayers will be heard pleading for guidance into the paths of a lasting and a permanent peace when this war ends. Ours is a peace-loving nation. We want peace, not war; we want happiness, not confusion; we

want to engage in useful occupations, not in the destruction of war. This Mother's Day will truly be one of prayer—prayer for the early termination of this cruel war and for a lasting and a permanent peace thereafter—and I know that every prayer will ask the richest blessings to rest upon those who have given all to our country, and upon those who have suffered the disabilities of war, and, too, may the blessings of God ever rest upon every mother, everywhere.

The Importance of the Cheese Industry in the United States and in Wisconsin

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the making of cheese is an art and a profession. When milk is converted into the various types of cheese, one of the great foods of all time have been produced. There are many types and kinds of cheeses. These types have been developed in the various countries such as the Italian in Italy, the Roquefort in France, the Cheddars in Britain, and the special cheeses of Holland and other countries.

Many of these cheeses have long been known as the poor man's meat. Many cows give 12,000 pounds of milk in a year. This milk can be converted into nearly 1,200 pounds of cheese. This 1,200 pounds of cheese may equal the weight of the cow. The cow, then, is a machine that is capable of producing her own weight in food each year for many years. Since this dairy cow will make four times as much human food from 100 pounds of feed as some farm animals and twice as much as any other farm animal, it is apparent why the dairy cow is of such importance in the production of food for war.

The total cheese production of all kinds in the United States has reached a total of approximately 1,000,000,000 pounds. It may not appear so important when we compare this source of animal protein with the twenty to twenty-five billion pounds of meat produced. However, cheese is practically all edible, while the meat poundage also includes the bone and waste.

There has been, and is now, and apparently going to be, an increasing demand for this great food. It is doubtful if any country can produce any type of cheese that excels the product made by the cheesemakers of America.

Table No. 1 shows the United States and Wisconsin production of various types of cheese. Table No. 2 shows the imports of the various types of cheese. Table No. 3 shows the import duties on Cheddar and Swiss types of cheese. Table No. 4 shows the average price of Swiss and Cheddar types of cheese:

Among the facts shown in these tables are:

TABLE I.—*Production of cheese by types, Wisconsin and United States, 1936–44*

Year	Wisconsin Cheddar cheese	United States Cheddar cheese	All Italian varieties		Münster		Brick cheese		Swiss

1944 [1]	3,904	7,523	{7,559 {8,679	{[5] 39,240 {[6] 20,391	4,012	6,616	5,904	19,629

[1] Preliminary estimates.
[2] Does not include American Cheddar and cottage cheese.
[3] Included in "All other types."
[4] Cream and Neufchatel.
[5] Cream.
[6] Neufchatel.

First. The rapid increase in the domestic production of Italian cheese. You can compare the United States production of Italian cheese as shown in the above table I with the imports of the Italian types—Pecorino, Provoloni, Parmesan—as shown in table II.

Second. The Münster and brick types are produced largely in Wisconsin.

Third. About one-half the Limburger and about one-half of the Cheddar cheese of the Nation is produced in Wisconsin.

Fourth. That about two-thirds of the Swiss cheese of the Nation and about three-fourths of the Bleu cheese of the Nation is produced in Wisconsin.

Fifth. That the imports of all cheese in 1926 represented as much as 20 percent of the United States production of all cheeses.

Sixth. That the domestic production of Bleu cheese—American comparable to French Roquefort—has shown an increased production, and that the United States production of this cheese now equals about the same amount as the former imports of Roquefort plus the former imports of Bleu cheese.

Seventh. The Cheddar-cheese production of the Nation has shown a rapid increase. Wisconsin has shown an increase in the production of Cheddar as well. Much of this type of cheese has gone to lend-lease. The consumers of America should be able to absorb all this increase in production. The improvement in quality will increase the per capita domestic consumption of this great food.

You can readily note that the Cheddar-cheese production overshadows the amounts of all the other types of cheese produced in the United States. This is also evident in the Wisconsin production of cheeses as well.

Eighth. The Roquefort made from goat's milk, and the Bleu cheese made from cow's milk are similar. The American Bleu has received an evident appreciation by the consumers of America. The consumers may prefer the domestic Bleu, which is being manufactured in splendid sanitary plants, to the imported Roquefort.

You will note that the domestic production of American Bleu has already exceeded the pre-war imports of Roquefort and the imported Bleu combined. You will also note that Wisconsin produces about three-fourths of the American Bleu produced in the United States. The acceptance of this American Bleu by the consumers should indicate that a rapid expansion in its domestic production can be expected.

Ninth. In looking over these tables you will note that a few years ago nearly all the Italian type of cheese consumed in the United States was imported. You will note that the domestic production of this variety has increased from 11,000,000 pounds in 1936 to 43,000,000 pounds in 1943. In 1936 about twice as much Italian cheese was imported as was produced in the United States. The war has contributed to increased domestic production very materially. The domestic Italian cheese is made under favorable scientific and sanitary conditions and it is not difficult to visualize a further expansion in the domestic production of this type of cheese. Wisconsin produces one-half the Italian cheese of the Nation.

The table showing the imports is as follows:

TABLE II.—*Cheese: United States imports for consumption, by types, 1920–43* [1]

[In thousands of pounds]

Year	Emmenthaler or Swiss	Romano or Pecorino	Provolette or Provoloni	Reggiano or Parmesan	Cheddar cheese whether or not in original loaves but not including any cheese processed otherwise than by division into pieces	Roquefort in original loaves	Blue-mold cheese in original loaves	Edam and Gouda	Gruyère process cheese	Sbrinz in original loaves	Goya in original loaves	Other cheese	Total all cheese imported

[1] Includes products of Cuba (duty less 20 percent). Excludes negligible imports entered free under special provisions of the tariff act.
[2] Not separately classified prior to July 8, 1927.
[3] Not separately classified, formerly included in all other cheese prior to the 1930 Tariff Act.
[4] Classified as Cheddar cheese in original loaves in trade agreement with Canada, effective Jan. 1, 1936, formerly included in all other cheese. Cheddar cheese, not processed, separately classified in 1939, included with cheese, not specifically provided for, prior to that date. Cheddar cheese, in original loaves and not processed, combined in 1940 and subsequent years.
[5] Not separately classified prior to trade agreement with France, effective June 15, 1936, formerly included in all other cheese.
[6] Not separately classified prior to trade agreement with Netherlands, effective Feb. 1, 1936, formerly included in all other cheese.
[7] Not separately classified prior to trade agreement with Switzerland, effective Feb. 15, 1936, formerly included in all other cheese.
[8] Not separately classified prior to trade agreement with Argentina, effective Nov. 15, 1941, formerly included in all other cheese.

Source: Compiled from official statistics of the U. S. Department of Commerce.

There have been at least four tariff setups in effect during the 20-year period.

The exports of cheese have been insignificant in amount since World War No. 1. Since 1930 it has been less than 2,000,000 pounds a year up until 1940 when it has been exported in large amounts for war purposes and under lease-lend.

The following table shows some of the duty changes on Swiss and Cheddar cheese:

TABLE No. III.—*Tariff duty on cheese*

1920: 20 percent ad valorem, all cheese.

1921 to 1926: 23 percent ad valorem, all cheese.

1927 to 1929: July 8, 1927, 7½ cents per pound, but not less than 37½ percent ad valorem, all cheese.

1930 to 1935: Tariff Act of 1930, 7 cents but not less than 35 percent ad valorem, all cheese.

1936 to 1941: Swiss cheese duty: Modified 1936, 7 cents per pound but not less than 20 percent ad valorem. November 2, 1936, Trade agreement with Finland, 5 cents per pound but not less than 20 percent ad valorem. Cheddar cheese duty: January 1, 1936, trade agreement with Canada, 5 cents per pound but not less than 25 percent ad valorem; 1937–41, superseded with trade agreement with Canada January 1939, 4 cents but not less than 25 percent ad valorem.

Duties provided in H. R. 2652 can be 2 cents per pound for Cheddar cheese and 2½ cents per pound for Swiss cheese.

The following table shows the average annual price of Cheddar and Swiss cheese:

TABLE IV

	Cheddar cheese, annual Plymouth price	Swiss cheese, annual Wisconsin price
	Cents per pound	*Cents per pound*
1920	26.2	31.0
1921	18.8	28.7
1922	19.7	21.9
1923	22.5	30.0
1924	18.8	23.1
1925	21.8	25.8
1926	20.2	26.3
1927	22.7	28.0

[1] P. 496, Agricultural Statistics, 1942.

You may note that Cheddar cheese averaged more than 20 cents per pound from 1920 to 1930 and only 13 cents per pound from 1930 to 1940. You will note that Swiss cheese averaged 27.2 cents per pound from 1920 to 1930 and only 19.6 cents per pound from 1930 to 1940.

The cheese industry of America is all set for the production of a higher and a higher quality of cheese. The agricultural colleges and the experiment stations and the industry itself are continuously improving methods to provide a still better finished product. The apparent demand for domestic blue cheese should result in a rapid expansion in the production of this type of cheese. Certain situations have developed during the war to this industry, but these situations will be erased once the war is over. The American people can look forward to the day they can secure even greater amounts of this great food with its blended animal fat and animal protein. The producer most assuredly can look forward to a further expansion of the industry if additional obstacles are not imposed on the industry.

We have been on an import basis as far as dairy products are concerned for many years. We have not produced sufficient amounts for our domestic consumption.

Two questions then are to be answered if H. R. 2652, the bill to cut duties by an additional 50 percent, is passed, as proposed by the present administration.

One is, if as in 1939, when Cheddar cheese was 2 cents per pound, and there was a duty of 4 cents per pound, over 6,000,000 pounds of Cheddar cheese was imported, how many millions of pounds of Cheddar cheese will be imported if the duty is reduced to 2 cents per pound and there is a floor price of 20 cents per pound for 2 years after the war?

The second question is, If, as in 1939, over 10,000,000 pounds of Swiss cheese

were imported and 42,000,000 pounds was the United States production—when the duty was 5 cents per pound and the price was 17 cents per pound, how many million pounds of Swiss cheese will be imported if the duty is reduced to 2½ cents per pound and there is a guaranteed floor price of 22 cents or 23 cents per pound?

Cheese of many varieties have had many problems to face as a result of a nonequitable reduction in the duty on the product in the past.

Protect American Investors

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. SHAFER. Mr. Speaker, I take this time to call the attention of the Congress to a significant line which appeared in a news release by Mr. Elmer Davis, of O. W. I., which announced the ban on American newspapers, magazines, and books from Germany. This news release, issued yesterday, contained the words "the ban will apply to foreign businesses in Germany."

Does that mean that great American plants established in Germany, such as the American Cyanimide Co., General Motors, International Harvester Co., and others will be prohibited from resuming operation?

What will become of such plants? What is to become of the American money that has been invested in those plants? What of the return to the United States Treasury on the earnings on those investments?

Who is Elmer Davis who, with one short stroke of the pen, blandly wipes out the investments of the American people? Where is his authority? What does he know about foreign investments? What pay roll has he ever met?

Administration spokesmen talk about reducing individual taxes but in thus wiping out this American capital and the return therefrom they are, in effect, increasing individual taxes.

In short, Mr. Speaker, Mr. Davis' announcement has all the earmarks of being the usual clever New Deal method of highlighting the ban on free press in Germany while concealing a move that will cost the American people hundreds of millions of dollars. This thing can be so far-reaching that it threatens the future of the white-collar class and its entire investment in annuities and life savings policies, because all insurance companies have investments in foreign countries.

This Congress owes a duty to the people of the United States to learn the full reason for Mr. Davis' action. The people are entitled to know every detail of the plan afoot. An immediate investigation is called for.

Bad Judgment in the House

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, yesterday we heard considerable about mice and men and about "fraidy cat" Congressmen.

Developments of the day really showed who were the "fraidy cats," since the bill was passed without the inconvenience of a roll call.

The following editorial from one of Washington's leading newspapers, the Washington Daily News, is in today's issue:

BAD JUDGMENT IN THE HOUSE

Because we so much want to see Congress deserve public respect, we regret that the House of Representatives yesterday voted a $2,500-a-year tax-free salary increase for each of its Members, in the guise of an expense allowance.

Our objection is not to better pay for Congressmen. Most of them need, and many of them deserve, more money. We think there would be almost no criticism of a salary increase adopted without subterfuge at a proper time under proper circumstances. At a time, we mean, when the Government is not holding down the wages of ordinary citizens and when public attention is not absorbed in world-shaking events. And by an honest record vote, so that constituents can know how each Congressman voted. And in conjunction with a genuine plan to bring the machinery of Congress up to date and make it more efficient.

Unless the Senate shows better judgment, this badly timed, sneakingly voted pay grab will become law—then Congressman will start crying because citizens say what they think.

Mr. Speaker, I hope that President Truman gives this bill the proper attention and veto it is entitled to. Will he? If he does not put the silencer on this $2,500, he might as well forget all about the Little Steel formula and he might just as well scrap the O. P. A.

Extension of Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Arthur Besse, president of the National Association of Wool Manufacturers, before the Committee on Ways and Means in opposition to an extension of the Reciprocal Trade Agreements Act, May 2, 1945:

The wool textile industry is opposed to H. R. 2652 and opposed to the extension of the reciprocal trade agreements amendment in any form.

This committee has listened to me a number of times on this subject, and I shall not impose upon you to the extent of presenting any compilation of previously expressed views.

I wish, however, to draw your attention to certain aspects of this program which can be seen in clearer perspective today than in 1934 when the program was first presented.

The advantages which the Reciprocal Trade Agreements Act are alleged to possess have always been many, and as conditions change, it appears that the sponsors of the legislation have found new virtues in the program.

In 1934 the Trade Agreements Act was heralded as "assisting in the * * * emergency in restoring the American standard of living."

In 1937 the theme was "world peace through world trade."

In 1940 the two themes were combined in the phrase "economic progress, sustained prosperity, and enduring peace for our Nation and for the world."

In 1943 the program was represented as a means whereby we could better assist in postwar, world-wide economic reconstruction, and the amendment became an instrument of "economic nonaggression" which would "be regarded throughout the world as an acid test of our future intentions" in the economic sphere.

Now, in 1945, our "economic nonaggression" seems to have given way to a new idea of promoting an export trade of ten billions or more annually, which most certainly is economic aggression on a colossal scale.

If our present objective is ten billions of exports—some even talk in terms of sixteen billion—we had better drop all talk of economic peace. Any such quantity of exports will bring us head-on into conflict with Great Britain and with other nations whose markets we must invade if we are to attain that volume. If we insist on exporting a volume even approaching that figure in terms of present-day dollars, we will invite a trade coalition against this country. Mr. Clayton in testifying for this bill spoke of the necessity of preventing "a resurgence of economic warfare." A minute later he praised the reciprocal trade-agreements program as a means of disposing of our surplus products overseas. There is no better way of promoting economic warfare than trying to dump our surpluses abroad and launching a campaign for a huge export trade in competition with other producing countries. Mr. Clayton seems a little uncertain as to whether this program is a grandiose philanthropic endeavor to assist other countries in achieving economic security of their own, or a project backed by the might of all of our so-called exporting industries to grab the lion's share of international trade.

I believe Mr. Clayton is wrong on both counts. The present concept of foreign trade as a means of getting rid of our surplus products is not a help in promoting peace but a step toward economic warfare. And if the program should result in a vast expansion of exports, we will sooner or later discover that we will not be paid for them for the simple reason that we do not require imports in a volume comparable with the volume of exports which the backers of this bill advocate.

The State Department is seeking to acquire and retain power which rightfully belongs to the Congress, for the express purpose of using that power in a manner of which the Congress itself would not approve. The obvious purpose of the State Department is to emasculate our tariff and completely revise it without regard to the original

purpose for which import duties were imposed nor to the effects of their abandonment.

I can see no present excuse for giving to the State Department the authority it seeks and many reasons why it is dangerous in the extreme to do so. When the proposal was first put forward in 1934, we were in the midst of a serious depression and in the mood to try anything. I think it was a mistake, but the amendment was passed. Since that time, all sorts of arguments, to which I have already referred, have been put forward by the State Department in an endeavor to retain their right to bargain away our established tariffs. In 1943 when the amendment was last extended, it was done so more or less as a personal tribute to Mr. Hull. The Congress realized that no substantial use of the State Department's powers was possible during the war and perhaps felt that at that stage any change in our set-up might be misinterpreted abroad.

The world faces very serious economic readjustments. No one knows what lies ahead, but it is likely that we will find it necessary to make substantial changes in our tariff structure. Certain fundamental decisions should first be made—decisions which should not be left to any administrative agency of the Government.

There is absolutely no warrant for leaving a matter of such prime importance to the State Department and allowing it to set tariff rates by a series of "bargains" with foreign countries. The matter of this bargaining should be considered objectively. Our tariffs are not for revenue, but rather for the purpose of channeling imports—to discourage the importation of certain items, and to facilitate the import of others. In the light of that fact, let us consider the mechanics of a bargain with Great Britain. Great Britain is asked to make a reduction in the tariff rate on something she does not want to import in return for a reduction here on an item which we have decided we want to produce ourselves rather than buy abroad. Does anyone who knows the business acumen displayed by Great Britain actually believe that any reduction in the rates which she makes will be a "valuable concession" to us? Does anyone who has followed the "buy British" campaign believe that the British actually will scrap that policy and rely on "bargains" from our State Department? And why—and for what end—should we insist on selling Great Britain products which she has decided she prefers to make herself. Or why should the British insist we should buy from England products which we can perfectly well make for ourselves. Certainly that is not the road to economic peace.

We should not bargain away our tariff and set rates by making international deals behind closed doors. Our tariffs were designed for certain purposes; they should not be abandoned unless we have first determined that the purpose for which they were established is no longer valid. For example, we should first decide whether or not we want a wool-textile industry in the United States. If we do not, we can forget the tariff on wool products altogether. If we do want the industry, however, the tariff rate should not be left to chance trading. We cannot reduce the rates by bargaining or otherwise and expect them to achieve their original purpose. It is not strictly correct to say that our rates have been left to chance trading. It would be more accurate to say that they have been made responsive to the desires of foreign negotiators. In the treaty with Great Britain, which reduced many of the rates in the wool schedule, the greatest reduction was made in the item where protection was needed most. This was not because that made sense, but because the British negotiators demanded it. There was no attempt whatever to be consistent, despite the fact that the State Department has claimed that this was the best way to establish a scientific tariff. The State Department has never suggested any increases in rates, which, it would seem, would have been necessary in at least a few instances if the object actually had been to establish a scientific and well-balanced tariff structure. It is abundantly evident that the State Department is interested only in completely emasculating the tariff and in doing so as rapidly as possible. This is too fundamental a matter to be left to an administrative agency.

State Department officials are completely inconsistent in their statements concerning the mechanics of this program. They claim that great care has been and will be used not to injure any American industry. They also point out that our industries are so efficiently organized that we need not fear foreign competition even if we have a lessened degree of tariff protection. If either of these statements mean anything, they mean that tariff reductions already made or in prospect will not substantially increase imports. But the State Department's avowed purpose is to increase imports so as to provide foreign countries with American dollars. Either they are confused or I am. They say that their object is to increase imports, but insist that they won't cut the rates enough so that this will actually happen, and add that we are so efficient that we can easily undersell the foreign competitors, anyway. Based on this extraordinarily illogical presentation, the State Department asks the Congress to delegate to it the authority to completely alter our tariff structure.

The request for authority to cut rates 50 percent below those prevailing on January 1, 1945, is a true index of the State Department's intentions. For a rate which has already been cut 50 percent from the 1930 established figure, this means a reduction of 75 percent. To justify any such action, one would have to show that the rates in the Hawley-Smoot tariff were four times as high as they should have been. To grant this request for additional cuts means complete abandonment of the policy of protecting American producers against low-paid foreign labor when such protection is needed.

The United States of America is not in the position of having to bargain for the privilege of carrying on international trade. Our productive capacity is extensive enough and diversified enough to permit us to direct it into channels of our own choosing; the matter should not hinge upon the results of a so-called trade agreement with Iran, Italy, Latvia, or some other nation. Our productive plant must undergo a very considerable reorganization after the war. That reorganization should be based upon a study of our own needs and a realistic appraisal of what products we should try to produce for other countries. We must decide what industries we want to keep in this country and determine the products which we plan to secure from other countries. Those are the key decisions. Those are the decisions which determine which industries should have tariff protection and how much. The matter should not hinge upon the willingness or unwillingness of Great Britain to cut her tariff on our automobiles or the promise of Italy to increase her import quota for American radios.

The necessary revision of tariff rates calls for most careful and detailed study. In the postwar period some rates already reduced by trade agreements will be found to be much too low; others may perhaps be higher than necessary. We should wait until the shape of the postwar world is more clearly discernible and then revise the tariff and do it properly. The spade work should be done by an enlarged tariff commission, working with industrial groups in gathering information and data to be submitted, with a carefully formulated plan, to the Congress. Most differences of opinion should be resolved before the recommendations reach the Congress. It should be the responsibility of Congress to determine whether or not the resulting recommendations are in the public interest and calculated to effectuate certain basic decisions on economic policy previously arrived at.

Meanwhile, we should not tinker further with our tariff. This idea of outsmarting ourselves by cutting existing tariff rates should be laid on the shelf for all time. Many industries such as our own—the wool-textile industry—are greatly disturbed over the cuts already made. Certain items in the wool schedule were cut on January 1, 1939, by a treaty with Great Britain. The war has prevented any real evaluation of the effect of those reductions. We are doubtful of our ability to meet British competition after the war under these rates. We are, however, content to wait and see what happens when peace returns. If it then develops that the rates are inadequate, we want to ask for changes presumably justified by a decision that we desire to continue to make woolens in the United States, and the decision as to what constitutes an adequate rate should be based upon a study of relative costs and not left to international horse trading.

In 1909 the ad valorem rate was set at 55 percent by the Payne-Aldrich Act.

In 1913 the Underwood-Simons Act cut the rate to 35 percent. The cut in the value of the pound sterling, especially in 1920 and 1921, had the effect of reducing the degree of protection considerably below that intended at the time the Underwood-Simons Act was drafted.

In 1922 the rate was increased to 50 percent, pursuant to the Fordney-McCumber Act. Exchange rates did not fluctuate greatly during the time this act was in force.

The Hawley-Smoot Tariff Act in 1930 set the rate at 60 percent. However, the action of Great Britain in abandoning the gold standard in September 1931 and the accompanying drop in sterling to approximately $3.50 made the actual assessment of duty in 1931 and 1932 lower than it was before the Hawley-Smoot Act was passed. On January 3, 1934, the United States devalued the dollar. This had the effect of increasing the duty. As the chart shows, the devaluation of the dollar in 1934 increased the amount of duty assessments to a greater extent than did the passage of the Hawley-Smoot tariff in 1930.

The trade agreement with Great Britain became effective on January 1, 1939, cutting the stated ad valorem rates to 35 percent. By reason of the ratio of the pound sterling to the dollar, the effective rate has averaged considerably lower, being below 30 percent during most of the time the agreement with Great Britain has been in effect.

Of primary importance is the fact that these ad valorem rates are percentages not of the value in this country but of the value in the country of origin. The English value is not over one-half the value in this country. Thus, the 35 percent in the agreement with Great Britain amounts to approximately 17½ percent of the American value. Adjusted to the present official exchange rate of $4.03½, this figures less than 15 percent of the American value.

And now because "much of our original authority under the act has been used up" and "we do not have enough to offer these (foreign) countries to serve as a basis for the further concessions we want from them" we have this demand for authority to cut this rate in two.

Can anyone seriously maintain that the wool textile industry in the United States can continue to pay an average hourly wage of 85 cents an hour and compete against English mills paying the equivalent of 30 cents an hour, if we are protected by a tariff amounting to 7 percent of the American value?

Ours is by no means an isolated case. The State Department has made many reductions in rates which might have had the most serious consequences if the World War

had not intervened to prevent foreign countries from underselling us in our own market. The tariff was designed for a specific purpose. The State Department does not agree with that purpose. This is too vital a matter to be delegated to any executive agency of the Government. This bill should be defeated. If the economic theory under which we have achieved the highest prosperity of any nation in the world is no longer sound, the Congress should consider the matter and devise whatever substitute seems most promising. If the theory is sound, we should stick to it. In no event should Congress delegate power to jeopardize our economic status to an agency which has in effect said that it wants authority to do that which it knows Congress would not itself approve if the opinion of Congress on individual agreements under this act were sought. The bill should not be passed. Congress should not abdicate its function in the critical postwar period.

Editor of Eagle Magazine Pays Tribute to Franklin D. Roosevelt

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. THOM. Mr. Speaker, I am reprinting a tribute from the Eagle magazine, published by the Fraternal Order of Eagles, to the late President Roosevelt, written by Editor Robert W. Hansen. The President was a long-time member of that fraternal organization, and during his political career sponsored many humanitarian social measures supported by its membership. The editorial follows:

FRANKLIN DELANO ROOSEVELT: A VALIANT EAGLE

(By Robert W. Hansen)

As Americans, with the Nation and the world, we mourn the passing of President Roosevelt. As Eagles, we mourn the passing of our most illustrious member, the man, Franklin Delano Roosevelt, powerful champion of the rights of the common man, the poor, the sick, the oppressed; the little people to whom the fraternity has dedicated its services over nearly half a century. In him, the little people found a human, understanding friend, a valiant champion—valiant despite physical handicaps that would have beaten a man less great in heart and spirit. In him the Eagles found a true, warmhearted friend and fellow member whose loyalty and leadership were tested in the crucible of our greatest crusade—the fight for Nationwide social security for the common man.

As Americans, with the Nation and the world, we pay homage to his indomitable spirit and his great leadership. As Eagles, we shall treasure forever the memory of the man who was one with us in common brotherhood. As it is true that no other public figure of the last quarter-century was so closely linked with the history of our fraternity, so is it true that his death ends one of the proudest chapters in the annals of Eagledom.

The chapter opened in 1930, when he was Governor of the State of New York. That year, on July 22, he became a member of Buffalo Aerie, No. 46, where the name of Franklin Delano Roosevelt was more than a symbol and a name on the roster. After the initiatory ceremonies, he said:

"I am very happy to be privileged to join such a wonderful organization—an order truly American in principle, one that is doing and intends to do the best possible thing for the many who need aid." Later that evening, upon receiving a solid gold life-membership card, he added: "I sincerely thank the members of Buffalo aerie for this life membership. I shall always prize it, and carry it as something worthy of respect by all men."

Prophetic words, these—and but the first of the many tributes that he was to bestow, as the years passed, upon the order for which he so often demonstrated his affection and admiration. Thus, too, was forged the bond that was, until his death, to unite this man of world vision with the fraternity whose principles so staunchly echoed his own ideals.

He was a fighter. Had he not fought—and conquered—a dread foe, infantile paralysis? Yes, he was a fighter. Maybe that is one reason why he loved the Eagles, the "fighting fraternity." The weeks, the months, the years ahead were to prove the strength of his fighting spirit.

As New York's Governor, he led the vigorous campaign for the security of the needy aged in his State. It was not smooth sailing—the proposal was meeting with powerful opposition. But he won that fight, just as he was later to win the fight on a broader front. On April 10, 1930, he signed the bill making mandatory the payment of old-age pensions in New York. As he affixed his signature, generously he declared:

"Most of the credit for showing the needs of old-age pensions is due, and will be given to the F. O. E. They started this Nation-wide movement and it is because of their continued efforts that the idea has been brought to the attention of the people in the various States."

Thus had Roosevelt kept the faith with our order * * * a faith that sprang from the early declaration made to his brother Eagles: "I hope in my humble way I may be of help to the members of this aerie and this fraternity in bringing about the enactment of this and similar humanitarian measures that may be advanced by this order." He was as good as his word. At many gatherings, his voice was heard in advocacy of old-age pensions * * * security for the dependent aged. And at the Governor's conference in Salt Lake City that year, he devoted his powerful address to unemployment and old-age pensions.

The page turns. The chapter continues. Franklin D. Roosevelt has become President of the United States. A national Social Security Act is the next goal.

The Social Security Act is regarded by many contemporaries as the outstanding piece of legislation bearing President Roosevelt's signature. Certainly, it represented the realization of an ideal he long cherished and for which our order long had labored. But first must come the molding of public opinion toward the need and the justice of security for the aged, the sick, the young, and helpless. He raised his voice in molding that opinion. Vigorously, with determination, he championed the cause of the needy aged. As all Eagles know, he was not alone. He won his fight. The national social-security bill was passed.

When he signed that history-making document on August 14, 1935, again, with characteristic thoughtfulness and generosity toward others, he expressed his appreciation for what the Eagles had done. In giving to our order a pen with which he signed the measure, he wrote:

"I have long observed with satisfaction the sponsorship by the F. O. E. of social-justice legislation, both in the States and in the Nation. The records for more than a quarter of a century bear witness to the campaigns of education conducted, the literature distributed, and the addresses delivered by your socially minded order. These efforts have borne, and are bearing, gratifying results. Our countrymen owe the Eagles much good will for their unselfish services.

"The pen I am presenting the order is a symbol of my approval of the fraternity's vision and courage. May its possession inspire your 600,000 [now 940,000] members to rededicate their own efforts and those of the fraternity to the insuring of such economic and political conditions as will bring a greater degree of happiness to our people."

Proud words, these—words to be engraved on the brightest page of our fraternity's archives. Eagles took hope, too, from other words spoken by the President on that historic occasion. The security of many of America's little people was assured. But ahead lay another battle front, for the dark days of the depression were upon us. And so, while expressing his satisfaction over the victory gained, he again sounded the new battle cry, which found echo in every Eagle heart:

"Today," the President said, "a hope of many years' standing is in large part fulfilled. The civilization of the last hundred years, with its startling industrial changes, has tended more and more to make life insecure. Young people have come to wonder what would be their lot when they came to old age. The man with a job has wondered how long the job would last.

"This social-security measure gives at least some protection to 30,000,000 of our people and has provided an economic structure of vastly greater soundness."

As Americans, we had felt the pinch of the depression. As Eagles, we had determined to do something about it, with the help of a national leader completely in accord with the Eagle thought and plans.

More than a year before, in his message to Congress on June 8, 1934, the President had outlined his program for economic and social reforms to insure a living wage and security for the workingman. These were his three objectives: Security of the home; security of jobs; security in old age. In November of that year the President called upon two Eagles to serve on an advisory council to aid in planning social legislation to be presented to Congress. The F. O. E. was the only fraternal group so honored.

Two years later, the common cause the late President made with the F. O. E. during the critical depression days was expressed in his message to the 1936 Grand Aerie convention. "I feel that our order has special cause for jubilation this year," the President stated. "With the return of better days we can feel a sense of satisfaction in the knowledge that during the dark days of the depression, we as a fraternity did our part. We did not lessen but rather increased our humanitarian and philanthropic work, ever mindful of our obligations to our less fortunate neighbors."

There were other evidences, too, of President Roosevelt's close kinship with the order. His own humanitarian causes and principles were part of the Eagles' creed, and he was quick to associate us with him in advancing his objectives. He followed Eagle events, too, with great interest, despite the demands of his high office. Never too busy to take note of our programs, he was with us in our fraternal gatherings through his warm, friendly messages. Typical of his annual greetings to fellow Eagles is the message to the Dayton convention, in session during the signing of the Social Security Act:

"I feel particularly interested in this meeting of the members of the Fraternal Order of Eagles because the members of the order have so fully demonstrated their sympathy with social legislation of the type to which so much sincere attention is being given in Washington.

"I recall with pleasure, for example, the helpful spirit shown by your members in New York when we placed the State old-age

pension law on the statute books. I am proud to be a member of an order whose interest and activities are being directed along such worthy lines.

"I trust and believe that the Dayton convention will serve to increase your enthusiasm for well-ordered social improvement, and I am sure the delegates will return to their respective aeries with added enthusiasm for the humanitarian efforts to which the order has devoted so much attention.

"With sincere good wishes for your continued success, and as a brother member of the order, I greet you."

Now that chapter in Eagle history has been closed by death. As we have relived the past in which Franklin D. Roosevelt so truly proved his brotherhood with us, we wonder what other bright pages might have been written had he lived to press onward. But this we know; no man in the history of our Nation did more to make life a little more secure for the ordinary folks of our land, a little easier for the weak and the helpless. Eagles were proud to serve in this crusade under a strong national leader, a humanitarian whom we revere as brother.

As the poet said of those of our Nation's honored dead who sleep at Arlington, to him reverently we say, as one who has fallen in the fight:

"Sleep well, soldier. You are not forgotten."

The Price of Peace

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. MARTIN of Iowa. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I am including an article by Louis J. Kehoe, of Washington, Iowa. Mr. Kehoe has written many articles on outstanding national and international issues during recent years and his discussions have always been worthy of thoughtful reading by everyone interested in our national and international situation. It is a pleasure to make his article available to the Members of Congress. It follows:

The quest of peace might well be described as the paramount concern of mankind at this time. All nations, almost without exception, and all people except only a few scattered madmen, are honestly yearning for respite from the turmoil and tragedy of war. Civilized mankind with all the gains of generations of effort and struggle has been shaken by this war to its very foundations.

It is not to be wondered at then, that as the prospect for cessation of hostilities in the near future appears quite certain, leaders of the world have shown increased activity in laying the groundwork for a peace that all of us hope will endure.

Worthy as this activity is, and conceding for the most part the good faith of all the nations and people concerned, yet in a matter of this long range importance, much caution must be exercised, particularly on the part of America or we may find curselves, while making an all-out effort for perpetual peace, losing many of our most cherished rights and privileges as a free people and a nation blessed by the Almighty with more than average natural treasure and a heritage entrusted to us by the valiant and costly efforts of our forefathers.

Even in our quest for peace, we must not betray that trust and must not barter away any of that sacred heritage for the generations of our American children, in exchange for some visionary guaranty of peace.

World peace is important and we must do our full share to make its realization possible in the future, yet it is not so important that we will pay any price. There are other things equally or more important to us Americans, to our brave men and women in service and to our children of the future. Yes, there is a price that is too great to pay for the peace of the world, even if that could be guaranteed and it cannot. Not while there still remains in human nature the spirit of greed that is common to all mankind, and there does not seem to be any immediate prospect that this human trait is going to be eliminated. If anything, it is getting worse as time goes on. Experience of past generations has demonstrated that this element of greed in human nature has been harnessed and controlled more by the moral teaching and practices of the Christian religion over the world than by any other agency. It is also quite apparent to anyone taking the trouble to look about him, that greed is on the increase in human behavior, whenever any political organization is substituted for such influence or set up and undertakes to regulate and control human behavior.

Granting that world peace is a most admirable goal, yet we cannot focus our eyes on that to the exclusion of many other very worth-while considerations. We must not become so preoccupied in our quest for perpetual world peace that we will stumble into some of the many pitfalls that lie between us and that utopia. What are some of these pitfalls that exist and must be shunned and avoided by America if we are to go forward as a great nation and continue as a free people blessed with most of the good things of this world?

1. There is little, if anything, possessed by other nations of the world that is generally coveted or sought after by the people of America. The nations of the world need have little fear of American aggression. America has much that is coveted and sought after by most other nations of the world. Lack of vigilance could cause us to lost great and priceless advantages we have.

2. Intruding ourselves and our ideas into the intimate affairs of other nations invites like activity by other nations in our intimate and entirely national affairs.

3. Too intimate a relationship between nations, just as between individuals, breeds contempt and leads to trouble. An example of that is Europe. It may be effectively argued that Europe's interminable troubles are due to a great extent to the close association of these nations with one another because of their geographical locations. Nations of Europe, because of this intimacy, easily get entangled in each other's affairs and trouble develops. It is not only possible but very probable that strong international influence and activity adds to rather than eliminates the causes of war. Instead of more international interference aiding in the prospect of peace, less intrusion of nations in each other's affairs is a much better prospect.

4. Our leaders and delegates to these international conferences had best keep in mind that we in America, for the most part, except a few adventurous political busybodies, are pretty well satisfied with our type of government and way of life here and do not welcome the prospect of it being interfered with by any nation or combination of nations having different notions.

We must never lose sight of the fact that our men are not fighting all over the world so that they and their loved ones can share in the Russian way of life or even the British way of life, even though we may admire them as a people and applaud their record in this war. Neither are they interested in exchanging our way of life for that of any other European or Asiatic people. They are fighting to perpetuate and preserve the American way of life they know and love. Our leaders and delegates to these various international meetings will do well to remember this at all times. Our fighting men and our people generally, will never sanction the sacrifice of or the bartering away of any of these American rights, or sacrificing any of our sovereignty as a Nation in return for some phony international guarantee of security or peace. Neither do our people or fighting men expect any other nation to surrender any of their sovereignty. Such ideas are impractical and fantastic and thrive only in the minds of zealots and international extremists. We must hold ourselves ready and willing to cooperate with other nations to curb aggressors and encourage peace, but this must be done as a dignified and entirely independent Nation acting with other nations of like kind. We must remain free of all international restraint beyond this cooperation. We cannot tolerate having other nations with other designs of government with the strange ideologies of other people of the world, superimposed on our American way, by the action of some supergovernment of the world, created to suit the fantastic whims of international adventurers either here or abroad.

The best way for an individual to retain the respect of his neighbors, is to be cooperative on matters that jointly concern them, deal fairly with them and then attend to his own business and not intrude in the private affairs of his neighbors. This, and keeping himself in such a position that he can resist any imposition on him or interference with his rights and dignity, is the best guarantee of future good relations in his neighborhood. This is just as true in the family of nations. This formula is best for the future tranquillity of the world.

Preliminary to American participation in any proposed international organization to be set up along the lines contemplated at the so-called Dumbarton Oaks meeting, and designed to regulate the behavior of the nations of the world following the conclusion of the war, serious consideration should be given to the realities involved in such an arrangement.

Our representatives should recognize the obvious truth, that any agreement completed between the nations establishing such an international set-up is nothing more than a multilateral treaty between the nations involved covering their future behavior in relation to matters affecting the interest of the member nations, and the sanctity or effect of such a treaty or charter is limited to the moral responsibility of the nations involved and their continued sympathetic adherence to its principles and aspirations. World experience in the not too distant past is not calculated to impress us as to the enduring nature of international agreements. Experience has shown these international agreements having but transitory effectiveness, and they are broken or renounced with abandon in many instances whenever they interfere with expediencies affecting interested nations.

Because of the past demonstrated instability of such commitments, it is well for us to go slow before determining to make extended sacrifices of our American rights or sovereignty for the benefit of any world organization or to further its uncertain hopes in any international venture.

To that end the writer submits the following suggestions as to the scope and purpose of any international organization, as well as the extent we are willing to share in or to provide the force necessary to insure the effectiveness of its precepts and principles.

A condition precedent to our having any part of such an organization is unquestioned recognition of the following basic rights of people anywhere and everywhere in the world:

1. The right of self-determination by the affected people of any nation to choose for themselves any type or form of government they see fit, and to adopt, without any outside interference, such laws as they consider best for themselves and provide for themselves such guaranties for individual personal rights as they consider proper. The sole limitations on this right of any nation or people, to be that they in the exercise of that right do not interfere or prevent the exercise of similar rights to all other nations and peoples.

2. National pride and veneration by the people for their history and traditions and faithfulness and loyalty to same, are conceded to all nations and all people, and even recommended as a stimulant to progress and civilized advancement. This to be denied or restricted only to nations such as Germany and Japan, during the period these countries require to eradicate the aggressive military policy that has predominated in these countries in the past, and this restriction shall continue only so long as it takes these countries to uproot the forces of military aggression that has characterized their conduct as a nation in the past, and when Germany or Japan shall be able to convincingly show the membership of such international organization that they no longer harbor ambitions to dominate the world or other peoples, and are content to follow with other nations a policy of peaceful relationship with all nations of the world, then they to be admitted on equal terms with other nations in this international organization and conceded the same rights for self-determination and management of its internal affairs as all other nations.

3. The scope and purpose of this international organization to be strictly limited to a program to curb and restrain aggressive activity of any nation or nations against any other nation or nations, and to the use of such force as shall be required to effect that result. For the purposes of this organization aggression shall be held to include military activity and also the intrusion of nationals of one country into the affairs of other nations, and particularly aiding, abetting, or having any part directly or indirectly in any political organization or any activity designed to, by the action of such group, change, alter, or modify, or influence any such activity toward the existing form of government or order in that nation.

4. The force necessary to curb aggressor countries and implement the provisions of such international organization to be provided by the member nations in accordance with treaty commitments covering that subject. Such commitment to specify the volume of military and naval forces to be provided by each nation, same to be made available only on the order of the government furnishing such forces; such forces to remain under the command of its own leaders, and its use and activity limited to restraining nations attempting aggressive action against other nations.

5. Additional incentives for the compliance with regulations prohibiting aggression may be provided by trade sanctions or boycotts to discourage violations of this restriction against national aggressiveness.

6. The territorial integrity of all member nations shall be respected and protected from all activity of aggressor nations. Any future territorial acquisitions to any nation shall be the result of purchase and not of conquest.

7. Each nation to be conceded the absolute right to choose for itself economic standards it desires, and maintain same and support same by such laws and regulation as its people may consider proper and best calculated to better their interests. This reservation of right to include the privilege of imposing any export or import regulation or duty as such nation may consider proper or expedient.

8. The international organization to have no power to abridge the right of any member nation to enter into any trade program or practice it desires with any other nation or nations under any treaty that might be arranged by interested nations.

9. The sphere of action of such international organization should be divided into two classes: (a) Its authority to forcefully prevent aggression and intrusion into the domestic affairs by one nation against another. (b) Further activity of the organization to be limited to making recommendations on subjects its membership may consider to be of constructive value in contributing to the cause of world peace, and the good of people of the nation receiving such advice or recommendation. Each nation having conceded to it the right to accept or reject such advice or recommendation as it shall choose, and in so doing not to subject that nation or its people to any penalty whatsoever.

10. Each nation to be conceded the right to retain and maintain such military, naval, and air establishment as such nation may consider proper or advisable without interference by such international organization except the limitation as to its aggressive use.

Every fair-minded person will hope for the success of the San Francisco meeting, and all right-thinking people share in the hope of future peace. However, America must take every precaution to preserve the future of our national welfare.

Of late it has been a common practice by some of the over-the-deep-end-internationalists to recklessly label any person, who had the temerity to even question the wisdom of some plans involving the almost complete integration of this Government into some international super government, as isolationists. America has never been an isolationist Nation. As evidence of that fact, if American leadership and American proposals had been recognized and supported, Japan's venture into Manchuria would never have succeeded. If America's attitude had received sympathetic response from many of the nations who now profess such interest in the world peace and fair treatment of all people, the Italian venture into Ethiopia would have been prevented at that time. It is apparent, then, to anyone who makes any effort to face the facts, that these attempts to label America as an isolationist Nation in the past or to attribute the most of the world's present ills to that isolationism, has no real basis and is nothing more than a mischievous effort to saddle America with responsibility that does not rightfully belong to this Nation and to encourage America participating in some visionary world scheme that will not be conducive to the future good of the American people.

Such practice has served to deter many right-thinking people from giving adequate examination or criticism to some of the more extreme of these international proposals. It is to be hoped that fear of such reckless labeling of this country as isolationist, or such well-meaning people as isolationists, will not deter our delegates and later our Congress from taking all possible precautions to prevent our being inveigled into some plan of international government that will endanger our sovereignty as a Nation, our way of life as a people, and increase rather than diminish the prospect of future wars and future domestic dissensions.

While the purpose of these proposed international involvements may be lofty beyond question, yet it is a radical innovation and experiment. Perhaps a worthy experiment, but none the less an experiment and a very dangerous experiment.

Sacrifice, the Essence of a Mother's Love

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article, "The Good Mother," by the Rev. Godfrey Kaspar, S. J., which appeared in the St. Aloysius (Wash.) Bulletin of May 1945.

Father Kaspar is an old friend of mine who is celebrating the twenty-fifth anniversary of his ordination to the holy priesthood next month. In my opinion, he personifies the great spirit of the Jesuit Order of which he is a member and I shall always cherish our friendship.

In the following article, Father Kaspar sets forth the criteria of the good mother. As he says, "a good mother is the greatest need in the world today." Because on Sunday, May 13, we honor the mothers of the world, who have loved, suffered, and sacrificed so much, I feel that his words are particularly fitting:

THE GOOD MOTHER

Mother! 'Tis the sweetest word in the language. 'Tis the first that springs from the heart and the first uttered by the tiny babe. It possesses charm that never grows old. Man may forget everything this world holds near and dear, but he cannot forget the word mother; her image remains within his breast amidst the greatest ruin. Even when mother is gone, we fancy we see her rise up before us—one whose memory grows more entrancing as the years stretch out between us.

A mother is the noblest personification of love. She is at once the ideal of the most lovable dignity and power, wielding the most irresistible and fruitful influence.

Dignity designates the rank that one being holds among other beings. In the human order nothing is higher, nothing nobler than the dignity of a mother. She cooperates with God in the creation and training of His masterpiece upon earth—man. Not only does she bring forth and nourish man, but she rears and fashions him; she gives him the finishing touch and makes him all that he is to be. It is at the mother's knee, in her arms, under the touch of her caress, by her tears and sacrifices that the heart of the child is fashioned. "Here is the sublimest mission," Cardinal Gibbons says in the Ambassador of Christ, "poverty and old age do not degrade a mother; only her character, her soul may ennoble or degrade her."

Every dignity imposes a duty. No man is greater than his mother; therefore the duty of this uncrowned queen of the home should be to cultivate the virtues of the home. Her radiance adorns the home; her labor beautifies it; her love makes it holy; her faith puts heaven into it. Should a mother think her life narrow and obscure? From her relative obscurity the mother's dignity sheds a great influence. Like all latent forces, the mother's influence, though hidden, is the more powerful; it is like the blood that circulates through the body bestowing life in a divine silence.

A good mother is the greatest need in the world today. Give the Nation good mothers and you give it safety, for its safety is better kept by domestic goodness than by trained armies. Give the Nation good mothers and you give it good laws, for the character of its

laws reaches back to the mother. Give the Nation good mothers and you give it greatness. If we would make the Nation glorious we must make the home good. A nation does not rise above its homes. The people of our country can never be greater than the cradles of our nurseries. The surest way to lift the country is to lift the home. If we take care of the home the Nation will take care of itself.

The origin of the mother's influence and power lies entirely in her love. It is her love that changes the poorest cottage into a paradise; and the lack of it changes the grandest mansion into a tomb. Love's shrine is the heart. Love is the mother's duty and happiness is the outcome. She lives for the child for her womb and loves it. The child that dwelt near its mother's heart is attracted by a secret, sympathetic but always conscious love. A mother loves more than anyone else and surely she has a right to be loved more than anyone else. It is nevertheless true that she loves more than she is loved; children receive more than they know how to give. The object of a mother's love is her child; therefore, she fashions its mind and heart; she teaches her child to know and love God. Her loving influence permeates the entire home; it is carried beyond the walls of the home in her sons and daughters armed with respect, purity, obedience, cheerfulness and affection. It continues through generations long after the mother's death.

A mother's influence is shown in sacrifice, for sacrifice is the most precious jewel in the crown of love. It is the duty of every mother to model herself on the divine Victim of Calvary. Sacrifice is the law of salvation; it governs individuals and society; it is the essence of Christianity it is the essence of the home. It finds its highest realization in the mother's heart. In sacrifice lies a mother's greatness, strength, beauty, and joy. She gives her life for her children. Like the Sacrifice of Christ, hers is personal. She never considers herself; never seeks herself, but always thinks of others and forgets herself for them. Like Christ, a mother sacrifices herself for all—for father and for all her children.

A mother's sacrifice too is perpetual. Christ immolates Himself today, tomorrow, every day and at all times. The life of a mother is a sacrifice that has no end. She never thinks herself too much a mother; she never feels that she has suffered enough for the happiness of her children. She often stands on Calvary and watches her children dying and passing into eternity.

Courage, mothers! Draw the secret of immolation and love from Christ. In the bitter hours of life, when the cross weighs heavily upon you and your heart is about to break, go up to Calvary and behold Mary bringing forth, in union with her Son, in the greatest anguish, that most sweet fruit, the world's redemption, the eternal salvation of mankind.

Such is your task, mothers, bringing forth God's children into the world and unto salvation. You may have seen mothers fail—ah, good mothers can never fail.

GODFREY KASPAR, S. J.

Statement of the American Tariff League

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement for the American Tariff League before the Committee on Ways and Means of the House of Representatives by H. Wickliffe Rose, member of the tariff league's executive committee:

The American Tariff League is over 60 years old. In its constitution the object of the league is declared as follows:

"The object of this league shall be to carry on continuous research into all the facts and forces brought into play in trade between the nations, and to make these facts available in an educational effort designed to provide a better understanding of the effect of these forces on the prosperity of American labor, agriculture, and industry."

In pursuance of this objective a statement of principles and recommended program was made in January of this year and a copy is submitted herewith.

Membership of the Tariff League includes not only those who produce for the domestic market but those who export and import as well. Thus the league is interested in both the domestic and foreign markets and in the proper relative proportion. Membership of the league includes 82 different industries and divisions of agriculture.

The league is actively interested in the broad objectives of enduring peace, increasing standards of living in this and in other nations, and economically sound international trade and the postwar achievement of maximum employment in the United States.

H. R. 2652 is offered in the guise of an extension of the Trade Agreements Act of 1934 as several times extended. The Trade Agreements Act (sec. 350 of the Tariff Act of 1930), at least, had the virtue of staying within the limits of allowable change as provided in the act of 1930. H. R. 2652 does not even have this merit. It is therefore not a mere renewal of the Trade Agreements Act. To the contrary, it would authorize changes in tariff rates much greater than authorized by Congress, either in the tariff law of 1930 or in the Trade Agreements Act of 1934.

The Tariff League has always been opposed to the Trade Agreements Act, not only as being unconstitutional, but because it is wrong in principle. H. R. 2652 makes the defects in the original law even worse, and the league is, therefore, opposed to its enactment.

There is a fundamental point at stake in H. R. 2652 in the trend from constitutional toward autocratic government. The method of autocracy in the Axis governments is the very enemy against which we are fighting, and yet this resolution asks not only that Congress extend further, after 11 years, its temporary grant of authority but still further to abdicate its responsibility by increasing that grant of authority to the executive branch of the Government.

If the extension of the Trade Agreements Act were necessary as a temporary war measure, that would be quite a different consideration. But the present proposal contained in H. R. 2652 is offered as a part of planning for the future. It is thus offered to forestall some future emergency under conditions which are impossible to predict.

We respectfully submit that the economic system of the United States, the welfare of its citizens, the international trade of the world, and the prospects for a durable peace are subjects of greater importance and complexity than can be well served by the present proposal. It is time to give up expedients and to prepare for fundamental solutions.

The formula in support of the drive for reduced United States tariffs is familiar to everyone:

1. We must have maximum employment—referred to by some as 60,000,000 jobs.

2. That calls for production as great as, or greater than, the present abnormal rate.

3. This country cannot absorb such production, and so the surplus, greater than ever before in normal times, must be shipped abroad.

4. The foreign buyers must be able to pay us by shipping goods here in return in much greater quantities than ever before in history.

5. Tariffs must be reduced in order to admit such unprecedented quantities of goods.

There the formula ends; but why? What of maximum employment when all that imported goods reaches our domestic market? Can we provide maximum employment in jobs that will be noncompetitive or that will compete successfully in our domestic market against exploited labor and low wages in all the rest of the world? The formula is never carried through this final step to complete the circle because the viciousness of that circle becomes only too apparent.

This resolution is offered on the theory that United States tariffs must be lowered to permit imports of competitive goods on an unprecedented scale so that exaggerated exports might be paid for. It is generally agreed that exports can best be paid for through imports of goods and services, but if such a volume of foreign competitive goods should come in there would be serious interference with our goal of maximum employment.

If we lead other nations to believe that we can and will accept such a volume of imports, we are dangerously misleading them and such a course is not conducive to peace and friendship. (See Postwar Fiscal Problems and Policies published by the Committee of Americans, 122 East Forty-second Street, New York, N. Y.)

While an exaggerated number of jobs is held up as the goal in the United States, H. R. 2652 would strike down many lines of production in which there is the possibility of providing much of the maximum employment we need.

I want to make it entirely clear that the American Tariff League is not opposed to tariff changes per se, provided the need for change and the permissible amount of change shall both be determined by an economic yardstick provided by the Congress, which shall be used to achieve definite objectives also provided by the Congress and of which maximum employment in the United States would be a most important one.

In his message to Congress on March 26, the President emphasized the fact that most of the authority to reduce United States tariffs had been used up under the existing Trade Agreements Act. What was not emphasized was the fact that, despite all the reductions already made by the United States, there is comparatively little real mitigation in the trade barriers of foreign nations. Another drastic cut in United States tariffs, as here proposed, again would secure little by comparison in the way of foreign reductions, even though the result to our own economy could be disastrous.

Also, in the message of March 26, some figures were given to show that under the agreements there had been in both exports and imports an increase with the agreement nations almost twice that with the nonagreement nations. This misleading deduction was reached, however, by including in the nonagreement nations those which were at war in the later period. If those nations are excluded from the calculation, then the increases in our trade with agreement and nonagreement nations were almost identical. This is to be expected when we consider that all concessions made under an agreement by the United States went to all the world, Germany excepted.

Furthermore, between 1934 and 1939, while total United States exports did increase in physical volume, as did those of all principal nations, they reached only 80 percent of the peak volume of 1928–29. The total of the physical volume of imports increased to the peak of 1929, but the increase in agri-

cultural products was greater than in manufactured goods, and the drought of 1934, 1935, and 1936 partly accounted for that increase. Since the net result of our foreign trade during this period of lowering our tariffs was an increase of imports much greater than that of exports, it becomes obvious that the trade agreements did nothing to aid employment in this country.

Furthermore, and this is not often acknowledged, many other nations either will not or cannot follow our lead in tariff reduction. In the first place, most nations, unlike the United States, derive a great part of their national revenue through tariffs. (See our study, Customs Duties or Tariffs as a Source of Revenue for Central and National Governments, copies of which are provided herewith.) For them substantially to reduce tariffs would mean finding a replacement of the lost revenue. Besides, many nations are planning new or increased protection to new productive enterprise, as was brought out at the recent Mexico City Conference.

The concisely stated objectives of the tariff act of 1930—the protection of labor and the encouragement of productive enterprise—are just as important today as when written. If we in the United States are to be of real help in reconstructing a torn world, it is imperative that we maintain the only possible basis for such help, which is maximum prosperity within the United States.

We offer here in outline form, and in more detail in our written brief, the framework of a program which we believe can place this country in position to trade with foreign nations on a businesslike basis and thereby to take steps toward our mutual goal of busy, prosperous, and peaceful lives.

The American Tariff League believes that in any legislation intended to further international economic cooperation through tariff changes, certain important principles should govern United States action.

Changes in United States tariff rates should not be made except in connection with stability in foreign exchange rates. Assuming stability of exchange, no reductions in United States tariffs should be made that will result in undue injury to an efficiently conducted American productive enterprise.

The principle of flexibility in United States tariff rates to meet unforeseen changes in the conditions of world competition should be restored to full operation.

In determining what is a proper rate of United States tariff, a well-defined economic yardstick should be used, including the differences in wages in this and competing countries as such are reflected in unit cost of production.

Our specific recommendations are that Congress should—

1. Reassume its constitutional duty to regulate commerce with foreign nations and to lay and collect duties.

2. Restore the flexible principle in the tariff act in such form as will provide for changes in rates up or down as such may be found necessary because of changing economic conditions.

3. Define the economic yardstick by which the necessity or the reasonableness of a change is to be decided. In section 336 of the Tariff Act of 1930, differences in cost of production are used as the measurement. This is reasonable in the case of competitive goods if these factors are taken into account: (a) Whether United States production is efficiently conducted; (b) the effect on the cost of a unit of production of differences in wages, taxes, or other such factors which are beyond the power of technical efficiency to overcome.

4. Provide that changes in United States tariff rates be made in accordance with the yardstick of measurement provided by the Congress.

5. Restore the constitutional right of United States producers to be heard and secure action where injury is claimed as a result of change in tariff rate.

6. Provide for mandatory action under the antidumping law of 1921 and under sections 337 and 338 of the tariff law of 1930, dealing with unfair practices and discriminatory treatment;

7. Provide for mandatory adjustments to equalize fluctuating exchange rates in the future, or exchange rates which are substantially different now from what they were when existing trade agreements were made.

We recommend further that Congress reorganize the United States Tariff Commission so that it again will be an independent agency operating under well-defined purposes and rules laid down by the Congress. If in addition, it were made a quasi-judicial body, it could make findings of fact and decisions based thereon; it could decide on rate changes which, if not disapproved within a certain time by Congress, would be proclaimed by the President.

We disagree with the theory voiced in support of H. R. 2652 that an industry is inefficient which needs tariff to enable it to compete fairly with foreign production. In automobiles, there is not the same percentage of skilled labor in the cost per unit of production as in pottery, for instance. The higher the percentage of labor, the more jobs will be lost by forcing an industry out of the country. Similar machines produce at the same rate in foreign countries as here, their labor is equally skilled abroad, and only because they are paid less can they produce goods cheaper. Our automobile industry, highly mechanized and considered superior in efficiency, enjoys a tremendous domestic market which makes high mechanization possible. Reduce that market and the same industry will become less efficient, for its labor per unit produced will become higher, as will its costs.

Our textile industry, for example, is dependent on tariff. It is pointed out by proponents of this resolution that the average wage in the textile industry is below that in the automotive industry. That is true, and it is so because, even with tariffs, our textile workers are competing with those of the rest of the world, which are paid much lower wages. We cannot afford to drive important industries and pay rolls out of our country without sacrificing employment, and yet, discouraged by this act and the policy motivating it, the prospects of building new plants here after the war not only are diminishing, but a number which otherwise would be here, are actually being planned and built abroad at the present time.

We only lose job opportunities by importing goods in which labor cost is high in order to export goods in which labor cost is low.

More than twice as many jobs are provided in cotton manufactures in producing $1,250,000,000 worth of goods than are provided by motor vehicles in producing $3,000,000,000 worth of goods. (See Statistical Abstracts of United States, 1940). Since the principal argument by proponents of this resolution is to provide dollars here for imports to pay for our excess in exports, it must not be overlooked that by sacrificing industries protected by tariff, we would lose more employment than we would gain, and thus defeat our major objective.

We need to raise the standard of living of our marginal and low-income groups and thereby create a greater market in the United States, in addition to what we do to increase sound foreign business. Industrialization in the South is offered as a logical solution of the cotton problem, but that solution is not practical so long as our policy is to drive the means of production abroad.

For this same reason, foreign countries will insist on protecting their industries. As we have the policy of helping them raise their standards of living, it will be inconsistent for us to ship them the means of production, and then to trade them out of the tariff necessary to produce. The Latin-American countries made this very clear to us at the recent Chapultepec Conference. As a result of their position taken at that Conference, Brazil, the following week, raised their tariff on several articles 105 percent.

And yet, advocates of this resolution say that there is no time like the present to lower tariffs, that while whole industries are patriotically working on war materials under all the various difficulties involved, now is the time to make it impossible for those industries to reconvert or ever again to produce profitably their normal goods. If any such deep injustice were done, it could result in the very reactionary wave of isolationism which all of us interested in enduring peace are working to prevent.

Are most of our imports subject to tariff? The general impression given is that they are. In the early days of the Republic that was the case, but an increasing percentage has been placed on the free list, until in recent years about 65 percent of all imports entered the United States duty free.

Are United States tariffs high? The general impression is that they are. Two studies, one in 1942 and another completed only in February 1945, show the contrary to be the case, most nations having higher tariffs than the United States. The second of these studies is more complete than the first and makes an entirely different approach, yet both are in agreement on the principal conclusion. (You received copies of the earlier study 2 years ago, but we are providing an additional copy herewith. Of the second study, we are providing copies for all members of the committee.)

It should be realized that the other barriers to trade, such as quotas, prohibitions, exchange restrictions, preferences, etc., are far more restrictive than tariffs, and yet if all these were removed, other nations would still have tariffs higher than those in the United States.

One of the barriers in our own tariff lies in the fact that we discriminate against the higher wage countries in favor of the lower wage countries. While two of the principles of our foreign policy are to give equal access to our market and to raise standards of living abroad, on the basis of foreign valuation we actually collect less duty from the low-cost country and thus increase the advantage already gained and actually encourage the exploitation of labor. The Trade Agreements Act does not take this into account and, therefore, any legislation to replace that act should include a provision to base all duties on domestic valuation.

The American Tariff League advocates as the basic principle of tariff that a domestic producer in an efficient industry and plant, should be in position to compete in the domestic market on an equitable basis with a similar foreign product. This does not mean high tariff. It does not mean low tariff. It means an equitable tariff.

An equitable tariff is not a barrier. It has the effect of stimulating trade. We all agree that fair competition is stimulating to business, and it is no less true when an equitable tariff is employed to make competition fair between domestic and foreign producers.

Of still more importance, and a point that is seldom discussed, tariff has a profound influence on the flow of the means of production in and out of a country. This act has the purpose of stimulating the flow of products, but not much has been published about the effect of tariff on the flow of the means of production in or out of this country. Our economy is based on pay rolls of production. Trade and services are important, but they depend on production. If tariffs are lowered beyond the level of equity, and the means of production are forced out of the country in order to employ cheap labor, then our economy suffers accordingly.

On the other hand, the presence of an equitable tariff causes a flow of the means of production into this country and fosters the growth of industry, employment, and pay rolls. For example, because there was a tariff, the entire rayon industry in the United States originally came from Europe, including patents, technology, know-how, some employees, and in many cases, capital. For 35 years those pay rolls have been pouring into our communities. Without the tariff, the European producers would have been content to ship the product here, until the war, when, like silk, the supply needed in the war would have ceased. Another example is our organic chemical industry, built here after the last war. Where would we be in this war without that industry, which has been dependent on a tariff? Is it isolationism to foster the very industries which are necessary for our national defense? We believe not.

This leads to what we consider to be one of the basic questions involved in the Trade Agreements Act. Should changes in our tariff be made piecemeal in an atmosphere of international political trading, when many other considerations than the exchange of goods become involved? We believe not, and so offer these recommendations in order to keep the complex subject of tariff in its true proportion to the other factors, and on a business-like, continuous, and up-to-date basis.

Finally, we recommend that, instead of H. R. 2652, legislation be prepared as soon as it is practically possible to replace the Trade Agreements Act, that all rates remain unchanged meanwhile, and that after the enactment of the legislation recommended, a review be made of all rates, whether or not they were established under a trade agreement.

We wish to thank the committee for this opportunity to appear before you, and we wish to call your attention to our written brief submitted herewith.

Foreign Trade and Shipping

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith two editorials, one from the New York Times and one from the Washington Post of May 10, 1945, with reference to the recently released sixth report of the Special House Committee on Postwar Economic Policy and Planning on the subject of foreign trade and shipping.

The editorials follow:

[From the New York Times of May 10, 1945]

TO REDUCE TRADE CURBS

The special House Committee on Postwar Economic Policy and Planning has issued a report which makes recommendations on so many leading economic questions that it could hardly expect agreement with every one of them. But the report produced by the committee is, on the whole, an admirable document, one of the most carefully thought out and balanced sets of recommendations, indeed, to come out of any congressional committee in recent years.

The recommendation of the committee that has attracted most immediate attention is that an international conference should be called as soon as practicable to establish a general policy of reducing barriers to world trade. This is wholly desirable. But two steps should obviously precede it. The first is for Congress to extend the Reciprocal Trade Agreements Act, which is due to expire in a few weeks. This law in itself provides, so to speak, for a series of international conferences, country by country, to make mutual reductions of tariff rates. The second step is for Congress and the administration to make up their own minds, and perhaps even to state clearly in advance what concessions they are ready to offer to other countries if they can obtain similar concessions in return. For unless we are willing ourselves to make substantial concessions of this sort, there would be no hope for the success of a world conference to universalize such concessions.

Once these two steps are taken, it is clear that there is much that such an international conference could achieve. For high tariff rates are not the only barriers that can stand in the way of international trade. Even more disrupting controls, as the special House committee recognizes, were developed during the thirties—import quotas, export subsidies, blocked currencies, exchange controls, bilateral trade pacts, and all the rest. World agreements could be made restricting or abolishing such devices. Agreements could be made, also, either prohibiting cartels or compelling public registration of international cartel agreements. If such world agreements were reached, an atmosphere could be created in which any international bank or fund would have a far better chance to work successfully.

These are some of the ends we could reach by a world conference against trade restrictions, once we have ourselves recognized that we have nothing to gain from such restrictions.

FOREIGN TRADE POLICY

The Colmer committee has outlined a foreign economic program for the United States, the aim of which is "to establish the economic foundations of a durable peace and to assist in providing high and expanding levels of income at home and abroad." Specifically, the committee favors continuation of the Reciprocal Trade Agreements Act, with increased authority to reduce tariff rates, and recommends speedy calling of an international conference to consider reduction or elimination of all sorts of trade restrictions, such as tariffs, import quotas, export subsidies, and exchange controls. The Post has frequently suggested such a conference.

While refraining from outright endorsement of the detailed provisions of the Bretton Woods agreements, the committee evidently approves the essential features of the program for establishing a world bank and an International Monetary Fund. Its advocacy of intergovernmental commodity pacts and opposition to restrictive private cartel practices are in general accord with the views expressed by various spokesmen for the Department of State and the Department of Justice. While the committee realizes that we shall need a much larger post-war merchant fleet than we had before the war, it concludes that the volume of subsidized merchant shipping should be limited to the tonnage necessary for national security. The question of size and type of vessels required for defense purposes should be determined, it suggests, by the Army, Navy, and Maritime Commission.

Most of the recommendations contained in the report are in conformity with administration proposals for reducing or eliminating barriers to international trade. No new ground is broken and no original contributions have been made to solution of the post-war foreign trade problems that confront this country. Nevertheless, the report is a highly valuable document. It explains clearly why an expansion of our foreign commerce after the war would contribute to the peace and prosperity of the world. And it shows why the achievement of a balanced trade expansion is dependent upon a many-sided program of action.

For example, foreign loans and investments by the United States will be needed to rehabilitate the industries of war-devastated countries and to build up the industries of undeveloped areas. The international monetary system will also have to be reconstructed after the war to prevent resort to restrictive systems of exchange control and competitive currency devaluation such as throttled trade during the thirties. Commercial policy—of which tariff policy is only one aspect—is likewise an integral part of the foreign economic program, but the committee does not elevate it to a position of supreme or even chief importance. Instead, the report emphasizes the fact that the success of a program to reduce trade barriers is "to a large extent dependent upon preventing serious depressions and upon establishing a workable international monetary system." As a result, our post-war commercial policy will necessarily be closely connected with our domestic employment policy and our monetary lending policies.

Not all the committee's recommendations will meet with approval outside Government circles. But advocates and dissenters alike will profit by reading the report because of its clear exposition of the basic principles underlying foreign trade and its penetrating analysis of the relation between our import trade and world prosperity.

Problems of Small Business

EXTENSION OF REMARKS

OF

HON. SHERMAN ADAMS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. ADAMS. Mr. Speaker, few people realize the importance of industry, especially small industry, to the very existence of New England. That importance is not simply to the prosperity of New England communities, but to their very survival. Neither New England, nor the community life which has grown up around so many little industries throughout the countryside, could continue to exist unless small industry continues to provide the livelihood upon which the worker and his family depends. This applies not only to all of the New England States but to New Hampshire in particular.

There are few people who realize, even in New England, that a greater proportion of the number of people who work for a living in New Hampshire work in small industries than in any other State in the Union. In a sense, New Hampshire is the most highly industrialized State in the country. Questions that bear upon the prosperity and survival of small business are, therefore, of the utmost importance to New Hampshire people. The problems of small business are New Hampshire problems. Questions involving the taxation, geographical distribution, the maintenance of a free market, and countless other questions affecting small industry are of importance, not only to workers, communities, towns,

counties, but to the State as a going, progressive enterprise.

The importance of the consideration which we give these questions is indicated in a resolution adopted by the Northeastern States Development Agencies Conference which, under leave granted me to insert, follows:

Representatives of the development agencies of the Northeastern States, including Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont, having conferred on matters of mutual concern and interest at a meeting held in New York City on May 3 and 4, have unanimously adopted the following resolution:

The Northeastern States were the cradle of liberty and economic progress and are the heart of the commercial and industrial life of the Nation.

These States are the homes and workshops of nearly one-third of the people of the Nation, and therefore America's greatest consumer market. At the same time they stand as the chief gateway for the exchange of goods between this country and the rest of the world.

We combine a rich experience in industrial skills, business judgment, and advanced labor relations with a wealth of youthful ideas and energy, and shall continue to expand our contributions to the benefit of the entire country.

We are continuing, as ever, to lead the way in progressive government and business measures for the benefit of all peoples, everywhere. Our histories have demonstrated that economic and political freedom are not merely compatible but complementary.

It is the sense of this meeting that the post-war prosperity of the Nation, particularly the reemployment of our returning service men and women, is the first order of business of the development agencies of the Northeastern States. To achieve this high objective the Nation requires the mature experience and skilled workmanship of the people of the Northeastern States.

In peace as in war, we take pride in the industrial development and prosperity of our entire Nation, and shall continue to give our best efforts and know-how to the end that all States will profit from the contributions of each, so that economic expansion can be general.

We shall continue to resist any effort to destroy the national free market, the birthright of every American, or to erect artificial trade and industrial barriers between States or regions, or to grant any special privileges to any sections of the country at the expense of the others. Opportunity for growth is unlimited throughout America, and we shall all prosper as we expand together.

Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Carl H. Wilken, economic analyst, Raw Materials National Council, Sioux City, Iowa, prepared and presented in behalf of the National Association of Commissioners, Secretaries, and Directors of Agriculture and the Raw Materials National Council, Sioux City, Iowa:

Mr. Chairman, members of the Ways and Means Committee, this is either the third or fourth time I have appeared before this committee in regard to trade agreements and the effect of tariffs. My testimony in previous hearings has been based on the record of the United States in the past.

In previous testimony I have pointed out that our raw-material income and especially our farm income is the governing factor in our economy. This basic fact has not changed even though conditions have.

Since my last appearance before this committee, I have carried on a detailed study of our economy and the correlation which exists between the various segments such as agriculture, employment, mining, manufacturing, transportation, trade, etc. The gross farm income in the United States is the foundation from which all the others ratio out, with almost mathematical precision.

The Curtis Publishing Co., of Philadelphia, after checking the analysis, the various graphs and tabulations, published an article in regard to our research work in the December issue of the Country Gentleman.

The article was entitled "The Key to Prosperity" and in it they accepted the basic laws of exchange and ratios that we found in analyzing the past record of the Nation. The ratio is quite simple, namely, that in the United States each dollar of farm income creates a dollar for factory pay rolls and $7 of national income.

The United States Chamber of Commerce in their report on agricultural income in April 1944 also pointed out the quite constant ratio of $1 of farm income to $7 of national income that apparently exists.

No one has been able to refute this ratio, which we first presented to a subcommittee of the United States Senate in Sioux City, Iowa, at a farm hearing in 1937. The ratio has not changed since that time, even with a war economy, but there are those who ask, "Well, how do you know the farm income comes first?" To a man with a practical nature, the very fact that a man must eat before he can work should be proof enough. For the benefit of the committee, I want to point out briefly why in our capital form of economy the farm income is the governing factor.

In our Nation we have, roughly, 9,000,000 business units, of which approximately 3,000,000 are nonagricultural. The other 6,000,000 business units are our 6,000,000 farms. Each of these farms is a business unit producing and processing products for trade and commerce, and the capital investment in each on the average is as large as the average capital investment in the 3,000,000 which are nonagricultural. Therefore, it ought to be self-evident that with agriculture having two-thirds of the capital investment in productive enterprise in the United States any rise or fall in farm income automatically creates a rise or fall in the income of the Nation as a whole.

With this ratio of income in existence, this committee can have a quite accurate yardstick to gage the results of any action which it may take in regard to tariffs or post-war taxes.

Any legislation which tends to reduce our farm income, either through curtailment of production or lower prices to the extent of a billion dollars, will automatically force the wiping out of a billion dollars of factory pay rolls and $7,000,000,000 of national income. Greater reductions pyramid according to the ratio.

The loss of such income is automatically reflected in less tax collections and a loss in employment because of the reduction in consumer buying power throughout the Nation. Our loss in foreign trade will also ratio to our loss in farm income. For example, in 1938 our imports dropped to $1,960,000,000 from a total of $3,083,000,000 in 1937. The trade agreements were in operation, and the drop cannot be blamed on tariffs, which, in my estimation, are a barrier to trade only when they are above or below the American parity price level, and even then to only a limited extent.

The real barrier to trade in the United States and the rest of the world is the price of raw materials and the resulting loss of purchasing power when farm prices drop. The loss in imports was the result of a drop in farm prices. In 1938 our gross farm income dropped over $1,000,000,000 and our national income dropped over $7,000,000,000, or in ratio to the formula I have given you.

A similar happening took place from 1929 to 1932. With a drop of over $6,000,000,000 in farm income from 1929 to 1932, our national income dropped approximately $45,000,000,000. This loss in farm income caused the wiping out of almost all our domestic and foreign trade with the exception of the necessities of life such as food and clothing and transportation.

The facts which I have pointed out to you are not theory, but the record of what took place.

Instead of correcting the price of agricultural products, we brought forth the trade agreements and various other measures as a cure. The only real measure of success which we had in the period from 1930 to 1940 was to increase the national debt.

The trade agreements were brought forth to increase the exports of farm products. The facts were that no power on earth could have restored our exports of farm products because our agricultural economy has been deficient ever since 1922.

It is true that in the case of cotton and wheat we had a surplus of about $400,000,000, but in spite of this our net imports of farm products from 1934 to 1941 ran about $600,000,000 per year. In 1941, with consumer buying power restored in the United States, our net imports of farm products were over a billion dollars.

Since 1910–14 our exports of farm products using that period as a yardstick of 100 dropped progressively to 49.4 percent in 1940, while on the other hand our imports increased progressively to 209.8 percent.

This record is positive proof that our agricultural tariffs since 1922 have not been a barrier to imports of farm products.

In the period 1910–14 up to 1940 our farm production increased 32.5 percent while our population growth was 38.9 percent. In spite of all this we passed and are asking for extension of the trade agreements to dispose of surplus farm products. Since 1940 our increase in population, on the basis of our American income level, is a greater market than all our export trade in 1940. In addition an increase of $80 per year in the wages of our 55,000,000 workers is equivalent to all exports in 1940.

The simple facts are, gentlemen, that our foreign trade depends on the production of American products and the price we maintain on them. Our foreign trade is merely a byproduct of our American economy.

I think I can prove this to better advantage by pointing out that of the 9,000,000 business units, nonagricultural and agricultural, all of them put together exported products equal to less than 5 percent of our national income during the 1933–40 period. I would like to point out in addition that of the 3,000,000 nonagricultural units, 96 percent of them employ 19 men or less. I have pointed out that the two-thirds of our capital industry agriculture had net imports of its products. With 96 percent of the nonagricultural units employing less than 19 men and many of them domestic trade and service units, it should be quite apparent that the only group who receive any benefit from the trade agreements are the large industrial groups, sometimes called

the "economic royalists." They hire the best economists and that may give the committee the reason why a large percentage of our economists are for the trade agreements.

The depression of 1929 was completely misinterpreted by our economists. It was not due to lack of foreign trade because our Nation has had more than its share of world trade. With only 6 percent of the world's population we have been having, good times and bad, about 15 percent of the world trade. We might ask ourselves just how much are we entitled to? It appears that if we reach out for a greater percentage than we now have we may get into quarrels with other nations.

We have had tariffs ever since the first session of the first Congress. During all that period of over 150 years we have outstripped all the rest of the world with both a higher living standard and a much greater increase in our own productive capacity.

This being true let us also ask ourselves the question, Why all the effort to obtain foreign trade when we can produce everything with the exception of 5 percent in the United States. Any attempt to increase our foreign trade will force us to reduce our own production and therefore be against our own interests and the world as a whole.

Our position in the world of tomorrow should be that of a referee and not that of a commercial power. To put us in a position of exporting manufactured goods in exchange for raw materials will be a direct repudiation of the Atlantic Charter. In the Atlantic Charter we proclaimed that we were going to make raw materials available for all the world. With only 6 percent of the world's population we have 25 percent of the available war material supplies and we cannot live up to the Atlantic Charter and import raw materials which other nations should have.

The real cause for the depression in 1929 was not tariffs but a complete break-down in the world's monetary system. Devaluation of foreign currencies had the indirect effect of wiping out most of our tariffs before the trade agreements program was put into operation. The result of this break-down in world price levels forced our price level to follow because we did not adjust our tariffs to offset the currency devaluation.

The break-down in our price level in the 1930–41 period forced the United States to suffer a loss of approximately $67,500,000,000 of farm income in the 12-year period and in turn a loss of $473,000,000,000 of national income. Of this loss approximately $25,000,000,000 was our loss in export trade that we could and should have had with proper tariff protection.

If through the trade agreements, Bretton Woods, Dumbarton Oaks and other announced policies we permit our price level to be reduced to the 1939 level, our Nation will take a loss of $75,000,000,000 per year. I therefore urge this committee to tread slowly on unknown waters.

In order to give the members of the committee an idea of the loss which their own States will suffer, I will give a few examples.

My own State of Iowa, by being forced to produce and sell at the 1939 level, will lose a billion dollars. New York State, which has often been a promoter of high tariffs for industry and low tariffs for raw materials, because of its investments in industry, will lose over $8,000,000,000, or more than all the foreign trade that we can hope to gain under a program of W. P. A. loans to the rest of the world.

The State of Virginia will lose a billion dollars; Michigan will lose $3,000,000,000 and incidentally a market for about 3,000,000 cars; Illinois, five billion; Ohio, four billion; and California, five billion.

Our total farm income will drop off $10,000,000,000, our factory pay rolls will be reduced $10,000,000,000, retail sales will be off $45,000,000,000 from our present potential, and we will have 20,000,000 unemployed.

I am here merely to warn you of what can and will happen if some of the announced policies and plans are carried out. I am for all the foreign trade which our economy will permit, and I am for the restoration of a sound world monetary system as a foundation for world peace. It cannot be done, however, by bankrupting the United States.

I have followed the meetings at Dumbarton Oaks, Bretton Woods, the meeting in Mexico, and have read of how the trade-agreement program is the cornerstone of them all. The program which is being proposed and planned in behind the scenes will force our price level back to the 1939 level and will bring about the results I have mentioned.

We are seemingly throwing all caution and leadership to the four winds and placing the resources of the United States in the hands of the rest of the world to use and price as they see fit. With our production and resources priced at the world level, we are a bankrupt Nation.

I don't think that this committee wants that to happen and we don't have to permit it to happen. To prevent it, however, we must present a program to the rest of the world which will permit a solvent United States. Instead of a program which would have us join world poverty we must have one in which the rest of the world can join us in prosperity. Such a program can be offered.

Let us analyze briefly foreign trade and commerce. The ability to buy depends on one of two things, income obtained through credit by the buyer or a price for the production of each nation so that they can earn the income for exchange.

The world economy of the past has been based primarily on loans. Because of an exploitive price level which prevented the repayment of loans the world banker, England landed in bankruptcy. Now we are being asked, through the Bretton Woods agreement, to underwrite world trade and through the extension of the trade agreements maintain a low price level which in turn will mean that the loans will never be repaid.

And what have we to gain? A few weeks ago I attended a meeting addressed by Mr. Clayton, and one of the points he made in favor of the whole program which we are being asked to rather blindly accept was that it would employ about 6 percent of our labor force in export trade. He forgot to mention that if we were to be paid for the exports with imports we would also import at least the same labor equivalent. The simple facts are that foreign trade paid for with goods will not increase our employment. Of course, if we wish to make loans to buy our own goods, then we can gain employment for the time being. But even then at a very high cost. At present levels it costs roughly a sum of $3,000,000,000 to create a million jobs. Or, stated in another way, 50,000,000 workers at $3,000 per year create the buying power for the Nation as represented by $150,000,000,000 of national income.

There may be some doubt in the committees' mind that present plans will bring about 1939 price levels. I would like to give you my reasons for that conclusion.

In the first place, approximately 60 percent of the world's population is earning 20 cents a day or less. They have no great buying power, and if our raw-material producers are forced to compete at that level even our efficiency cannot meet their ability to buy.

As examples of these imports, I want to give you a few samples as given in the plans of the National Planning Association, 800 Twenty-first Street NW., Washington, D. C., in regard to future world trade.

They expect to bring in, for example, 2,000,000,000 pounds of fats and oils which, of course, will compete with cottonseed oil, butter, lard, and other oils, 1,000,000,000 pounds of meats, 1,000,000,000 pounds of burlap, 1,000,000,000 barrels of petroleum, 600,000,000 pounds of copper, 1,000,000,000 pounds of zinc, and practically all our needs of manganese. The prices listed are such that if the program is put into operation it will close our mines, force down the price and production of agricultural products, and the resulting loss in income I mentioned.

The names listed in this planning association are very close to and in accord with the sponsors of present plans for peace and trade. The world cannot recover without a solvent United States, and to me the plan means chaos. Smaller nations, of course, had no choice and accepted what was offered.

If a program had been worked out to give nations a proper price for their product they would have, in my opinion, accepted even more readily. With a proper price for their products to earn exchange they wouldn't have to borrow money.

The Bretton Woods agreement, in my estimation, practically threw gold and silver to the four winds as monetary metals. In theory they have evidently decided that scraps of paper are just as good. It is my frank opinion that the two-thirds of the world which does not have a banking system such as we have will want coinage or hard money. If that is the case, which I think it is, why not be realistic and have metal coinage as a foundation for world exchange?

Gold can be set up at its present value of $35 per ounce, a price to which the world has become accustomed; silver can be brought to parity with gold, using as an example the price ratio that existed between the two metals in 1910–14.

Commodity prices could then be stabilized at our parity level, the price we need for national solvency, and we would have world parity and a chance for the world to have prosperity instead of poverty as a foundation for world peace. If we are going to agree to something then let us use arithmetic and agree to something that doesn't put the skids under our own Nation.

With such a world program this committee could safely remove all tariffs even for the protection of the steel barons. We should be realistic, however, and realize that in much the same way that we as a nation grew to our level through tariffs, other nations who wish to establish industry will need them to get under way.

With world prices stabilized at the American price level, world trade could be quadrupled in a few years.

You have a right to ask whether such a program would be acceptable to other nations. I think I can safely say that it would.

At the recent Mexican Conference our State Department Presented a blueprint for world free trade. The South American countries didn't want it. Mexico wants to protect its growing steel industry and Brazil desires to protect industries she has started during the war. I feel that they should be given that right.

The final result of the meeting was a very important section namely, subsection (b) of resolution 15:

"That a fair and equitable relationship should be sought between the prices of agricultural and mineral products and those of manufactured articles and that all prices should be fair to producers and consumers alike."

That in essence is parity prices for raw materials and can be implemented with gold and silver at parity as I have outlined above. With the matter of parity agreed to by all the Nations at the Mexican Conference the question is at what level?

To maintain a solvent United States we must maintain our price level as it now exists. Therefore we have only one choice and that is to protect our price level with tariffs at the parity level until such time as world parity,

with our parity level as the yardstick is properly implemented with a reorganization of the world monetary system and with basic commodities stabilized at parity with the exchange medium.

The program outline is not theoretical but based on the factual dislocation of money and commodity prices in the period following 1910–1914. In fact our parity price level was the world level in both the 1910–1914 and 1925–1929 periods. Our price level of today as given by the Bureau of Labor Index for all commodities is 105 percent of the 1926 level. The only thing which will prevent our parity level from becoming the yardstick for world price levels is the leadership on our part to bring it about.

The citizens of the United States are relying on this committee to be one of the first to protect our Nation. Sometime in the future you are going to be asked to make proper tax levies with which to refund the national debt and it is only natural that you should wish to maintain the income of the United States.

There are two parts to economy. One is production and the other is price. Nature gave us the raw material resources to produce, the Constitution of the United States gave Congress the right to regulate the value of the American dollar which in turn is the price of our production. Failure to properly protect the value of our dollar either through the price of commodities or other measures such as tariffs is to fail to protect the welfare of the American people and our form of government.

The time has come when we must make a decision. To join the world economy by reducing our price level to world levels will mean a return to the economy of the seventeenth century and going back to an economy that our forefathers ran away from.

To restore world economy on the basis of our American economy, means that we would give to the world the kind of economy which time has proved as the one which gave the people in the United States the highest standard of living in the world and at the same time the lowest food cost on the basis of per capita income of any nation in the world.

My advice to the committee is—make haste slowly. If you don't feel that this measure before you can be amended to require that no trade agreements can be made for imports below the American parity level, you can at least merely extend the law for 1 year in order that we may know how the cards are stacked.

As I have pointed out, we have $75,000,000,000 per year at stake and it is no time to play blind pitch.

In closing I wish to point out:

1. That the trade-agreements program did not increase the export of farm products but instead increased imports of farm products, which in turn prevented the recovery of our normal condition of parity prices for farm products.

2. That the trade agreements when deductions are made for loans and foreign travel did not increase our exports of all products.

3. That our dollar value of foreign trade is determined by the governing factor of our own economy, our farm income.

4. That the physical imports will ratio to the percentage of farm parity.

5. That a reduction of our price level to the world level will mean national bankruptcy, and the continuation of world poverty.

6. That the course which we should follow is to maintain our parity price level and with it as a yardstick, to help reorganize the world monetary system and commodity price level, thus protecting the solvency of the United States and at the same time give the world an opportunity to have prosperity through production rather than loans at our expense.

No Easy Road Back

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. GWYNNE of Iowa. Mr. Speaker, the medical profession has frequently called attention to the fact that there are certain fundamental rules relating to health. The doctors of the country have constantly warned of the disillusionment that is bound to follow if we take the easy road suggested by self-seeking quacks and fakers. The same thing is true in regard to engineering or farming or business generally.

It is difficult, however, to convince some people that there are also certain sound principles of government which may not be violated with impunity. Nevertheless, the bitter experience of many people in many times points to the conclusion that the duty of any government is to seek out these fundamentals and apply them. For example, our Constitution sets out certain great principles relating to social and individual conduct. These principles are not true simply because they are in the Constitution; they are in the Constitution because they are true.

Now we are hearing a lot about 60,000,000 jobs to be furnished for us by Government planning. The burden of this song is that the individual should look to his Government, follow blindly its orders, and comfort and security will come to him. It ignores the obvious fact that if we call upon the Government to plan our way, that Government must also have the authority to make us walk the way it has planned. History points out that the highest standard of living has always been in those countries where exists the fullest measure of individual liberty.

In accordance with permission heretofore granted, I include an editorial in the April 26 issue of the New Hampton Economist, a sturdy exponent of Americanism published by the Babcock Bros. at New Hampton, Iowa:

NO EASY ROAD BACK

There is so much loose talk in political circles about the "right to a job" that it has become almost meaningless. "Rights" have become confused with "opportunities."

The United States Constitution and Bill of Rights guarantee every citizen fundamental rights that make him a free man to enjoy the opportunity to go as far as he can, based on his ability, ambition, and energy. Beyond that, Government owes a free man nothing, except if he is destitute or mentally deficient, or handicapped in ways beyond his control. Government should then provide satisfactory means for his care and comfort—that is what government is for. But to try to fool the people with the idea that the Government owes a man a living can create and maintain countless millions of jobs, without destroying a free country, is rank hypocrisy.

Vote-seeking politicians are trying to make millions of war workers think a benign government can take over all their troubles after the war. Within reason, a government can widen the opportunities whereby men can have jobs, recreation, and high wages. The extent to which one takes advantage of opportunities, depends upon the will and purpose of the individual. As government or anyone else can expand opportunities, the chances for advancement in living standards are greater, but in no sense are such benefits rights to which anyone is entitled, without respect to his own effort to obtain them.

History has shown that when the people of any nation depend on government to do their thinking and providing for them, it is only a short time before they lose their ambition, their initiative, and their freedom. There will be no easy road to full employment and prosperity, after this destructive war. Only a people who work and save and do not look to government for hand-outs, will survive and retain their personal liberties.

H. R. 3109

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I feel that the portion of H. R. 3109 having to do with allowing $2,500 to Members of Congress for expenses is ill-advised at this time. It is not so much a question of need—as that is very apparent—but it is a matter of holding the line against inflation. That line is not being too strongly held at this time, and I am fearful that this particular legislation may open the floodgates to widespread demands for wage increases and thus bring about an inflationary situation which we might not be able to control. On that basis I was one of 124 who voted against the rule reporting H. R. 3109 to the House, was one of those who voted to recommit the bill to the Appropriations Committee, and then, when that failed of passage, was one of 83 who voted against final passage of the measure.

Poland

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Jan Ciechanowski, Ambassador of Poland to the United States, over Station WCBM in Baltimore, Md., on Sunday, May 6, 1945:

I am deeply grateful to the United American and Polish Societies of Baltimore and to Station WCBM for the opportunity of addressing this distinguished American radio

audience on this one hundred and fifty-fourth anniversary of Poland's liberal constitution.

Poland's past history is the record of a nation fervent in its Christian faith, tolerant and liberal, deeply attached to individual and national freedom. Two hundred years before England passed the Habeas Corpus Act, Poland guaranteed the liberty of the individual by the Neminem Captivabimus Act of 1430. In 1573 she established freedom of conscience and worship, when religious persecution was rife in most other countries.

The liberal constitution of May 3, 1791, was therefore but a natural development of Poland's gradual trend toward democracy. It is the basic ideological link between the Polish and the American Nations.

Poland has been true to her traditions throughout this war. She was the first unhesitatingly to put up fierce armed resistance against German aggression in September 1939. Ever since, although her armies were defeated inside Poland by overwhelming forces, her underground army in Poland and her army, navy, and air force abroad, under the leadership of her legal Government-in-exile, have never ceased to fight for the common cause of freedom and justice.

She has a clear record of Allied loyalty and has never produced a Quisling.

Freedom, justice, and peace are Poland's aims in this war, in accordance with the principles laid down in the Atlantic Charter and embodied in the Declaration of the United Nations of which Poland was one of the original signatories on January 1, 1942.

The Polish people will certainly regard as symbolic that the United Nations victory in Europe coincides with the anniversary of their liberal constitution. They will see in this fact a promise that the fundamental principles of democracy and the "government of the people, by the people, and for the people" and the rule of right over might will now effectively become the rule for the world.

If this promise is to be fulfilled, and peace, justice, and human freedom are to become a living reality after this victory of freedom-loving peoples over the evil forces of the pagan Hitlerite doctrines of enslavement, it is urgent to realize the necessity of reestablishing democracy not only within countries but of applying its rules to international relations as well. In a civilized world all nations must be equal before the law, regardless of their size or power. That is the essence of equality as applied to nations and to their mutual relations.

The inequality which exists between big powers and smaller states should be measured not in terms of power domination, but in terms of power responsibility alone.

In this war, the people of Poland have been subjected to greater cruelty, barbaric oppression and extermination than any other nation overrun by Hitler.

The Polish Nation yearns for freedom and for collaboration with other free nations in the work of establishing and maintaining a just and durable peace. It would be unthinkable if Poland were not given her rightful chance to do her part in this great task and further to develop her peaceful instincts and her constructive and cultural capacities.

Her precarious geographical position between two powerful neighbors, has been reflected throughout her history in the course of which she was repeatedly partitioned and subjected to foreign domination. President Woodrow Wilson declared this to be one of the greatest crimes in history and clearly stated that the restoration of Poland's freedom was an essential necessity for the establishment of a just peace.

The men and women of the United Nations who have so gallantly fought in this war, the millions of them who have sacrificed their lives in the cause of justice, have proved through their sacrifice that these noble principles of humanity continue to prevail. Our common victory proves that ideals still play a dominant part in realism.

In this Western Hemisphere the nations of the Americas enjoy the blessings of good-neighbor policy which above all is the basis of security and peace. It is time that this American concept, so indispensable to international confidence, be made available to the Eastern Hemisphere as well.

Experience has taught all of us that peace can only be maintained if it becomes indivisible the world over. It has taught us that no nation, however powerful, is secure from attack in our modern times of scientific achievement which has so greatly reduced distance and abolished the effectiveness of natural or created defenses. It has therefore become impossible separately to plan a western peace and an eastern peace. It is impossible to allow totalitarianism to hold sway in one part of the world, while democracy prevails in another. For then, the ideological cleavage between nations would divide the world into potential rival camps and inevitably lead to future wars.

It is time to be realistic. Not in the cynical sense of power-political concepts unworthy of our enlightened times, but to be sufficiently bold and realistic to face facts. Instead of launching ever new slogans about world unity, it is necessary to create that unity on the firm basis of principles which all free human beings understand and demand. In fact, it is time to realize the greatness of American concepts and to apply them to the world in establishing security and peace. At the time of their proclamation the world may not have been ripe for them. At the end of this terrible war all mankind is ripe for justice.

It is time to understand that the problems left by this war, which has shaken the world in its very foundations and destroyed practically everything tangible and solid except the fundamental qualities of humanity, cannot be solved by petty compromises or short-lived power-political agreements. To solve them, we must start from the foundations, by applying sound, human, and solid principles with simplicity and courage, urged by firm determination to build a new and better world for its duration, and not merely to set up a precarious structure of antiquated concepts of balance of power on the quicksands of temporary appeasements and of wishful thinking.

Humanity has gone through too much to accept anything but real peace, founded on real freedom and on real justice.

It is time to simplify, not to complicate, problems. The solution of really great problems calls for boldness of statesmanship and simplicity. The time has come to adopt and to apply to the world the proposal announced by President Woodrow Wilson in his magnificent address to the Senate on January 22, 1917, when he suggested "that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world: that no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful."

Memorial to Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. O'TOOLE. Mr. Speaker, I have introduced into the House of Representatives a resolution to create a memorial to our late President, Franklin Delano Roosevelt. The resolution has been referred to the Committee on the Library of which I am the chairman.

It is my purpose in the near future to begin hearings on this measure. I intend to bear in mind the suggestion of Mrs. Roosevelt that a living memorial be erected in honor of her husband. It is not necessary for me to inform this House that that which was dearest to the President's heart was the care of the unfortunate victims of infantile paralysis. Through his untiring efforts and personal interest, the Nation was made conscious of this dreadful plague. He, more than anyone else, was responsible for the great sums that were collected to study and combat this disease.

Knowing this, I feel that the best memorial that could be erected in his honor would be a national institution here in Washington for the study and treatment of polio and similar muscular and nerve diseases. With that in mind, it is my intention within the next few days to invite here to Washington to appear before my committee Sister Elizabeth Kenny, Dr. Morris Fishbein, and other leading figures in the medical world. Through their testimony we will be able to get expert guidance on the polio situation. We will have an opportunity to find out the advanced treatments and approved therapy with which to combat the disease. The hearings in themselves will serve as a clinic where these experts can settle the disputes that are now existing in the medical profession and at the same time can agree as to the size, scope, treatment, and study that will be used in the suggested memorial. It is my intention from time to time to acquaint the Members of the House with the proceedings of the committee.

Congress Wisely Provided for Air-Mail Pick-up Service; Great Progress Noted During First 6 Years

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. RANDOLPH. Mr. Speaker, the rapid development of aviation is noteworthy during the emergency of war. Air power is recognized as having shortened, perhaps by years, the defeat of Germany. Its fury is now being loosed against Japan.

We look ahead to the use of the airplane for the purposes of peace. It is in this connection that I call to the attention of my colleagues and the country one unique and successful phase of aviation as it assists our people to speedier communication and transportation.

It was 6 years ago tomorrow that the air pick-up service was begun. The anniversary of the Nation's unusual air-line operation, established as an experiment

authorized by Congress in an effort to find a practical way to extend air-mail service to communities off the main air-transport system, brings comment from Halsey R. Bazley, president of All-American Aviation, as to the adaptation of the pick-up equipment for military purposes, and disclosed plans for the future.

All-American, the operating carrier, has grown from 2 experimental routes 1,040 miles long which served 56 communities, to a system of 5 routes extending 1,568 miles and serving 118 communities on schedules requiring 5,068 miles of daily flying.

The air pick-up planes in the past year flew 1,296,472 revenue miles making the 6-year total 5,166,434 miles to which should be added another million miles flown by the company's military cargo aircraft before the service was terminated. During the year 70,488 pick-ups and deliveries were made for a grand total of 295,609. Mail transported amounted to 954,000 pounds; air express 181,000 pounds.

The mail volume, Mr. Bazley reports, represents an increase of 71 percent over the previous year. Air express traffic jumped 11 percent. This increase would have been greater if mail loads had not precluded development of the traffic.

The air pick-up service—

Says Mr. Bazley—

is not costing the Government a cent. We emerged from the subsidy class 3 years ago, and the Post Office Department is now making a substantial profit on the service. Air mail dispatched via air pick-up last year produced estimated postal revenues of $1,915,000 as compared with $534,000 mail pay received by the company. In 6 years the postal revenues from mail dispatched by air pick-up have amounted to $3,875,245, while our mail pay for the same period was $2,416,069. The postal revenues have been computed only on mail which has been actually dispatched over All-American's lines by the communities which they serve. The figures do not include postal revenues from mail dispatched to these points from our terminals—Pittsburgh, Philadelphia, Washington, and Harrisburg. They were purposely left out in order to make a bedrock appraisal of the economy of the service from the Government's standpoint.

The Army Air Forces lifted recently the secrecy on how the air pick-up has been used effectively in Europe and Burma in launching gliders, carrying troops and supplies, in evacuating battle casualties by gliders, and in retrieving gliders stranded in isolated places, and in picking up human beings. I am advised that except they are larger, the military pick-up units are identical with those in air mail pick-up operations.

All-American has on file with the Civil Aeronautics Board applications which, if approved, would create an integrated system of 69 air pick-up routes covering 20,064 miles and serving 1,321 cities and towns in 24 States east of the Mississippi River. Present lines extend through 6 States—Pennsylvania, West Virginia, Ohio, Kentucky, Delaware, and New York and the District of Columbia. I recall the work preparatory to the first operation when Dr. L. S. Adams, pick-up device inventor, demonstrated and perfected the operation with work in West Virginia.

Expansion of the air pick-up system abroad seems imminent. All-American is completing the organization of its own Brazilian company. In recent months government representatives and others from France, Sweden, Norway, Great Britain, Australia, Canada, and several South American countries have displayed interest.

Combination passenger-pick-up service is planned over some of the new routes.

The company likewise is studying the feasibility of commercial glider operations.

Mr. Bazley believes that:

From the first All-American has envisioned the adaptation of the air pick-up to passenger planes which would be operated over short routes to many intermediate points making stops only where necessary to load or deplane passengers and providing service to other places by the pick-up and delivery method as it is operated today. Technically, this operation is entirely feasible. Pick-up planes have carried many Government officials, members of the press, and others as passengers on regular trips and without exception these passengers have afterward expressed the belief that a combination pick-up and passenger service would be both practical and safe. Such an operation would provide passenger service to many more places on local and short-haul routes than would be possible if a landing were necessary at each station.

All-American has on file with the Civil Aeronautics Board applications to carry passengers on pick-up routes. Although some of the airports on the proposed passenger-pick-up routes may not be suitable for passenger operations, they probably could be improved for this purpose without prohibitive expense. In considering the traffic potential the thought has been expressed that psychological resistance on the part of air passengers to riding in planes engaged in pick-up operations would make it unprofitable. No such feeling has been expressed by the persons who have flown as passengers over the present air pick-up routes and it is not anticipated that this factor will seriously retard the development of combination pick-up and passenger service.

Serious thought also is being given to the possibility of using gliders in future short-haul transportation. The spectacular achievements of gliders in warfare in the transportation of troops and supplies give the promise that they can be employed for the transportation of passengers and cargo in commercial operations.

The economic feasibility of short-haul air transportation as it has been conducted by conventional methods is still speculative but there can be no speculation about the economic and operating feasibility of air pick-up service which represents the intensive development of short-haul and local transportation.

By air pick-up the Government almost overnight could extend the benefits of direct air mail and air express service to every nook and corner of the country. This expansion could be accomplished at no great cost to the Post Office Department and would involve no expense to the Government for additional airports or aids to navigation. It also would afford postwar employment for thousands and a substantial market for new equipment.

Mr. Speaker, I close my remarks by stating that West Virginia, now served by the air-mail pick-up in 34 communities, has been a valuable proving ground because of the rugged terrain and difficult flying conditions. At my home town of Elkins the system dispatched 13,659 pieces of mail during the first year of service. In 1944, 221,614 pieces were dispatched. The same phenomenal growth has been found at other points, including Morgantown where the increase in the first and most recent year jumped from 25,043 to 365,385 pieces. This city also dispatches air mail over the facilities of Pennsylvania-Central Airlines. I desire to also state that Morgantown was the base of operations for Dr. Adams during the pioneering period prior to the beginning of regular pick-up service.

Resolution of Development Agencies of the Northeastern States

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. CANFIELD. Mr. Speaker, representatives of the development agencies of the Northeastern States, including Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont, having conferred on matters of mutual concern and interest at a meeting held in New York City on May 3 and 4, have unanimously adopted the following resolution:

The Northeastern States were the cradle of liberty and economic progress and are the heart of the commercial and industrial life of the Nation. These States are the homes and workshops of nearly one-third of the people of the Nation, and therefore America's greatest consumer market. At the same time, they stand as the chief gateway for the exchange of goods between this country and the rest of the world.

We combine a rich experience in industrial skills, business judgment, and advanced labor relations with a wealth of youthful ideas and energy, and shall continue to expand our contributions to the benefit of the entire country.

We are continuing, as ever, to lead the way in progressive government and business measures for the benefit of all peoples everywhere. Our histories have demonstrated that economic and political freedom are not merely compatible but complementary.

It is the sense of this meeting that the postwar prosperity of the Nation, particularly the reemployment of our returning service men and women, is the first order of business of the development agencies of the Northeastern States. To achieve this high objective, the Nation requires the mature experience and skilled workmanship of the people of the Northeastern States.

In peace as in war, we take pride in the industrial development and prosperity of our entire Nation, and shall continue to give our best efforts and "know how," to the end that all States will profit from the contributions of each, so that economic expansion can be general.

We shall continue to resist any effort to destroy the national free market, the birthright of every American, or to erect artificial trade and industrial barriers between States or regions, or to grant any special privileges to any sections of the country at the expense of the others. Opportunity for growth is unlimited throughout America, and we shall all prosper as we expand together.

VE-Day Emotion Questioned by Writer

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. HOFFMAN. Mr. Speaker, under permission granted, there is herewith printed David Lawrence's column datelined at San Francisco on May 9:

VE-DAY EMOTION QUESTIONED BY WRITER—CAMOUFLAGING OF TRUTH TO BRING ON OTHER WARS, SAYS LAWRENCE

(By David Lawrence)

SAN FRANCISCO, May 9.—This is a strange place to be writing about VE-day, but perhaps, after all, it is the most significant location in the whole world from which to express one's dissent from the prevailing concept of VE-day.

As encouragement for the future, as satisfaction over what has already been achieved, as an opportunity for prayer and thanksgiving that a big milestone has been reached—as President Truman has so eloquently proclaimed—there is reason for applause. But what real reason is there for rejoicing, for shouting, for carousing, for stopping work?

Will rejoicing bring back the hundreds of thousands who have been killed? Will it restore the limbs of the maimed, or heal the wounds of the sick? Will it stop the fighting against Japan? Will it help to prevent the next world war?

These are the questions that one asks today as the celebrations all around us seem so drab and artificial. But it is precisely because we camouflage truth on VE-days that we have such things as wars. We like to sweep along with so-called popular tides and let emotion appear as the substitute for reason. And that's why we keep on ignoring the facts that lead to wars.

OUT THERE IN THE PACIFIC

Today, as I write this in a high building which overlooks for miles around the entire bay of San Francisco, I see so many ships moving slowly out to sea, so many kinds of ships, so many loaded down and so many coming back to be reloaded, that I can think only of the war out there in the Pacific—10,000 miles away from our shores. We have won a war 3,500 miles away in Europe, but to win a war nearly three times as far away in the Pacific means an unsung, yet unprecedented, operation of supply and transportation so colossal that it is really indescribable.

Here in San Francisco, too, the United Nations Conference is going on. Millions of words are being written about its phrases and its maneuvers. Again, emotion prevails—and a limitation on truth-telling. It is popular, of course, to speak of the Conference here as one that is to make a lasting peace. It is considered desirable to emphasize such progress as is being made and to avoid telling the people the unpleasant truth, which is that the charter being written here is weaker by far and endeavors, at least on paper, to do much less to restrain the evil passions of would-be aggressors and selfish powers than the document drawn up 26 years ago in Paris.

To those who make such observations about the charter is flung back the misleading retort that they are perfectionists. They are told that the old league tried to do too much and hence failed. Excuses and more excuses, alibis and more alibis, and still not the whole truth.

What is the truth? It is that men with pride and devilish passion, with selfishness and greed, with an exaggerated sense of what military might can do to make peace and a scorn for the power of moral force and spiritual understanding, still rule this world and run its conferences. Timidity, such as men on the battlefield never show, hesitancy, and even fear, are the characteristics in and about the United Nations Conference.

OLD DOCTRINES STATED

One had hoped that here at San Francisco, after all the sacrifices of heroic men, there would be a new spirit; that the swashbuckling attitudes of power would be abandoned; and that governments would sit down together in all humbleness and examine their own consciences before they asked for political or economic terms of special advantage to themselves. But they boldly proclaim here that might makes right, that the weak have less voice because their armament is less, and that the strong must be trusted to be benevolent even when actuated by self-interest.

Here they proclaim that human rights are to be granted on paper but to be brushed aside if they conict with the internal policies of any nation. Here they state the same old doctrine that "internal" affairs are sacrosanct, which means that another Hitler and another Nazi party can arise, suppress freedom of speech and freedom of worship, and mislead millions of people into war. Must the charter of a conference of nations ignore all this as purely an "internal" and hence a forbidden question for world-wide inquiry and condemnation?

Some day the truth may force its way through. It must first make a shambles of this edifice of pretense called diplomacy and this mechanism of camouflage called expediency which permits quibble and equivocation. Then it will be revealed clearly that because powerful nations, like individuals, often wish to become a law unto themselves, there has been no universal peace.

We shall have peace only when peoples—the ones who shed their blood—are permitted to have complete access to each other through freedom of the press and speech and when the right to insist on the truth is not impaired by the coercive hand of totalitarian governments or dictatorships anywhere in the world.

Peoples can make peace and keep the peace if they will make governments their servants and not their masters.

Stop It Before It Starts

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tulsa Tribune of May 8, 1945:

STOP IT BEFORE IT STARTS

Never in our history, until now, have the American people been kept in the dark about the fate of American sons who have survived a war and who have rendered their highest duty in destroying the enemies who tried to rob us of our liberties and our rights.

Germany set out to destroy the United States of America. Germany set out to destroy, no less, England, France, Russia, Norway, Denmark, Belgium, and Holland. We fought to save these countries while we fought to save ourselves. And we destroyed that common foe. Now that job is done. We have carried a great deal of the war load. Now let our allies, two of them especially, carry the police load principally.

It is a very strange thing that the American people are not allowed to know what the late President Roosevelt said and did at Yalta that might commandeer our sons to stay in soldiers' service for an indefinite term of years.

If there is such a commitment, as has been at least implied, Mr. Roosevelt violated all the principles and practices of our liberties and repudiated all the traditions of our national life. We have a right to know.

Our sons enlisted for a period lasting 6 months after the duration of the war. They did not enlist for 25 years after the war. But it appears that agreements were made at Yalta for a half-million American soldiers to remain for 25 years in a section of Germany, and the least good section at that, to live the lives of policemen to patrol those mad people.

That is Europe's job. We have a war to win against Japan. It will need many of our men now in Europe. Congress should rise as one man to protest, and to stop any effort to pledge 25 years of the lives of half a million American men to any such service as is alleged to have been pledged at Yalta.

For our Government to take half a million men and commandeer a quarter of a century of their lives is a cruel conviction that is wholly without warrant and without justice.

Let's have the facts on this Yalta business. And if any such diabolical business as this was part of Mr. Roosevelt's pledge, Congress and the President should stop it before it starts.

Army Demobilization Plan

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the New York Times of today by Maj. Gen. William F. Tompkins:

The standards that will control priority of separation from the Army will apply equally to soldiers all over the world and they embody the desires of the soldiers themselves, as expressed in polls taken by the War Department among thousands of enlisted men in this country and overseas. More than 90 percent of the men interviewed said they believed the men to be released first should be those who have been overseas and in combat longest and those with children.

Accordingly, the program to be followed provides for the issuance to each enlisted man and woman of an adjusted service rating card. Separate point totals will be entered on this card covering each of the following four factors:

1. Service credits: One point for each month of Army service since September 16, 1940. This is the same as 12 points per year.

2. Overseas credits: One point for each month served overseas since September 16, 1940. This too, is the same as 12 points per year.

RULES ON COMBAT CREDIT

3. Combat credit: 5 points for the first and each additional award of the following for service performed since September 16, 1940:

A. Distinguished Service Cross, Legion of Merit, Silver Star, Distinguished Flying

Cross, Soldiers Medal, Bronze Star Medal, Air Medal, Purple Heart, and Bronze Service Stars (battle participation stars).

B. Credit will also be given for the following decorations awarded by the Navy Department: Navy Cross, Distinguished Service Medal, Legion of Merit, Silver Star Medal, Distinguished Flying Cross, Navy and Marine Corps Medal, Bronze Star Medal, Air Medal, and Purple Heart Medal.

C. Credit will be given for those awards and decorations of a foreign country which may be accepted and won under the War Department regulations in effect when the readjustment regulations are placed in operation.

4. Parenthood credit: 12 points for each child under 18 years up to a limit of 3 children.

HOW POINT SYSTEM WORKS

To illustrate how the point system works, let us suppose that a soldier has been in the Army 36 months, has served overseas for 18 months, has won the Silver Star and Purple Heart and participated in three major campaigns and is the father of a child under 18. He would receive 36 points in service credit, 18 points in overseas credit, 25 points in combat credit, and 12 points in parenthood credit. His total score would be 91 points.

The men with the highest point totals will become eligible for release from the Army, except where considerations of military necessity make it impossible to let them go until qualified replacements can be obtained. This exception applies particularly to men possessing special skills required in the war against Japan and to men in units that will have to move into the Pacific so swiftly that no opportunity is provided for replacing men with high scores until they reach the new theater.

The Army wants to be absolutely certain, however, that any such cases which arise represent true military necessity and not military convenience. Therefore, the theater commanders have been instructed to establish a reviewing authority at an appropriate level to consist of selected mature officers who will pass on every case where an individual with a score equal to or above the critical score is to be retained by reason of military necessity.

SYSTEM WILL HELP FATHERS

I know many of you are wondering how we know whether the point credits we intend to use will actually achieve the desired effect of permitting those soldiers who have seen the longest and most arduous service away from home and those with children to leave the Army first.

A preliminary survey made by the War Department on the basis of a one-sixth demobilization of the Army indicates that all but 2 percent of the men to be released will be men who have served overseas and that these 2 percent will be fathers who have been in the Army a long time.

The significance of this figure becomes clear when you consider that 68 men out of every 100 now serving in the Army have served overseas, whereas 98 out of every 100 to be returned to civilian life will be overseas veterans.

How well will the system succeed in providing preferential treatment for men with combat experience? Men who have been in combat constitute 35 percent of the Army, but 73 percent of the men who will get out are men from this group. Put another way, men with combat experience make up a little over one-third of the Army, but constitute nearly three-quarters of the number to be released.

Fathers represent 19 percent of the Army and 26 percent of the group returning to civilian life. In other words, one soldier out of five is a father, but one man in every four to be sent home will be a father. Since we did not begin drafting fathers until the war was well advanced, it is apparent that our system is operating heavily in their favor.

MOST DESERVING TO BE FIRST

I think these statistics make it clear that the point system carries out the desire expressed by our soldiers in the polls and gives first consideration to those most entitled to receive it.

After the adjusted-service rating cards have been filled out, the number of soldiers with each point total in every theater will be reported to The Adjutant General's office here in Washington and a certain point total will be established as the critical score. This critical score will represent the minimum number of points with which an enlisted man or woman can be released from the Army. There will be one critical score for all enlisted men in the Army Ground Forces and the Army Service Forces and another for all men in the Army Air Forces. A third critical score will be calculated for members of the Women's Army Corps. The three critical scores are designed to effect equality of treatment for enlisted personnel in all branches of the service.

It will take about 6 weeks before these critical scores can be computed and announced. However, the War Department has no intention of delaying releases until this computation is finished. An interim score of 85 points has been established for Army Ground, Air, and Service Forces enlisted personnel. All soldiers who have this many points or more will be considered as eligible for release in accordance with the plan, and men will start moving to separation centers for discharge early next week. For members of the WAC, an interim score of 44 points has been set up.

MEN ALLOWED TO STAY IN ARMY

Only points scored as of Saturday, May 12, 1945, will be taken into consideration in determining eligibility for release. The only credits which will be given after that date will be for decorations and battle participation stars earned prior thereto. Likewise additional credit will be given for children born on or before May 12, but whose birth was not known to the father at the time the scores were prepared.

Enlisted personnel who desire to remain in the service and have a satisfactory record will be retained.

Because of the requirements of the war against Japan, the strength of the Army Service Forces and the Army Air Forces will be reduced much less than the strength of the Army Ground Forces. As a result, the initial rate of release will be more rapid among ground troops than among those assigned to air forces or service forces. However, through transfers of some low-score men from the ground forces and new trainees, a proportionate share of men will be released from all three forces as rapidly as practicable.

ARMY TO AVOID UNFAIRNESS

In this whole program the Army has put the emphasis on the individual because we felt that was the only fair way in which to carry out demobilization. From the operating viewpoint it would have been much simpler to bring surplus units home for demobilization and release their personnel intact without worrying about whether all the men in them were entitled to priority of separation from the Army.

Such a method, however, would operate with great unfairness to many individuals who have had long and arduous service but are not assigned to one of the units declared surplus. If only units in Europe were considered, this method would work unfairly to units long in the Pacific or at outpost bases in the American theater. It would operate unfairly to men who have seen extended combat service both in Europe and the Pacific and have been returned to this country for reassignment. It would release men only recently assigned as replacements to units long in combat and would discriminate against veterans of many campaigns in units not selected for return.

Consequently, it was determined that the fairest method to effect partial demobilization would be through the selection of men as individuals, rather than by units, with the selection governed by thoroughly impartial standards.

The carrying out of this program will not affect the continued release of enlisted men over 42 years of age, which was started recently. Discharge of these men, upon application, will continue without regard to other factors.

Holders of the Medal of Honor will also be eligible for release upon their own request.

In addition, married members of the WAC will be released, at their own request, if their husbands have been separated from the armed forces and returned to civilian life.

STRICTER PLAN FOR OFFICERS

Now, I would like to explain the method we will use in releasing officers. It is tougher than the plan for enlisted personnel primarily because officers have received additional training, have heavier responsibilities, and have developed specialized skills and leadership capacity. They must be handled more on an individual than a group basis. Therefore, although officers will have an adjusted-service rating score based on the same multiples as for enlisted personnel, this factor will be secondary to the prime requirement of military necessity.

The expression "military necessity," as applied to officers, means consideration must be given on an individual basis to the relative utility of an officer, need for his specialty, and the availability of assignments which will make the best use of his capabilities. Officers with lengthy overseas service and long and hazardous service in combat will receive special consideration for release. An officer's desire to remain in the service at this time will be another factor to get consideration.

The return of officers to the United States will be controlled by theater commanders, who will use the foregoing principles in making their decisions. However, I wish to emphasize that the determination of whether or not an officer is to be released from the Army, as opposed to simply being returned to the United States, will be made by the commanding generals of the Army ground, air, and service forces acting under the general supervision of the War Department.

SYSTEM IS SET FOR CENTERS

In other words, if an officer is declared surplus by his theater commander, he may still be retained if he is needed by any unit of the A. A. F., A. G. F., or A. S. F.

When individuals who are surplus to overseas theaters arrive in this country, they will proceed from ports to a reception station close to their home area. Twenty-two of these reception stations will be placed about the country in order that the Army may bring individuals as close to their homes as possible. Seventeen of them are already in operation and the remainder will begin operations during June. Here in the reception station those individuals with scores equal to or above the critical score will be screened once more to determine whether they are essential to the Army as a whole or are nonessential and can therefore be returned to civilian life.

Again let me emphasize that an enlisted man whose score entitles him to release will be held in the Army as essential only if his skill is so important to the Army and so scarce that he cannot be spared. Individuals of this type who do have to be held will be replaced as rapidly as the Army can train and

make available replacements with the proper skills.

An individual who is found nonessential at the reception station is immediately transferred to a separation center, located at the same post, for processing for release from the Army. The complete process in a separation center will take about 48 hours, after which the individual is on his way to his home as a civilian. As you know, at the separation center, every possible assistance is given to prepare the soldier for his return to civilian life. We want those who are separated from the Army to know that their services are deeply appreciated.

HARD TASK IS SEEN AHEAD

We are certain, too, that they will prove themselves to be as good citizens as they have been soldiers, and as soldiers they have shown themselves to be unexcelled. The many citizen soldiers who must remain in the service have a tough job ahead. Their accomplishments so far indicate that they will more than measure up to that task. They may be assured that when the job is done procedures will be ready to insure their prompt return to civilian life.

Through the same reception stations, which I have just mentioned, pass the individuals returned to this country in units which will be required for continued service against the Japanese. These individuals will have in almost every case scores below the critical score. They will be brought from the ports to these reception stations in order to get them close to their home areas. Here they receive travel time to and from their homes, plus up to 30 days' furlough for rest and recuperation. After that they report to the designated point where their unit is to be reformed for continued active service.

Postwar Jobs in Aircraft

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Republic of February 28, 1944:

POSTWAR JOBS IN AIRCRAFT

Statisticians like to say that war employment in the aircraft industry has not expanded—it has exploded. Substantially they are correct. In 1939 about 50,000 men and women made up the total working force of the American aircraft industry. Today nearly 2,000,000 are at work in aircraft plants over the Nation. In addition at least 200,000 members of the armed forces are former aircraft workers with legal right to available jobs in that industry. Two out of every 17 workers now employed by American industry are aircraft workers.

What do these workers have to look forward to on the morning after the victory of the United Nations over the Axis? Will the explosive expansion of aircraft employment during the war be matched by an even sharper deflationary detonation once the demand for planes to smash the Axis has been met?

To look now for an answer to these questions is, in my opinion, a very direct and immediate part of the Nation's war effort. For workers in the aircraft industry know and fear the specter of postwar unemployment. The men and women who trekked to southern California or Detroit in search of a war job 2 years ago, are beginning now to look around for other jobs—jobs that will carry through into peacetime employment. Increasingly when the worker has freedom of choice among a number of jobs, his choice is for one in "permanent" industry rather than in the aircraft plants or shipyards.

Fear of the future—the conviction that regular paychecks are purely wartime phenomena—has bitterly intensified worker resentment against the inequitable application of Government "stabilization" policies. The rigidities of the Little Steel formula seem doubly onerous to the worker who sees both his present and his future standard of living slashed by high prices. Inevitably, therefore, the Nation is paying a price in terms of depleted production morale for failure to give the aircraft worker at least a fighting chance for future security.

Such a fighting chance for the aircraft worker has not been within the vision of those Government experts who have been charting, graphing, and forecasting the future. A very pleasant statistical gentleman from the United States Department of Labor recently gave me and my fellow officers of the U. A. W.-C. I. O. his picture of what lay in store for us following victory over the Axis. His charts showed aircraft employment curving upward with all the verve of a skyrocket from 1940 on through 1943 and 1944. But then at 194— came the end of the war, and with it there was a fall in aircraft employment like the side of the Grand Canyon.

The best we could expect was to find employment for about 300,000 workers in the aircraft industry. Maximum annual production would be a little bit less than 2 weeks' output at the industry's present rate. One aircraft worker out of 15 might find a job in the industry. The rest would choose between unemployment and "withdrawal from the labor force."

I am convinced that those figures are accurate only if we do nothing to prevent them from being verified by reality. I do not believe that we must accept any assumption that the hundreds of thousands of workers, the Negroes, the women, the older workers—who are doing so magnificent a job on the assembly lines—must be rewarded by bread lines and continuing insecurity. Such an assumption of renewed unemployment for millions in the postwar world is an assumption of national defeat and chaos which I shall never be prepared to make.

Certainly some curtailment of aircraft production is inevitable. No presently conceivable peacetime economy could justify devoting 2,000,000 workers and $12,000,000,000 a year to the production of aircrart. No worker wants to continue a situation in which the Nation's life and liberty hangs on the production of 100,000 warplanes a year. I am confident, nevertheless, that our postwar aircraft industry can provide employment for well over a million workers—and become a mainspring of economic and social progress.

My own prediction is based, like those of the statisticians, upon certain assumptions. I am assuming:

1. That the United Nations carry through to a complete and unconditional victory over the Axis, and establish thereby the bedrock foundation to a peaceful and democratic world.

2. That political and economic cooperation among the United Nations continues to develop for winning the peace and assuring the democratic development of a world economy.

3. That the American people rally in this year's elections to defeat the rightist reaction at home which would snatch away from us the victory over fascism.

4. That American labor, industry and farm groups press for an economy of full production and employment, with gross national product running at levels of close to $200,000,000,000 a year.

Not a single one of these assumptions represents any historic inevitability. But they are the fighting objectives of hundreds of millions of common people throughout the world today. With certain important limitations, they are the objectives of industry groups who are learning in the war that world organization along Fascist lines can lead only to their own destruction. We in the labor movement feel that we have a right to make these assumptions in our planning because we are fighting for their realization in the war factories today—and will vote, along with millions of our fellow citizens, for their realization in the elections next fall.

If the American people as a whole enjoy decent income and a rising standard of living, if the channels of international trade are fully opened up, if the system of autarchal self-sufficiency which characterized the early preparations of Fascist powers for world domination is fully rooted out, then we can talk of 1,000,000 jobs in the postwar aircraft industry in terms of solid and practical reality. Otherwise what we must talk about will not be jobs in the aircraft industry of peace, but jobs in the manufacture of weapons for a Third World War. In the planning of such an economy I suspect that organized labor, together with readers of The New Republic, will be permited very little to say.

What are steps necessary to the development of the aircraft industry in a democratic world?

First of all it is necessary, in my opinion, to work out measures to protect aircraft workers and their families in the period of conversion that will follow almost inevitably upon the cutting off of the monster load of war orders upon which the industry is now working. The Wagner-Murray-Dingell bill, together with increased State unemployment insurance, can do part of that vital job in protecting the health and economic welfare of those who built the planes for victory.

In addition, the U. A. W.-C. I. O. has brought before industry and government proposals for the accumulation of funds out of war profits from which severance and layoff bonuses may be paid out to workers at the end of the war. This obviously noninflationary measure is one which cries out for adoption by war agencies dealing with labor and wage policies. Retraining and educational projects for aircraft workers who do not plan to return to the industry should be initiated during the conversion period under Government auspices.

A second and companion imperative is to shorten as much as possible this period of conversion and of tooling up for new production in aircraft plants. For this purpose I believe that an industry planning committee, with representatives of manufacturers, government, and labor, should be established immediately. The extremely complex problems of plant disposal, of inventories, of determining which plants are to stand by ready for production of military planes, of where orders are to be concentrated as war demand tapers off—all these things can be decided in the interest of the Nation only if labor is assured its rightful voice in the making of such basic decisions.

Public moneys to the value of nearly $4,000,000,000 have gone into the construction and equipping of aircraft plants throughout the country. What use is made of that tremendous investment (about 40 times the industry's own investment from 1935 to 1939) is a matter of crucial public concern.

Investigation should be immediately undertaken by such a tripartite committee to determine possible uses for postwar aircraft plants whose productive capacity will not be required in the predictable future.

Most aircraft-parts plants are readily convertible to the output of various types of consumers' durable goods. The aircraft-engine plants, with their batteries of basic machine tools, likewise are available for any

and all types of metal fabrication. Final-assembly plants present a more difficult problem. Their jigs and fixtures are adapted for the most part to the production of only one plane model. Their tools are generally light and are not suited to a wide range of production. At a minimum, these plants represent a tremendous asset in available floor space in modern plants for the manufacture of anything from four-motor bombers to prefabricated houses or widgets.

For the conversion period and as long as unemployment exists, a 30-hour week should prevail in the industry—with the guarantee of a decent annual wage.

TECHNOLOGICAL PROBLEMS

Assuming the emergence of steady mass purchasing power, postwar aviation can become a mass industry like the automobile industry, provided only that certain technical problems are solved. So far the complexity, uncertainty and danger, even, of light-plane operation has kept it the monopoly of sportsmen or enthusiastic amateurs.

None of these problems is basic. Concerted research work should open the way to the production of a light plane that you or I can operate with the same certainty and with substantially less risk than the present family jalopy. Assuming that only one automobile owner out of five is willing to go on the market for such a plane, that demand should be sufficient to maintain an annual output of about 1,000,000 light planes.

A pooling of research facilities and personnel through Government support for such a project would be out of the normal channel of technological development in American corporate enterprise. But it would bring results. Only through such joint effort could immediate research work be undertaken on an adequate scale without interference with the essential war research and development which are now the primary responsibility of the industry and the Government.

AIR PASSENGER AND CARGO TRANSPORT

Civilian air travel today is the almost exclusive privilege of the socially, politically, or economically elect. In the postwar world this situation can continue only as a direct result of planned sabotage to air travel. Naturally the same forces which were charged before the Kilgore committee with choking of the manufacture of streamlined trains in order to keep obsolescent Pullman cars in operation will be hostile toward large-scale, cheap air transport for the average American.

This resistance must be broken down. It is the only barrier to air travel in postwar America for the common man and his family. It can be broken down if pressure from the American people and their elected representatives is brought to bear against the monopoly groups which are responsible for this sabotage of progress. It is by no means visionary to predict that the average American in the future will be able to vacation in California, in Europe, or the islands of the Pacific. For improved travel facilities means not less travel but more—a lesson which even the profit accounts of the transport monopolies should verify.

The same principles apply to air cargo transportation. Here international trade will be decisive. Full interchange of goods and services among all nations will provide a giant stimulus to the expansion of aircraft. Clearly, present rates per ton-mile for air freight have been artificially maintained. Sharp reductions in costs, together with control of corporate price policy, should put air transport within the range of any shipper to whom speedy delivery is a major consideration.

Obviously, likewise, international air transport cannot be advanced on any program of Lucean air imperialism or on arrogant demands for American air bases to girdle the world. The future of international air transport hangs on the future of peaceful and cooperative relations among all nations of the earth.

LABOR RELATIONS

Emerging as a new force in American industry, the aircraft industry should and must create for itself a new pattern of labor relations. An opportunity exists to develop cooperative relationships which can lead to new levels of joint accomplishment. The pattern of corporate hostility to unionism which still scars the automobile industry must not be duplicated in aircraft.

Our union can report already that substantial progress is being made toward this end in wartime. Whether such will continue to be the case when the wartime pressure for manpower and production is lifted, I cannot presume to say. That question of policy will be determined by the powers of the industry.

My frank advice to them, however, is to remember that the entire future of their industry is linked to the force of democratic progress in this country and throughout the world. If they are to profit by such developments they must at the same time give recognition to democracy where it most directly counts—in the plants where the planes are made.

RICHARD T. FRANKENSTEEN.

The European Food Problem

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. GILLIE. Mr. Speaker, stark hunger is stalking Europe in the wake of the war. With the crying urgency of feeding the hungry of Europe, it seems to me that the House Agriculture Committee has an important mission to perform in seeing that the food needs of Europe are met efficiently and effectively without jeopardizing the situation on the home front.

Former President Hoover, who contributed one of the greatest jobs to humanity with his distribution and care of the food problem after the last war has spoken out for immediate action to save hundreds of thousands of children from starvation in Europe. Gen. Dwight Eisenhower, our great military leader, also has indicated the importance of the job of feeding the peoples of Europe.

While we have one governmental agency, the U. N. R. R. A., functioning for relief purposes, it seems to me that to objectively plan a program, and to see that the proper goals and food supply are achieved to meet the needs which confront us, that the Agriculture Committee of the House outline a survey and study of the conditions by making a personal inspection and investigation of conditions in Europe. With this first-hand information, we would be in a position to report and make suitable recommendations to see that we fulfill our obligations to the deserving peoples of Europe while sizing up the demands of the home front. This would enable us to shape adequate plans for food production and give us complete knowledge of conditions and potential demands from agriculture.

As I have stated before, food is one of the most important factors in winning the peace of the world. Well-fed persons are happy. If we can help keep the hungry fed, we can help avoid future wars.

On Increased Congressional Allowance

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. STEVENSON. Mr. Speaker, I voted against the rule on H. R. 3109 for the reason that I am opposed to that provision in this bill providing for an expense allowance for Representatives in Congress, and I voted against the bill, when it came before this body on a motion to recommit.

In my opinion there has been no material change in the status of Members of Congress since the last election to justify this action by Congress. Therefore, with no material change in the status of the expenses incidental to the office, I am of the opinion that this is not the time for us to make provision for increased living expenses and other incidental expenses attached to the office.

The congressional committees appointed for the purpose of making recommendations relative to the streamlining and modernizing Congress are at this time conducting hearings on this matter. Many suggestions have been made by economic experts pertaining to the matter of streamlining Congress. These committees have not as yet made their report nor have they made their recommendations to Congress on these matters. Until they have made their report and submitted their recommendations to Congress, I do not feel this is the proper time to pass legislation on this matter in a piecemeal fashion, without the benefit of the facts from the investigations now being made by the congressional committees which have been appointed for that very purpose.

Crossroads Town or Superfactory—United States Builds on Firm Base

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1945

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article from the Christian Science Monitor by Mr. R. H. Markham, who is one of the outstanding magazine writers. Mr. Markham

states that this article is inspired by a recent visit to the Midwest, where he saw both main phases of modern existence—industry and agriculture. He calls attention to his visit through one of the greatest manufacturing plants ever built that turns out "one of the mightiest, most intricate, and most beautiful machines ever produced—the B–29 Superfortress." Mr. Markham speaks of his trip over the Kansas prairies and his visit to towns and villages, and describes a typical town whose name is legion because of its former beloved citizen, William Allen White.

I commend the reading of this article to you:

Although there is much inequality, a good deal of lawlessness, and not a little unjust discrimination in the United States, there is far more good will, brotherliness, freedom, and justice.

I have just had a special occasion to observe some of these good things, and found them very inspiring. They have strengthened my conviction that the United States has enabled masses of common men and women to live in a far more prosperous, enlightened, neighborly, and independent manner than was ever the case before. There is much to be reformed, but the United States has laid the best basis that has ever existed for good life on the part of common people.

These remarks are inspired by a recent visit to the Midwest, where I saw both main phases of modern existence—industry and agriculture. I had an opportunity to visit one of the greatest manufacturing plants ever built, the Boeing airplane factory at Wichita, Kans., and to wander through the labyrinth of its amazing production lines.

TEAMWORK ON SUPER SCALE

The vast building is as clean and light and convenient as a modern university. It turns out one of the mightiest, most intricate, and most beautiful machines ever produced—the B–29 Superfortress. Perfect engineering, flawless construction, unerring precision are required. Never have bulk and minutiae been more intimately combined. Inspecting it one wonders if the production of any other single machine anywhere at any time has called upon so many men and women so completely to adapt themselves to teamwork and so unreservedly to follow directions.

The production line of that factory, with all its tributaries, resembles a great river system, emerging as a tiny spring and eventually flowing as a mighty flood into the sea.

A B–29 starts as nothing, or rather, as a plan in the corner of a factory, then gathers wires, rivets, metal sheets, motors, body, immense wings, and finally emerges, all in a single shift, as the mightiest bird that ever soared into the air. A score of thousands of men and women, white and Negro, strewn along the lines, upstairs and down, with hammers and brushes and screw drivers, with delicate pincers, and with power cranes that could lift railroad cars, all work in unison as a champion rowing crew.

STEADY PACE WITHOUT TENSION

When the broad factory doors swing open at regular intervals, day and night, to let an American eagle fly into the air, the throng of workers might well applaud its silvery flight as a team victory.

The lines move almost unceasingly, but with little appearance of strain or tension. The pace is steady and humane; each task is measured.

Men and women work side by side and get equal pay. White and Negro work at the same task for the same reward. They gather in the some lounging rooms, listen to the same radios, eat at the same places, sit together on the same benches.

Relationships are friendly and dignified. The toilers are neatly dressed. They seem to have as much self-respect and assurance as a lawyer in his office or a teacher in his classroom. And they are far better paid than most high-school teachers.

HOUSING FACILITIES ARE GOOD

Although this is an emergency project, carried on by workers who flocked into the area in multitudes, they are well housed in clean marginal settlements that are equipped with modern conveniences, served by good stores and shops, and provided with excellent schools, good playgrounds, and suitable places of worship.

In this factory also the bosses are closely associated with the workers, and the big chief's old Chevrolet is daily parked on the factory lot near the workers' cars of the same type. There has been no work stoppage because of labor trouble. All the producers, from the chief through the engineers and technicians to the floor sweepers, have cooperated with confidence and a sense of devotion to a common task.

In that extremely intricate plant, where utter exactitude in timing and production is required, one might expect the workers to become robots and the bosses tyrants, but that is in no sense the case. What you see there are mothers and fathers, brothers and sisters, friends and neighbors, proud of their place in American life, jealous of individual freedom, and determined several times each day and night to send a gigantic silver bird to their young men fighting for America at the ends of the earth. They work well, are paid well, live well, and are consciously trying to help one another make a better America.

ITS NAME IS LEGION

And if we go from this splendid factory, typifying our machine civilization, out over the Kansas prairies and vist towns and villages, we see still more pleasing scenes. Let us take a typical town of 10,000 inhabitants. I shall not mention its name, because, though I have a special town in mind, its name is Legion.

It has wide, clean, well-paved streets, beneath graceful, overarching trees. A central park adds to the impression of spaciousness and liberty of freedom from constraint and compulsion. Two peripheral parks serve as picnic grounds and are well patronized. There are several sport fields.

Two modest, well-housed colleges of denominational origin vie in a friendly way for sport trophies and academic honors. There is a fine high school and an appropriate number of good primary schools.

Large, well-built, and pretty-well-attended churches adorn the central city blocks, and posters in the windows of the business houses show that the pastors are busy in common, useful projects. You find a Y. W. C. A. and a Y. M. C. A.

The local daily paper is an honor to America's free press. I am not intimating that every American town of 10,000 has a William Allen White, but many small-town dailies are of a higher standard than not a few big-city dailies. They show integrity, competence, a balanced news sense, and moral responsibility.

Relations between the town's bankers and the farmers or businessmen are not those of Shylocks with desperate debtors; most of the bankers seem more like neighborly promoters. Not a few of them point with pride to many young fellows whom they helped get a start.

INEQUALITIES ARE AMELIORATED

The houses in town are much alike; so are the furnishings. Naturally, there are better streets and poorer ones, newer buildings and older ones, but no slums.

The Negro problem—or the white problem in relation to Negroes—is not solved, but inequalities are ameliorated. Negro boys and girls sit beside white classmates. No other racial or class problem seriously violates democratic ideals there. Homes are often left unlocked.

The high-school principal and milkman call each other by their first names; the Lutheran pastor and the Greek restaurant keeper sit side by side in the grandstand and cheer their Hans and Nick as they charge the line together in the college football game.

NEIGHBORLY BUT NOT PROVINCIAL

Yet with this neighborliness there is no comic provincialism. The girls and women dress stylishly as their sisters in Washington or Boston, the coeds one degree less sloppily than their fellow students in the famous girls' schools of the East.

Prominent lecturers make frequent visits, and the people are well informed on world affairs. They are also as familiar with fast automobiles, splendid roads, crack trains, and silver planes as any community on earth.

Some impatient, impetuous, rebellious reformers are inclined to laugh with scorn at such a picture of good America. But it is a true picture, and anyone with eyes may see it for himself. These facts stand solidly for all the world to behold. One may soberly say that America has made the dreams of ages come true. Some of the dreams. Others still remain to be realized. Building must be continued. But it would be well to build on the present foundation and not tear it down in fanatical devotion to foreign models.

Significance of VE-Day to the Veteran

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. KEARNEY. Mr. Speaker, at the request of the Veterans of Foreign Wars of the United States, and under leave to extend my remarks, I wish to include the following statement entitled "Significance of VE-day to the Veteran":

"The capitulation of Germany serves as a forceful and immediate reminder that the United States is woefuly unprepared to assume its just responsibility to the millions of fighting men who, it is hoped, will be returning to civilian life at an early date," declared Jean A. Brunner, Forest Hills, N. Y., commander in chief of the Veterans of Foreign Wars of the United States, in a statement issued on VE-day.

While hailing the great victory over Germany, Brunner pointed out that "the men who made VE-day possible, and who are carrying the cause of liberty into Japan's own backyard, now more than ever demand that adequate consideration be given to that date in the not too distant future when they will be coming home.

"While we humbly give thanks that the evil German forces of oppression have been conquered without greater loss of American life, we must stop to recall that the war is far from won. Yet, at this time, it is fitting to take inventory of the Nation into which some of our boys will be setting foot again soon.

"We find that the men returning from the battle fronts will encounter an understaffed

and overloaded veteran's agency; that they will experience difficulty in obtaining a job—unless they return to their former place of work—or opening a new business, or securing education and vocational training, and that they will discover no concrete plan for avoiding another world conflict.

"And let us not forget those who will be kept overseas until final victory is won. The V. F. W. has consistently sought 30 days furlough in the United States for each fighting man after 18 months' overseas service, and we are gratified that General Marshall has seen fit to base forthcoming home leave on length of service. We sincerely trust that the forgotten men with 3 and 4 years' service in the Pacific for whom we have tried time and again to obtain furloughs on the rotation plan will be given equal consideration with the triumphant troops in Europe."

Brunner, speaking for 900,000 war veterans, including over 500,000 now fighting in combat theaters overseas, called upon the Nation's leaders to prepare for the discharge of millions of servicemen now scheduled by the War Department by taking immediate action on the following program of the V. F. W.:

1. Thirty-day furloughs in the United States for all men after 18 months of foreign service, with preference given to those with extended periods of combat duty, 3 and 4 years, in the Pacific as well as in the European theater of operations.

2. Demobilization procedure, based solely on length and type of service, which will give discharge preference in the following order: (1) Combat disabled veterans; (2) those with longest periods of combat service; (3) those with longest periods of foreign service; (4) those with the longest periods of home service.

3. An adequately staffed and equipped, efficiently operated Veterans' Administration, capable of serving 15,000,000 war veterans with elimination of delay and red tape in adjudication of claims to veterans and dependents.

4. Complete and adequate hospital facilities for free medical treatment of honorably discharged veterans.

5. Full opportunity for employment of returning servicemen, including recognition of military service in computing job seniority for the purpose of both securing and retaining jobs in industries where employment is based on seniority—placing the veteran on an equal footing with the worker who obtained a job in a war plant since Pearl Harbor.

6. Relaxation of rationing, priority, and surplus property sale restrictions to enable the veteran to enter business and to take advantage of loan provisions of the G. I. bill of rights.

7. Liberalization and prompt and efficient administration of the Servicemen's Readjustment Act of 1944, to remove barriers impeding practical application of loan and educational provisions.

8. Insulation against another world war through immediate adoption of a compulsory peacetime training program, maintenance of large and well-equipped land, air, and naval forces, inclusion of representatives of combat veterans in peace conferences concluding the present war and participation of the United States in a world association to maintain peace, by force when necessary.

9. The ultimate postwar goal of the V. F. W.—a stake in the future for the veteran, commensurate with the financial advantage accrued by the war worker, consisting of adjusted service pay for World War No. 2 veterans through a credit of $3 a day for home service and $4 a day for overseas service, with a maximum of $3,500 for home service and $4,500 for overseas service, exclusive of $500 extra credit to those wounded in active service in line of duty.

A. F. of L. Supports Bretton Woods

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. DE LACY. Mr. Speaker, under the leave granted me, I include in the RECORD the following excellent article by President William Green, of the American Federation of Labor, endorsing the Bretton Woods agreements, which was published in the May issue of the American Federationist:

WE BACK BRETTON WOODS

(By William Green)

The American Federation of Labor, in accordance with its stated policy of supporting a world organization to aid in resolving differences between nations and in bringing about a lasting peace, recommends that Congress accept the Bretton Woods agreements with necessary clarifications and safeguards, as of vital importance in implementing the functions of such a world organization. We take this position because we experienced after the First World War the alternatives to cooperative action in this field, and we know they would bring even more direful consequences now.

Labor realizes that exchange controls and loans are only one key to resumption of world trade and rehabilitation of economies destroyed or damaged by the war. We need also economic agencies for reconstruction.

MUST ALSO ACT IN OTHER FIELDS

It will be necessary to take action in other important fields, such as food, cartels, surplus commodities, aviation, and others, and it is not to be expected that the Bretton Woods agreements alone will suffice to prevent post-war chaos in international trade. We do believe, however, that these agreements can make a substantial contribution toward solving immediate and long-term problems of exchange and international investment.

The A. F. of L.'s main reasons for urging acceptance are as follows:

"While we believe that the chief source of prosperity in this country lies in maximum productive employment which would support greatly enlarged markets for our home use, we also believe that an additional source lies in expanding international trade.

"It is particularly important for a small country to have an opportunity to satisfy its economic needs through international agencies, instead of being forced to resort to bilateral agreements with a dominant power. These bilateral economic agreements might well bring the small country within the political orbit of the dominant power, thus jeopardizing its national integrity and independence.

"Experience with international investments in the period between the two wars has demonstrated the need for international understanding and cooperation instead of blind competition. In the long run, investment must be repaid with goods. But during that period international investments were often devoted to developments which were not productive of goods, such as balancing of accounts, housing projects, etc. There was an additional handicap to repayment because of high rates of interest. The result was repudiation of debts or depreciation of currency, with loss to the investor. Under the Bretton Woods agreements the investor is insured against loss both by the bank and the country of the borrower, after the bank has assured itself that the loans are to be used for productive purposes. One great cause of potential ill feeling or ill-advised action is eliminated by making the debtor country responsible to the bank rather than directly to the loaning country. An additional safeguard is provided in that each government is authorized to prevent its currency from being loaned if it regards the loan as insecure. All losses are shared, thus reducing the loss to any one country.

"The policy followed between the wars of national self-interest in competitive currency depreciation, fostered depressions, discriminatory control of foreign exchange; bilateral agreements for barter, high tariffs, controlled reduction of imports, dumping, and similar forms of economic warfare did in some cases aid temporarily in solving domestic problems for individual countries, but in the long run contracted international trade and lowered the standard of living in all countries and strengthened trends toward isolation. The proposed fund provides a plan for the elimination of such practices and the gradual restoration of the orderly and stable exchange relationships essential to expanding international trade. It has been recognized that equitable exchange rates cannot be determined immediately because of the present disruption of international trade. Provision for flexibility has therefore been made in the agreements, permitting gradual relaxation of wartime exchange and currency controls, as well as limited currency devaluation. The fund should aid nations in relaxing these controls.

"It is to the advantage of workers that the currency of their country be stabilized, that inflation or deflation be avoided, and that their savings and their earnings should not be destroyed by violent fluctuations. In the past there have been such losses to the workers and their families because of the inability of their countries to borrow on a short-term basis in bad years to pay for the imports which in good years would balance their exports. Their governments, without an international fund from which to borrow, where forced to resort to such poverty-creating expedients as limiting imports, fostering a depression, or devaluating their currency.

"If the United States does not ratify these agreements we may be accused of bad faith by the people of the world who are relying on us for aid in their prostration and misery. On the other hand, our acceptance of these agreements may engender good will which will be a strong force in the mutual settlement of other international problems."

ENLIGHTENED SELF-INTEREST

The American Federation of Labor believes that it is both a matter of human decency and a matter of enlightened self-interest on the part of the United States to share through the bank in restoring the prewar economic status of our allies. They need aid on a self-respecting basis in restoring their general productive capacity and in stabilizing their currencies during the period of restoration. Some of our allies are practically bankrupt as a result of war devastation and of their need to liquidate all available assets. Until their productive capacity is restored and increased, they cannot engage in extensive international trade, nor can they pay with exports for their imports. Restoration will mean greater productive employment and higher standards of living in all countries, including our own. To achieve these purposes would constitute a constructive investment even if the loans were not repaid.

Authorization should be given to the bank to make either short-term or long-term loans to countries needing them for general economic stabilization in addition to loans for specific projects of reconstruction and development, under safeguarding guaranties

as provided elsewhere in the agreement. In the articles of agreement, international bank for reconstruction and development, article III, section 4 (vii), reads as follows: "Loans made or guaranteed by the bank shall, except in special circumstances, be for the purpose of specific projects of reconstruction and development." At the recent hearings before the House Banking and Currency Committee, one of our delegates to the Bretton Woods Conference testified that the phrase "except in special circumstances" was intended to cover such general restoration and stabilization loans. The authority of the bank to make these loans should be clarified. We recommend, therefore, that this provision "except in special circumstances" be expanded to include specific authorization to the bank to make these general restoration and stabilization loans.

We realize that the Bretton Woods proposals to stabilize rates must be supplemented by efforts to expand and stabilize the economy and the domestic financial system of each country, followed by efficient marketing of products at home and abroad, and constantly increasing consumer purchasing power with greater production.

High levels of productive employment cannot be maintained by individual countries without cooperation between countries to sustain the efforts of all countries and to promote progressively higher standards of living for the people of all countries.

When efforts are made to eliminate obstacles to trade between nations, workers must be assured that lower tariffs do not mean lower labor standards.

The one special organization which labor helped to create and to which we have entrusted the protection and advancement of labor standards and welfare is the International Labor Organization. This organization must be continued and authorized to protect our interests in connection with operations of the bank and the fund and coordinate economic progress. The International Labor Organization must be preserved with its present independence and with its present capacity for service. We urge that Congress provide policy on the bank and fund directing our representatives to insist that consultation with the International Labor Organization be made a base administrative procedure before deciding upon policies and use of funds.

We also urge that our Government's representatives should be instructed to insist that the bank, in considering loans for reconstruction and development projects, should include in any contract standard labor provisions requiring that the recipient of the loan must give minimum guaranties of welfare on the work, including observance of the labor laws and requirements of the country, prevailing wages and hours, safety and health standards, and, in general, the labor standards recommended by the International Labor Organization.

Fair labor standards guarantee the welfare of workers and therefore increase productivity, promote justice, economic stability, and prosperity. These purposes are an implementation of the expressed objectives of the Bretton Woods proposals.

The functioning of the bank and fund will be no better than the men administering them. Wisdom, foresight, good judgment, and broad experience as a basis of cooperation will be needed if these international institutions are to perform their part in an expanding world prosperity and peace.

We urge that the selection of our representatives be made without regard to politics, and in consultation with representatives of the main functional organizations of our economy which are vitally concerned.

Guard for Liberty

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article entitled "Guard for Liberty" by Daniel M. Kidney, which appeared in today's issue of the Washington Daily News:

GUARD FOR LIBERTY

(By Daniel M. Kidney)

Hitler and Mussolini rose to power by denouncing political parties and "corrupt politicians," Ambassador Claude G. Bowers maintains.

The former Ambassador to republican Spain, who now represents the United States in Chile, outlined his views in the Virginia Quarterly Review under In Defense of Politicians.

As a historian, Mr. Bowers maintains that the greatest Presidents were the best politicians—except Woodrow Wilson—and warns against the trend to discredit politics and politicians as being Fascist.

"I have observed, close hand, that invariably the preliminary campaign (toward dictatorship) has taken the form of a denunciation of political parties and corrupt politicians," he wrote.

"The assumption of the Goebbels propagandists was that a political party not dominated by the state is a faction, and that all politicians are incompetent and corrupt.

"There certainly are some corrupt politicians, just as there are corrupt financiers, corrupt merchants, corrupt industrialists, and corrupt preachers, but no one is so unfair as to draw a sweeping indictment against these sectors of society because they contain, here and there, a corrupt man.

"Only in the case of politicans is the charge made general, and that, of course, is a fantastic falsehood. When we reflect that in the case of men engaged politically in the public service the spotlight is constantly thrown upon them and the microscope used in eager search of evidence of wrongdoing, we tremble to think what might be the result if all the other elements of society were subjected to the same constant and intensive scrutiny.

"And nothing could be more amusing than the notion that with the elimination of politicians, which would mean the extermination of democracy, corruption would disappear from government.

"It is common knowledge that leaders of fascism in Italy and Germany accumulated vast fortunes through the ungentle art of stealing by force; and in the stealing of the property of the citizens, these nabobs of tyranny also deprived them of their natural rights, liberties, and human dignity.

"This astounding pillaging of the state and of individuals, by the totalitarian dignitaries, would be quite impossible where the people can pass on such crimes through legal and political action. * * *

"The dictator must suppress political parties because he must impose silence. With but one party, and that an organ of the government, the rulers can keep the people in ignorance of the fact that their pockets are being picked and their liberties are being taken away.

"Party government means ballots; Fascist government means surrender or bullets."

Psychological Nonsense

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks, I include the following two articles entitled "Psychological Nonsense," an editorial in today's Washington Daily News, and "Capitol Stuff" by John O'Donnell, which appeared in today's Washington Times-Herald:

[From the Washington Daily News of May 11, 1945]

PSYCHOLOGICAL NONSENSE

This newspaper isn't seeking subscribers among the beaten Germans. So it's no skin off our personal nose that the Office of War Information has joined in an agreement to bar from Germany, during the initial period of occupation, all privately published American, British, and other newspapers and magazines. The story was an exclusive in this newspaper yesterday.

We think, however, that the agreement is silly. And so is O. W. I. Director Elmer Davis' explanation of why it was made. He gave the explanation following publication of our story. We report it today on page 16.

"For 12 years," says Mr. Davis, "the Germans have been getting out of the habit of understanding what a free press means." For some time, he goes on, it won't be safe to let them read private publications from free-press countries, which might give them "too much of an impression of divided policies." Instead, they will be confined to publications "conducted" by American, British and, doubtless, Russian officials.

This, according to Mr. Davis, is the decision of the Psychological Warfare Command, composed of American and British military men and civilians. Only last week President Truman said, in cutting O. W. I.'s budget, that events then culminating were expected to make possible the end of psychological warfare in the European theater. But our psychological warriors seem determined to become psychological peace wagers, at the taxpayers' expense. We can only wonder at their brand of psychology.

[From the Washington Times-Herald of May 11, 1945]

CAPITOL STUFF

(By John O'Donnell)

Distinguished members of the medical profession have pointed out that one of the occupational hazards of the practice of psychology is that a doctor at times becomes as screwy as the patient.

As a case in point, we call attention to the latest proposal of the Office of War Information and its uniformed stooge, the War Department's Division of Psychological Warfare, for the immediate treatment of Germany's psychological ills brought on by the Hitler regime.

In substance it is this: Germany, under Hitler, had a controlled press and all-powerful propaganda set-up—almost as 100 percent airtight as that imposed by the dictators of Russia on the citizens of the Soviet.

So the psychological experts of O. W. I. announced yesterday that the triumphant forces of liberty in Germany, by way of giving practical application to the somewhat moth-eaten principles of the "four freedoms," will

go Hitler one better in the way of iron-clad censorship and all-out propaganda.

In the first place, no United States newspaper, magazine, or book will be permitted to get into the hands of a resident of occupied Germany; also barred from Germany, Director of O. W. I. Elmer Davis said yesterday afternoon, will be the publications of all foreign countries—Swiss, Swedish, etc.

To fill this vacuum in the consciousness of German readers, O. W. I. is using up some newsprint in its London office turning out what it hopes will be a best seller among the German populace.

This first effort will be a booklet, profusely illustrated, depicting the horrors of the German concentration camps.

Later, O. W. I. will run the entire German newspaper publishing business. Under 250 O. W. I. editorial directors, now in Europe, and some 750 uniformed members of the Division of Psychological Warfare, publication of newspapers will start in the chief German cities—first as weeklies, later as dailies. The proposal is to use German printing equipment and mechanical labor, and publish in German, world news as prepared in the O. W. I. headquarters in London.

Very frankly, Davis told Washington reporters that if you let Germans read American newspapers, the conquered nation would get too much of an impression of divided policies.

The idea that you could keep facts of world importance—unpalatable as they might be to O. W. I.—from reaching the consciousness of a mass of 70,000,000 persons, is something that would never occur to anyone but those self-appointed experts in the psychology of news.

And the decision to bar the free press of the United States and Great Britain from the victims of Hitler censorship on the grounds that the news in our papers would be bad for them is one of the most bizarre flip-flops of logic that the ever-resourceful do-gooders and world-savers have yet produced at Government expense.

The expense won't be so much, Director Davis thought. A few more millions, perhaps.

Incidentally, it was just a week ago that President Truman recommended that O. W. I.'s present budget request of $54,100,000 be slashed twelve million on the grounds that "war developments in the European theater are expected to make possible an end of psychological warfare in that area and a curtailment of information and broadcast materials in neutral and Allied countries."

There is a matter of newsprint so desperately needed in the United States which enters into the question, but this Davis does not think will be serious. O. W. I. has a store in Great Britain and France.

More has been recovered in German cities by our troops. And within a few weeks it is hoped that the Scandinavian supply can be tapped for the psychological publications in the occupied Reich.

Authority to put all these new O. W. I. overseas schemes into operation stems solely from the military power of the occupying forces. The O. W. I. concurred in the decisions reached by the military and the O. K. was put on the plan by S. H. A. E. F. and the British Foreign Office.

A good hunch is that the regular military men first heard of the plan after it had been cooked up by Director Davis, Assistant Secretary of State and Poet Laureate Archibald MacLeish, Philip C. Hamblet, European Chief of O. W. I., and former White House assistant and New Deal publicist, Lowell Mellett.

Davis, while he made it clear that he didn't trust all American papers in the hands of the German reading public, came out with the hope that American reporters would be permitted to circulate freely within Germany. This point was raised in connection with the prohibition, simultaneously announced, against American businessmen entering the occupied zones.

German bureaus of American newspapers, wire services, and news periodicals will not come under the ban, Davis declared. However, an American corporation which had manufacturing equipment in Germany will not be permitted to resume operations.

Davis pointed out that all these decisions to bar American and other newspapers from Germany and set up an O. W. I. psychological publishing monopoly there was only for the initial or military period of the occupation and would be relaxed as time went on.

Important point is that it gave O. W. I. another chance to prolong its legal life, ask more dough from Congress, and keep the faithful on fat Treasury salary checks with a lush allowance for subsistence and expenses while abroad. In other words, the boys don't get off the gravy train until they're kicked off.

Meat Shortages

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. BAILEY. Mr. Speaker, I am very much alarmed over the growing shortages of meat in the coal-mining areas of West Virginia.

I have received several protests and desire to read a letter for inclusion in the RECORD from Mr. C. F. Davis, president district No. 31, United Mine Workers of America which he is joined by G. S. Brackett, president, of the Northern West Virginia Coal Association, Fairmont, W. Va. There is also a letter from Local Union No. 442, Pursglove, W. Va., United Mine Workers of America which I also desire to include in the RECORD:

UNITED MINE WORKERS OF AMERICA,
Fairmont, W. Va., May 9, 1945.

Hon. CLEVELAND M. BAILEY,
House Office Building,
Washington, D. C.

DEAR SIR: Sometime ago Mr. George S. Brackett and myself addressed a joint letter to you relative to the meat shortage in the coal-mining areas of northern West Virginia. We have received replies which would lead one to believe that the situation was improving.

The facts are, however, the situation is gradually growing worse. Local unions of the United Mine Workers of America have been asking that something be done about this.

The enclosed photostatic copy of letter received at our office is a sample of coal miners' thinking.

Again I suggest that something be done about this matter.

Very truly yours,

C. F. DAVIS,
President, District No. 31, U. M. W. of A.

LOCAL UNION 4427,
DISTRICT NO. 31, U. M. W. A.,
Pursglove, W. Va., May 7, 1945.

C. F. DAVIS,
President, District No. 31, U. M. W. A.,
Fairmount, W. Va.

Mr. DAVIS: By instructions of my local, I have been instructed to write you as to the general meat shortage in this area.

The members are becoming bored with these meatless work days and hence want you and your office to contact the O. P. A. as to the granting of more meat to the hard-working and energy-using coal miner. There has been, and is, the rumor of "no meat, no work." I assume you realize the significance of that expression at this vital stage of the times.

Knowing that you all will give this letter proper attention, we remain,

Fraternally yours,

PETE CHIKIS,
Secretary.

House Committee on Foreign Affairs Opens Hearings on Resolution Proposing an International Office of Education

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. MUNDT. Mr. Speaker, on Thursday of this week the House Committee on Foreign Affairs opened hearings on House Resolution 215 which I introduced on April 9 for the purpose of encouraging the establishment of an International Office of Education. Hearings on this resolution will be continued next Tuesday morning, starting at 10 o'clock.

Because the newspaper report on the hearings as it appears in the Christian Science Monitor for Thursday, May 10, provides a clear but cogent review of many of the purposes of House Resolution 215, I am inserting it in the RECORD at this point for the information of the Members of the Senate and the House:

INTERNATIONAL EDUCATION OFFICE URGED TO UNITE WORLD PEOPLES

WASHINGTON, May 10.—On the theory that the man you don't like is the man you don't know, Representative KARL E. MUNDT, Republican, of South Dakota, has proposed that the peoples of the world get acquainted with each other through the medium of an international office of education.

His proposal is in the form of a resolution—House Resolution 215—which has been referred to the Committee on Foreign Affairs and which Mr. MUNDT outlined to the committee today.

The resolution does not establish an international office of education, but merely provides the means by which Congress can express its support of such a project and so advise the San Francisco Conference and the world.

The purposes of the office were announced by Representative MUNDT as follows:

1. To function in a purely consultative and advisory capacity so as to bring together scholars and educators throughout the world for an exchange of ideas and ideals.

2. To encourage the wide exchange of students so that people of different nations may become acquainted with each other and with living conditions in other parts of the world.

3. To elevate world educational standards and educational opportunities throughout the world.

4. To work with other national and international agencies to speed up the rehabilitation of school systems which have been dislocated and destroyed by the war.

5. To advise and consult with the occupying authorities representing the United Nations on appropriate methods for aiding in the reestablishment of educational opportunities in enemy countries and freeing these systems from the poisonous doctrines which they promoted before the war.

6. To establish commissions and conduct studies to prepare curricula material which will help to spread abroad a correct conception of different peoples of the world.

7. To eventually evolve a code of international good behavior which will help everyone to appreciate the virtues of good citizenship and proper international relations.

It was emphasized that the resolution does not propose to set up an international educational system. Also it does not represent any effort to promote political indoctrination or to interfere in any way with local school systems.

Opium—Hidden Wartime Cargo

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 11, 1945

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article entitled "Opium—Hidden Wartime Cargo" from Hearst's International-Cosmopolitan magazine from April 1945:

OPIUM—HIDDEN WARTIME CARGO

(By Phillips J. Peck)

Out of the logistics of World War No. 2 today grows the threat of a flourishing peacetime revival in the United States of illicit narcotic traffic and the ugly menace of drug addiction.

Military men use the term "logistics" when they talk of the job of supplying armies. The world's supply lanes now are revealed as two-way thoroughfares unloading destruction at both ends.

The story is one of amazing simplicity—a mere case of two and two adding up to four. It promises to have a grim post-war aftermath, however, barring extreme vigilance and prompt counteraction by this country.

The story is one of ships—ships voyaging out from United States ports by the thousands laden with war materials and returning for more supplies—to provide a possible bridge between the opium marts of the east and the fantastic prices offered by the underworld drug rings here.

Pang Jong Hock, 31-year-old English-speaking Chinese merchant seaman, could explain in more detail how the traffic operates. Not so long ago the Chinese seaman was a member of the crew of a freighter which put into port at Baltimore—almost in the shadow of the Nation's Capital. Pang Jong Hock carried a rich cargo of 63 pounds of opium purchased in India.

Drug smugglers frequently make mistakes, but not often are they as careless as Pang Jong Hock. He foolishly asked the Navy gun crew aboard the vessel to assist him in bringing his prize ashore. Treasury officials were notified and agents of Narcotics Commissioner H. J. Anslinger nabbed the Chinaman as he prepared to board a train for the headquarters of the United States underground drug network in New York City.

In this case an inept smuggler was caught. Stringent enforcement work of the Treasury's Bureau of Customs and Bureau of Narcotics blocks a great part of such efforts, but undoubtedly in some cases the traffickers succeed. The traffic in opium is lucrative enough to justify great risk, from the standpoint of the smuggler. Pang Jong Hock's 63 pounds of the drug were purchased for roughly $1,000. In the United States the contraband would have brought $50,000.

Ironically, the ever-widening arc of United States conquest, each foot of Jap-held territory liberated, has intensified the problem. The presence of thousands of American soldiers, sailors, and civilians and the merchant seamen of other Allied Powers in India and Iran has made the British and Persian opium monopolies our concern.

Before the war the smuggling of Indian opium into the United States was nonexistent. The traffic developed with the war. United States officials fought the opium menace around the world but were inclined to recognize the Indian opium monopoly as India's own problem. Now, in Bombay, Karachi, and Calcutta, World War No. 2 has placed our troops in close association with the habits of the East.

Westward go United States ships to the great new port of Basra to unload war materials, soldiers, and civilian technicians in Iran, where both raw and prepared opium can be bought as readily as cigarettes in the United States.

United States military authorities have declared opium shops out of bounds in Iran. In India they apparently are too numerous for such a simple expedient to be really effective. The Defense of India Rules provide punishment, however, for the sale of drugs to soldiers.

A War Department spokesman minimized the danger. He said the problem was dealt with by commanders in the field, adding that the drug threat in India and Iran apparently had not become serious enough to warrant referral to Washington.

"The opium shops and dens have been declared out of bounds by the Army commanders," he said. "There are limits to where you can go in the Army. And don't forget you are in the Army and under its control 24 hours a day."

In the minds of other United States authorities, however, the problem is not so easily dismissed. They believe great danger exists in uncontrolled, immeasurable illicit traffic which is acknowledged by the Indian Government.

Despite a 35-year fight by the United States to liberate several million people from the slavery of drug addiction, the world still produces an estimated 5,200,000 pounds of opium annually—more than five times its medicinal and scientific needs—and Iran and India are the second and third largest producers, respectively. The age-old British monopoly in the latter country continues to operate through some 22,000 State stores, and 17,000 licensed cultivators of the opium poppy. The traffic nets enormous revenue.

India, whose Mohandas K. Gandhi has constantly decried the drug evil, affords one of the most conspicuous examples of opium monopolies. In India opium is eaten, not smoked. It is consumed by countless inhabitants to cure a cough, for pure pleasure, in treating children for diarrhea and dysentery, or to keep babies from crying. It possesses a monopoly of great revenue-producing qualities. In 1940, according to a League of Nations document, 16 provincial governments alone—out of 570 states—collected $3,989,000 in opium excise duties and licensing fees.

The 22,000 opium shops in India are estimated to sell upwards of 500 tons of opium annually. In India the cultivator must first obtain a license from the government stating the number of acres to be planted with poppies. When the crop is ripe, it must be sold to the government, which converts it into opium for export and for domestic consumption in India. In 1940, the government factories at Ghazipur and Neemuch bought 71,355 and 30,928 kilograms of opium, respectively. In the same year 21,991 acres of poppies were planted in British India, although the acreage once ran as high as half a million. The shopkeeper pays a small fee for his license to sell and buys the opium from the government. It is sold at a fixed price and in specified quantities. In addition to opium, many of the licensed shops also sell marijuana—preparations of Indian hemp known as bhang, charas, and ganja.

Other notable figures: in the Netherlands East Indies, 2 percent of the entire revenue was derived from smoking opium; in British Burma, 5 percent; in the British Federated Malay States, 6 percent; in British North Borneo, 10 percent; in British Sarawak, 11 percent; in the British unfederated Malay States, 12 percent; in the British Straits Settlements, 20 percent.

United States drug addicts—estimated at 1 in each 3,000 of the country's population—had tough sledding before the war. It used to be that the average addict could keep himself well satisfied for $2 a day. Then our campaign to wipe out the narcotic evil, given force by the enactment of the Harrison law 30 years ago, gradually bore fruit. Over a period of years the price went up as the supply of drugs slumped. By the time World War No. 2 made its appearance, the long arm of the Government had blotted out many of the traditional sources of supply and the dope fiend found that it cost him $10 a day to satisfy his craving. From 1 in 400 before the last war the number of United States drug addicts dropped to the present-day ratio of 1 to 3,000 population. Another conflict now threatens to undo these gains.

India and Iran are, according to the Narcotics Chief, the sore spots—"the cancer of narcotics infection." Indicative of the sinister trend here at home is the disclosure that seizures by United States narcotic agents of opium from Iran and the Indian state of Gwalior doubled last year. The raw opium bore the labels, "Iranian Government Opium Monopoly" and "Gwalior Government Opium Godown."

Whether or not the United States, as the price of Pacific victory, will reap the harvest of a full-scale outbreak of drug addiction, smuggling, and crime in the years ahead depends not only on its vigilance here at home but also upon the success of its efforts to cleanse the rest of the world of this age-old evil.

"We have no illusions about breaking up permanently the United States drug rings," Anslinger explained. "Our best bet is to destroy the sources of opium—dry up the supply before it reaches this country."

The United States policy against the illicit traffic in and nonmedicinal consumption of opium has been reinforced by the so-called Judd resolution, which requested President Roosevelt to urge upon all opium-producing countries immediate steps to limit growth of the opium poppy and the production of opium and its derivatives.

Representative WALTER H. JUDD, of Minnesota, voiced the fears in the minds of United States narcotics officials when he told the House that conditions in India and Iran constitute a real threat to the health and welfare of Americans.

The situation, JUDD believes, is most conducive to the development of addiction among curious or lonely or discouraged boys. Others succumb to the temptation to pay 50 cents for a small package of opium which they can sell illicitly for as much as $50 in America. High officials of the merchant marine, JUDD reported, have expressed concern at the increasing number of such small packages found on returning vessels.

So far, however, the evidence indicates that the bulk of the smuggling is carried on by foreign crews, largely Chinese. The total seizures or raw opium practically doubled last year and nearly two-thirds of it came originally from Persian Gulf ports and

was carried by Chinese crew members of British and Netherlands vessels. Large quantities of Iranian stick opium were seized in Atlantic-coast ports by customs officers from Chinese seamen on British tankers coming from Liverpool and other British ports. Investigation revealed that, because of war conditions, there is a considerable Chinese colony in Liverpool and that opium is being trafficked freely.

The wartime impetus given to opium smuggling, Anslinger fears, will mount after the peace, with extensive world-wide shipping to continue but without the current strict military surveillance. Smugglers will have built up backlogs of drugs here and there throughout the world, and the demand and fantastic prices of the United States underworld market will persist. The inevitable law of supply and demand will continue in force.

United States officials view the opium problem in two phases:

The Far East: The area embracing Java, Sumatra, the Malay States, and other British and Dutch colonial regions, now Jap-held, where real progress is being made—plans to stamp out the drug evil after liberation.

India and Iran: Where progress is not so apparent.

In the first-named populous regions, the United States' long fight against opium is about to be crowned with success. The Governments of the United Kingdom and the Netherlands, after pursuing for many years a policy of gradual suppression of the use of smoking opium, have announced that upon regaining control of the Japanese-dominated territories they will not reestablish the opium monopolies. Moreover, all American expeditionary forces, immediately upon the occupation of a part or the whole of any of the Jap-occupied countries, will seize all narcotic drugs intended for other than medicinal and scientific purposes and close existing opium monopolies, opium shops, and dens.

The State Department reports that the Judd resolution has been transmitted to the Governments of Great Britain, Turkey, Iran, Afghanistan, Russia, Yugoslavia, and China. The Department hopes it will prove the forerunner of a postwar agreement among the opium-producing countries to fix rigid production quotas essential to medicinal and scientific needs.

Will India and Iran be the prime targets of postwar efforts by our Government to obliterate the opium evil?

Fraternalism's Job in the Days Up Ahead

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Independent Order of Odd Fellows, District of Columbia Lodge, on May 12, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tonight, we gather to celebrate the one hundred and twenty-sixth anniversary of the Independent Order of Odd Fellows, which came into being in England on April 26, 1819.

In these fast-moving times, it is difficult for us to turn our glance backward through the din and roar of a world which is filled with war and the problems of the coming peace, and the world's need for the solution thereof. However, with a brief glance backward to 1819, we see this Nation, now the greatest on earth, then just reaching westward beyond the eastern seacoast. This was before the invention of the steamboat, steam engine, telephone, telegraph, threshing machine, the radio, the automobile, and all the modern inventions.

In the brief period of this order's life, this country has crossed the continent, fought in two world wars, and advanced, as we stated, to leadership among the nations of earth. As we face the future, this order and other fraternal organizations, are met with this question: Will we be adequate in the challenging days up ahead? Has fraternalism a place?

We know that in the Fascist lands, such orders as this one were considered obnoxious to the state. Why? That brings us head-on to the subject of this talk: Fraternalism's Job in the Days Up Ahead.

There comes to my mind a poem:

"I gave a beggar from my little store of well-earned gold,
He spent the shining ore,
And came again, and yet again,
Still cold and hungry as before.

"I gave a thought, and though that thought was mine,
He found himself a man, supreme, divine,
Bold, clothed, and crowned with blessings, manifold,
And now he begs no more."

In this little verse is found a mint of wisdom. We know that our job in Europe, during its reconstruction, is to do just what is set out in these inspiring words. Of course, we have to help to feed and clothe, but our main job is to reconstruct men so that they will be able to help themselves. This calls for understanding, kindness, and having patience with human failures; for being generous and large in deed and thought. It calls for doing unto others as we would be done by; for bestowing charity that enables the receiver to be reborn.

This is meeting the world's need. But we also need the same kind of action on the home front.

The other night I talked with a group of Gideons who told me that they had distributed some eight million New Testaments and Psalms to the men in the services. This exemplifies businessmen in action, men who realize that right ideas mean right action. I heard one businessman say that he had no trouble with his group of workmen. He called them together when they wanted to organize and told them that was agreeable to him. All he asked was that when they had any problems, they would meet around the table, put the Bible between them, and agree to settle their problems on the basis of what was contained in that book. Here was a man who was motivated by the spirit of love, good will, and justice.

What would happen if we could convince the peoples of this earth that greed and selfishness would get no one anywhere; that in good will and understanding will be found the solution to all problems—economic, social, and political. You and I know that if this solvent became an actuality, that all problems would be on their way to a solution.

On this continent, since this great order was founded, we have in a slight measure applied this solution. In our political field, we have had to fight a civil war to test whether this Nation was one or divisible. While we have had a great many misunderstandings between labor and management because this solvent was not present on both sides of the table, by and large, as the statistics show, a great percentage of employers and employees do possess this gift from on high.

Up ahead on the world's stage, when the mechanism comes out of San Francisco, we are hoping that the peoples of earth will work together as brothers, bound together in the rebirth of the desire for the utilization of this solvent. Without it, there will be no advance step taken toward the solution of this problem of war.

Everywhere the individual is asking how he can make an effective and enduring contribution to this great end.

I know I am speaking to men and women who are leaders. By that I mean folks who constructively influence others in their daily contacts. My answer to this question is this: In your own conduct apply the rule of doing good. It is an old injunction which has rung down through the centuries. You remember the Master said: "Do good to them that hate you." There is plenty of opportunity everywhere for the application of that rule. We find such opportunities in our own community, in our own homes, and in our own businesses. The job of this organization is to revitalize the leadership, which is inherent here, to invest its great teachings, the fine thoughts, and physical energy of its membership, in doing that which will add to the grand total of the good which is done in the world.

It is easy to talk this way, but if it is put into practice, it becomes easy to act this way. When discouragement approaches, we will have to shut that devil out. You remember the story related that the devil held an auction and sold off all his goods. The next day someone came to his store and said: "Well, now you are out of business. The world will be at peace." And the devil replied: "No; I still have one tool. It is over there in the corner," and the observer noticed an old rusty tool and inquired what it was. The devil said: "That remains with me, and tomorrow I will have a brand new stock of merchandise. That tool is called discouragement."

The war is over in Europe. Some of us will remember VE-day for the rest of our lives. Here in Washington it was in great contrast to the Armistice Day of 1918. But apparently in Europe—war-torn, wrecked Europe—the relief was so great that again they lived through a great day of celebration. All this was brought to our ears over the magic of the radio. I heard reports from around the world: President Truman, Churchill, Eisenhower, MacArthur, the King of England, and countless others. And there was abundant wonderful music adding to the splendor of the day.

There are occasions in individual and national experiences when the limited view gives way to the far expanse; the provincial becomes worldwide. We are living in such a period now, and the VE-day experience gave us the broader view. Because of man's invention, his extended physical and mental powers, the world has become shrunken, and the era calls for the wider view. The individual, if he does not sense this, is like the man who lives by the side of the road and sees the rest of the world go by.

Man was born for growth, development, unfoldment. The race is called now to meet the challenge which has obtained all through the preceding centuries—the challenge of peace or war. The fact that the preceding centuries have failed should put us more on our toes and not cause us to feel inadequate. This age, of which we are a part, is a great age. It is great to be alive. It is great to know that we can go places—places where other generations have failed.

There lived in this city some 80 years ago a man whose spirit I am sure is at the helm guiding this Nation. He had a philosophy which each individual in this age should get a hold of. It was this:

(a) He believed in the utilization and practicality of a sense of humor.

(b) He had a great faith—a faith in the omnipotence, omnipresence, and omniscience of God.

(c) He had a great love—a love of America and its Constitution.

This man was, of course, Abraham Lincoln.

If we could follow in his footsteps, there would be no question about the adequacy of this day and generation. We would sell a true and worthy bill of goods to the world. We would get rid of the fears which exist between the nations.

And on the home front, by our actions (which speak louder than words), we would demonstrate to the world that there is only one class in America—the American. As in this war, we have all played ball together, so in the peace we should collaborate, cooperate, and live in harmony together, producing such a volume of material wealth and such a force of spiritual harmony, that our light would so shine that all the world would see the wisdom of following in our footsteps.

I have spoken of a great hope, a great job, for each of us.

In the lodge meetings of the Independent Order of Odd Fellows, there must be reborn the spirit (not the letter) of friendship, love, and truth, in order that the vitality of these great principles can effectively operate in the minds of men. We have been told, "You shall know the truth, and the truth shall make you free."

"Perfect love casteth out fear." Only through international friendship can suspicion and hate be dissolved. You remember the story of Tolstoy. He was walking down the street of Warsaw one day and a palsied beggar asked him for alms. Tolstoy had given away his wealth, but he approached the beggar, took him by the hand, and said, "My friend," and then he whispered in his ear a great idea. That afternoon the beggar stood erect, not palsied, and with gleaming eyes he repeated, "He called me friend."

I have refrained from applying these thoughts to the specific problems of reconversion, reemploying 56,000,000 Americans, balancing the Budget, eradicating supergovernment influence and bureaucracy. That is the job for each of us. I make only one exception—because there is so much synthetic thinking, so much opportunism.

What is that exception? It is this: In our pursuit of the better life for America and the world and the solution of our problems—social, economic, and political—proving ourselves and the Nation adequate, let us ever bear in mind the words of the prophet: "Open Thou our eyes that we may see." This means that we must never again become so obsessed with an idea of false security which would result in America becoming endangered because of such obsession.

A good Odd Fellow is alert—on his toes—as to what is going on and is fully cognizant of the rights and obligations of being an American.

A Plea for Poland

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an eloquent address delivered by Most Rev. Richard J. Cushing, archbishop of Boston, entitled "A Plea for Poland." This address was delivered at a religious ceremony at the Cathedral of the Holy Cross, at Boston, Mass., on May 6, 1945, attended by several thousand people of Polish descent.

There being no objection, the address was ordered to be printed in the RECORD as follows:

While freedom is being won and city after city is being liberated throughout the world it is sad to note that those who first suffered the impact of the invader, and who have never given up the struggle, appear destined to be mercilessly crushed in their attempt to regain freedom. I speak of the heroic people of Poland.

As soon as the Polish opposition to the Nazi invasion had been crushed the people of Poland's western provinces were torn from their homes and lands and the systematic destruction of a great people began. While staggering from the first attack, another enemy crossed her borders to deliver the blow of death. To Germany and Russia went helpless Poland. When these two countries were at war poor Poland fell to the one, then to the other, and the wholesale destruction of a Nation ensued.

There is no need to retell the sad story of devastation, exile, and slaughter. It is probable that no nation in all history ever suffered so greatly and so bitterly in such a short period of time. But while the fury of war crushed the bodies of men, it cannot destroy the spirit of a nation.

Against seeming insurmountable difficulties and in the face of almost certain defeat, with few if any signs of hope, the Poles fought on. They never despaired. Almost 1,000,000 of their soldiers gave their lives on every battle front of Europe. In Poland itself the losses are said to be approximately 5,700,000. Of this number 3,500,000 are reported to have been executed, murdered, or to have died in concentration camps, in prisons, or in gas chambers. Two hundred thousand are said to be in prison camps and the remaining 2,000,000 are listed as deported, to forced labor in foreign lands. When one compares the population of Great Britain, the United States and Poland, the significance of Poland's contribution is astounding and appalling. Her losses exceed 18 percent of her prewar population. England's Prime Minister has said that Poland contributed immeasurably to save Great Britain. Our late President once called Poland the "inspiration of nations." We are hopeful that those who owe Poland a debt of gratitude will demand justice for her.

Today Russia claims that she must have at least half of the country for her own security. According to prewar statistics Russia is 54 times the size of Poland, twice the size of all the rest of Europe, about 3 times the size of continental United States. She has one-sixth of the land area of the globe. Poland had one-third of 1 percent of the earth with 35,000,000 people while Russia counted 170,467,000 people. Since the war Russia has taken over much more territory and millions more in population. It is hard for me to follow the reasoning that Russia needs a goodly part of Poland for her security. This problem came before the three great victorious powers in the Crimean Conference. Their solution was a disappointment to all who had built their hopes on the Atlantic Charter.

Poland, which stood against the Nazi aggressor from the very beginning of the war; Poland, which has suffered more than any other nation in the war; Poland, which has fought and is fighting with our armies on every European front, has been forced by her allies to surrender a very large part of her territory. In apparent exchange, it was guaranteed at Yalta that in the reconstructed world there will be a strong, Independent Poland, with a government chosen in a free election by its own people. Pending the action of the people of Poland in a free election, agreements were made to set up a provisional regime which will be recognized by the Three Great Powers. This provisional government must not be the creation of a single foreign power, but the choice of all parties to the Yalta engagements. Our President is pledged to see that in the choice of a permanent Polish Government the people of Poland be guaranteed in their right of free secret ballot. No foreign power must be permitted to influence this election in a way which will determine its results. The peace of the world demands a free, independent, democratic Poland. It must not be that Poland become a puppet state under the domination and control of any foreign power. If Poland is secured in its rights of freedom and independence, it will make great sacrifices and do its full part in the international community. If it is enslaved and its leadership forced into exile or inhumanly liquidated, the love of freedom will not be crushed in Polish hearts, but the seeds of war will have been sown.

The cause of Poland must not die, for her cause is the cause of Europe and the cause of the world. As her rights are guaranteed, so will the rights of other countries be guaranteed. The tragedy of Poland is inseparable from the fate of a dozen of nations between Germany and Russia which, after having escaped the Nazi conquest, are now forced into the Russian orbit. This war began for Poland's independence and security. Her restoration was the prime technical purpose of the war. Without the guaranteed independence and freedom of Poland, the outcome of this war is destined to be questioned, both morally and politically. Morally, because the just aims of the war would be questioned. Politically, because it will be said that ideals are utilized in order to prosecute wars but not to organize peace. Poland is a test case. We ask, therefore, that the same justice be given to Poland as we expect will be accorded to every other country, large or small, that has been our ally in this war. To punish or abandon an ally to whom we solemnly promised to restore all rights, privileges, and liberties taken from him by a brutal, bloody, and wicked enemy is something without precedent in American history. Self-respect and the debt we owe to our men who have died in Europe for a really free world in which Poland also might be free make it impossible for any authority to still the imperishable demand that complete justice be done Poland.

We pray, therefore, today that justice may be done to Poland so that a great nation, an ancient member of Christendom, a faithful defender through the ages of its faith and culture, may once again be free. Justice to her cannot be disregarded in building a just and enduring peace.

Reply to Governor Dewey

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able radio address delivered by Hon. Paul E. Fitzpatrick, Democratic State chairman of New York State, on May 11, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Dewey has made his report to the people. As chairman of the Democratic

Party in New York State, it is my responsibility to call to the attention of the people certain misrepresentations. I shall do so frankly in the interest of good government and fair play. I shall do so from the record.

Mr. Dewey's record must be judged by what he failed to accomplish as well as by what he claims credit for, and incidentally, it is important to remember that much of what he claims credit for, was forced upon him and the Republican Party. Public opinion was far ahead of him, and he caught up with it only as a matter of political expediency.

He dwelt at great length upon the antidiscrimination bill which was passed at the last session of the legislature. Now, how did it come about that this law for which he claims credit was written into the statute books?

Was it his leadership that brought about its passage, or did he actually try to run away from it? The facts give the answer.

In 1943, a nonpartisan commission was appointed to deal with unfair labor practices in industrial employment. The war effort was being hampered because of such discrimination and the commission operated under the State war council. This commission, composed of public-spirited citizens unanimously made its report to Mr. Dewey, and submitted a proposed bill embodying their recommendations. It was then introduced in the Senate by a Republican. The bill had the support of divergent groups and was considered a nonpartisan measure. Now, anybody who knows how the Republican Party of this State works, understands that the introduction of this bill was O. K.'d by Mr. Dewey. He gave it his support because he considered it a politically expedient bill—that is, until he remembered that he was a candidate for the Presidential nomination and he might lose delegates in the convention.

What did he do? He ran away from the bill, using the all-too-familiar technique of appointing another commission to study a subject which had already been studied at length by his own appointees. Eight outstanding members of the original commission resigned in disgust. Mr. Dewey now claims that last year's bill "was clumsily drawn, and introduced so late that no action was then possible." A year's delay resulted. You, the people of the State, will pass judgment on this lame excuse.

In the last session of the legislature the members of the Governor's own party sought to avoid consideration of the bill. It was planned to send it to the scrap heap until vigorous public opinion and a forceful Democratic minority in the legislature compelled the Governor to take a stand. Despite a clear Republican majority in each house of the legislature, it would not have passed without the support of the Democratic Party. The people of the State of New York will resent the effort of Mr. Dewey to claim credit for a bill which had the unanimous support of the Democratic Party. They will resent the failure of the members of his own party to give support to the bill. The antidiscrimination bill was not political in nature and should have no place in politics. The law will attain its objective only if wisely administered. We will watch the character of the Governor's appointees and will be vigilant in following their official acts. Upon them, will depend the success or failure of the law

A similar technique was employed by Mr. Dewey in connection with the rent-control bill. Certainly the memory of the people of this State is not so short that they have forgotten the facts which led to the passage of the present rent-control bill. Here, too, Mr. Dewey seeks credit for legislation which was forced upon him. In 1944, as a result of the critical shortage of loft, office, and business space in the city of New York and the rent-gouging activities engaged in by unpatriotic landlords, a legislative commission was appointed. Nineteen hundred and forty-four, as Mr. Dewey may remember, was the presidential year and again the commission delayed action for a full year for political reasons while landlords made extortionist demands for increase in rents upon their tenants. The commission failed to take any action, an acute situation arose, and demands were made for a special session of the legislature. The mayor of the city of New York and many nonpartisan organizations urged some action upon Mr. Dewey but the pleas fell on deaf ears. It will be remembered that the Democrats introduced bills in the 1944 sesison for rent control which the Republican Party defeated. Finally, in December 1944 the situation became so aggravated that the Republican Party could no longer ignore the needs of the situation. Under persistent pressure from the Democratic Party, Mr. Dewey finally recommended legislation freezing rents on loft buildings, but he continued to ignore the equally serious need for similar limits on office and store rents.

In his report to the people, Mr. Dewey, in discussing another subject speaks "of those hired lobbyists who swarm down on Albany * * * mispresenting both the nature of the problem and the various bills before the legislature." Could it be that the Governor also had in mind the lobbyists composed of close friends and advisers who swarmed down on the legislature and succeeded, at least for a time, in preventing passage of a rent-control bill for office and business space? Again, public opinion was too strong to be resisted and finally the people triumphed, not because of Mr. Dewey or the members of the Republican Party, but in spite of them.

Mr. Dewey's general policy has been one of token support of such bills as he believes to be expedient politically. He represents a negative type of leadership where such action as he takes is the result of pressure of public opinion. He has not exerted a dynamic and aggressive leadership such as marked the administration of three previous Democratic governors.

Let us take another example of this negative leadership. Every civic and nonpartisan organization interested in housing had urged upon the legislature the full authorization of the balance of $115,000,000 and an increase of the subsidy necessary to carry the annual loan amount to the extent of $4,000,000. The Governor controlled the activity of the various civil bureaus interested in sound housing and radically cut these figures, thereby limiting the scope of this program. This is an example of the policy embarked upon from the beginning of his administration to scuttle the housing program. He gives it just little enough support so that it can not be said he has killed the program entirely. Let us not forget that Mr. Dewey and his Republican legislature "forgot" in 1943 to pass necessary legislation, and in so doing delayed the steady advance of the housing program.

The State with its unlimited resources and taxing powers has accumulated a large surplus. Everyone knows this is due to abnormal times resulting from war conditions. Our municipalities have been stripped with rising costs and limited revenues. Mr. Dewey shut his eyes to their needs. As a result, the operating plants of our municipalities have slowly disintegrated and the efficient operations of municipal services have been seriously impaired. Employees of the municipalities, faced with rising cost of living, find that their real wages have been considerably reduced. Mr. Dewey ignored their plight. The Democratic Party consistently hammered home the fact that the municipalities were in need of additional financial relief from the State. Mr. Dewey has once more shown he is very adept at talking big and accomplishing little. All we get from him is the creation of a commission to study the problem and after they submit their reports, he sets up other committees and commissions. These he dominates and controls by appointing members who will do his bidding—members of his own party or immediate cabinet.

Mr. Dewey takes a bow on the fact that out of the postwar fund approximately $210,000,000 has been appropriated for a highway construction to employ the returning veteran. Our boys have had their fill of digging foxholes and living in mud and mire without having to come back and be given the so-called generous opportunity to work with a pick and shovel on the highway. They are not looking for a dole or a hand-out.

The existing method of allocating State aid for education is antiquated and it is inadequate for our present-day needs. The Democratic Party has recognized this principle for many years and has agitated for a change in the Friedsam formula which is the method governing the distribution of State aid for education. Mr. Dewey has continued to ignore this self-evident fact. It was due only to the persistent prodding of the Democratic Party that any action was taken.

A joint legislative committee created to study educational problems, and which had received aprpopriations of approximately one-half million dollars, was authorized to make a study of the Friedsam formula with a view to making changes in keeping with present-day needs. Fearful that the findings of this legislative committee would run counter of his views, Mr. Dewey by-passed this committee and instead appointed members of his own administration—the "yes-men." This group, hastily created and without an opportunity to study this very complex and vital problem, prepared a revision of the Friedsam formula favorable to some districts at the expense of others for reasons of political expediency.

Let me conclude by saying that in the problem year ahead Governor Dewey may depend on the fullest cooperation of the Democratic Party toward solving the pressing problems of the times but we shall expect full credit for this patriotic assistance. Whenever the Governor endeavors to deny us this credit for political enhancement of his aims, we shall feel free to correct the record. We aim to play fair and expect fair play in return.

Getting Along With the Government Agencies

EXTENSION OF REMARKS

OF

HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. WHITE. Mr. President, on behalf of the senior Senator from New Jersey [Mr. HAWKES], I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Getting Along With the Government Agencies," delivered by Mr. Gilbert H. Montague, and I also ask that the request for printing prepared by the Senator from New Jersey be incorporated in the RECORD preceding the address.

There being no objection, the request and address were ordered to be printed in the RECORD, as follows:

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech made by Gilbert H. Montague under the title "Getting Along With the Government Agencies."

Mr. Montague delivered this speech before the Forum of Administrative Law of the Essex County Bar Association, in Newark, N. J., April 9, 1945.

Great interest has been shown by the businessmen and members of the bar in this speech of Mr. Montague's.

Your committee has asked me to talk as personally and intimately as possible, out of my 30 years' experience practicing in matters before Government agencies.

Illustrative of the Government agencies to which I shall refer are the Antitrust Division and the War Division of the Department of Justice, the Federal Trade Commission, the Food and Drug Administration, the Securities and Exchange Commission, the National Labor Relations Board, the National War Labor Board, the Committee on Fair Employment Practice, the War Manpower Commission, the Alien Property Custodian, the Wage and Hour Division and the Public Contracts Division of the Department of Labor, the Office of Price Administration, and other prosecuting agencies and departments of the Government.

KEEPING OUT OF TROUBLE

Trials and court arguments are the drama in a lawyer's life, but most companies and trade associations want to keep as far away from litigation as possible.

Now that Government agencies are everywhere, a prime part of a lawyer's job consists in advising companies and trade associations so as to keep them out of trouble with the Government agencies.

I shall talk, therefore, as your committee has requested, as personally and intimately as possible, about ways and means for accomplishing these objectives.

WHAT IS UNLAWFUL?

When a company or a trade association asks, "Is what we are doing unlawful?" what it really wants to know is usually something quite different, namely, "Is it likely that the Government agency that enforces this law will prosecute us in the belief that what we are doing is unlawful?"

Companies and trade associations have bought and paid for reams of legal opinions dealing with the former question, when what they really wanted was usually something they never got, namely a legal opinion dealing with the latter question.

Before there is any investigation or prosecution, a company or a trade association is seldom interested in the question "How is the Supreme Court likely to rule on what we are doing?" What it then usually wants to know is, "Is it likely that some Government agency will prosecute us?"

Not until after investigation or prosecution is begun, is a company or trade association often really interested in the former question.

BEFORE THERE IS ANY INVESTIGATION

To counsel whose day-to-day practice is in many matters and many industries which Government agencies are investigating and prosecuting, there are many premonitory signs as to when and where an investigation and prosecution may be likely.

That likelihood will have been sensed by such counsel long before any prosecution, or even any investigation, is actually begun, if he is active and experienced in this field, and knows the operations of the company or the trade association he is advising.

The company or the trade association can then weigh unhurriedly that likelihood, and also the pros and cons of whatever changes of methods and policies may become necessary, if it seems worthwhile as a business proposition to try to avert the likelihood of investigation and prosecution.

Companies and trade associations thus served have shown over the years a remarkable absence of prosecutions and even investigations, and a notable record of effective growth, as compared with companies and trade associations that have continued methods and policies which they have later had to change with loss of prestige, or under pressure of investigations and prosecutions that have been harassing and costly in lawyers' fees and executives' time.

Equally important is assurance to a company or a trade association when there is no likelihood of an investigation and prosecution.

This assurance can sometimes be given by counsel when the officers and general counsel of the company or trade association are mistakenly apprehensive.

WHEN AN INVESTIGATION BEGINS

The sign that an investigation is actually begun is sometimes first discoverable in a questionnaire or inquiry coming from some nonprosecuting branch of a prosecuting agency, such as a research, economic, administrative, or policy division of the Department of Justice or the Federal Trade Commission or the Office of Price Aministration, or from some wholly different agency which itself does little or no prosecuting, such as the Departments of State, Treasury, War, Navy, Interior, Agriculture, Labor and Commerce, the War Production Board, the Petroleum Administration for War, the Office of Defense Transportation, the Foreign Economic Administration, and innumerable other nonprosecuting Government agencies.

So abundantly do the prosecuting agencies now avail of data obtained by questionnaires and inquiries from the nonprosecuting agencies that many companies are finding it worth while to insist on a routine screening by counsel of all questionnaires and inquiries coming in from any Government agency whatsoever, and all responses thereto which the company makes.

TELLING YOUR STORY FIRST

Should a company or a trade association always keep away from a prosecuting agency until after the agency has called on it?

Usually, yes. But if its story is one that can be more persuasive and convincing if the agency hears it before listening to too many of its enemies, and if its counsel knows the agency well enough to be able to gage the probabilities, it is sometimes good tactics to tell its story to the agency's top officials before they hear it from the agency's staff, or before there is any sign that an investigation is actually begun, or even before there is any prosecution in prospect.

When companies and trade associations served by such counsel have thus told their story in advance to an agency, my experience has been that in most instances there has been a prompt settlement and sometimes no prosecution.

Where investigation and prosecution have not been averted, the good impression created by the first approach to the agency has usually sufficed to curtail greatly the scope of the investigation and to aid greatly the negotiation of a satisfactory settlement without a trial.

UTILIZING THE INVESTIGATION PERIOD TO AVERT PROSECUTION

During an investigation a counsel who is active and experienced and knows the agency will have many opportunities for well-planned efforts to avert prosecution.

He and his staff in contact with the agency's staff will be able to sense the direction of the investigation and the probability and extent of the possible prosecution.

If he knows the agency well enough, such a counsel can, without offense to the agency's top officials or staff, develop opportunities for raising before the agency's top officials questions of law on which he can submit informal legal memos and make informal legal arguments.

Companies served by such counsel have in this way averted many prosecutions involving highly controversial legal, economic, scientific, and medical questions which, if not averted, would have been exceedingly protracted and expensive.

Even where prosecution has not been averted, the narrowing of the issues achieved by informal legal memos submitted and informal legal arguments made on these questions of law before the agency's top officials has usually curtailed greatly the scope of the investigation and greatly aided the negotiation of a satisfactory settlement without a trial.

CONCERNING COUNSEL

Trial lawyers and litigating law firms are sometimes better at litigating than in interesting a Government agency's top officials in questions of law that may terminate an investigation without prosecution, or negotiating a settlement without a trial.

Trial lawyers are trained to compete against adversary counsel and to persuade, convince, and win agreement from a judge or a presiding officer.

In a Government agency matter, in the initial stages before a prosecution is begun, the counsel's task is to persuade, convince, and win agreement, not from a judge or a presiding officer, but from his adversary counsel.

This calls for a high order of advocacy, quite different from the advocacy requisite to persuade, convince, and win agreement from a judge or a presiding officer.

Speaking personally, as your committee has asked me to do, it has been my experience that a lawyer practicing before a Government agency will find it helpful, if his record with the agency is that while he has litigated or settled many cases coming to him after investigation or prosecution has begun, no individual or company or trade association while acting upon his advice has ever been prosecuted by the agency.

HIGH COST OF TROUBLE

Government agencies today have plenty of teeth.

A recovery or a settlement for violating a directive or a regulation of the Office of Price Administration can sometimes cost a company hundreds of thousands of dollars.

Back pay awarded to employees because of discrimination in violation of the National Labor Relations Act has in one case exceeded a million dollars.

A recovery or a settlement for wages that are not in compliance with a directive or a regulation under the Fair Labor Standards Act or the Stabilization Act will sometimes cost a company thousands of dollars.

Fines collected by the Attorney General in criminal prosecutions and settlements under the antitrust laws now amount to several million dollars annually.

More formidable than money damages and fines are some of the provisions that courts are now inserting in antitrust decrees.

CAPITAL PUNISHMENT FOR A TRADE ASSOCIATION

Because a trade association had violated the antitrust laws a lower court in 1942 required drastic changes in its methods of operation, but permitted it to continue. But in January 1945 the Supreme Court held that the lower court had been too lenient, and ordered that the trade association be disbanded and enjoined the defendant companies from having any trade association for 5 years.

"The association has undoubtedly been an important instrument of restraint and monopoly," said the Supreme Court.

"It may be made such again, and detection and prevention and punishment for such resumption of violations of law may be difficult if not impossible.

"In the light of the record, we think it better to order its dissolution, and to provide that the corporate defendants be restrained for a period of 5 years from forming or joining any such trade association, and that thereafter they may apply for leave to do so.

and have such leave on showing to the court that the purposes and activities of the proposed body will not be violative of law."

CAPITAL PUNISHMENT FOR FAIR TRADE RIGHTS?

Price structures in many lines of business are today based on resale prices specified in contracts executed under State Fair Trade Acts and the Miller-Tydings Act.

Because it had violated the antitrust laws, a company in 1942 was enjoined for 6 months from making Fair Trade contracts with its trade.

This 6 months' limitation disappointed the Government, and on appeal it asked the Supreme Court to make the injunction permanent.

In April 1944 the Supreme Court declined to do this. But it is an interesting speculation whether the Supreme Court would have cut this injunction down to 6 months, if the court below had made this injunction permanent in the first place.

CAPITAL PUNISHMENT FOR PATENT RIGHTS?

With the forcible persuasion of criminal indictments, the Attorney General in recent years has been procuring consent decrees, in which patent owners violating the antitrust laws have been required, permanently or for limited periods, to license, royalty free to all applicants, patent rights involved in this violation.

In a contested case in January 1945, the Supreme Court in a 4-to-2 decision, refused to follow this course. But the Attorney General has not desisted, and in several suits begun since that date he is still continuing to ask for decrees containing this provision.

Apparently he hopes that the Supreme Court, in some future case in which all of the nine Justices can participate, may recede from its January 1945 decision, and may hold that where patent rights have been used in violation of the antitrust laws, patent owners may be required, permanently or for limited periods, to license, royalty free to all applicants, all the patent rights involved in this violation.

Several times in recent years the Attorney General has moved to intervene in suits by patent owners for infringement, so as to litigate in those suits the question of whether the patent owner is violating the antitrust laws.

By this practice the Attorney General may transform any patent infringement suit into an antitrust suit against the patent owner.

The Attorney General has recently begun two suits to cancel patents on the ground of fraud. It is 60 years since any Attorney General has instituted any suits of this character. Sixty years ago the Government lost.

LOSING COMPETITIVE RIGHTS

For an industry to be prevented for 5 years from having any trade association may be a serious handicap in meeting the competition of other industries.

For a company to be mulcted in huge money damages or fines because of violations of the Emergency Price Control Act, the National Labor Relations Act, the Fair Labor Standards Act, the Stabilization Act, the antitrust laws, or any other law administered by a Government agency may be financial ruin.

For a company to be enjoined from exercising its patent rights or from making Fair Trade contracts with its trade, while its competitors are still free to do these things, may spell disaster in a highly competitive field.

LITIGATING WITH THE GOVERNMENT

Litigation of any kind is a nuisance to a businessman, but litigating with the Government is most wasteful of all in lawyers' fees and executives' time.

As a litigant, the Government has advantages of unique prestige, unrivaled powers of publicity, specially trained legal talent, and inexhaustible resources.

Such Government agencies as the Federal Trade Commission and the National Labor Relations Board have also the advantage that in all their prosecutions they are both prosecutor and judge, and are empowered by statute to make decisions in their own favor, even though such decisions be contrary to the weight of evidence.

Sometimes prosecution cannot be averted. Its challenge sometimes has to be met in order to back up the management of the company or the trade association or to save their standing with the trade or the public.

But the door should always be kept open to the possibility of negotiating with the agency's top officials looking toward a settlement of the prosecution and the reestablishment of pacific relations with the Government.

RESPONSIBILITY AND RESOURCEFULNESS

Advising a company or a trade association in its relations with the Government agencies calls for a high degree of responsibility and resourcefulness.

Like other institutions, a company or a trade association can be crippled or wrecked a great deal faster than it can be built up.

Mistakes of law with respect to Government agencies are a swift way to cripple or wreck a company or a trade association.

These casualties are more frequent than they should be, and the tragedy is that most of them are preventable.

With a little more care and a little more resourcefulness, almost any company or trade association can do just about as well within the law as it can do when it heedlessly strays outside the law.

Getting along with the Government agencies requires constant alertness, constant care, and constant resourcefulness; but these are duties that every company and every trade association owes to itself.

Treatment of Hermann Goering After Capture

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address dealing with the story of Goering's capture and treatment after capture, delivered by Dr. Frank Kingdon over Station WMCA on May 10.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The story of Goering's capture and treatment is an immediate, clear, and unmistakable call to every American to be on the alert. In all soberness, I say that it is the most dangerous signal for the future since Munich. Official representatives of this Government have shaken hands and sat down to dinner with this monstrous and perverted being who has openly denied the reality of the very meaning of law, spilt human blood as recklessly as clouds drop rain, treacherously unloosed ruthless air power upon undefended cities and people, and denied every humane instinct of mankind. This is the brute who rubbed his hands in such glee when the infamous pact of Munich was signed. For 5 years and more men, women, and children have been dying in horror and torture because of what he planned and executed. He has destroyed homes, desecrated churches, prostituted schools, and burned books. We have captured him. What did we do then? We invited him to dinner. But first he took a bath, as though all the waters of all the seven seas could wash out one single stain from his polluted record. Then he put on his favorite uniform, presumably so that he could carry to the dinner table every memory of savagery and sadism upon which this rotting cloth had looked. Then—God save the mark—he put on his decorations, just to remind himself of the hands of the dictator who first pinned them on him. Thus bedecked in the trappings of his dishonor, he posed for pictures and sat down as the guest of the American Republic.

One reporter wrote of him: "Goering seemed delighted with his captivity." One can almost see his satisfied smile, but one cannot see it. The room is too crowded, the faces of the dead look up from the mounds of the murdered, the fire-scarred skulls of the burned gleam in the dining room, the twisted bodies of a hundred battlefields crowd the chairs. the wounded and the blind are stumbling over the furniture, the tear-streaked faces of a million mothers are looking for their lost sons, the misshapen bodies of starved children haunt the table piled with food, the shrunken eyes of the persecuted are reflected in the polished silver. What madness is there in us that we can pull up a chair for such a one as Goering in the midst of so great a company bereft and tortured by his horror? I warn you, my countrymen, that the cause of justice is threatened, and the folly of forgetting has already begun. I turned this morning to one of our most responsible New York papers and could hardly believe my eyes when I read: "Ridiculous poseur though (Goering) is, one is yet tempted to apply to him such relative terms as the 'brains' and 'balance wheel' of the Nazi regime. That is because of his organizing ability, his general astuteness and his affable wordliness." I can imagine no more humiliating confession of our utter incapacity for moral indignation than to use such words of such a man. Look at them. "Ridiculous poseur"—said of the man upon whose conscience rests the heaviest weight of spilled human blood in all history, Hitler alone excepted. Goering is no poseur. His costumes, his medals, his hunting knives, his infatuation with display are all parts of the man himself, the pride, the scorn of others, the vaunting arrogance, the inflamed megolomania which could not be satisfied unless a thousand airplanes dropped their pyrotechnic death upon terrorized innocence. Goering never was "ridiculous"; he was mad with all the terror of unbridled lust for power, as ugly and degraded as a maniac running wild with a jewelled sword in an unarmed crowd. "Brains and balance wheel"—such words lose meaning when applied to him. His brains were the tool of his paranoiac master, capable of no nobler utterance than to say that he was the first paladin of Hitler. His were the brains that consented to the burning of the books and prophesied that Berlin would never be attacked. And to call him a balance wheel is like calling the black plague glowing health.

This is the man who organized the Gestapo, the prying and probing and threatening instrument of tyranny which upset every balance of government and stable living in Germany from the humblest home to the highest councils of the Nazis. Goering may have the low intelligence of a cunning beast of prey, but he made a prostitute of even that, and in the process unbalanced not only one country but the world. It is that low cunning which probably prompted him to give himself up to the Allies, gambling a few weeks of life against the possibility that he may never be executed for his deeds, and, whatever else may happen, he has already got one good meal out of it. "His organizing ability and general astuteness"—how can such words be

used calmly about this man whose monuments are the Luftwaffe, the Elite Guard, the Reichstag fire, the blood bath of 1944? These are the work of the organizing ability of a wolf-pack and the general astuteness of a plague of locusts settling on a field of corn. This is unreason, not reason. It is destruction for its own sake. It is worship of naked power. In any proper use of words, it is the triumph of organizing disability and of general insanity. But look most closely at the final phrase of this description, "affable worldliness." My mind literally staggers at its use. Goering is fat, rough, cynically patronizing, and able to smile. There is no doubt about his worldliness. He robbed every man and every country he could to provide himself with luxury and wealth—but, affable? Ask the hundreds of thousands thrown into concentration camps for their political beliefs. Inquire of all those driven from their homes and their altars for their faith, from the lowliest Jew to Paster Niemoeller. There is not a city or a hamlet in Germany into which the heartless cruelty of this monster has not penetrated. The earth of a score of countries cries out with the searing wounds of his bombs, London and Stalingrad and Rotterdam and Warsaw carry his signature in their broken walls and roofless houses.

He was the first officer in the army of hate, the essence of evil concentrated into one will. I suppose that, again with the exception of his master, he will be accounted by history as the most degraded individual of our time, and the generations that come after us will never speak his name without cursing it. I am spending all this time on this one description of Goering, not to point a finger at a particular paper, for the one in which this appeared has been among the most enlightened in its treatment of the Nazi peril, but to indicate the danger toward which this kind of thinking leads. If we can be mild about Goering, we can be mild about Germany, and if we are mild about Germany we shall commit again the error of 25 years ago, and bequeath to our children the world war that will finally end civilization. Word comes through today that Goering is to be brought to trial soon. How can he be tried? There is not a code of law in history that defines as crime what he has committed. He is thief, arsonist, and murderer—guilty of crimes which the law recognizes—but he is more than all these put together. He has denied the concept of law itself and acted to destroy humanity. There is no law that can measure the depths of his subhumanity. To call him a criminal is to flatter him. To try such a creature is to rob law of its dignity. He is outside its pale. There is no defense for him. There cannot be for he has denied the existence of truth. He cannot be fitted into orderly processes because he has denied order and served chaos as the ultimate good. We make a mockery of our own best impulses when we consider giving such a man what we call a trial. He has forfeited his day in court by his 12 years in blood. He and those associated with him in the Nazi Party leadership, the members of the Gestapo and the Elite Guard, should be shot, the United Nations taking full responsibility for the moral decision involved in such an action and making their declaration solemnly for the record of history.

We should write once and for all so that all men of the future may read that those who deny humanity and civilization will be destroyed by them. I believe that this is in the profoundest sense, moral. The weakness of our generation has been that it has seen the moral beauty of goodness and kindness, but it has never faced the unrelieved moral ugliness of evil. We have gone on our way saying easily that men will be good if we give them a chance, and refusing to recognize the abysmal capacity of men for evil-doing. Nazism is more than a false political philosophy, more than a derangement of the mind, more than a love of arms. It is evil. It is men depraved by the lust for power which blots out all morality. They are worse than immoral. They mock the whole concept of morality. Racial persecutions, blood purges, starvation and burning of prisoners, ruthless cruelty in all its forms—these are the products of something much more fundamental—the denial of human dignity itself. Unless we see this evil for what it is and deal with it inflexibly, we shall never achieve the good life we desire, for realization of the nature of evil is one prerequisite to achievement of good.

Now What?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1945

Mr. HOFFMAN. Mr. Speaker, with organized fighting in Europe at an end, it is time for those representing foreign countries and our own hired men to tell us what they have in mind for the United States. Whether we went into this war to establish the "four freedoms" throughout the world (and that we now know cannot be done), to protect ourselves from a feared invasion by Germany, or whether we went in to preserve the British Empire, is a dead issue.

The European war has cost us $185,000,000,000. That is $1,405.03 for every man, woman, and child in the United States. As of May 4, 1945, 920,472 American men and women are casualties—dead, wounded, or missing; and, for years to come, the crippled, the maimed, and the mentally deranged will be with us.

Our dollars, material, our flesh and blood, saved the British Empire, enabled Russia to successfully defend herself. Our own way of living has been changed. Some who are getting high wages, doing a good business, making exorbitant profits, are joining the internationalists in the demand that we keep a million or two young Americans indefinitely in Europe, to aid in police work, in rebuilding the war-damaged towns and cities and to, if necessary, fight the Russians if they attempt to dominate Europe and threaten the welfare of the British Empire.

Some also ask that we not only feed and clothe the people of the stricken areas but that we supply Russia and all others who ask with the necessary equipment, including machinery of all kinds, to enable those countries to reestablish themselves in postwar world trade.

Now there are many agencies to which those who want to aid other nations and other people can contribute as much as they desire of their own money without any action by Congress.

PATRIOTISM

Is it unpatriotic to suggest that Great Britain, Russia, and France—Germany having been disarmed—now police their own backyards—Europe—and let American boys come home at the earliest possible moment? Is there any reason why, after they have retaken all of the islands of the Pacific which may be necessary for our own national defense, our men should continue to fight and to die to take and then to give to the British or to the Dutch the islands and territory which they lost; which they may want to protect their international trade?

Is it not time for us say to Russia, to Britain, to the Netherlands, "Now that our men have the Japs on the run, if you want more islands, more territory, you get into the war against the Japs; give our men the same aid they gave you when your existence was at stake?"

The war in the Pacific is not over; 1,000,000, 2,000,000 additional Americans will be sent into the fighting there. In view of the fact that three—a fourth only in part—of the most powerful integral parts of the British Empire have never conscripted men for overseas service; that Canada has ceased to induct men, should we not ask those in authority in our own Government to state now, in clear and unmistakable language, our program in the Pacific; just what we intend to do hereafter in Europe?

Our people have demonstrated their willingness to do the right thing and, as the young men and women who have been inducted into the service—not the politicians, statesmen, profiteers, nor we who are safely enjoying life here at home—have been doing the fighting, making the sacrifices, they are entitled to know, and to know now, the full extent of the program which our statesmen, those in authority, the internationalists, are laying out for them.

Nothing is gained by deception or concealment. The man who is asked by his government to give up his home life, to fight, perhaps to die, has the right to know why and for what purpose. Only dictators and tyrants expect men to sacrifice themselves without knowing the reason.

The 80 Commodities Having Imports Valued at $1,000,000 or More Each in 1939 on Which Reduced Trade-Agreement Rates Were in Effect on April 1, 1945, Arranged According to the Percent of Reduction

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting a table prepared by the Tariff Commission showing tariff reductions in major imports of products under the reciprocal trade-agreements program. The table is unique, Mr. Speaker, in the fact that the products are listed according to the percentage of reductions made under the program and will more clearly show the particular products upon which further reductions may be made in tariff duties.

The table follows:

The 80 commodities having imports valued at $1,000,000 or more each in 1939 on which reduced trade agreement rates were in effect on Apr. 1, 1945, arranged according to the percent of reduction

Tariff paragraph	Commodity, agreement country, and effective date of agreement	Value of imports, 1939 [1]	Equivalent ad valorem rates [2]		Reduction in rate
			Preagreement	Agreement	
	ITEMS HAVING A REDUCTION IN RATE OF DUTY OF 10 TO 19 PERCENT				
		Thousands	*Percent*	*Percent*	*Percent*
389	Nickel and alloys in pigs, ingots, etc. (Canada, Jan. 1, 1939)	$24,914	12	10	17
1109 (a)	Woolens, not elsewhere specified, weighing over 4 ounces per square yard, valued over $1.25, not over $2 per pound (United Kingdom, Jan. 1, 1939).	2,327	88	73	17
1530 (b) (4)	Calf and kip lining leather (United Kingdom, Jan. 1, 1939)	1,854	15	12	17
601	Cigarette leaf tobacco, unstemmed (Turkey, May 5, 1939)	24,247	71	61	14
1109 (a)	Woolens, not elsewhere specified, weighing over 4 ounces per square yard, valued over 80 cents, not over $1.25 per pound (United Kingdom, Jan. 1, 1939).	1,636	98	88	10
	ITEMS HAVING A REDUCTION IN RATE OF DUTY OF 20 TO 29 PERCENT				
710	Cheese: Romano and Pecorino, in original loaves (Argentina, Nov. 15, 1941), imports at ad valorem rate.[3]	4,061	35	25	29
205 (b)	Roman, portland, and other hydraulic cement (Belgium, May 1, 1935)	1,614	25	19	25
374	Aluminum metal and alloys, crude, and scrap (Canada, Jan. 1, 1939)	3,249	34	26	25
717 (a)	Fresh water fish, fresh or frozen: Whitefish, yellow pike, jacks, lake trout, yellow perch, tullibees, lake herring and ciscoes, chubs, mullet, saugers, and blue pike (Canada, Jan. 1, 1936, and Jan. 1, 1939).	4,114	12	8.9	25
1552	Cigarette paper in bobbins (France, June 15, 1936)	3,569	60	45	25
	ITEMS HAVING A REDUCTION IN RATE OF DUTY OF 30 TO 39 PERCENT				
367 (a)	Watches and watch movements, etc., less than 1.77 inches wide, having 7 to 7 jewels (Switzerland, Feb. 15, 1936).	2,510	99	61	39
367 (a)	Watches and watch movements, etc., less than 1.77 inches wide, having 16 or 17 jewels (Switzerland, Feb. 15, 1936).	4,308	106	66	38
382 (a)	Aluminum foil, less than six one-thousandths of 1 inch in thickness (Switzerland, Feb. 15, 1936), imports at reduced rates.	1,250	40	25	37
601	Tobacco leaf for cigar wrappers, unstemmed (Cuba, Sept. 3, 1934; Netherlands, Feb. 1, 1936; Cuba, supplement, Dec. 23, 1939, and Jan. 5, 1942).	3,623	134	89	34
1529 (a)	Cotton laces and articles, Levers, 12 point or finer (France, June 15, 1936)	2,558	90	60	33
1109 (a)	Woolens, not elsewhere specified, weighing over 4 ounches per square yard, valued over $2 per pound (United Kingdom, Jan. 1, 1939.)	1,616	80	55	31
1105 (a)	Wool noils, not carbonized (United Kingdom, Jan. 1, 1939)	1,939	60	42	30
1519 (c)	Silver or black fox furs or skins, dressed, or undressed, n. s. p. f. (Canada, Jan. 1, 1939, and Canada supplement, Jan. 1, 1940, and Dec. 20, 1940).	2,468	50	35	30
	ITEMS HAVING A REDUCTION IN RATE OF DUTY OF 40 TO 49 PERCENT				
202 (d)	Ferromanganese (30 percent or more manganese) containing not less than 4 percent carbon (Canada, Jan. 1, 1936, and Jan. 1, 1939).	1,415	61	32	47
1101 (a)	Wools, Donskoi, Smyrna, and similar, in the grease (Argentina, Nov. 15, 1941; Uruguay, Jan. 1, 1943).	1,338	85	46	46
1101 (a)	Wools (other than Donskoi, Smyrna, and similar), not finer than 40s, worsted type, in the grease—dutiable (Argentina, Nov. 15, 1941; Uruguay, Jan. 1, 1943).	1,910	90	49	46
1013	Table damask of flax and articles thereof, over 130 threads per square inch (United Kingdom, Jan. 1, 1939).	1,410	45	25	44
921	Imitation oriental rugs of cotton (Belgium, May 1, 1935)	2,546	35	20	43
1011	Plain woven fabrics of flax, hemp, or rumie, weighing less than 4 ounces per square yard (United Kingdom, Jan. 1, 1939).	3,239	35	20	43
710	Cheese, Emmenthaler (Switzerland, Feb. 15, 1936; Finland, Nov. 2, 1936)	2,606	36	21	41
701	Cattle, weighing less than 200 pounds each (Canada, Jan. 1, 1939; Mexico, Jan. 30, 1943)	1,600	31	19	40
701	Cattle, weighing 200 pounds or more, but less than 700 pounds each (Mexico, Jan. 30, 1943)	5,037	80	48	40
804	Still wines from grapes, 14 percent or less alcohol, in containers of 1 gallon or less (France, June 15, 1936; Argentina, Nov. 15, 1941).	1,661	68	41	40
	ITEMS HAVING A REDUCTION IN RATE OF DUTY OF 50 PERCENT				
38	Quebracho extract (Argentina, Nov. 15, 1941)	5,082	15	7.5	50
92	Vanilla beans (France, June 15, 1936; and Mexico, Jan. 31, 1943)	3,502	8.8	4.4	50
302 (a)	Manganese ore, etc., containing 35 percent and over of manganese (Brazil, Jan. 1, 1936) (not including imports from Cuba, free of duty).	6,719	86	43	50
391	Lead-bearing ores, flue dust, and mattes (Mexico, Jan. 30, 1943)	1,045	35	17	50
393	Zinc ores (except pyrites, not more than 3 percent zinc), dutiable (Canada Jan. 1, 1939; and Mexico, Jan. 30, 1943).	1,304	77	38	50
394	Zinc, in blocks, pigs, etc. (Canada, Jan. 1, 1939; and Mexico, Jan. 30, 1943)	1,890	57	29	50
401	Sawed boards, planks, etc.—Spruce, other than Western white (Canada, Jan. 1, 1936, and Jan. 1, 1939)	3,666	16	8.2	50
401	Sawed boards, planks, etc.—Spruce, western white (Canada, Jan. 1, 1936, and Jan. 1, 1939)	2,989	4.6	2.3	50
401	Sawed boards, planks, etc.—Pine, northern white and Norway (Canada, Jan. 1, 1936, and Jan. 1, 1939; and Mexico, Jan. 30, 1943).	2,736	3.4	1.7	50
401	Sawed boards, planks, etc.—Fir (Canada, Jan. 1, 1936, and Jan. 1, 1939)	1,578	18	8.8	50
501	Cane sugar from Cuba (Cuba, Sept. 3, 1934, and Cuba, supplemental, Jan. 5, 1942)	72,772	78	39	50
501	Cane sugar, full duty (Peru, July 29, 1942)	2,243	137	68	50
502	Molasses not used for the extraction of sugar, or for human consumption, from Cuba (Cuba supplemental, Jan. 5, 1942).	5,172	5.3	2.6	50
502	Molasses and sugar sirups, containing 6 percent or less soluble nonsugar solids, from Cuba (Cuba, Jan. 5, 1942).	1,258	40	20	50
503	Maple sugar (Canada, Jan. 1, 1936, and Jan. 1, 1939)	1,524	38	19	50
601	Cigar filler tobacco, stemmed, from Cuba (Cuba, Sept. 3, 1934, and Cuba supplemental, Dec. 23, 1939, and Jan. 5, 1942).	5,426	60	30	50
601	Cigar filler tobacco, unstemmed, from Cuba (Cuba, Sept. 3, 1934, and Cuba supplemental, Dec. 23, 1939, and Jan. 5, 1942).	1,175	52	26	50
701	Cattle, weighing 700 pounds or more each, other than dairy cows (Canada, Jan. 1, 1936, and Jan. 1, 1939; and Mexico, Jan. 30, 1943).	13,008	50	25	50
706	Beef, including corned beef, canned (Argentina, Nov. 15, 1941, and Uruguay, Jan. 1, 1943), imports at specific rate.	8,571	60	30	50
718 (a)	Tuna fish packed in oil, etc. (Mexico, Jan. 30, 1943)	1,490	45	22	50
719 (2)	Cod, haddock, etc., pickled or salted, neither skinned nor boned, containing more than 43 percent moisture (Canada, Jan. 1, 1939; United Kingdom, Jan. 1, 1939).	1,767	20	10	50
726	Oats (except hulled oats unfit for human consumption) (Canada, Jan. 1, 1939)	1,506	46	23	50
730	Bran, shorts, and other wheat byproduct feeds (Canada, Jan. 1, 1939)	7,853	10	5	50
747	Pineapples in crates, from Cuba (Cuba, Sept. 3, 1934)	1,132	38	19	50
753	Tulip bulbs (Netherlands, Feb. 1, 1936)	1,682	40	20	50
757	Brazil nuts: Shelled (Brazil, Jan. 1, 1936)	1,298	33	17	50

805	Ale, porter, stout, and beer (Mexico, Jan. 30, 1943)	1,372	55	27	50
1001	Flax, not hackled (Belgium, May 1, 1935; United Kingdom, Jan. 1, 1939; and Peru, July 29, 1942)	1,291	6.2	3.1	50
1001	Flax, hackled including dressed line (United Kingdom, Jan. 1, 1939; and Peru, July 29, 1942)	1,097	7.8	3.9	50
1010	Woven fabrics of flax, hemp, or ramie, n. s. p. f. (Belgium, May 1, 1935; United Kingdom, Jan. 1, 1939)	5,405	40	20	50
1105 (a)	Wool rags (United Kingdom, Jan. 1, 1939)	2,322	65	33	50
1116 (a)	Oriental, etc. rugs, not made on a power-driven loom (Turkey, May 5, 1939; and Iran, June 28, 1944)	2,568	63	32	50
1410	Bound or unbound books of foreign authorship, except prayer books, tourist literature, and diaries (United Kingdom, Jan. 1, 1939; and Mexico, Jan. 30, 1943).	1,544	15	7.5	50
1530 (a)	Hides and skins of cattle of bovine species, raw or uncured, or dried, salted, or pickled (Argentina, Nov. 15, 1941; and Uruguay, Jan. 1, 1943).	16,820	10	5.0	50
1551	Motion-picture film sensitized but not exposed or developed, 1 inch or more in width (Belgium, May 1, 1935).	$1,200	53	26	50
1733	Crude petroleum (Venezuela, Dec. 16, 1939; and Mexico, Jan. 30, 1943) [4]	19,570	30	15	50
1733	Topped crude oil (Venezuela, Dec. 16, 1939; and Mexico, Jan. 30, 1943) [4]	[5] 3,362	26	13	50
1733	Residual fuel oil (Venezuela, Dec. 16, 1939; and Mexico, Jan. 30, 1943) [4]	1,476	32	16	50
1803 (1)	Sawed boards, planks, etc. (except flooring)—Maple (except Japanese), birch, and beech (Canada, Jan. 1, 1936, and Jan. 1, 1939).[3]	2,295	7.4	3.7	50
1803 (1)	Cedar, siding (Canada, Jan. 1, 1936, and Jan. 1, 1939) [3]	2,023	5.0	2.5	50

[4] This item is on the free list of the Tariff Act of 1930, but is subject to an excise tax on importation. This tax was reduced by the trade agreements. The quantity of imports admissible at the reduced tax is limited by the terms of the agreement. The imports shown here for 1939, however, would all have obtained the benefit of the reduction in effect on Apr. 1, 1945, had it been effective in 1939.

[5] This item is on the free list of the Tariff Act of 1930, but is subject to an excise tax on importation. This tax was reduced by the trade agreement.

NOTE.—"N. s. p. f." means "not specially provided for" in another classification.

The equivalent ad valorem rates have been shown in whole numbers (except in a few cases where very small) in order to avoid decimals without significance, and the "reduction in rate" figures, based on actual rates of duty or total amount of calculated duty, are therefore controlling where a discrepancy appears.

The imports of the 80 items in this table represent 76 percent, based on value, of all imports of duty-reduction items.

Italian Patriots

EXTENSION OF REMARKS

OF

HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release relating to an overseas broadcast which I made on April 27, 1945.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

Senator JAMES M. TUNNELL, of Delaware, member of the Foreign Relations Committee, who recently completed an inspection trip to Italy and the Mediterranean area, speaking to the Allied armies and liberated nations in an overseas broadcast said today:

"That the tremendous feat of Italian patriots in liberating Milan, Italy's second city, and Genoa, her greatest port, as Allied forces sweep forward toward these cities, is on a par with the great military victories over Germany which are taking place on all fronts."

He further said:

"The perfect timing of the Italian partisans in seizing these important cities in advance of our armies shows their complete coordination with the Allied Military Command. The patriots, organized under the National Committee of Liberation, are now acting as an advance army for us in a big way. Clearly their ability to help is as strong as their will to help in this final drive to clear the hated enemy from northern Italy. The courageous Italian patriots are now waging war on a large scale.

"They are contributing both to the pace of the Allied armies and to the disastrous plight of the German troops in Italy. The Allied seizure of Verona, the gateway to the Brenner Pass, seals off a great part of the forces in northern Italy. We know that the Nazis' loss in men and equipment has been terrific. In these signal achievements the Italian patriots have aided heavily."

Real Uses for Waste Waters

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1945

Mr. LEMKE. Mr. Speaker, the greatest natural resource in our Nation is water. Until recently we have taken for granted that this resource was permanent. Recent years have convinced us that we must not only control but conserve the water within the interior of our country. We must not only conserve but make intelligent use of our flood waters. We must harness them for power, store them for irrigation and domestic use, and what is left the navigators can have.

Bearing the above in mind it gives me great pleasure to insert here an article by B. Ashton Keith:

Further waste of public funds for a so-called flood control by backing the provenly outmoded and provenly ineffective plans of the Army engineers merits general denouncement.

Also, from bitter personal experience, we decry further waste of the Nation's water resources despite repeated occurrences of severe drought and grave need for increased production of foods and vast needs for really cheap power.

Studies on the official reports of foreign governments through many years show that at least two great nations have found many ways to utilize nearly all their flood waters in many river basin for the benefit of all the people (pt. 2, pp. 19 and 24), instead of for the enrichment of only a few (pp. 18 and 20). Flood waters may be either a curse or a blessing, depending on how they are managed and by whom.

Careful examination of divers public records reveals that during the past 65 years an astounding great sum-total of cash has been paid out to support the so-called river improvement activities of the Army engineers, but that they have given us countless so-called permanent improvement which the next floods either filled up or washed away.

Their methods were simply to dike, dredge, and sand-bag the streams, as the Germans had done for 200 years, only to cause increased silting, flood damages, and expenses, and which finally led (pp. 20–21), to national disaster. France discarded these methods in 1857 because she, too, had found them increasingly expensive and ineffective. Better methods were adopted, and through almost 80 years have proven to be far superior to the

German methods which were copied (pt. 2, pp. 16 and 18) by our Army engineers.

The main trouble has been in fighting the floods and rushing the excess waters as quickly as possible out to sea, an utter waste. The saving of such waters by up-stream, cheaper dams of medium size, which has proven so successful in India (pt. 2, p. 24), not only prevents flood damages almost completely, but in all our States their use for emergency irrigation in times of drought would alone save many billions of dollars over a period of 30 years.

These statements are proven by our public records and the official reports of other governments. They are not the products of armchair theorizing. It has been found that our Nation's grand total of costs in floods alone already exceeds the cash costs of all our previous wars; and we not only still have flood damages and expenses, but we have them increasing. The set-up as well as the methods are wrong[1] fundamentally.

Widespread retention of nearly all the run-off waters by means of cheaper and smaller reservoirs, mostly situated far up on tributary streams on cheaper or even worthless land have been tested by the engineers of India (2 p. 24) through several decades with steadily increasing success in many ways and with simultaneous solving of flood-control and soil-erosion problems, and wider spread of intensive cultivation of land that formerly was less productive.

The placing of many very large dams on the main streams "with facilities for generation of electric current, the aid of navigation, and for purposes of flood control" is merly a safe method for securing large sums of money by false pretenses, so far as effective flood control is concerned. Dams to aid navigation and for production of power must be kept constantly so full of water that they are of little use and cannot be depended on for flood control.

On the other hand numerous systems of medium-size, up-stream dams in many places have been found cheaper and more effective and rendered a more useful service, with valuable production of additional cheap power, with more abundant supplies of water to farmers for irrigation of crops when needed.

At the same time through a period of more than a century, India's intensive methods of water conservation and improved use, have proven far superior to ours. With very liberal contracts for the farmers and local industries, there long has been[2][3][4][5] high yield of interest on the grand total of expenses for irrigation construction (both productive and nonproductive), and with effective flood prevention made only an incidental matter.

It is a matter of common knowledge that in many areas where terrible famines formerly occurred, due to floods and drouths, intensive conservation of flood waters and widespread promotion of in-soak have brought greatly increased safety and prosperity despite increase in population.

High prices and exploitation of the masses through control of foods by scarcity, largely has been prevented by abundant production.

Permanent covering of more and more of the richer bottom lands by construction of dams on the larger streams is deplored as wasteful and unnecessary.

[1] Read the warning of Ritter Gustav von Wex, Chief Imperial Counselor on Engineering 1873, later verified by readings: Küster on the Oder 58 years; Berghaus on the Rhine 66 years, etc.

[2] Statesmans Year Book (1943) (Congressional Library No. JA51.S7).

[3] New Delhi Report, Bureau of Information (1937) (DS401.I38).

[4] Rept. Com. Cent. Provinces (1929) (TC-904.C3H5).

[5] Buckley, Robt.—Irrigation Works of India (1880) (TC903.B9).

Examination of divers records has revealed the fact of a little-publicized but startling number of failures of very large dams in recent years. Largely these were found to be due to unexpected deterioration of the concrete or to construction plans and methods which obviously need further study. The failure without warning of the great St. Francis Dam[6] in California, drowning nearly 1,500 people, is only one of the many examples. We have a long list.

Too generally, for some reason, the engineers involved have minimized these tragic disasters. We find that of a list of more than 20 large dams which a leading engineer classed as "perfectly safe" only a few years ago, several already have gone down and several others have begun to undergo extensive repairs. It is becoming evident that the talk of large and costly dams lasting for centuries has little basis on facts. Several have been destroyed by natural forces within only a few years, and several more within a few days after completion.

Another serious cause of national and local loss that has not been made sufficiently well-known to the public in general is seen in the very rapid filling of a number of large reservoirs with silt. Instead of lasting for centuries, many already have had their water-storage capacity largely diminished by the washing in of dirt. Valuable soils that should have been held far upstream on the farms already have been permitted to almost completely fill several of our larger reservoirs. That on the Bighorn River near Emory, Wyo., is only one of the several examples.

We know of many farmers with valid water rights who did not get their share of the water or did not get it when it was needed, although others got theirs when needed and not a few got more than they needed. In some instances this was known to be due to the ignorance or indifference of easterners who had been sent out to manage western water business. Specific examples of this, too, can be cited, some of which caused some hard-working farmers to lose their land.

By a called vote by our members in 22 Western and Midwestern States, it is the sense of the League of Western Voters that a more genuine flood control can be and should be made incidental to a truer conservation and better use of the flood waters in nearly all parts of this United States, and certainly in the Midwest and far West.

This can best be done by constructing numerous systems of medium-size, up-stream dams with canals, ditches, and channels for permitting a far wider spread of irrigation, both emergency and regular. There is no better or cheaper way to produce with dependable regularity the increased quantities of grains, meats, and other foods that increasingly will be needed to fill domestic and foreign orders through many years to come. The people of many nations now are getting the American idea of foods in greater variety for all the people.

Chavez Leads First Patrol Into Naha

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1945

Mr. JOHNSON of Colorado. Mr. President, in the Washington Post of today appears an article of far more than passing interest to the Members of the Senate. Every story reciting the heroism and courage and resourcefulness and the will to win of the American armed forces elicits our admiration, but this story is especially intriguing because it is centered around Lt. Dennis Chavez, Jr., the son of one of our distinguished colleagues, the junior Senator from New Mexico.

Lieutenant Chavez of the marines led the first patrol into the city of Naha which, by the way, is the first Japanese city to be entered by Americans in this war.

I therefore ask unanimous consent to have this fascinating press release printed in the Appendix of the CONGRESSIONAL RECORD where it may have the attention of the Members of the Congress and the public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHAVEZ LEADS FIRST PATROL INTO NAHA

(By Homer Bigart)

WITH THE SIXTH MARINE DIVISION OUTSIDE NAHA, May 13.—Lt. Dennis Chavez, Jr., Albuquerque, son of the Senator from New Mexico, led the first patrol to Naha Saturday afternoon.

For more than an hour they explored the northernmost ward of the capital city, separated from the main part of the town by the broad mud flats of the Asato estuary. Then, after drawing only sniper and knee mortar fire, Chavez boldly tried to ford the basin in low tide. Two Marines went along with him while the rest of the patrol covered them with automatic small arms from the northern bank.

They crossed at a point 50 yards below the demolished concrete span of Highway No. 1, which the Japanese had dynamited the day before. They had absolutely no cover and were plainly visible to the Japanese, who undoubtedly watched their every movement from handsome stone government buildings across the river. These buildings appeared to have suffered little from nearly 2 months of naval siege.

PLUNGE THROUGH MUD

Chavez tested the black ooze beside an abandoned yawl. He sank to his knees, but still thought that the estuary could be waded. With Corp. Thomas D. Bryson, Jr., Oakland, Calif., and Pvt. Roy Wheeler, Watertown, Mass., former locomotive fireman on the Boston & Albany Railroad, Chavez plunged through the mud. The stream was about 60 yards wide at ebb tide. Beached on the opposite mud flat was another yawl that looked deserted and would offer some protection if the patrol were caught under sniper fire.

The three men headed for it.

Bryson, in the vanguard, was nearly across when he floundered suddenly in hip-deep mud. "It sucked me down like quicksand," he told this correspondent. "I was going down fast when Wheeler grabbed a mooring rope from the yawl and tossed one end of it to me." The patrol tried to skirt the deep hole, but couldn't and finally retired.

ENEMY FIRE INCREASES

Meanwhile, the four marines on the north bank were drawing increasing small-arms and mortar fire from enemy troops approaching from the military college, a quarter of a mile up the river.

Upstream and just behind the military college was a wooded knoll topped by a Shinto shrine. From wooded prayer grounds around the shrine came the first enemy fire.

A knee mortar shell exploded close to Lieutenant Chavez, who was staggered momentarily by shock but uninjured.

Other mortar shells slammed down on the river bank where Moran and three other marines took positions while Chavez, Bryson, and Wheeler set out across the mud bottom.

JAP SHELTER SMASHED

Friendly outposts on the bluff overlooking the estuary saw Japs sneaking into a three-story frame building at the north end of the bridge. Capt. John P. Lanigan, London, Ohio, immediately placed the building under mortar fire. It collapsed under a rain of 81-millimeter shells.

The Japs made no further attempt to cut off Chavez, but snipers continued to shoot from buildings and woodlots upstream. Their special target was not the Senator's son, but Pvt. (1st cl.) Harold L. Maddocks, Fort Fairfield, Maine. "I was willing to join more than one church down there," Maddocks said.

Chavez's patrol returned without one casualty.

The honor of being the first Americans to enter a Japanese city since the outbreak of the war rested lightly on the marines. Chavez called it "just another patrol."

Should Bureaus Be Substituted for Our Probate Courts?

EXTENSION OF REMARKS

OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. WINSTEAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gibson B. Witherspoon, attorney at law, Meridian, Miss., from the March 1944 issue of the Mississippi Law Journal:

SHOULD BUREAUS BE SUESTITUTED FOR OUR PROBATE COURTS?

(By Gibson B. Witherspoon, attorney, Meridian, Miss., member of Mississippi State Bar and American Bar Association)

I. ESTATES OF VETERANS OF WORLD WAR NO. 1

Estates of veterans of World War No. 1 were administered under the law existing in the State where the veteran was domiciled, subject to the able supervision of the Veterans' Bureau of the various States. The work of the Veterans' Bureau was splendid. They held the court costs, attorneys' fees, and administrative expenses to a minimum and always were alert to see that the result obtained was to the best interest of the veteran's estate. Under the uniform veterans' law,[1] which has been enacted in all the States, copies of petitions were submitted to the Veterans' Bureau before being taken up with the courts. Often objectionable features were eliminated and the best available investments were obtained for the estate. Thus each estate was safeguarded by all the laws of the several States plus the wisdom and experience which the able attorneys of the Veterans' Bureau were able to render. Apparently this was a desirable combination and reached near perfection in protecting the estates of the deceased veterans and preserving the corpus for the time in the minor's life when it was most needed for educational purposes.

[1] Mississippi Code Annotation (1930), ch. 175.

II. THE NEW LAW FOR VETERANS' ESTATES OF WORLD WAR NO. 2

Section 21 of the World War Veterans' Act of 1924, as amended up to July 13, 1943,[2] provided that where payment of any compensation, pension, or insurance was to be made to a minor or to any person under other legal disability adjudged by a court of competent jurisdiction, the payment might be made to the legally appointed guardian. If the latter were not properly executing his duties, the Administrator of Veterans' Affairs of the United States Veterans' Administration[3] could appear in the court which had appointed this fiduciary and call the matter to the court's attention. He could also suspend payment, holding the funds in the Treasury to the credit of the beneficiary. But the person normally in charge of the funds was a judicially appointed and controlled guardian.

Not being satisfied with this developed system of handling estates of veterans and wishing to abandon the safeguards established through years of experience, Congress passed, on July 13, 1943, an amendment to this section which demands the closest scrutiny by the bench and bar. The new subsection (4) of section 21 is as follows:

"(4) Any benefit payable or paid by the Veterans' Administration shall be subject to the applicable provisions of sections 454a and 555a of this title, as now or hereafter amended: *Provided*, That in any case of an incompetent veteran having no guardian, payment of compensation, pension, or retirement pay may be made in the discretion of the Administrator to the wife of such veteran for the use of the veteran and his dependents: *And provided further*, That payment of death benefits to a widow for herself and child or children, if any, may be made directly to such widow, notwithstanding she may be a minor. Section 44 of this title is hereby repealed and any other law in conflict herewith is modified accordingly."[4]

The alleged purposes of the passage of the above amendment, according to testimony before a congressional committee, are:

"1. To provide uniform application of World War Veterans' Act of 1924, as amended, and other provisions of Public Law No. 262.

"2. To afford more flexible administrative actions and centralize the control of all cases under a Washington bureau, regardless of the rights of the several States to safeguard the rights of its incompetent and unfortunate citizens.

"3. The direct payment of all the money to the beneficiaries without the small amounts depleted by:

"(a) Guardians' commission.

"(b) Attorneys' fees, and

"(c) Court costs incident to guardianships, etc."[5]

III. SHOULD ESTABLISHED SAFEGUARDS BE ABANDONED FOR SPECULATIVE BENEFITS?

Under the first alleged purpose for the enactment of this amendment, "to provide uniform application of veterans' estates," it should be remembered that each State has already enacted what is universally called a World War Veterans' Act. Under its provisions, each petition is presented to the Veterans' Administration in each State before being filed and taken up with the court. If there are no objectionable features in the petition, the veterans' chief attorney returns a waiver. On the other hand, if there are objectionable features in the proposed petition, the chief attorney of the State offices of the Veterans' Administration points out the objectionable features to the local attorney handling the matter, and usually the petition is redrafted and the objectionable portion thereof is omitted. In a very few cases the petition is filed regardless of the objection and the reasons therefor. In such cases the chief attorney of the Veterans' Administration files objections and the chancelor or judge of the probate court decides the issues. Thus, it would appear that the laws are uniform in the several States and that all the safeguards as prescribed by the various States should be preserved.

The Veterans' Administration has supervision in all veterans' estates under the old law as administered in veterans' estates of World War No. 1. The oft-heard criticism of bureaus wanting to have more and more power seems applicable in answering the first alleged benefit of the new act. The efficiency which has been effected in the handling of estate cases in the First World War should be utilized instead of abandoned. The experience gained should prove a beacon light to safeguard the estates of veterans of World War No. 2.

The boys in the armed forces are fighting to preserve life as they know it, and not as it might be administered by some bureau. It is safe to say that the insurance premiums which they pay for the support of their wives and children are intended to be subject to the safeguards with which they are familiar—to the administration of a court of competent jurisdiction which will preserve the best interest of their loved ones by preventing the squandering of a lump-sum payment.

Concerning the second alleged purpose for the enactment of this amendment, namely, to afford more flexible administrative action and centralize all the estates of the veterans of this war under the control of a Washington bureau, it is submitted that the various State courts should be utilized and that the States' established safeguards should govern the administration of these estates. That procedure has proved satisfactory in the handling of estates of World War No. 1; so, why should it be changed?

It is admitted that Federal grants can be given to anyone the Government may smile upon, under the Jeremiah Hall case,[6] but there is a serious legal question presented where there is a sacred contract between a soldier of this war and the United States, payable to certain beneficiaries who are under the disability of minority. Can some administrator take a valid release from a minor of tender years or from a widow who is sweet sixteen? At the conclusion of war in 1918, all of our courts held that the Government could be sued on these contracts of insurance. Suppose a minor, after reaching his majority, should sue the Government for his insurance money, on the theory that it was wrongfuly paid to his mother, who was incompetent to handle the estate and who spent the money herself without giving him any of the benefits. Certainly there would be at least some equity in his claim. If this amendment to section 21 were declared invalid by our Supreme Court because it violated the rights of the several States as guaranteed under our sometime forgotten Constitution,[7] would

[5] Letter of November 5, 1943, from Frank T. Hines, Administrator, Veterans' Administration, to J. E. RANKIN, Member of Congress and chairman of the Committee on World War Veterans' Legislation.

[6] *United States* v. *Hall* (98 U. S. 343, 25 L. Ed. 180 (1879)).

[7] In 1823 Jefferson said, "I ask for no straining words against the Government nor yet against the States. I believe the States can best govern over home concerns and the General Government over foreign ones. I wish therefore to see maintained that wholesome distribution of power established by the Constitution for the limitation of both and never see all offices transferred to Washington." Norton, The Constitution of the United States ((1940) 226).

the Federal Government then be liable for another payment to the proper legal guardian of the minor?

The act containing this amended subsection was originally passed by Congress on July 13, 1943, and provides for "payment of compensation or retirement pay-death benefits to a widow for herself and child or children if any," this notwithstanding the widow might be a minor. The President signed the act a few days later; and with the ink hardly dry, the Veterans' Bureau on July 16, 1943, sent out a form letter to every State office in America advising them not only that the act applied to payment of compensation pensions, retirement pay, and death benefits, as Congress specifically designated in the act, but also that it applied to all insurance of personnel discharged from the military or naval force of the United States. Can it be said fairly that Congress intended to include insurance money in this act? The very fact that it was left out would indicate that Congress wanted to exclude insurance payments.

The third and last reason advanced by the administrator in support of this objectionable new amendment is possibly the underlying purpose for the enactment of this provision into law. Guardians' commissions usually amount to approximately 5 percent of the expenditures. In normal times, when the Government is not lending money, most investments earn more than this commission, and everyone knows that the guardian earns every cent of these small fees, as do the clerks of the courts. So the basic reason for the entire act, I think, is to cut the attorneys of the country out of making any fees at all from veterans' estates arising from this war.[8] Apparently we have another example of the forgotten man—the lawyer—who is completely left out by this new legislation. Yet if the attorney charged too much for his services under the old law, the attorneys for the veterans bureau immediately objected and equitable fees were invariably paid. Thus a most uniform fee schedule for attorneys was actually in force throughout America.

IV. POSSIBLE APPLICATIONS OF THE AMENDMENT

Let us consider some practical applications of this law.[9] Assume some 18-year-old widow, whose soldier-husband was killed in Italy and who is left with one child. The insurance money is paid directly to her; she receives the child's part for its use and benefit. The widow marries again and other children are born to this new couple. The mother spends her money for a home. The soldier's son has his money in the bank, and the mother hopes to educate him in the State university. But the children of the second marriage become ill and must be hospitalized; so the mother from time to time spends the inheritance of the soldier's son, and when he is old enough to go to college, his money has disappeared and he must go to work instead. This wrong could well occur under the statute, under which guardians' commissions and small attorneys' fees were saved to this estate.

Numerous illustrations could be cited. In every State, each surety company, lawyer, and chancery clerk could add some regrettable cases in which the corpus was wasted; but, because of the surety bond, no loss resulted to the infant heirs of the estates.

It is stated that a guardian may be appointed under this new law. This is true, but how many will be appointed if the Federal Government will pay directly to the widow without a guardianship? The attorney for the Government may approach the widow with a check for $10,000. He may say,

"I will pay this over to you now and you may use it as you desire, or you may have a guardian appointed, but you will have to pay the guardian's commissions, pay court costs, bond premiums, and, of course, attorney's fees. Every time you want to spend something, the court will pass on it, etc."

In nearly every case the widow would take the money, and she would become subject to all the hazards which might befall a person incompetent and inexperienced in handling money.[10]

[8] See resolution passed by Mississippi State Bar ((1943) 15 Miss. L. J. 319).

[9] Jesse Stuart, winner of the Thomas Jefferson award for 1943, gives us an example of this in Taps for Private Tussie. When Kim Tussie was killed in action, the Bureau paid his illiterate wife, Vittie, $10,000 insurance money in one lump sum. The author shows the natural sequence of events which normally happened when an illiterate relief family was paid $10,000 cash. The tragedies in this novel will be enacted in real life in hundreds of cases unless our present law is changed.

[10] Joseph W. Henderson, president of the American Bar Association, states, "I am a good deal concerned that we of the American Bar Association and the legal profession do the job which is expected of us, and do it soon and well. The rising tide of criticism of arbitrary administrative action no longer comes chiefly from lawyers or their clients but from the rank and file of folks who now are finding out that arbitrary and unchecked administrative action affects their lives and liberties too. As someone said the other day: 'They are tired of being kicked around.'" ((1943) 29 A. B. A. J. 681.)

Poetic Tribute to the Late President Roosevelt by John Magill

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a poem written by a farmer of North Dakota named John Magill, of Verona, N. Dak. The poem is entitled "Glorious Leader," and is one of the finest poems I have read in memory of the late President Franklin Delano Roosevelt.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

GLORIOUS LEADER

(By John Magill)

"Long live your glorious leader!"
Cried allies overseas;
Alas! that leader slumbers;
'Neath Hyde Park's budding trees.
'Twas in the "line of duty"
The final summons came
To him whose years so painful
Have earned undying fame.

For him no union hours,
For him no 8-hour day;
Like farmer at the harvest,
Or soldier in the fray,
His Atlas mind envisioned
Through anxious days, and long,
Through battles never ending—
For him no friendly gong.

The peace he vainly wished for
With longing, tired sigh,
Has come to him eternal
In Realms of God, on high;
Yet long will live his efforts
For us he loved so well;
Our world will ne'er forget him
Who in the battle fell.

He found our Nation fearful
Of dangers near at hand;
Resurgently his courage
Spread hope throughout the land.
When rising tides of warfare
Sought to engulf us all,
He calmly told our country
To answer every call.

To work or fight, wherever
The talent each possessed
Could render greatest service—
And each to give—his best!
In this our splendid leader
Example set for all,
Since none can strive more greatly
Than labor till he fall!

That voice of silver kindness
Our firesides heard of yore,
Like those of Clay and Webster
Can stir men's hearts no more.
Then take your place, Frank Roosevelt,
Nor hesitate to claim
What you so nobly merit
In history's hall of fame.

The qualities of Washington,
And Lincoln's love of men,
With ideals of a Wilson
Have lived in you again.
In every national crisis
A leader forward came;
America forever
Will bless your honored name.

Patent Medicine Politics

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. BUTLER. Mr. President, the May 1945 issue of the magazine, Washington News Digest, contains an interesting and informative article by the junior Senator from Wisconsin [Mr. WILEY]. I ask unanimous consent that the article be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

PATENT MEDICINE POLITICS

(By ALEXANDER WILEY, United States Senator from Wisconsin)

The pattern of American politics of the immedate future has now become clear. A swarm of collectivist medicine men are going to try to high-pressure our Nation into buying a mess of political patent medicine.

They intend to take advantage of our unsettled times and feelings to sell us a phony political bill of goods. These leftists want to bamboozle us to buy—what?

"The little pink healer. A magic bottle which produces cradle-to-the-grave security and jobs for all. A miraculous formula designed to make a sick nation well and a well nation better. Composed of the following ingredients: One part of deficit financing, one

part centralized Executive power, and miscellaneous items such as political pap, bureaucratic patronage, and public pork."

From the rostrums of Government-controlled unions and front organizations, the snake-oil salesmen will hawk their nostrum. They will use all the time-worn techniques of the medicine man craft—the come-on, the follow-through, and the who'll-be-the-first-to-buy-it finale.

First, they will gush their dripping praise of the common man. Next, they will beat their breasts over the fictitious political and economic grievances and ailments of the common man. Lastly, they will hold up the little pink healer, which will put him out of his misery. Take a bottle, folks. It's all wrapped up in red tape. Yours for the simple price of the great American ballot.

Will our Nation take to this apple sauce? I think not. I think we have learned to beware of these political charlatans. We have enough horse sense to neutralize their hokum. But let's start right now to take their hokum apart and show up its component elements for just what they are—the siren songs of demagogy.

First, the medicine men's initial bit of hokum is their professed love for the common man, the little man, the forgotten man. Inwardly these demagogs must sneer at the common man who "falls for their line," even though it has been long discredited.

It is the little man who will pay through the nose in taxes for the staggering national debt which the collectivist medicine men would even increase. It is the little man who will surrender his liberties just as the big man will lose his in return for the spurious blessings of "the little pink healer."

Secondly, the medicine men's next bit of hokum is their spine-chilling propaganda of fear. They try to panic the public into state socialism or a reasonable facsimile thereof. With their gloomy warnings of post-war depressions and unemployment, of bread lines and soup kitchens, they try to raise America's hair, its blood pressure, and its willingness to do what the political hypnotists tell it.

The demagogs omit all references to the forces which will make for post-war prosperity in the American way. They do not mention the breath-taking backlog of industrial, agricultural, and consumer demands both here and abroad, demands whose fulfillment will enable American production to reach a peacetime peak and to continue humming in high gear.

They ignore America's great infant industries—plastics, electronics, aviation—which are standing only on the threshold of their tremendous peacetime development. They render no account of America's private inventive genius, which, in the period since 1870, produced 15,000,000 new jobs in 15 new industries.

Thirdly, the medicine men proclaim the hokum of the democratic newness of their nostrum. They say their seductively titled full-employment program is the latest thing in democratic public policy. They urge, let's keep up with the English Joneses with their up-to-the-minute Beveridge plan. They know that the public always takes a hankering to neat things wrapped up in a new package.

Actually, however, their program is neither new nor neat nor democratic. Its collectivist poison is the oldest stuff in the world—the stuff of which the ancient institution of slavery was made. In particular, look underneath the bottle and you will see made in Europe—totalitarian Europe.

The ersatz American thinkers, who concocted their devil's brew of spend and spend, elect and elect, borrowed the formula from the economic advisers of Hitler and Mussolini. They took over, as their own, the hocus-pocus economic and political schemes of the very men whose nations we have had to conquer with such costly sacrifice on the battlefield.

Moreover, we ourselves have tried this potion and found it completely wanting. Between 1933 and 1940, we took a long swallow of the very same economic and political firewater which is sold today as something new. Before the war, this firewater bore the trademark, pump priming and other innocent titles.

Under its influence, we indulged in an orgy of extravagant spending. We came very close to scuttling our entire system of economic and political checks and balances. Yet, we were left after 7 years of our intemperance with worse financial headaches and spiritual heartaches than when we started—and with 10,000,000 unemployed.

Fourthly, the medicine men dispense their hokum about Government. Washington, D. C., is, of course, the location of the mineral springs from which "the little pink healer" comes. The Capitol is the Fountain of Youth for our "tired old economy."

If in doubt, turn to Government. If in need, turn to Government (the Federal Government). If suspicious, remember that government works in a mysterious way its wonders to perform. Government does everything better. Government knows best. Government, government, government!

Now, just who was it that built this Nation—the bureaucratic seat-warmers or the grass-roots men in overalls?

Who was it who, between 1940 and 1944, produced 246,000 planes, 56,000 naval vessels, 769,000 trucks, who boosted the Nation's food output by 23 percent while the Nation's farm population dropped by 16 percent?

Was it not the selfsame free enterprise whose independent genius and grit the collectivists despise?

Was not our magnificent production achieved often in spite of the confusing, conflicting, and confounding orders issued pell mell by the authority-mad Washington bureaucrats?

Fifthly, the medicine men spout a lot of hokum about strife on the American scene as a reason and justification for Federal intervention. They picture big business as being at the throat of little business, labor in a death struggle with management, the farmer as perpetually at loggerheads with the consumer.

Of course, these class-conscious medicine men make no mention of the fact that they have gleefully contributed to whatever strife exists. They ignore the fact that the existence of competitive groups in America, peacefully pursuing their individual ends, within the framework of the general welfare, is the very crux of our American system.

These groups are in themselves beneficial checks and balances against one another. Certainly, there are abundant evidences at hand which belie the insinuations of vicious strife between them.

"The new charter of labor and management" agreed to by the presidents of the A. F. of L., C. I. O., and chamber of commerce is a case in point of the most modern American cooperation between supposedly deadly antagonists.

Other evidences of voluntary cooperation are the numerous profit-sharing plans in industry, the widespread pension and insurance plans sponsored by private enterprise for its employees, the innumerable labor-management committees, and the $600,000,000 financial pool for America's small business projected by America's bankers.

All these and more refute the trumped-up charges of American class-warfare and riddle the case for the Federal Government taking everything over in order to enforce peace and harmony.

Finally, the medicine men bait their trap with the hokum of guarantees. What do they not promise to guarantee? They vow to insure jobs, credits, profits, education, security, health, housing—practically the moon on a silver platter for every American.

But they fail to tell us the price, the age-old price of slavery in a planned economy in which wages, hours, and every factor of production are held in the iron fist of despotic government.

They fail to tell us that even after paying that awful price, the so-called guarantees turn out to be pigs in the poke. The little pink healer, itself, merely becomes the first drug to which a nation becomes addicted. Soon that nation finds itself compelled to take the all red healer.

So is it not best to beware of collectivists bearing gifts? The security they would donate is that of the caged bird or of the hog being fattened for slaughter. Why not remember the words of old that "he who would give up liberty for security deserves neither"?

But enough of the patent-medicine palaver.

America should give ear to none of it. Our national economic and political body is sound. Whatever ailments that body does have were brought on by the depression emergency, then by the continuation of the depression (resulting from the taking of quack cures) and then by the war.

Those ailments can all be cured by tried and true American remedies. The only medicine we need take is the sunshine medicine of sincere cooperation.

This natural medicine shows its effects in straight thinking, straight talking, and straight acting on the part of management, labor, agriculture, and government.

Yes, a government of checks and balances, a thrifty government, an efficient government, a courteous government can contribute its vital share to the health and well-being of a free America.

Political patent medicines are patently perilous. America doesn't want them.

Our New President

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Our New President, Harry S. Truman" delivered by the distinguished junior Senator from Maryland [Mr. RADCLIFFE] over Station WBAL, Baltimore, Md., on April 21 last.

There being no objection, the address was ordered to be printed in the RECORD as follows:

The momentous transition of the Presidency from Roosevelt to Truman has come at one of the most critical stages in history. It is highly significant that the American people are meeting this change in the office of the Presidency with quiet assurance.

President Truman is confronted with stupendous problems of war and peace, of economic readjustments the significance of which is unprecedented. A new President is necessarily a serious experiment in peacetimes and more so during a war.

People are asking today "Who is Truman and what will he do?" Well, what has Truman been doing? His life may be divided roughly into four periods: First, civilian and minor political activities; second, as a soldier; third, as United States Senator; and

fourth, his exceedingly brief experience as Vice President and as President of the United States.

Truman's record in civilian life and as a public official is creditable. As a soldier he displayed courage, efficiency, and the ability to win the confidence and friendship of his fellow soldiers. Scrutiny of his record as a Member of the United States Senate gives much insight as to his personal characteristics and as to what may be expected of him as President.

President Truman and I were sworn in as Members of the United States Senate on the same day, January 3, 1935, and we soon came into close contact with each other. We agreed on many points. We remembered Senator John Sharp William's description of the United States Senate as a "cave of the winds." Both President Truman and I expressed belief that the value of the making of set speeches in the Senate is grossly exaggerated; that while many speeches are explanatory and persuasive, slogans and catch phrases and especially denunciatory language may attract attention, but seldom are illuminating or convincing, in the Senate or out of it. Again and again he regretted that people do not realize sufficiently that the operations of the Senate are really a vast business enterprise, and that hard work, industry, and clearness of vision are as essential in the United States Senate as in any other place in the world.

President Truman's work in the organization and handling of the Truman committee was really in line with his previous valuable work in the Senate. Everyone admits that the work of the Truman committee was entirely nonpartisan and as constructive as that of any other congressional committee during the past 50 years. President Truman, in handling that committee, ran true to form.

When President Truman in his impressive speech to the joint session of the Congress pled for hearty cooperation, it was almost as if he were talking again, as a Senator, to his former associates in the Senate, urging closer teamwork between the President and the Congress. His informal visit to Congress on April 13, the earliest moment possible, and his radio address a day or so later to the members of the armed forces, again emphasized the necessity of such cooperation.

Another characteristic of Truman is his love for tolerance. When several weeks ago I asked him to come to Baltimore to speak to the Maryland Historical Society, he accepted immediately. So, on March 27, in commemoration of Maryland Day, the then Vice President Truman delivered an address to the Maryland Society, praising Maryland's historic doctrine of toleration, and urging that it be a beacon light to us in these days. His splendid record during his 10 days as the President proclaims the man, and is no surprise to those who know him.

The hundred days at the end of the Napoleonic regime are regarded as unprecedented in the importance of the events which followed each other in rapid succession. The first hundred days of the administration of President Truman will be comparable. Developments in this, the biggest and most tragic of world wars, are taking place with unparalleled rapidity. Organized resistance in Germany is fast disappearing. Since modern warfare requires men, weapons, oil, airplanes, and countless other facilities on a gigantic scale closely coordinated, the effectiveness of disjointed Nazi fighting groups will peter out, however much some fanatics prefer to die fighting in a hopeless cause.

The war in the Pacific moves on with incredible speed. The Japanese now know their ill-gotten gains will fast disappear but the frenzied eagerness of the businessmen in Japan, to try to prevent their basic industries from being destroyed will become more and more apparent and may be a factor of increasing importance as to the duration of the war.

Will the San Francisco Conference adopt the conclusions of Dumbarton Oaks or will material changes be made? The Conference, after controversies and apparent deadlocks, will probably follow substantially the Dumbarton Oaks proposals. Only 2 days before the death of President Roosevelt I received a letter from him in which he referred to his plans for attending the San Francisco Conference. Although Truman has stated that he will not participate on the ground in that Conference, he will keep in the closest touch with what is going on there and his influence will be a continuing and powerful one. He shares fully the general opinion that our delegation of six can and will handle the situation satisfactorily. Even though Truman does not take part in San Francisco in the active proceedings of the Conference, he might appear in San Francisco as a host to greet or congratulate and bid farewell to the visiting delegation.

On Friday a very unusual event happened as Senator CONNALLY and Senator VANDENBERG, our two delegates from the Senate, were about to leave San Francisco. Both made earnest speeches in the Senate outlining generally our aims and purposes. At the conclusion of each speech, the Members of the staid and precedent-observing United States Senate paid the highly unique tribute of breaking into loud applause. This farewell touch was our recognition of the vast importance of the conference, and of our full and complete confidence in our delegates.

History will record more changes during the 100 days beginning April 12 than in any other short period in our existence. History is in the making as never before. The foundations of our future international relations are being laid. An organization will be created, designed to offer security to a world tortured and stricken almost to death. However, the main safeguard of peace will be, not in the language of the instrument adopted, but in the spirit in which it is carried out.

Among the myriad of serious matters to be settled will be the disposition of certain islands in the Pacific which have been in the possession of our enemies. We do not want colonies, but this war has demonstrated that our security demands that we must have air and naval bases in various parts of the world which are always readily available to us. Ought we to own these bases outright or should they be trusteed? No set formula will probably prevail but some of the bases should belong to us outright. Where there is grave uncertainty as to whether they should be owned or held in trust, all doubts should be resolved in favor of our ownership.

I now return to what has been the greatest change in the rapidly moving panorama. The sudden death of the dynamic and epoch-making Roosevelt with a record of real achievement in the international field brings a man to the White House of proven and outstanding ability, but almost untried in diplomacy and international relations. Never in this country has an incoming President received more whole-souled assurances of support. The people of the United States, irrespective of party, have gathered around our new leader in accordance with the best traditions of our American way of life. Both Democrats and Republicans in caucus have passed resolutions pledging the President hearty cooperation and have called at the White House to emphasize such support.

Some cynics say, however, that this is the customary honeymoon of a new administration, and that discord will break out later on. Differences of opinion between the President and some members of Congress may lead in time to some friction. In view, however, of the gravity of our problems, and of the fact that President Truman, while a member of Congress, made friends and no enemies there, and also because he is instinctively cooperative, the probabilities of grave and lasting discord developing are at a minimum.

The American people like a contrast in temperament in their successive chief executives. Soon we will have the opportunity to decide which of the many far-reaching Roosevelt an policies should continue and which should be discarded. Strange as it may seem we may be able to make these decisions better under President Truman since as long as President Roosevelt lived, likes and dislikes of him tended at times to hamper the handling of our policies. We can now approach these matters, less as personalities and more as intrinsic specific facts. Time alone will permit us to evaluate clearly Roosevelt's astonishing record of achievement. President Truman's well-poised and practical mind will function satisfactorily in sharp antithesis to the brilliant one of Roosevelt.

Many people are asking, Is Truman a New Dealer? I do not know how to answer that question, nor, do I imagine, would he. Those who favor and those who oppose the New Deal differ so materially among themselves as to its meaning and desirability of policies, that classifications are not satisfactory. President Truman will judge every important matter on its merits, totally irrespective of whether it has any label or brand as being pro- or anti-New Deal.

Will Truman retain the Roosevelt Cabinet and chief advisers? I doubt if he has very definite opinions on that point just now. Experience has demonstrated, however, that each new President does, as time goes on, make numerous substitutions in the official family which he inherits. Quite likely some such changes will again take place, but of this we can be sure—President Truman will move thoughtfully and will select competent assistants.

We have given convincing evidence to the world of how a change in the head of our Government can avoid disruption and promote unity. By that striking example we urge the world to make governmental changes in a calm and deliberate manner, in the fullest accordance with both the letter and spirit of constitutional processes of government.

President Truman must deal with men who have spent their lives in close international contacts. How will Truman function when he negotiates with Churchill and Stalin? Against Truman's lack of experience in international matters is the fact that he has many able and trained advisers, including Cordell Hull, the soundest man alive in the field of international relations. Even more important is the fact that Truman is naturally clear-headed, cautious, fair-minded, and cooperative. Frequently, during the Presidential campaign of 1944, I said in my speeches that if Truman should ever become the President of the United States he would serve the people well, and he is doing so. He is modest and delights in no illusions of grandeur. He has shown he can be quick to act, and yet act wisely. He is firm in the position he takes and he is his own President.

We have a wise and well-balanced man in the White House who strives to serve the people well, and who will devote himself assiduously and efficiently to the most gigantic job in the world—the Presidency of the United States.

Economic Stability for the South

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an article entitled "United States Plans 10-Year $4,600,000,000 Campaign to Give Economic Stability to Cotton South," written by William Parker and published in the Wall Street Journal of Monday, May 14. This is a very important announcement to the cotton farmers of the South and to the country generally. I ask unanimous consent to have it inserted in the Appendix of the RECORD, not that I approve of it, but in order to advise the cotton farmers of the South of the plan of the Department of Agriculture over a period of 10 years, and later I expect to speak on the proposal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES PLANS 10-YEAR $4,600,000,000 CAMPAIGN TO GIVE ECONOMIC STABILITY TO COTTON SOUTH—WOULD LET DOMESTIC PRICE OF FIBER SINK TO WORLD LEVEL, CUSHIONED BY SUBSIDIES

(By William Parker)

WASHINGTON.—The Department of Agriculture this week will publicly unveil a $4,600,000,000 plan to restore economic order to the Cotton South.

Covering a 10-year period, the new program is designed to do the following:

1. Allow the domestic price of cotton to sink to the world price.

2. Cushion the shock of this drop through a 5-year system of cotton price adjustment payments, which each year would make up a smaller part of the difference between the world and the parity price of cotton.

3. Make additional Government payments over the entire 10-year period to aid inefficient cotton producers to switch to other types of farming.

4. Industrialize the South.

5. Shift 1,600,000 southern farm workers from farms to industry or service trades.

6. Keep cotton production at about 13,500,000 bales, or at the level which domestic consumption and exports will absorb each year.

7. Restore cotton to a competitive price position with foreign cotton and with synthetic fibers.

8. Increase gross farm income of southern farmers from the pre-war average of $865 to $2,500 a year or better.

9. Get the Government out of the expensive business of artificially supporting the price of cotton year after year while building up large stocks of unwanted cotton.

This new proposal is really a detailed elaboration of the general ideas presented last December to Representative PACE'S Cotton Investigating Committee in the House by Secretary of Agriculture Wickard. Though still labeled "preliminary," the document has been sent to Mr. PACE and will doubtless be discussed at the hearings which his committee will hold this week.

To date the Pace committee appears to be more inclined toward the present program of artificially holding up the price of cotton. Backers of the new proposal say that it has been examined and endorsed by representatives of the cotton industry and that they hope to win further support among agricultural officials in cotton States. Through the hoped-for support in the cotton area, the authors of this proposal believe that now skeptical Congressmen can be won over.

In drafting the 10-year cotton program, the agricultural planners started with the following assumptions:

That the war with Japan would be over in 1946 and the new program would start in 1947.

That the parity price of cotton would remain at about 20.5 cents a pound and that the world price would be 15 cents in 1947, 14 cents in 1948, and 13 cents thereafter.

That the United States would be experiencing a period of full employment. The study says that if all of these conditions did not exist the plan might be retarded, but still could be carried out.

CUSHIONED BY SUBSIDIES

Assuming the program was instituted in 1947, the initial step would be to allow the price of cotton to fall to the world price, or to 15 cents a pound if the calculations of the plan are correct. The impact of this drop, the advocates of this plan admit, would be tremendous so they propose a system of cotton price adjustment payments to act as a cushion. Under this system every cotton grower would be allowed during the first year 100 percent of the different between the world price and the parity price. The second year this would be reduced to 80 percent of the difference, the third year to 60 percent, the fourth year to 40 percent, and the fifth year to 20 percent. After the fifth year these payments would be discontinued altogether.

This would serve notice to cotton growers that at the end of 5 years they would have to be producing cotton at the world price or not at all. The efficient producers would be expected to continue and enlarge their cotton crop and the inefficient growers to reduce their cotton acreage or drop out of cotton altogether. This brings up the second phase of the program or the conversion payments. These are payments which would be made to farmers to help them get out of cotton and into some other field of agriculture.

Government grants would be available for such purposes as establishing improved permanent pastures, fencing, terracing, planting soil-building crops and improving farm wood lots. Farmers would be encouraged to go into the production of livestock, dairy and poultry, and truck. Payments to make this change-over would continue for 5 years, but as all farmers probably would not come in at the same time, the conversion payment program would last the full 10 years.

In addition to the conversion payments, there would be available to converting farmers an expanded system of loans, which would enable them to get the money for barns, livestock, and additional land where needed.

INCREASED INDUSTRIALIZATION

Concentrating cotton production on efficient farms and shifting other farms to producing food crops still will not take care of all the farm families in the South. The answer to this surplus population, according to the plan, is increased industrialization, more nonagricultural jobs in the South. This can be done primarily through stimulating the growth of industries to supply the expected increase in the needs of the area and through encouraging expansion or new industries to manufacture the raw materials of the South. An example cited is that expansion in food processing and marketing to handle the expected rise in food requirements in southern States will require 200,000 more workers, or about one-seventh of the 1,500,000 people who will have to find nonagricultural work.

The plan proposes Government aid to displaced workers including training in new jobs, transportation, and subsistance during the training period, all amounting to approximately $200 per worker for an estimated 900,000 people who will need to be helped. Private capital would be expected to finance most of the new enterprises in the region, but where necessary Government loans from such agencies as the Reconstruction Finance Corporation should be available.

The cost of this program to put cotton back on its economic feet is expected to run $4,600,000,000 over the 10-year period, exclusive of loans to either agriculture or industry. The plan estimates that for the first year the direct cost would be $675,000,000, that it would increase somewhat during the next 2 years, and then steadily decline, averaging less than $160,000,000 yearly during the last 5 years.

This annual average rate of expenditure of $460,000,000 for farm payment would be higher than the $375,000,000 a year spent on cotton programs prior to the war. But according to the advocates of the plan, the new program will work to help get the Government out of the cotton business. They estimate that after the conversion program has been completed, the Government need not make any contributions to cotton agriculture other than normal soil conservation payments which will probably continue to run around $50,000,000 a year.

Post-war Problems

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered over the network of the National Broadcasting Co. on Friday night, May 11, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are living in a changing world. We cannot measure the future by the past. When the war is over we are going to have to deal with complex and difficult problems, both in America and throughout the world. When victory comes we shall not be able to return to conditions which existed 20 years ago, or even before the war began. Our economy has undergone a vast change. We have contracted a staggering public debt. We must provide for its payment, make jobs available for our whole population, including our army of returning soldiers, stabilize our national life, and make secure our own future by aiding in stabilizing the other nations of the world.

While the supreme task of America is to win the war—and this shall continue to be our sole aim until final victory comes—yet it is vitally important that we give serious thought to meeting the conditions which will confront us at the close of the war and which must be met without delay if we are to save our country from the tragic conditions which exist today in many nations of the earth.

We hear much about creating 60,000,000 jobs, providing security for all the people from the cradle to the grave, safeguarding the health of the whole population, and otherwise making everybody happy and contented by making available for them all material comforts. This sort of utopia reads well and you could get considerable support for the general proposition, but it is not as easy as all of that. We have always had more or less unemployment, lack of security, scarcity of money, even poverty and want. We cannot abolish all of these evils. The only way to get rid of total unemployment is to have either war or slavery. The demands of war take up the slack in unemployment and the master always provided a job for his slave. Likewise, the slave had security. He was provided with food, shelter, and raiment, but he was a slave.

Sometimes it becomes necessary to choose between security and freedom. The slave had security but not liberty. The man in jail has security. He will not starve, he will not freeze, he will be treated by a doctor when he is sick, but he has lost his freedom and he is paying a high price for his security. It is our problem as a Nation to provide the maximum of employment, security, education, and other desirable facilities for the whole people without sacrificing or imperiling our greater assets of liberty and freedom.

America has had a great record of progress, advancement, and achievement. This has been the land of opportunity. It has been possible for the poorest boy or girl to reach the highest attainments in the field of business, industry, agriculture, or the professions. The tenant of yesterday has become the landlord of today; the mill worker yesterday is the mill owner today; the clerk yesterday, the merchant prince today; the mechanic yesterday, the industrialist today; the family yesterday in poverty and want, today in wealth and affluence; the plow boy becomes president. That's the America of yesterday and today—it must be the America of tomorrow if we shall preserve our individual liberty and freedom.

The Government can and should do much to help its citizens. The first obligation is to maintain liberty and freedom for all of its people; to provide opportunity for work and achievement, to safeguard and protect from monopolistic control and capital or labor dictation; to enable all of its children to have the chance to get an education and be trained and equipped to do some helpful and gainful work; to provide assistance for the old who are unable to work and without sufficient income for support, and help for the dependent children and those who are handicapped by disability. These are proper functions for a government of a free people.

If we would retain our freedom we must guard against regimentation; against state socialism; against a planned economy to the extent of limiting and controlling the initiative and activities of our citizens, or restricting or regulating business or establishing a bar against the power to acquire or possess wealth. There must be an incentive to work and achieve and the profit motive has demonstrated its effectiveness in accomplishing marvelous results in all fields of human endeavor. A planned economy did not produce the Edisons, Fords, Dukes, Reynolds, Cannons or Ervins of the business world, nor could regimentation give us the great scientists, educators, ministers, statesmen, and leaders of thought who have blazed the pathway of human progress throughout our national history.

We have already achieved victory in Europe and are now standing on the threshold of complete victory in the mightiest global conflict of all history. We know the productive power and capacity of America; we know the greatness of her people and the indomitable courage of her young men and the complete dedication in time of war of all the men and women in our land. Yet amid the shouts of triumph of our armed forces and the swelling tide of gratitude in the hearts of fathers, mothers, wives, and sweethearts of our Nation as we confidently look forward to final victory there are many discordant voices and pessimistic prophecies with reference to the post-war period and our ability to get along with other nations and to formulate and establish a tribunal to make a just peace and then to function effectively in settling future controversies between nations and to preserve world peace.

I do not share this pessimism. I believe that a nation capable of achieving the success which has been ours, will be able to meet the conditions and solve the problems of the post-war period and translate the fruits of a great war victory into a great peace victory. We have already made much progress in that direction. Beginning with the Atlantic Charter which heralded a new day for the world and which received the approval of 44 nations or governments, with all of the intervening conferences and proposals now culminating in the San Francisco Conference, we have abundant ground for the basic hope that all peace-loving nations will be able to formulate and agree upon a compact of world peace by which war will be forever outlawed.

There have been two great basic conferences whose proposals furnish the groundwork and the real foundation for stabilizing the world and establishing the peace. They are generally known as the Bretton Woods Plan and the Dumbarton Oaks Proposals. The former deals specifically with the material or financial affairs of our own country and the other 43 nations whose representatives have already agreed to its provisions and the latter relates to the organization of a world tribunal to hear, determine, and settle controversies between nations and to preserve and enforce peace. The Yalta Conference supplements Dumbarton Oaks and all of the proposals are being considered and discussed, and it is hoped will be agreed upon at San Francisco.

A big issue following the war will be the stabilization of our own Nation and the nations of the world to the end that full employment may be maintained and America may continue prosperous. The Bretton Woods plan will aid in accomplishing this result. In order for America to have markets for her increased production of farm and factory the other nations must be in a position to buy our excess products. With a view of providing this market for our goods and at the same time to save the world from collapse and revolution, this very practical plan has been devised, which consists of the establishment of an international bank and an international fund.

The international bank would have a capital of $9,100,000,000 subscribed by the 44 nation members. The United States, the richest Nation of the world, would be the largest stockholder, owning $3,175,000,000 of the stock of the bank. The purpose of the bank would be twofold—one to lend money to the nations, or its institutions, upon valid security, and the other to guarantee the loans made under its directions by private banks to the member nations, or its corporations, upon security approved by the bank. The latter would be the largest sphere of activity. These would be generally long-term loans and made for the purpose of enabling the devastated countries to rebuild and reestablish their business and industry and generally to stabilize their whole economy.

The international fund would consist of $8,800,000,000, representing an investment of $2,750,000,000 by the United States and a corresponding amount in proportion to wealth of each of the member nations. The chief purpose of this fund would be to stabilize the currency of all member nations and prevent the depreciation of currency by any nation, to regulate money exchange rates and to facilitate trade between the nations. In order to do this, the fund, in periods of emergency or crisis in any nation, would be authorized to buy a given amount of that nation's currency and otherwise enable the nation to meet its obligations and keep its financial structure from collapsing. The fund would make these advances for temporary uses and would be regarded as short-time loans and made upon security inferior to that required by the bank for long-term loans.

It is of vital importance to America that we keep the other nations from depreciating their currencies. That is why we lost so much of our export trade in cotton, tobacco, wheat, potatoes, textile goods, and so many other products following the other World War and continuing until the beginning of this war. We cannot maintain a trade balance in our favor when other nations are prevented from buying goods in American markets, because it requires double and treble the amount of their currency to equal ours. This would remedy that situation and enable us to expand our industry and agriculture and to find ready markets for our surplus products.

This is but a brief explanation of the functions of the bank and the fund, stripped of all technical terms and stipulations. The headquarters of both would be America, since our Nation would hold 35 percent of the stock in the bank and around 32 percent in the fund. There would be 12 directors from the various nations to manage the affairs of these institutions. There is general approval of the bank, but a committee from the American Bankers Association opposes the fund, largely upon the ground that it is not good banking practice and that the security would not be adequate. Looking at it from a banker's standpoint alone, that is unquestionably true, but the very purpose of the fund is to enable nations in periods of crises to obtain funds without having gild-edged security, and the justification is to save the nation's financial structure and prevent its collapse and the consequent depreciation of its currency, which would result in more detriment to our country than to any other, because we are going to maintain the value of our currency and the American dollar will continue to be the standard of value.

Not all of the great bankers in America oppose this fund, and while I have great respect and admiration for the Committee of the American Bankers Association who think this plan for the international fund is unwise, I recall that a similar committee opposed the establishment of the Federal Reserve System in the United States and regarded that as a dangerous innovation, and later offered strenuous opposition to the creation of the Federal Deposit Insurance Corporation to guarantee bank deposits and voiced the opinion that this would prove adverse to our whole banking system. Now everybody approves both of these institutions and regards their establishment as wise and beneficial legislation. As a result of the latter and the prosperity of our people there is more money on deposit in the banks of America today than at any time since we became a Nation. In view of all of this, I do not feel that we should be unduly alarmed by the opposition offered to the Bretton Woods plan.

The Dumbarton Oaks deals with the spiritual concept of a peaceful world following the winning of this war. It provides the machinery for the establishment of a tribunal to settle controversies between nations, to advance the common interests of all nations, to maintain liberty and freedom in the world and to preserve peace in the long tomorrows. It would establish a general assembly in which every peace-loving nation in the world would have at least 1 member. This assembly would meet once a year, and have power to make recommendations, to present causes, to counsel as to the economic and other interests of the affected nations, and to elect 6 members of the security council, which would be composed of 11 members. Five nations would be permanent members of this council—United States, Great Britain, Russia, China, and France—and the other 6 members would represent the smaller nations and would serve for 2 years each, with a change of 3 each year. The council would be the supreme authority and would have power to settle controversies short of war, to employ economic restraints to prevent war and ultimately and as a last resort, to use force to make effective its decisions. There would also be an international court to hear and determine legal questions and a secretariat and economic council. All of these agencies

would be properly correlated with the final authority in the security council.

The San Francisco Conference is considering the Dumbarton Oaks and the Yalta proposals, and it is expected that an international agreement will be reached providing a workable plan for preserving the fruits of our forthcoming war victory and to translate it into a victory for permanent peace. We must not expect perfection in this document. We must be prepared to accept all of this as a foundation upon which to build a structure of world peace with the full knowledge that improvements can and will be made. The important thing is that the nations shall have the will for peace and shall make an honest effort to arrive at an agreement by which differences may be composed and controversies heard and determined, without resorting to the sword. Civilization cannot survive a third world war, and the fathers and mothers of the world and the youth of tomorrow must be saved from the devastation and destruction incident to another global war. I believe it will be possible to achieve world peace and it would be criminal to fail to agree to make a supreme and united effort to attain this goal.

I am not pessimistic about our condition now or the future of our country. I believe in the inherent common sense of the American people, of their honesty of purpose and unfailing patriotism. They have always proven their resourcefulness and courage in both peace and war. I look forward confidently to winning the war and just as confidently to winning the peace. I believe our people will display the same daring and courage following the war that they have shown during the long and difficult days of this dreadful world conflict. Even as this Nation has amazed the world by its production during the war, it will surpass its own great record in producing in peace. America and the world will need all that we can produce and if we can succeed in stabilizing the other nations we shall have available abundant markets for all of our excess production. We should enter upon a period of unexampled prosperity.

The peace proposals transcend in importance any of the economic or material aspects of the whole situation. I am happy to say that I find genuine and wholehearted support for the peace treaty on both sides of the aisle in the Senate. It was most reassuring to find that the 16 new Senators elected last November—10 Democrats and 6 Republicans—are unanimous in their support of the principles of the Dumbarton Oaks proposals and will give their enthusiastic support to any reasonable plan for world peace. I confidently believe that the Senate will ratify the peace treaty by more than the two-thirds majority required by the Constitution.

With the world assured of a long period of peace and our Nation occupying a position of leadership in cooperation with the big and little nations of the world in economic improvement and development, and in spiritual unity of purpose in establishing and maintaining that long-hoped-for peace—America will stand at the crossroads of world history as the Nation of destiny.

Veterans' Hospitals

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. JUDD. Mr. Speaker, during recent weeks we have heard and read so many critical remarks regarding the veterans' hospitals, including the one in Minneapolis, that under leave to extend my remarks I am glad to include, along with my reply, a letter from a patient who is eminently satisfied with the care he received at our Minneapolis veterans' hospital.

MINNEAPOLIS, MINN., *May 2, 1945.*

Mr. C. D. HIBBARD,
Manager, Veterans' Administration,
Minneapolis, Minn.

DEAR MR. HIBBARD: The recent articles in Cosmopolitan magazine have made me so damned mad that I have delayed writing this letter to try and cool off.

The records will show that in the past 11 years I have spent about 2½ years as a patient in the Minneapolis veterans hospital. The medical records will show that when I first came there I was in mighty bad shape.

That I am alive today is, without any question, due to the wonderful care that I received at the hands of the very people who are now called third raters.

I cannot say how the other veterans' hospitals are run. But that first Cosmopolitan article named my own doctor out there. True, he didn't say Dr. Josewich was incompetent; but in the very next paragraph he implied as much. I am intelligent enough and interested enough in my personal physical ailment to have learned a great deal of the record and reputation of the many specialists in the same field as Dr. Josewich. He tops them all. He was doing lung collapse treatment successfully when the writer of that article was in grade school.

Many others rate equally high. I recall Dr. Marclay—now retired—undisputed dean of chest men in the Twin Cities; Dr. Seaberg, now promoted to a higher position at the Minneapolis hospital; Dr. Culligan, who did some surgery for me—recognized as one of the most brilliant surgeons in the Twin Cities; Dr. Dumas, recognized nationally in his special field. These are the men who have taken a bunch of broken down wrecks like me—average age today 52—and put us back on our feet.

But the doctors alone couldn't do it.

"Poor food served cold" that article said. I give you my word of honor that I often got a copy of the mimeographed menu for the week from the dietitian and mailed it home to my folks to show them that I was sure "living the life of Riley." I found that the dietitians, the kitchen help, the orderlies, everyone that had anything to do with the food would break their necks to give a fellow the finest food and served according to the patient's taste even though the patient was many times unreasonable in his wishes.

And the nurses—God bless them. Sick men are apt to complain and squawk about trifles. But those girls did just the right thing at every turn. Why I haven't been in the hospital for 7 years and yet today I could name off no less than 25 by name that I remember for their many kindnesses, and especially that grand character, the Chief Nurse Anne Griffin.

You must excuse the length of this letter but a hospital is made up of a lot of people—I refer to the hard and thankless jobs done by the orderlies. I'll never forget the many times when I was in very serious condition that some orderly would slip into my room quietly to see if there was anything he could do to make things more comfortable for me.

When a fellow got on the mend and time hung heavy on his hands he needed another type of help—mental help.

I am thinking of that fine occupational therapy worker, Miss Macomber and her staff—how she would teach us all manner of things such as needle work, leathercraft, paintings, etc. It took our minds off of our bodies and our worries.

And then along would come the librarian, Miss O'Toole. To think that we actually in that single institution had a library that would be the envy of many a small city. With the current subscriptions to practically every magazine published and, if I recall, about 10,000 books—and a fine and cooperative librarian to bring to your bedside any book or magazine you might fancy.

And the dental clinic—as fine a staff of workers as would be found anywhere. Dr. Koontz happened to be the dentist who worked on me. A fine dentist, a fine man. And to think that every man they work on is actually there for some other reason than his teeth, all sick men. They have to be good, and they sure are.

I must not pass over your own part in the scheme of things. I recall very well that when I first entered the hospital a sick, worried and down-hearted man it was only a day or two and a contact man from the Administration was at my bedside explaining all of my rights under the veterans' laws; assisting whenever needed in adjusting business and family affairs. It happened to be Mr. Madden that took care of things for me. He was fine. Unable to appear or speak for myself, he appeared before various boards and saw that my rights were properly presented. I am grateful to him.

I'm sorry that I have strung this letter out but from my heart I want to say I am mighty grateful and there are so many people who have done so much for me that I could not be brief if I tried.

With the storm of criticism that is being stirred up on the subject I feel that men like myself should speak up. The chronic complainer, though in the minority, is long-winded and loud-voiced. We who know the fine record of the Veterans' Administration should tell the millions of service men and women, their parents, wives, and families that they can feel assured that their loved ones will get the best treatment in the world in the veterans' hospitals.

I am sending a copy of this letter to Dr. JUDD, my Congressman, so that he will know of my experience.

Sincerely,

ROBT. J. BURNS.

MAY 10, 1945.

Mr. ROBERT J. BURNS,
Minneapolis, Minn.

DEAR MR. BURNS: Thank you very much for sending me a copy of your letter of May 2 to Mr. Hibbard, regarding medical and other conditions at our Fort Snelling Veterans' Hospital.

There can be no denying the fact that in any large bureau which has to be run fairly closely according to rules and regulations, things become mechanical at times and not as personalized as one could wish. On the other hand, I believe the picture drawn in the Cosmopolitan article is out of focus.

I do think that veterans' hospitals ought to be under medical men rather than laymen. There are some other changes which will have to be made in the enormously expanded program, but your point is very well taken that the complainers are usually very vocal while those who are satisfied with the service allow the complaints to go unchallenged or unanswered. Therefore, I am having your letter introduced in the CONGRESSIONAL RECORD because I believe it will be wholesome in getting a little better balance into the picture.

Very sincerely yours,

WALTER H. JUDD.

Right in the Middle

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, May 14 (legislative day of Monday, April 16), 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Right in the Middle," written by Maurice R. Franks, editor of Railroad Yardmasters, on a subject which is very much in our minds at the moment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT IN THE MIDDLE

We are hearing much pro and con on the subject of unionizing foremen in industry. Some labor leaders feel that foremen should be unionized, and most businessmen are of opposite opinion. The National Labor Relations Board has ruled in favor of organizing foremen and just recently handed down a decision in Detroit covering an automobile manufacturer. So now the public is becoming curious and wanting to know just who is right.

This question, to be handled intelligently, must be done in an unbiased manner, without special favor to the parties directly concerned in the controversy. The best answer so far seems to be the one covered in an advertisement of General Motors Corporation. It says: "We think it would be bad for foremen if American industry would be compelled to make a change in its proven type of organization, which would unavoidably reduce the foreman's status, diminish his responsibility, authority, influence, decrease his opportunity for personal advancement."

Some labor leaders believe that unionization would be highly beneficial because it would enhance the membership of unionism and it would give unions inside control over production through union membership of foremen. And right here is where the rub comes in, because it places the foremen of industry right in the middle.

This question is not going to be adequately solved by "beating around the bush" and believe me, this writer does not like bushes to beat around. The title "foreman" means nothing. In fact, titles alone in any occupation mean nothing; the duty of the occupation is what really counts. In other words, you can call them foremen, vice presidents, general managers, or what have you, and it does not amount to much. What really is important is the duty of the occupation. A messenger boy that does nothing more than deliver messages, even though you call him an expediter, is only a messenger.

If a foreman is a worker with no disciplinary authority, he is to my mind just a glorified worker, with a title that means nothing, and I see no reason why he should not be organized. But, if the title of "foreman" means what it actually implies, the right to hire, discharge, and discipline employees for insubordination, then I do not hesitate in saying that a foreman should not be organized. How can a man be honest with himself and honest with his union, if he is forced, through a condition of unionism, to play both ends against the middle. And this is exactly what he must do as a unionized foreman. If he does not discipline insubordinate employees, he can be expelled from the company for his own insubordination; and if he does discipline, as a conscientious foreman, he can be expelled from his own union, which places him right in the middle!

In order for a foreman to function properly in his capacity, he must be respected by all those with whom he comes in contact; and just how can he be respected, or even trusted, when he is in the position of playing two ends against the middle? In the position of serving two masters at one time. Management cannot trust him because he has sworn allegiance to the union, and the union cannot trust him because he has sworn allegiance to management. In this position, it is not very long until no one trusts him, because to hold his position as foreman, he is inclined to become an unprincipled schemer of playing both ends against the middle.

The foreman of any job should be a man highly respected by his subordinates. It is necessary for him to set an example of good, loyal workmanship. He must personify incentive, initiative, and executive leadership. Yes, the foremanship of every department ought to be something that all workers should strive to attain some day. It is definitely a reward for capable and conscientious workers.

Just picture a foreman, who is just an ordinary member of his union, getting into an argument with the president or business agent of his own union in a meeting. I would venture to say that his union status would not be so good, and if it is not good, according to union contract under the closed-shop system, he can be expelled for union insubordination. If he is expelled from the union, he is automatically expelled from the company. A nice system of eliminating the conscientious foreman. The more I think of the situation the more I am inclined to agree with management, that foremen should not be unionized. It would be bad for management because it takes the managerial rights away from where they belong. It would be equally bad for labor because it automatically sets up a condition of disharmony within unionism.

The National Labor Relations Act, or the Wagner Act, as it is commonly referred to, definitely states in section 8 "It shall be an unfair labor practice for an employer (1) to interfere with, restrain, or coerce employees in the exercise of their rights guaranteed in section 7; (2) to dominate, interfere with the formation or administration of any labor organization, etc." Now in spite of this law, which has been validated by the United States Supreme Court, the National Labor Relations Board in its decision has told the world that employers do have the right to interfere with, restrain, or coerce employees in the exercising of their rights as workers. This statement is based on the fact that when foremen have the authority to hire and discharge workers, they are employers, part of management, and as such have no right to be mixed up in unionism in any manner whatsoever. It is obvious that as unionists they can be the means of influencing labor one way or the other. When a man becomes a foreman and is unionized, he immediately loses his chances of going further up the ladder, because he becomes estranged from management.

The Labor Act is in unmistakable language, and as long as the National Labor Relations Act stands as the recognized law of the land governing employer-employee relations, in my opinion it is unlawful for foremen to become unionists. And mark you, when I say foremen, I mean those who have disciplinarian authority, the right to hire and discharge workers.

We Americans boast of our system of free enterprise, a system by which the most humble may rise to the pinnacle of industry, through diligent application, and yet the real recipient of this system, the worker himself, through unionizing foremen, is creating a condition that will definitely block careers at the half-way mark. To look at the situation with an open mind is to invariably arrive at the conclusion that to unionize foremen is to put them right in the middle.

Frankly yours,

MAURICE R. FRANKS,
Editor.

H. R. 1690

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. GILLIE. Mr. Speaker, I am glad to add my support to H. R. 1690. Two important reasons immediately come to my mind, in backing this measure. First, the important contribution that the 4–H Club program has made in developing the agricultural interests of the boys and girls participating in the program and the resulting high standards of citizenship they have achieved; and, secondly, the farsighted educational advantages which have accrued to the farmers because of the assistance and interest they have received from the agricultural extension program.

One of the most impressive and unforgettable sights in my memory has been to see the more than 1,500 4–H Club members from every State in the Union marching into the amphitheater at the International Livestock Exhibition at the Chicago Union Stockyards, where they were participating in the numerous projects conducted for their benefit. The 4–H program has helped them in many ways, taught them to be better farmers, livestock raisers, and better citizens by teaching them to work with their hearts, hands, and heads for better health and happiness. They have been doing a remarkable piece of work, and the culmination of their efforts has been inspiringly portrayed in the projects and exhibits that I have seen during the quarter of a century that I have been privileged to witness the international exhibition.

In several instances today I have heard on the floor of the House objections to the bill because of complaints registered against the county agents in various districts of the Nation. These complaints have charged the county agents with "playing politics." While this situation may exist in some localities, I find that the county agents and their assistants in my Indiana district are of the highest type. They have remained distinctly out of politics and have devoted their time and energies to their duties of effecting a comprehensive 4–H Club program which will mean a better farm citizenship in the future, while assisting the farmers with their soil, livestock, and agrarian problems to enable the farmers to do a better job of farming.

I believe that it would be unwise for us to jeopardize the widespread benefits of these activities because some county agent unfortunately places his selfish political interest above the high objectives of the agriculture program. There

should be some other method of handling these individuals who stand in the way of constructive, progressive agricultural developments.

I therefore support the bill H. R. 1690.

China and the United States—A Challenge to Partnership

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a radio address prepared for broadcasting over the Mutual Broadcasting System May 13 on the Let's Face the Issue program, sponsored by the American Bar Association:

The first objective of a nation's foreign policy must always be its own security. As VE-day brings us security on our eastern border, it is appropriate that we turn our attention to the West, where our historic policy for achieving security has been the so-called "Open Door Policy" in China.

Sometimes one hears Americans say, "Why are we so sentimental about China? Why are we always insisting upon an independent China? What concern is it of ours what happens in Asia? Why don't we keep out of other peoples' affairs, and mind our own business?"

That kind of comment is based on the naive assumption that America's insistence for a half century upon an independent China was the result of some sort of sentimental altruism. But, as a matter of cold fact, it was based on the most realistic and hard-headed concern, not for China, but for the United States of America. It has been clearly recognized by all our real statesmen, that the surest guarantee of America's security in the Pacific was to have there an independent, strong, friendly China. There have been only two nations that could conceivably threaten us in the Pacific—Japan and Russia. Neither of them could move in our direction as long as, in their rear or on their flank, was a strong, independent, friendly China.

Perhaps a case could be made out that we ought to appease Japan, try to avoid trouble by yielding to her demands for the war materials necessary for her cruel assault on China. On the other hand, perhaps a case could be made out for our disarming in the Pacific, thereby saving the taxes that would have been necessary to build a two-ocean Navy and to fortify the Philippines and Guam. But nobody who can add up two and two and get four can possibly make out a case for doing those two things at the same time. If we were going to help Japan destroy China as our bulwark, then we had to have a great Pacific Navy. If we were not going to build that Navy, then we had to have an independent, friendly China. But what did we do? We gave up our Pacific armaments and then helped Japan destroy China, left ourselves almost defenseless. It would be incredible if it were not so tragically true. Thus we got into a two-front war. Our hope of victory depended, in part, on China's ability to hold out against Japan until we could beat Hitler first and then get our full strength into the Pacific. Fortunately for us, China has been able to hold out through unbelievable fortitude. She needs and properly wants the same sort of assistance in war materials and weapons and in men to help train her troops in mechanized warfare as we have given so lavishly to our allies in Europe. It is in our own interest to supply them. The more the Chinese can do of the fighting against Japan on the mainland, the better it is for the Chinese, and for Asia, and for the world, both now and in the future. And certainly it is better for us. It will be costly enough to equip and train China's armies, but if we have to do most of the fighting ourselves, then it will cost us far more in money and materials—and more of our men in addition.

We are needlessly sacrificing American lives and money insofar as we fail to mobilize fully the will and the confidence, as well as the military strength, of so important an ally.

The white man's prestige in Asia has been at its all-time low. To regain respect he must demonstrate power—and he will. But power alone does not command confidence. That comes only as he demonstrates that he intends in the future to use his power in Asia for the freedom and welfare of the people there, not just to restore the white man's special privileges. The Chinese have justifiably been anxious at times, not so much because of what some other nations have said or done regarding their war aims in Asia, as because of what we have not said regarding our aims.

Therefore, it was most reassuring to hear President Truman's ringing declaration that, "The responsibility of the great states is to serve, and not dominate the peoples of the world." That is effective political leadership.

For much as we need China to help win the war, we will need her even more to help establish and maintain a stable peace. We have learned, the hard way, that we can no longer get security by physical separation from the world. The ability of the airplane and the flying bomb to disregard all land and sea boundaries, and the refusal of other nations to ignore us, no matter how much we want to ignore them, have made isolation an impossibility.

On the other hand, we cannot get long-term security just by building up a gigantic Army and Navy air force. We simply do not have enough resources or essential minerals or money or manpower to sustain such a program indefinitely. We should not forget the hard fact that we have only 6 percent of the earth's land and 6½ percent of its population.

The peoples of Asia are on the move. We cannot hold them back. We cannot drive them. We cannot buy them. What, then, can we do? We can join them; yes, we can lead them—if it be on the basis, not of superior and inferior, but of full partnership in working together for the security of all as the true way to promote the security of each. If we fail to exert vigorous leadership in that direction, there are others eager to persuade China to go in other directions.

In short, America, after this war, is going to need friends. We have realized how much China needs us. But, on the whole, we have not appreciated how much we need a friendly China as the strongest nation in Asia once more, the great stabilizing force in the Far East as she was all down through the centuries.

For example, the one thing that, above all else, prevented Japan from making this a world race-war, as she tried so desperately to do, was a great moral decision by Chiang Kai-shek and the Chinese people—a decision to fight against their own race, the Japanese, and to fight with us, of an alien race, because they thought this was a war for human freedom, including their freedom, too. This contribution by China to us far outweighs all other considerations. It was one of the truly great decisions of history. And the way to make certain that there will not be a world race-war in the next 10 years, or 100 years, or 300 years, is to make sure that the western democracies and the Chinese, incomparably the largest and strongest of all the nonwhite peoples, are on the same side—the side of freedom and democracy. Is there any more important business in the world than making sure of that?

Heretofore the Chinese have trusted America far above any other country. They never forget our 125 years of missionary work, churches, schools, hospitals, agricultural stations.

They do not forget our inauguration of the open-door policy, which prevented their being split up by the European powers at the end of the last century; or our return of the Boxer indemnity to establish a great modern university in China, and to provide scholarships, enabling almost 5,000 of China's ablest and finest youth to study in our universities here and return to be the new leaders of China, imbued with American ideas and ideals.

They remember gratefully our vigorous rejection of Japan's 21 demands on China in 1915; and Mr. Stimson's firm stand against Japan's seizure of Manchuria in 1931.

They observe that we made the Philippine Islands, not the first colony in a great new empire, but a republic—and trained its people for the independence we promised and will deliver.

Our support of the Cairo declaration, promising complete defeat of Japan and return of Formosa and Manchuria to China, their rightful owner, was worth divisions of American soldiers.

Our repeal of the Chinese exclusion acts and putting the Chinese on the same immigration quota basis as our other allies, thereby starting to treat them as equals now, won their respect and gratitude not because it was a favor but because it was simple justice.

They almost revere General Chennault and those gallant American aviators who have been so heroically fighting for China and flying supplies "over the hump."

Despite some less worthy chapters like our arming of Japan and our relinquishing extraterritoriality only after we no longer had it to give back, such factors as the above have caused the Chinese to continue to believe in us almost pathetically.

We must continue to prove worthy of their faith. The thing that, more than anything else, will bind China to us for the future is for us to demonstrate that at long last we understand the true nature and significance of this struggle in Asia and of the times in which we live, as the Chinese have understood them all these lonely years; that we, too, see the larger vision and are committed to the larger loyalties which alone can give a common hope for the future.

Chiang Kai-shek himself has said it in unequivocal terms: "China has no desire to replace western imperialism in Asia with an oriental imperialism or isolationism of its own or of anyone else. We hold that we must advance from the narrow idea of exclusive alliances and regional blocs, which in the end make for bigger and better wars, to effective organization of world unity. Unless real world cooperation replaces both isolationism and imperialism of whatever form in the new interdependent world of free nations, there will be no lasting security for you or for us."

In dedication to that common cause of real world cooperation let us go forward together confident and unafraid.

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. BERKELEY L. BUNKER
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. BUNKER. Mr. Speaker, Mr. Clem Walker, a friend of mine and a prominent Nevada miner, very clearly expresses my sentiments, as well as those of many of my constituents, on reciprocal trade and the tariff question. His expressions are worthy of the attention of the Members of this House.

DON'T TRY TO TELL ME A CUT IN THE ZINC TARIFF WON'T HURT THE ZINC MINER

(By Clem Walker)

I am a miner in a Western State. There are lots of miners in this country, both East and West and North and South, but I work in the West.

I mine the ore from which zinc is made.

If I don't mine the ore, then there is so much less zinc.

They tell me zinc is called a critical and strategic metal in wartime. Those are big words but they tell me they mean that without zinc there can't be any brass for ammunition, or dry batteries, or galvanized steel, or zinc die castings, or lots of other important things for the Army and Navy.

They tell me I am just as important in the war work as a lot of other workers you hear more about.

They tell me if we ever get in another jam, we've got to have a lot of zinc where we can get at it quick.

I get all this and it sounds good to me to be a zinc miner, now and after the war.

And then they say that when the war is over we've got to sell a lot of things to foreign countries so the men in the big cities in this country where they make things will have lots of work—important work, I guess, but work I don't know how to do because I'm a zinc miner. Besides, my family and my house are here, near the mine, and not in a city.

However, it sounc d good to me to have the big factories running full time because I figured they would have to use a lot of zinc and that would mean I would have lots of work mining the zinc ore.

But, Mister, I got a jolt when they told me these factories wouldn't need the zinc ore I mine. The hell you say, I said. How can you make a lot of those things you're going to sell to those foreigners if you don't use any zinc?

Well, sir, they said they would use zinc all right but it wouldn't be the zinc I mine, because they would use zinc from those foreign countries, because how could those foreigners pay for the things we sold them if they didn't sell us something; and they could sell our factories over here zinc very cheap because they don't pay such good wages over there in those other countries and they don't pay out much for safety work in the mines, and they don't do a lot of other things for the zinc miners that cost money and the zinc miners work long hours and their zinc costs less. And on top of this they're going to cut the tariff on zinc to almost nothing a pound so that I won't be protected against this cheap foreign zinc, as I ought to be. Thank you very much, but they won't need the zinc I mine. Ain't that something?

They call that bargaining with foreign countries so as to help them buy from us. I call it throwing me out of a job so I can't buy anything from anybody. They use long words like reciprocal trade treaties, but when you get down to the guts of all the fancy talk, it looks like I'm going to get trimmed; all I got to go on is that every time so far that they put zinc into one of those trade treaties, they cut the tariff, and in the long run, I get the worst of it.

Where the hell do I come in, I said. Oh, they said, you don't count because the big manufacturers like the idea of cheap zinc and the workers in the cities like the idea of having lots of work and there are a whole lot of these people and there aren't as many zinc miners. Besides, the boys in Washington who work with figures have got it all figured out. The zinc mines will close down and all the zinc miners will move somewhere else and do something else or go fishing or something.

So I'm just a figure on a piece of paper, am I, I said. Well, that don't sound good to me. Why should I lose my job of mining zinc to help some guy in some foreign country who works longer hours for lower wages so he can sell his zinc cheap over here? Why shouldn't somebody worry about me instead of worrying about some foreign guy and giving away the tariff protection I ought to have.

And if they close down the zinc mines and they fill up with water, and the timbers rot and there isn't any development work to find more zinc to mine and we all lose our jobs, what becomes of this mining town I live in? What happens to all the miners and to all the people who work in stores here and who work at a lot of other things around town? There just wouldn't be any town—and that goes for a lot of towns in this United States of America.

And then, some day, when they want zinc in a rush because there is an emergency, as they call it, where is the mine and the mining town and where am I? Strictly out of sight—gone. And then everybody will rush around and holler for zinc.

Well, why not holler for zinc now, I say, and that's what I'm going to do.

I'm going to holler about losing my job and I'm going to holler so they can hear me in Washington and at my union headquarters and so they can hear me, a living human zinc miner, above the clatter of those adding machines on which I'm just a figure to the boys who work with figures and not with human beings.

How about hollering with me, you zinc miners, and telling those fellows they can't do this to us—they had better put the tariff up instead of down and out.

The Postal Pay Increase Bill

REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. MASON. Mr. Speaker, the postal pay increase bill is to be brought before the House for debate and action tomorrow. For the benefit of the Members of the House in general, I make the following brief synopsis of the provisions of H. R. 3035:

First. The bill provides a $400 per year increase over present base pay to practically every person in the Postal Service, in lieu of the $300 per year temporary bonus which expires June 30, 1945.

Second. It introduces the principle of longevity pay in many of the branches of the Postal Service.

Third. It removes many of the inequalities and injustices that have existed for a long time between various branches of the Postal Service.

Fourth. It provides for time and one-half pay for overtime work.

Fifth. It provides 10 percent extra over the hourly day rate for postal workers, with some exceptions, who are required to work nights.

Sixth. It grants to all postal employees 15 days leave of absence each year with pay, and 10 days of sick leave with pay each year.

Mr. Speaker, when H. R. 4715, the $400 flat salary increase for postal employees, was passed by the House last December, I said in the debate on the bill:

I wish to warn the House that H. R. 4715 is not a panacea that will cure all the ills of our Postal Service. We have many inequalities and injustices that this bill does not touch. In fact, the inequalities and injustices now prevalent in the Postal Service will only be aggravated by the passage of this $400 flat pay increase. It will not remove the restricted and narrow opportunities for promotion, advancement, and pay increases that exist today in the Postal Service.

H. R. 3035 corrects most of those inequalities and injustices; it provides a permanent $400 increase in the yearly basic pay of practically all postal employees; and it also removes the "narrow opportunities for promotion, advancement, and pay increases." It should be passed by a unanimous vote of the Congress.

Norwich University Trained 16 Chinese Generals, All Now in War Service

EXTENSION OF REMARKS
OF
HON. SHERMAN ADAMS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. ADAMS. Mr. Speaker, his colleagues in the House of Representatives will not begrudge the gentleman from Vermont [Mr. PLUMLEY] the gratification and satisfaction he must feel in the knowledge that 16 of the ranking generals now commanding the Chinese armies were educated at Norwich University while he was president of that West Point of New England. No alumni have greater affection for their college than those who have graduated from the small but solidly grounded schools of historic New England. Mr. PLUMLEY can rest in the assurance that those Chinese generals, trained as they were under the hard, conscientious, painstaking tutelage of an able Vermont schoolmaster, now look back with appreciation of the sturdy preparation they had in the grim business of war.

Today Norwich can look at the Chinese command with the knowledge that it

has been strengthened and fortified with the qualities that, since the days of Ethan Allen and Seth Warner, have been indissolubly associated with the hills of Vermont.

In the Burlington Free Press, published at Burlington, Vt., one of the most beautifully located cities in America, appears the following item in its issue of May 3:

SIXTEEN CHINESE GENERALS, FORMER NORWICH MEN, MAKE RECORD IN WAR

NORTHFIELD, May. 2.—News of 16 Chinese generals who were students at Norwich University two decades ago was reported to the alumni office of the military college today by Lt. Col. Edward T. Cowen of the United States Army, Norwich, 1928, graduate now stationed at Chungking.

High in military and governmental affairs in China, 2 of the former Norwich students are major generals and 10 are brigadiers, according to Colonel Cowen, while 2, Ma Chu-an, class of 1925, and Wang Chun, '28, have died, and a third, Brig. Gen. Chen Chung-wu, '28, is insane as the result of injuries received during an air raid. Another, Brig. Gen. Chi Hsueh-chi, '26, is a prisoner of the Japanese.

The two Chinese major generals listed by Colonel Cowen are 1926 Norwich graduates. Maj. Gen. Shuming is generalissimo's representative to the joint Sino-American planning section, and he formerly was military attaché at Washington. Maj. Gen. Ho Hao-jo is head of the foreign affairs bureau at Chungking. Names and positions of other Chinese Norwich graduates follow:

Brig. Gen. Yang Chang-ling, '28, chief of protocol to the generalissimo and director of gas defense; Brig. Gen. Yao Kai, '28, director of the foreign affairs bureau at Kweiyang; Brig. Gen. Wang Chieh, '31, attached to General MacArthur's staff; Brig. Gen. Chao Hen-ching, '28, mayor of Hengyang; Brig. Gen. Sun Fu-lin, '26, guerrilla commander in Honan Province behind the Japanese lines; Brig. Gen. Chang Chin-chung, '25, military spokesman at Chungking; Brig. Gen. Li Chia-chen, '25, a Chinese commander in India.

When Mr. PLUMLEY read this item he stated there are many others too, among them Gen. S. M. Chu, military attaché at the Chinese Embassy right here in Washington. It is noteworthy that any educational institution in America should have graduated 16 boys, all of whom became generals in the army of one of our Allies; but when a small New England military college, tucked away in the hills of Vermont, can boast of such an accomplishment, it is a significant achievement indeed.

In sending those boys to Norwich the Chinese Embassy was impressed not only with the training which Norwich had to offer, but with those in whose hands was entrusted the responsibility of administering that training. That Norwich was selected is a tribute to that sturdy college, but it is in addition a tribute to the man who was her president in those days of preparation. Some day China was to rely upon the training which they were to receive. They needed to be trained well. How wise was China's choice, and how richly has that choice been rewarded.

Norwich University is a small college. Over the years she has labored diligently to train her sons thoroughly, to counsel wisely, and to educate soundly. Her alumni—Gen. Ted Brooks is one of them—testify to her success.

From the founding of the college in 1819 in Norwich, Vt., until it changed its location to Northfield in 1866, Norwich and Dartmouth were separated only by the Connecticut River. Although the colleges were good neighbors, the students, to put it mildly, were not congenial. Since it was desirable that one of the colleges should move, Norwich went to Northfield, later to be further enriched as the birthplace of one who was to become later the president of Norwich. As one born in Vermont and an alumnus of the Hanover college, I know how well Norwich has fulfilled her mission as a military college, and how ably she has met the responsibilities imposed upon her. No tribute of mine is of any moment. Her sons, generals, and other officers of allied armies now reerecting the pillars of freedom are paying that tribute, not only to a small college, firm and resolute in ideals nurtured in the everlasting hills of Vermont, but to a master craftsman, heralded in the history of that college, CHARLES A. PLUMLEY.

Stettinius and the San Francisco Conference

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an editorial from the Portland Oregonian of May 7, 1945, and also a column by Ernest Lindley published in the Washington Post of May 6, 1945. I am calling these newspaper articles to the attention of the House because they represent the opinion of individuals who are on the job at the San Francisco Conference and who have had a chance to size up the fine work being done there by our Secretary of State, the Honorable Edward R. Stettinius.

I think it extremely important that these matters be called to the attention of the House because of the fine response which I have heard on the part of all Members concerning the good job that our Secretary of State is trying to do at San Francisco.

[From the Portland Oregonian of May 7, 1945]

AMERICAN WAY

Attempts by some Washington columnists and a few newspaper editors to discredit Edward R. Stettinius, Secretary of State, by referring to him as "second team" quality, has done them no good and Mr. Stettinius some harm. Criticisms of "Big Ed" seem to be based on the fact that he is not a professional diplomat. This is true. And for this Americans should get down on their knees and thank God most heartily.

The fact that Ed Stettinius is himself as typically American as the ice cream soda (in fact is himself one of America's typical success stories) bodes well for United States victory at San Francisco. The Stettinius story is a story of America. He was board chairman of the United States Steel Corporation at the age of 37. No New Dealer, Ed Stettinius answered the call of his Government when war clouds gathered. Stettinius did an outstanding job as Lend-Lease Administrator and succeeded in making both the Congress and the country understand its practical phases. When Sumner Welles resigned, he was made Under Secretary of State and became Secretary with the retirement of Cordell Hull. Those close to Big Ed say he has no political ambitions, but that he is determined to do a service for his country in winning a few victories on the diplomatic front.

In any event, for the first time in recent history, an American Secretary of State is sitting across from his peers at a world conference and saying "Yes" and "No" in the American way. For the first time in many years foreign diplomats are learning right from the horse's mouth what we want and why we want it. As a result, we have increased hope of getting the things that we need if we are to do a job for ourselves and thus insure a peaceful world.

Stettinius' boss, Harry Truman, the Missouri farm boy who became President of the United States, is American, too—just as American as the corner drug store that he used to hang around in Independence, Mo. Mr. Truman, also, believes in the direct approach, and apparently has no use for the devious turnings and dark paths of Old World diplomacy. Mr. Truman thinks his boy Ed is doing a great job. And so does Senator ARTHUR H. VANDENBERG, one of America's ablest elder statesmen.

Of the world powers the Russians were the first to abandon the courtly and devious techniques of world diplomacy—that is, since the United States forgot the school of Ben Franklin and Henry Clay. Now at long last the Americans have at least matched the Russians in the reply direct and because of the simple forthrightness of Ed Stettinius have perhaps gone a step ahead. The Russians have found and the world has found that we propose to hang onto the strategic bases taken over in this war, at the same time cooperating fully with the United Nations in caring for native populations to the satisfaction of all.

There is every reason to believe that whatever the outcome of the San Francisco Conference may be, the true aims and viewpoints of the people of the United States will be presented to the world in simple and unequivocal terms by Secretary Stettinius and such able colleagues as Commander Harold E. Stassen and Senator Vandenberg.

[From the Washington Post of May 6, 1945]

STETTINIUS' TACT WINS DELEGATES

(By Ernest Lindley)

Before and since this conference began, there has been some sniping in the press at Secretary of State Stettinius. It is only accurate and fair to report that so far as one can see or hear, these criticisms are at variance with the overwhelming judgment of the delegates.

The remarkable harmony within the American delegation is due in no small part to his tactful management. At every turn the delegation has given him overwhelming support—unanimous except in one instance, in which a single dissenting vote was cast.

Stettinius and Eden have worked as a team. Eden is more experienced. His help has been very valuable. But he has not been dominant in any sense. Even if you granted that he might dominate Stettinius, if only the two men were to be considered, it would be hard to imagine his dominating Senators Vandenberg or Connally or Commander Stassen.

The delegations from the smaller countries also seem to like and respect Stettinius. This respect and liking really are attached to the United States. But, at least, the chairman of our delegation has not subtracted from them.

Finally, the Russians, as of this moment, seem intent on showing Stettinius that they are really good fellows and haven't minded the rebuffs which he was instrumental in administering to them.

FACTS NOT TOLD

Much of the criticism of our handling of the Russians sprang from ignorance of or a refusal to face the facts about Russia's failure to fulfill the pledges made at the Crimea Conference.

The American Government had been reluctant to put the facts before the public—which may have been an error.

It cannot be emphasized too strongly that the Russian default cannot possibly be explained by misunderstandings or differing interpretations of the meaning of the Yalta agreement—especially with respect to Poland. The agreement was discussed too extensively before it was reached to admit such a margin of misunderstanding.

When the Russians, with this lamentable record, began to throw their weight around—and especially when they had the brass to request seating of the Communist-dominated Warsaw regime—they asked for the rebuffs which they received. Inevitably their international reputation had suffered and it can be repaired only by the substantial, if belated, performance of their previous promises.

As to Stettinius, the point is that the moves he made with respect to the Russians were considered right and wise not only by the United States delegation and by the British but by nearly all of the smaller nations.

Whether Stettinius has the wisdom to formulate long-range policies and the fortitude to argue and fight for them is a different question.

ROCKEFELLER POPULAR

In certain respects, especially with regard to the treatment of colonial areas, the American program seems poorly prepared. The formula proposed takes care of our needs for naval and military bases, but it takes little account of our economic interests in the colonial areas which are being redeemed by American arms or of our moral position as the champion of self-government.

It appears to be—it is hard to be sure of this because the language is very general—a complete capitulation to the imperial powers which are allied with us.

One doubts that if Roosevelt had lived the American program would have been so weak and so narrow.

Among the diplomats outside the delegation, the man who seems to carry the most weight is Nelson Rockefeller. The solid bloc of Latin-American votes has not created too good an impression outside this hemisphere but it has impressed mightily the practical politicians on the American delegation. It is the surest proof that the good-neighbor policy pays dividends.

It seems odd, in a way, that the two relative amateurs in diplomacy, Stettinius and Rockefeller, should exert so much influence. Both are beneficiaries of long-range policies conceived before they became important officials and of the reaction to recent Russian maneuvers.

But it would not have been hard for them, or anyone, to dissipate these assets. They have conserved them, and so among the delegates—both American and from other nations—enhanced their personal prestige.

General Romulo Makes Eloquent Plea

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. HAGEN. Mr. Speaker, CARLOS P. ROMULO, Resident Commissioner of the Philippines to the United States and chairman of the Philippine delegation, delivered a dramatic speech before the fourth plenary session of the United Nations Conference on International Organization, April 28 at San Francisco, Calif. Commissioner ROMULO has the distinction of having served as aide to Gen. Douglas MacArthur. He is also a writer and a speaker whose knowledge of the political, economic, and social conditions of the Philippines, and other oriental countries has afforded us the key to the understanding of the hopes and aspirations of the peoples of the Far East.

The substance of his address at the conference has been widely publicized throughout the United States. The San Francisco News, April 30, 1945, summed up his speech in the following article:

ROMULO STIRS U. N. C. I. O. WITH A DRAMATIC PLEA—"WORLD WILL SIGN ITS DEATH WARRANT IF WE FAIL ON THIS FLOOR"

Philippines Chief Delegate Brig. Gen. CARLOS P. ROMULO in dramatic oratory championed "1,000,000,000 oriental faces turned pleadingly toward us for recognition of their human rights" before the fourth plenary session of U. N. C. I. O. Saturday afternoon.

General ROMULO pulled out all the stops as he gave the session an oratorical exhibition unequaled heretofore at U. N. C. I. O. Accompanied by sweeping dramatic gestures, his tones ranged from whispers to soulful cries which brought frequent applause from his audience.

WARNING TO WORLD

He warned the world that it will sign the death warrant for the future unless it shows a willingness for giving and not grasping, declaring, "We are here to determine whether the human race is going to exist or whether it is to be wiped out in another world holocaust. We are here to fight for our lives. Let us make this floor our last battlefield."

Emphasizing the urgency of each nation contributing its share of effort and yielding, General ROMULO declared, "Men of all nations have shown their ability to sacrifice and die. Now is the time to show our ability to sacrifice and live, for without mutual sacrifice now we will only live to die."

"It is the hope of orientals," he continued, "that the peace which this conference is seeking to secure is one which will not neglect the uplift and development of all socially and economically depressed areas and peoples, but one that will help raise them to a plane of living where they can become not merely bystanders, but effective collaborators in the promotion of human welfare and maintenance of peace. Theirs is the plea that such a peace may not be appropriated for the purpose of freezing the political, economic, and social order in their part of the world."

MUST ANSWER FRANKLY

"Paramount in Asia today," the Filipino leader declared, "is the remembrance of past hopelessness. Sections of our world are festering with resentments that will obstruct the war to peace unless they are brought into the open and cleared away. We must ask what gave birth to these resentments and hatreds. We must ask why they are there. And we must answer these questions frankly before we can wipe away those erosions of distrust."

He likened the struggle of American and Philippine soldiers on Bataan to those of the ancient Greeks at Thermopylae and modern Greeks before the German invaders, declaring that 9,000 Americans and 75,000 Filipinos held off the Japanese forces which might have invaded Australia and destroyed civilization in the Pacific.

Press Comment on Associated Press News Release of Germany's Unconditional Surrender

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. GOSSETT. Mr. Speaker, a good newspaper friend of mine, the Honorable A. Morton Smith, of Gainesville, Tex., has just sent me a number of observations and press comment relative to the news release of Germany's unconditional surrender by Edward Kennedy. I agree with these newspapermen that censorship is certainly not in keeping with American traditions unless military security is in some way involved. While I am not passing judgment on the actions of Mr. Kennedy, I think it might be well that these various opinions be placed in the RECORD:

UNDATED NATIONAL AND TEXAS COMMENT

(By the Associated Press)

Messages of commendation and congratulations on the news of Germany's unconditional surrender poured into Associated Press offices Monday and today.

Coupled with these were protests against official efforts to withhold the news of final victory in Europe.

Texas editors and publishers, as well as those of other States, took occasion to emphasize the importance of the freedom of information and news, when security is not at stake.

Following are some of the messages received by the Associated Press Bureau at Dallas:

Brownwood Bulletin:

"Congratulations on sustaining the finest traditions of a free press in free world.

"ERNEST JONES,
"Editor."

Big Spring Herald:

"While scoring an outstanding beat, A. P. has struck a blow for free and prompt dissemination of news. We are tremendously proud of both.

"JOE PICKLE,
"Managing Editor."

Waco Times-Herald:

"Congratulations many times over to A. P.

"HARRY PROVENCE,
"Managing Editor."

Times and Record News, Wichita Falls:

"Edward Kennedy's dispatch was clean, straight newspaper beat that efforts of apology, explanation, censorship, and deprecation can only emphasize. Congratulations."

Pampa News:

"The by-line of dependability still stands. We back Ed Kennedy to the hilt in his filing the greatest story of our time.

"J. L. SWINDLE,
"Managing Editor."

Texarkana Gazette and Daily News:

"We could not conceive of complete exclusive on one of the greatest stories in history. I would rather be Ed Kennedy today than President of the United States.

"J. Q. MAHAFFEY,
"Managing Editor."

Laredo Times:

"We are fighting a war for freedom. May the Associated Press always continue to carry the banner of truth and freedom as it has today. Please convey this to our champion of world peace freedom, Kent Cooper.

"WILLIAM PRESCOTT ALLEN,
"Publisher."

Temple Telegram:

"Real congratulations are deserved by the A. P. for fine beat on surrender story, pride for which is shared by all Associated Press members. That A. P. facilities in Europe should be suspended because of Ed Kennedy's vigilance and enterprise is absurd anticlimax to great journalistic achievement.

"WALTER B. HUMPHREY,
"Editor."

Lufkin News:

"The A. P. has turned out a great job and we member papers today should appreciate our membership more than ever.

"W. R. BEAUMIER,
"General Manager."

Daily Register, Gainsville:

"We want you to know we greatly appreciate great beat scored in announcement of Germany's surrender. It was A. P.'s greatest achievement to date."

The editors of the Austin American and Austin Statesman sent President Truman a message protesting delay in announcement of the end of the war in Europe, and pointing out that the Associated Press performed public service of highest value in reporting to the parents of American soldiers authentic news of unquestioned facts. The message also stated:

"We protest political agreements for withholding, delaying, or controlling authentic war news and deplore a nation dedicated to freedoms has been made a party to trampling of the fundamental freedom of the people to know accomplished facts and to political suppression of the freedom of the supreme Allied commander in reporting his great achievement."

Corsicana Daily Sun:

"Congratulations on the greatest news beat in the history of journalism. The Daily Sun carried all Associated Press News of the unconditional surrender of Germany in its Monday afternoon edition. When it is news, the Associated Press gets it and sends it through. Again congratulations.

"L. A. WORTHAM,
"Editor."

Beaumont Journal:

"Your 24-hour beat on World War No. 2 surrender of Germany is perhaps the greatest in news history. We commend you on the story and your courage to use it, thus maintaining the tradition of the public's right to the freedom of news of such vital importance. Also, praise to Edward Kennedy who wrote it.

"W. W. WARD,
"Managing Editor."

Denison Herald:

"Formal announcement by Allied chieftains confirms the greatest scoop in history by the Associated Press. In the thinking of millions of Americans the triumph of the Associated Press was heightened by the fact that the historic flash was forced through a news black-out intended to keep the world for 36 hours in ignorance of the development it had fought, prayed, and died for.

"PAUL O'TOLLEY,
Editor."

Dallas Times-Herald:

"May I congratulate the Associated Press, its executives, and personnel, for securing the greatest news beat in the history of American daily newspapers. With characteristic enterprise and devotion to truth, your splendid organization continues to uphold the finest traditions of the news-gathering craft. Admiringly yours.

"TOM C. GOOCH,
"President."

The Sugar Situation

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Republican congressional food-study committee report to the Honorable JOSEPH W. MARTIN, Jr., Republican leader, House of Representatives, Monday, May 14, 1945:

SUGAR SITUATION

The Republican Congressional Food Study Committee submits this report based on an investigation of the sugar situation made by a subcommittee of which Hon. BARTEL J. JONKMAN is chairman:

The American public faces the most severe sugar shortage of the entire war emergency because the Commodity Credit Corporation has failed to use the authority given it by Congress to encourage production in Puerto Rico and Cuba, where 60 percent of our sugar supply is grown. This shortage has been further accentuated by the failure of the Office of Price Administration to properly regulate rationing of sugar.

The civilian population of the United States, already severely restricted, will be further drastically reduced in its sugar consumption under action of the War Food Administration and the Office of Price Administration, as follows:

1. Consumers will have 25 percent less sugar for table use.

2. Housewives will receive 45 percent less sugar for home canning.

3. Hospitals and other institutional users will receive 17 to 30 percent less sugar.

4. Restaurants, cafeterias, and other public eating places will receive 25 percent less sugar.

5. Industrial users, such as bakers, soft drink, and candy manufacturers, and food canners will be drastically restricted to 45 or 50 percent of pre-war requirements. Their supplies should be materially increased at this time.

While sugar cane is harvested annually the planted crop has a life of from 3 to 6 years, its average being 4 years. Thus it is necessary to plan sugar production over a period of several years, modifying it annually as necessary. In 1943 Cuba could have harvested the equivalent of 5,000,000 tons of sugar. Our Government was the sold buyer. Cuba actually produced only 3,250,000 tons because of the failure of the War Shipping Administration to adequately route returning empty ships on the North Atlantic run to pick up sugar cargoes. Immediately following an address by Congressman JONKMAN in the House of Representatives on March 28, 1944, in which he called attention to the fact that for many months large numbers of ships had been lying idle in American east coast ports, the War Shipping Administration allocated ships to the sugar run.

The shocking failure of food officials to plan for sugar production has created the present serious situation. They failed to take note of the fact that the continental stockpile of sugar in December 1942, was 500,000 tons less than it was in December 1939. Furthermore, to balance crops in the United States, these Government officials had reduced the sugar beet acreage for 1943 by another 500,000 tons. They failed completely to consider the loss of the whole Philippine sugar crop for an indefinite period. Had a long-range sugar program been inaugurated at the outset, there would be an adequate supply of sugar today to meet all needs.

Further accentuating this shortage was the action of the United States Government officials in 1944, when they diverted 900,000 tons of sugar to the manufacture of industrial alcohol at a time when we were harvesting the greatest grain crop in our history. The result now is that we have such a huge surplus of grain without storage facilities that the 1944 fall harvest in some areas is still lying in the fields, while the American housewife and industrial user pay for administration folly.

The Commodity Credit Corporation is authorized to use incentive payments to stimulate production in continental United States and Puerto Rico. It purchases all sugar supplied from Cuba, and is authorized to fix the price so that production will be stimulated. Incentive payments must be made known prior to the planting of a crop if they are to be effective. The Commodity Credit Corporation has repeatedly delayed announcement of these incentive payments until too late for them to serve their purpose. Testimony adduced before the Committee on Insular Affairs indicates that these payments should have been resurveyed long ago to provide for future crops. In 1944 the incentive payment for the Puerto Rico crop was not announced until 2 months after the harvest ended; and in 1945 it was not announced until 6 weeks after the harvest had begun. In the case of Cuba, the price for the 1945 crop was not announced until March, when the harvest had been under way almost 2 months.

As a result of this kind of procrastination and delay, Cuba's sugar production this year is more than a million tons less than last year; and the output of sugar in Puerto Rico, while slightly higher than 1944, when a drought reduced production, will be 200,000 tons less than in 1943, and 300,000 tons less than in 1942. Had the Commodity Credit Corporation used its authority for incentive payments as contemplated by the law, authorities in the sugar industry estimate that Puerto Rico would have this year produced about 1,300,000 tons of sugar instead of an estimated 850,000 tons, and that Cuba would have produced almost 6,000,000 tons instead of an estimated 4,200,000 tons. Puerto Rican sugar producers have exhibited their records showing actual losses on their 1944 production.

The method of sugar rationing by the Office of Price Administration was so lax and ineffective in 1944 that 800,000 tons of sugar were not subjected to rationing regulations. The Office of Price Administration has failed to explain this matter. Until it does make full explanation the Office of Price Administration has failed in its responsibility to the people.

Administration officials have been very secretive about the amount of sugar that has been allocated for foreign commitments. There should be an immediate resurvey of allocations, both foreign and domestic, to assure the American people of their fair share of the supply of sugar.

There is nothing further that can be done to increase sugar production for this year in Cuba and Puerto Rico, for these crops were planted last year and are now almost all harvested; but to prevent a more serious situation during the year ahead, constructive

governmental action can be taken. Otherwise there is grave likelihood of an actual sugar famine in 1946 and 1947.

Additional acreage can be planted in sugar cane in both Puerto Rico and Cuba until about June 15, to be harvested 12 months after planting. Reliable sugar authorities estimate that 1946 production can be increased by 1,000,000 tons if the Commodity Credit Corporation takes immediate action. Likewise speedy action would induce sugar beet growers to expand their production for the 1945 fall harvest.

Responsibility now rests on these Federal Government agencies to insure an adequate supply of sugar for 1946 and 1947. If they fail in their duty, then Congress must speedily act to protect the American public.

Respectfully submitted.

REPUBLICAN CONGRESSIONAL FOOD STUDY COMMITTEE,
By THOMAS A. JENKINS, *Chairman*,
HARRIS ELLSWORTH, *Secretary*.

Permanent Court of International Justice

EXTENSION OF REMARKS
OF
HON. HATTON W. SUMNERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

THE FEDERAL BAR ASSOCIATION,
Washington, D. C.

The undersigned Committee on International Organization for World Peace wishes to submit the following resolutions for adoption and promulgation by the Federal Bar Association:

"Resolved, That the Federal Bar Association recommends and urges that the United Nations Conference at San Francisco should establish a permanent international organization for the purpose of maintaining and enforcing peace and the prevention and suppression of war in accordance with Christian and other established religious and moral principles and the pattern of the Dumbarton Oaks proposals; and be it further

"Resolved, That the resolutions and report adopted by this council on January 20, 1945, with respect to the Permanent Court of International Justice are hereby reaffirmed, the resolutions being as follows:

"'1. That the Permanent Court of International Justice organized in 1922 at The Hague and known as the World Court, should be continued and should constitute the principal judicial organ of the United Nations Organization.

"'2. That the statute of the Court should be continued in force and should be annexed to, and be a part of, the charter of the United Nations Organization.

"'2. That the statute of the Court should be modified to provide that the Court may be divided into chambers or divisions and that such chambers or divisions may be available to hear and make decisions in international cases expeditiously. In this connection provision should be made for sessions of chambers or divisions of the Court in such capitals of the member nations as may be necessary from time to time. Provisions should also be made for appeals from the decisions of chambers or divisions to the full court.

"'4. That the members of the United Nations Organization should ipso facto be parties to the statute of the Court.

"'5. That the Court should have obligatory jurisdiction in legal disputes'; and be it further

"Resolved, That the foregoing resolutions be presented to officials of the executive and of the legislative branches of the Government charged with the duty and responsibility of formulating and effectuating the Nation's policies in international relations."

JAMES GIBSON EWELL, *Chairman*.
WILLIAM ROY VALLANCE.
MARTIN F. SMITH,
Adopted April 17, 1945.
TOM C. CLARK, *President*.

Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Upper Mississippi and St. Croix River Improvement Commission, Minneapolis, Minn., April 19, 1945:

The Upper Mississippi and St. Croix River Improvement Commission of Minnesota, established by a joint resolution of the State legislature in 1927, wishes to make the following statement in opposition to the establishment of a Missouri Valley Authority or other similar legislation creating regional authorities patterned after the Tennessee Valley Authority. Unanimously adopted at a meeting of the commission in Minneapolis, Minn., April 19, 1945.

Our commission unanimously agrees that the accomplishments made under democratic principles in the United States under the system of free enterprise has definitely proven that there is no need for the establishment of regional authorities which take away from the people the power of control over management of the resources of the affected area.

The 48 States which make up our Union already have established adequate departments for the management of their resources and the United States Congress has established proper United States agencies which are well staffed to coordinate with the present State agencies' plans for the development and management of these resources.

We further believe that the establishment of authorities with appointed heads who are not directly responsible to the people or the State officials or representatives of the affected areas is basically unsound.

We are of the unanimous opinion and we do support the need for coordination of planning and development of the water resources of some of our major river basins. However, we are sure that the present State and Federal agencies are well qualified to do the necessary job that lies before us.

The recent development of the Upper Mississippi Valley Water Use Council which consists of three delegates from each of the five States bordering the upper Mississippi is a fine example of how State and Federal agencies which have interests in the control of water on a navigable stream can handle the many problems that develop from such control and still give proper representation to the people in the areas affected, and at the same time give recognition to the rights of all interested groups such as navigation, small boating interests, recreation and the management of wildlife.

We are opposed to the establishment of authorities that are granted power by Congress to engage in private business, remove thousands of acres of lands from tax rolls and in general do the economic planning through the control of basic resources of the entire area.

Christening of Coast Guard Helicopter "Congressional Page"

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following program of the christening of the United States Coast Guard helicopter *Congressional Page* held at United States Capitol on April 30, 1945:

Master of ceremonies, Hon. KENNETH MCKELLAR, President of the Senate. Fellow citizens, we will open the ceremonies here this afternoon with prayer to Almighty God for His blessing which will be delivered by Dr. Harris, the Chaplain of the Senate. Dr. Harris.

Dr. HARRIS. Our Father God, we pause beside this majestic dome of this shrine of each patriot's devotion. We come with humble and reverent hearts to acknowledge Thee as the God who hath made and preserved us a Nation. Thou hast taught us to love truth and beauty and goodness. May Thy truth make us free—free from pride and from prejudice and from all the ugly sins that doth so easily beset us. Lift us we pray Thee above the mud and scum of mere things to the holiness of beauty. Lead us in the paths of righteousness for Thy name's sake. We thank Thee for great national leaders who being dead yet speak. We thank Thee for new leaders who step into the gap, coming from the vital ranks of our democracy. We thank Three for the victory over the powers of darkness, which have threatened the precious things that we hold nearest and dearest to our hearts. And we pray that in this war of test and trial we may give the best that is in us—the last measure of devotion against the wrongs that need resistance and for the right that needs assistance and for the future in the distance and for the goodness we may do. In Thy name we ask it. Amen.

Mr. MIDDLESWORTH. Last year we congressional pages desired to do our small bit in this war effort and other affairs which netted over $32,000 worth of bonds. As chairman of last year's drive I would like to thank the many people who helped to make this possible. Out here today you can see what the pages bought with last year's funds and we hope it is only a small token of what we would like to accomplish this year with your kind support. And now I take great pleasure in introducing our distinguished chairman of this year's page bond drive, Mr. John Floyd.

Mr. FLOYD. Friends of the congressional pages serving in the United States Congress in the Senate and in the House and in the Supreme Court, we realize how fortunate we are to be active in the war effort on Capitol Hill under your leadership and guidance. We are indebted to you for an opportunity to express our patriotism in our work as well as in our bond selling. We also appreciate the

generous cooperation of the United States Coast Guard for helping us to provide a setting for the christening of our purchase. We especially invite you to attend our War bond dance this evening at the Shoreham Hotel at 8 o'clock to 12 o'clock. This begins our seventh War bond drive to sell bonds for our Pacific rocket plane armada. We have organized teams to compete for the trophies you will see displayed this afternoon, and final awards will be made at graduation exercises on June 15. We are depending on you and your generosity to put us over the top. It is now my great pleasure and honor to present one of our best friends on Capitol Hill, who will act as master of ceremonies, the President of the Senate of the United States, the Honorable KENNETH MCKELLAR of Tennessee.

Senator MCKELLAR. If you will look on your program you will see the names of the distinguished gentlemen who are now going to address you. The first of these is a member of and belongs to the greatest court that was ever established among men—the Supreme Court of the United States. And I take great pleasure at this time in introducing to you one of the ablest lawyers, one of the best judges, one of the best friends that the pages ever had—Justice Wiley Rutledge, of the Supreme Court of the United States. Ladies and gentlemen, Justice Rutledge.

Justice RUTLEDGE. Senator MCKELLAR, my friends the pages, your distinguished guests and friends, I wish I could measure up to the Senator's very kind but I'm afraid not altogether accurate introduction. I do want to express on behalf of the judicial branch of our Government the feeling which all of us have in the very fine contribution which these boys have made as expressions of their citizenship and their future leadership in the affairs of this Nation. They already assume their obligations as citizens. Their action today and their action last year in raising the fund with which this donation has been made show that they too realize what the issues are now confronting this country and the part it plays in the world. And so to them I am honored and proud to have part in expressing our appreciation for what they have done, for what they are to do in the drive to come and in the years ahead when they assume the full leadership of the Nation. Thank you.

Senator MCKELLAR. Ladies and gentlemen, the next business on the program is to show all of you the reward that will come to that group of you who makes the greatest number of sales of War bonds. I am going to show it to you in just a moment. Before doing that I want to say to these pages of the Senate, and I hope that the House and the Supreme Court pages may also be included in the group, that several of us met several days ago for the purpose of working out a plan that we can establish here in Washington within a very short distance of this Capitol a great school for the education and maintenance of the pages of these three bodies. These pages are brought here from all over the United States. They are as fine a lot of boys as could be found anywhere in the world. I don't know but what they are the finest lot of boys in all the world and I think this Government ought to establish a school that will make great men out of them in the future and that's what I will propose later on in the Senate and I hope such a law will pass. Now I will show you the immediate reward for the group selling the largest number of bonds. It is this gold-lined cup that I hold in my hand. I'm merely showing it to you to show you what your reward will be. Ladies and gentlemen, the next on the program is one of my friends in the Senate. Formerly he was mayor of the great city of Cleveland, Ohio. He has been in the Senate quite a number of years. He is one of the ablest men and one of the finest men I know, and without further words I am going to introduce to you the Honorable HAROLD H. BURTON, Senator from the State of Ohio, who will now address you.

Senator BURTON. Senator MCKELLAR, Mr. Justice Rutledge, Members of the Senate and of the House, representatives of the Latin-American republics, the pages in the Senate and House and the Supreme Court, ladies and gentlemen, it is a great privilege to join here today with our pages and I'm glad to see the steps of the Capitol so well decorated with the youth of America. It is to the youth of America that we look for the future of America and we believe that that future is in the best of hands. And I am glad to see the pages here today as they go ahead with their bond campaign also look up—look up with the symbol of an airplane, because I believe that aviation is a symbol of this generation. When these pages were born I don't suppose there were more than a few thousand people flying in the planes of America. These days there are millions of people flying in the planes of America every year. And so it is that we look forward. We look to new heights. And these young men serving the Senate and the House and the Supreme Court are destined to lead this Nation to new heights. We wish them well with this bond drive and I happened to receive the other day a copy of a letter which a young man who is flying a plane abroad sent to his father and I want to read a few sentences from it that will bring us a message here that I believe will help us to see the war as he saw it and to see the share that we have in it. He said this:

"MY DEAR DAD: The life that I'm leading now is not nearly so bad as one might imagine. Although our lives are risked on each mission, the odds are pretty much in our favor. More and more I feel that it is all in the hands of the Lord. On each mission I pray that my crew and I will make it, if it is His will. Now I know that the crew will stick by me and I shall certainly do all in my power, with the help of God, to see them through all that lies ahead. Going over a target and seeing and feeling all of the flak that is thrown up is an experience which is indescribable. It really makes one feel awfully humble, because you realize that there is only a certain amount that you can do about it. The rest is entirely in the hands of the Lord. Some people call it luck, but I'm firmly convinced that to an element of luck and a certain amount of skill is added an awful lot which is answerable only to God. I know that every time that I go over the target I am scared to death—yet there is something about it that I wouldn't miss for all the world. At least we do know that we are contributing our share, little as it may be, toward winning this war which shall and must be won."

That message from a man at the front to us here, and I'm glad to see many men here in uniform also, is a message telling us that everyone has a share in the winning of this war and the restoration of our country to prosperity. The buying of a bond is one good way to do it. By buying a bond, you have helped to fight the war, you have helped to preserve the money so that it will be able to bring prosperity to the country when you spend it again in years to come when the bond is paid back to you. So these pages are engaged in helping to win the war and to reestablish prosperity in America in order that there may be peace and security in this world and an opportunity worthy of the sacrifice that is being paid for it around the world. And so I close with one sentence. A sentence that I believe is the most fitting sentence for this time. A sentence that was first spoken right here 80 years ago. A sentence that was spoken by President Abraham Lincoln when he took office at his second inaugural. He said this, and we may well say it today. He said it as he faced the end of a great war and we hope that we shall soon see the end of the great war that we are in today. He said: "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to build up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Senator MCKELLAR. Ladies and gentlemen, the next on the program is the distinguished Congressman from the State of Oklahoma. He is an able and splendid Representative, and I now take great pleasure in introducing to you the Honorable VICTOR WICKERSHAM, of the State of Oklahoma.

Mr. WICKERSHAM. Thank you, Senator MCKELLAR. Fellow guests, it's a privilege to be here today with you folks. I wish to congratulate the page boys, the Coast Guard, the mothers, and each and every one of you who participates in this type of work. Only a few weeks ago I went to Europe and, if you could have seen the dead bodies packed for 3 miles like cordwood, as I did, then you can really appreciate the value of these bonds. Today at noon I rose over this Capitol in this Sikorsky helicopter and, as we hovered there above the dome, it made me think that perhaps the Lord was hovering over each and every one of you and over our boys in the service. As you buy these bonds, remember that it purchases machines like this and many others to help our boys in the service. Thank you.

Senator MCKELLAR. Ladies and gentlemen, primarily this is a business affair this afternoon. We all want to sell bonds for the benefit of our Government to keep our boys in the Army, and Navy, and Marine Corps, and Air Corps going while this war is going on. We want to sell these bonds and we want to say that any person here, lady or gentleman, any person who wants a bond and would like to help the pages, or would like to help the Army, or the Navy, or the Marine Corps, or the Air Corps, or the great Government that is ours, we have a booth right around here and a table a little beyond, and you can go there and buy your bonds and have your name inscribed on the tablet that is to be prepared. It is a splendid investment, and I hope that these boys will make even greater sales this time than they made last year. I now have the pleasure of introducing to you another distinguished Senator of the United States who happens to be present with us. I have served on the committee a long time with him. He knows all about money, too. He knows all about many things. I take great pleasure in introducing to you the Senator from Michigan, the Honorable HOMER FERGUSON.

Senator FERGUSON. Senator MCKELLAR, honored guests, pages, fellow citizens, it is indeed fitting today that we open this bond drive with the boys christening this helicopter. I look upon this as an instrument of peace—an instrument by means of which those wounded at sea may be rescued and which may be used for many other types of rescue work. We have other airplanes that travel much faster than this, but the fact that this helicopter can be set down in front of the Capitol Building is indeed a marvel, and we are going to hear great things of it in the future. While we expect victory in Europe, we still need the instruments of war to win against Japan. We rejoice that the battle is about over in Europe, but it is up to each and every American citizen to work for complete victory on the other side of the world. Only then will we realize the truth of those words carved over the door of the Supreme Court Building, just back of us, "Equal justice under law."

Senator McKELLAR. I now introduce Congressman GERALD LANDIS, of Indiana, whose heart and soul is in this work. Congressman LANDIS. [Here follows applause while Mr. LANDIS rises to acknowledge this introduction.]

Senator McKELLAR. About a hundred years, more or less, I can't be accurate, of course, about a hundred years ago I served in the House of Representatives, and while I was there I had a very distinguished and able friend. Truthfully, he is young, I admit it, but he is not a great deal younger than I am. He is one of the finest men God ever made. I'm delighted to see him here. He doesn't expect me to do it, but I am going to introduce South Trimble, of Kentucky. [Applause while Mr. Trimble acknowledges introduction by rising.] Mr. McKELLAR continues: I feel that I should applaud my friend because I love him with all my heart. Now, ladies and gentlemen, we'll have a christening participation, and I want to read the names of the participants: Miss Gloria Chavez, maid of honor; Mr. Ernest K. Hall, Senate page; Mr. Joseph L. Bowles, House page; Miss Sylvia Brull, Latin-American girl; and Miss Dorothy Weaver, a naturalized girl.

Miss CHAVEZ. It is customary to christen ships with champagne. But since we want the congressional page air armada to become the sea gulls which will rid the world of the locust plague, we use mineral water. As the Lord has blessed this liquid with many healing elements, may He also bless this and all our ships in the air and on the sea toward the end that they shall quickly rid mankind of the diseases of tyranny and become the healers of the human race. May He also bless the work which our late beloved President Roosevelt undertook by sponsoring the good-neighbor policy on this hemisphere—a policy which we hope shall reach into every corner of the world. May President Truman be guided by Him in his efforts to complete this humanitarian undertaking.

Mr. BOWLES. I christen thee *Congressional Page* so that you shall bring new hope to the united world, to cement the good-neighbor policy of the American hemisphere.

(Here ship is hit four time with bottle.)

Mr. HALL. I christen thee *Congressional Page*, air armada of the Senate, to become the armada of peace and friendship among all peoples on earth.

Miss BRULL. We, the Latin Americans, your neighbors, are happy and proud that you have asked us to join with you in the christening of your *Congressional Page* and hope that the young people of the country will help to increase this armada so that we can bring this war to a quicker end and shall help build an even larger American air force in the post-war world to bring us of the Americas and the world closer together in order to enjoy each other's products and production, given each of our countries by God, and to the labor of man for the enjoyment of all the people of all the world for peace and mutual prosperity.

[Here follows translation of Miss Brull's remarks in Spanish.]

Miss WEAVER. We naturalized Americans who come from every corner of the globe appreciate highly that we can participate in this worthy christening of the *Congressional Page* armada and we pray ardently that these planes shall become after the war ambassadors to teach the world how to live the American way among themselves and with their neighbors so that our children and the yet unborn children of the returning war heroes will not have to die on foreign soil.

Senator McKELLAR. The audience will come to order and we will now have a solo, "God Bless America," by Miss Rita Nicholson.

[Song.]

This Changing World

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Constantine Brown, This Changing World, that appeared in the Washington Evening Star of May 12, 1945:

THIS CHANGING WORLD

(By Constantine Brown)

The diplomatic relations between the United States and Great Britain on the one hand and Russia on the other have entered another difficult phase.

According to well-informed diplomats here, President Truman and Prime Minister Churchill received individually on Thursday a reply from Moscow to their observations regarding the Russian leader's failure to live up to the Yalta agreements. Premier Stalin's reply to Mr. Churchill is said to have been couched in stern terms and in unequivocal language.

The "observations" sent from Washington and London are said to have dealt with the question of Poland, Russia's unilateral actions in Romania, Hungary, and Austria, and the failure to hold elections in Yugoslavia.

The confirmation of the reports that 16 Polish underground leaders had been arrested in Moscow caused consternation in London and Washington.

Within 48 hours after Mr. Truman had become President there were definite indications from the American and British Ambassadors in Moscow that at least half of the Polish group would be included in a new Polish government in order to permit Poland to be represented at the San Francisco Conference. Premier Stalin apparently changed his mind, however, by the time Foreign Commissar Molotov arrived in Washington.

President Truman is said to have expected to clear up the entire situation with the Soviet Foreign Commissar when he received him at the White House. He was disappointed when Mr. Molotov informed him he had no instructions to make any "deal" on Poland, but had come to the United States merely as Russia's chief delegate to the San Francisco Conference. President Truman and Prime Minister Churchill then took up the whole question with Premier Stalin directly and in order to make their arguments stronger brought up every one of the points agreed on in February at Yalta which the U. S. S. R. Government had not lived up to.

Among these matters the question of the tripartite occupation of Austria and particularly Vienna is said to have been brought to the fore strongly.

It appears that there had been a definite agreement at Yalta that Austria should be occupied by the forces of the three Allies. Britain was to send troops into southern Austria and take temporary possession of Carinthia and Carniola. The United States was to occupy the Austrian area on the Bavarian border, while Russia was to occupy the rest of the country. Vienna was to share the same fate as Berlin and be divided into three zones shared equally by the American, Russian, and British forces.

Since we had no direct access to Vienna it was agreed later that the American and British token forces were to be brought by air and supplied in the same manner. Two incidents occurred soon after Vienna's liberation. The Russians, in drawing the various occupational lines in the Austrian capital, took over all the airfields, making it impossible for their Allies to use them except with their permission. This meant that every time transport planes arrived they had to receive permission of the Russian authorities to land.

But while negotiations to remedy this situation took place, Russia, without consulting the American and British Governments as provided for in the Yalta agreements, formed an Austrian cabinet under 75-year-old Dr. Karl Renner. Although neither Washington nor London recognized this government and Moscow was duly informed of our decision, the Soviet Government extended its full recognition to the new puppet organization and pointed out that we would have to take up the matter of the presence of the American and British forces in Vienna with the new national government of Austria. Austria became a "sovereign" state once more almost overnight.

This action by Russia was considered in Washington and London as another flagrant breach of the Yalta agreements. All these matters, together with the failure of the Yugoslav Government to hold free elections and the difficulties of our diplomatic and military missions in moving freely in Russian-liberated countries, were summed up and sent to Moscow. In his reply Premier Stalin is reported to have refused to recede from his position.

J. G. White Engineering Corporation Report Ignores St. Lawrence Project

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. PITTENGER. Mr. Speaker, on May 1 I inserted in the CONGRESSIONAL RECORD some remarks about an alleged engineering report—economic engineering—of the J. G. White Engineering Corporation, dealing with the resources and possibilities of the State of Minnesota. My remarks are found in the Appendix, page A2005. Incorporated in those remarks was a very able editorial from Duluth Publicity, under date of Saturday, April 28, 1945, which called attention to the omissions in the J. G. White Engineering Corporation report of the value of the cheap transportation on the St. Lawrence River and the Great Lakes in future development of the resources of the State of Minnesota. In this connection, it is interesting to note an editorial from the Duluth Herald, Duluth, Minn., under date of May 10, 1945, which reads as follows:

PITTENGER ON WHITE REPORT

In the CONGRESSIONAL RECORD Appendix for May 1, appears an extension of remarks by Congressman W. A. PITTENGER, of this district, attacking the White report, which pictures Minnesota pretty nearly flat on its back and helpless in a commercial, industrial, and futuristic way. Mr. PITTENGER devoted his attack from another angle than those from which the press and different organizations of the State plunged their stilettos into the

report and the White Co., its compilers. And there were plenty such attacks.

Mr. PITTENGER took up the negligent attitude of the White report on the St. Lawrence seaway, pointing out the absurdity of virtually ignoring a project that would mean a new era in transportation and a conversion of Duluth, the only port of consequence of the State, into a world terminus. Especially when the White Co. had been hired to uncover commercial and industrial avenues of progress and development for the State.

"Money must be plentiful and people must like to waste it," said the Eighth District Representative, "if the State spent $175,000 for a report which entirely overlooked the unlimited possibilities of the St. Lawrence development, so far as progress in Minnesota and other adjacent States is concerned."

Of course, it should be explained, the hiring of the White Co. was engineered by interests not favorable to Duluth, for a purpose, the purpose being obvious on a reading of the report.

"I am under the impression," continued Mr. PITTENGER, "that one of the suburbs of Duluth, about 178 miles away, had some industrialists who 'engineered' this engineering report. They evidently saw to it that the report was tailor made, and must have felt that Duluth was an orphan or a stepchild, and did not 'fit in' with the purposes they had in mind in getting this report."

We feel the Congressman has made as clear an explanation of the situation as is necessary, and we don't expect to hear a reply.

The able editorial points out much better than I can do the implications contained in this alleged report which the editor calls the White Report. It seems strange that anyone claiming to be an authority on economics and agricultural development would entirely overlook the tremendous importance of water transportation, which, not only in the United States but all over the world, has contributed to the progress of all nations.

If we are dealing in color-scheme effects, I am afraid that the word "white" is the wrong word to use as an adjective applicable to describe the results of the labors of this engineering corporation.

Colorado-Big Thompson Diversion Project

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. HILL. Mr. Speaker, once again it is proven that food is as essential in winning a war as ammunition. Now after the first round and our first enemy has been defeated, food and ammunition for the continuation of the war against the Japanese are just as important and essential as they have been since December 7, 1941.

As our special investigating committees on food continue their efforts to discover the cause of our shortages and offer proper remedies, sugar appears as one of the most scarce of our vital food products.

In the Second Congressional District of Colorado we have 12 beet-sugar manufacturing or processing plants. Under pressure from the War Food Administration we have increased our beet acreage, estimated contracted acreage for 1945, to 171,000 acres. Colorado has the acreage and could produce at a profit beets on more than 240,000 acres. Under the Colorado-Big Thompson diversion project, extra or supplementary irrigation water will be made available for more than 600,000 highly tilled and irrigated acres, with the lakes, irrigation ditches, and headgates already installed to distribute the water over this land.

A very fine article appeared in the Longmont Times-Call in which a word picture is painted of this great project. I enclose it as part of my remarks:

THE MIRACLE TUNNEL THROUGH THE DIVIDE

A short time ago some half a hundred Longmont district men, who are interested in the Colorado-Big Thompson water diversion project, rode deep into the famous Adams tunnel which has been cut 13.03 miles through solid rock under the Continental Divide.

This famous tube, the longest in the world to be driven from two portals, is 9 feet 9 inches in diameter and was holed through last summer. It is now being lined with concrete—concrete so smooth that it appears to be steel plates.

The Longmonters entered the east portal above Estes Park after climbing aboard a three-car train pulled by an electric motor. As the electric train bumped and clattered over its uneven, narrow-gage track, the passengers, who were soundly spanked by wooden-car benches for the entire journey became acutely conscious of a brisk draft and a temperature not much above 40 degrees.

As the train pulled itself deeper into the earth, the passengers became conscious that they were going into a hole of solid granite, schist and gneiss rocks—rocks that were ancient and fused by heat before the earth's crust folded up to make the Rocky Mountains 60,000,000 years ago.

During the first mile inside it is noted that heavy iron ribs support the granite walls which are crumbling and slacking due to exposure to the air. In some areas water seeps through with the force of a summer shower. As the train bumps on, solid granite is reached which needs no support. The change is easily noted because electric lights line the tunnel at distances of 50 feet.

A mile or so before the train reaches the center of the Continental Divide, about 6½ miles in, the iron supports are used again. They are needed because of the huge pressure of the mountain above. At the point where the train stops, the thickness of the ground above is 3,800 feet and the temperature was over 82 degrees. The peak through which the tube goes is 12,183 feet high.

The passengers got off the train and, led by J. M. Dille, secretary-manager of the Northern Colorado Water Conservation District, waded through water past giant concrete machines and fantastic forms to the point where concreting the tube was under way. After the lecture regarding the work, the awed observers scrambled on their wooden train and bumped back to the east entrance. The ride required 50 minutes to go and 45 minutes coming out.

This tunnel, when complete, will divert water pumped into Shadow Mountain Lake through Grand Lake to the Eastern slope, and will generate over 90,000,000 kilowatt-hours of electrical energy annually. Seven power plants are provided for. The Green Mountain plant is now in operation, Mary's Lake and Estes Park plants will be built soon after the war, and the others as needed.

The tunnel will make 320,000 acre-feet of water available to bring 615,000 acres of already irrigated land to full production. The water will reach the farms through present irrigation systems, but will put no new lands under irrigation. The water project alone will boost the value of crops in northern Colorado millions of dollars, and will stabilize the income of 175,000 people. The Longmont district will benefit greatly, how greatly only the people who have actually gone through the miracle tunnel can realize.

Food Famine and the Office of Price Administration

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. PITTENGER. Mr. Speaker, there is no secret about the fact that I consider the key officials and the policy-making officials of the Office of Price Administration a first-class failure. I expressed that opinion about them 2 years ago and my remarks appeared on Thursday, July 8, 1943, in the CONGRESSIONAL RECORD for that date. It is not pleasant to be critical. It is always diplomatic and easy to pay tribute and to hand out orange blossoms and sunflowers and red roses to those who do a good job. However, we just can't do that in connection with this particular Government bureau. In this connection, I have no criticism for the various employees in different sections of the country, who carry out the regulations that are mimeographed every hour, with rapid change, and sent to them. They are doing the best they can. However, I cannot say as much for the policy-making boys in this Bureau here at Washington, D. C.

They have done everything they could to create a food shortage. Other bungling and ignorant-minded bureaus may deserve a lot of honorable mention for helping out in the mess, but do not forget we started out with O. P. A. and it had promised to make and carry out regulations which would keep prices down, increase production, and even in wartime make everybody sensitive to the more abundant life.

As I said, I do not like this fault-finding idea, so I take Senator ELMER THOMAS, Democrat, of Oklahoma, as one of the authors of my food bible. I do this so the "braintrusters" and New Dealers will understand that I am trying to be nonpolitical and fortify myself with comment from an impartial observer. Said Senator THOMAS in a newspaper interview in the Washington Post for April 29:

I would be for anything other than what we have.

Senator THOMAS declared—

It is obvious that the meat situation must have some extraordinary attention and it is obvious to me that O. P. A. has failed on the problem to date.

In a speech the other day, our colleague the Honorable AUGUST H. ANDRESEN pointed out findings of the House investigating committee of which he is a member indicating that there not only would be a shortage of meat and other vital foods in this country, but that in

the case of some foods there would be none at all.

In view of these startling disclosures, I just want to ask why there is any delay in changing horses in the middle of the stream, or on either side of the bank. We need a food administrator and we need him badly and we need him now.

Congressional Medal of Honor

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ST. JOSEPH, MO., *May 8, 1945.*

Hon. WILLIAM C. COLE,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR BILL: I have been noticing in the press that an action of Congress is pending to confer the Congressional Medal of Honor to the late President.

Such an action would be a clear violation of the law creating the honor. But it would be more than that, it would be a cheapening of the honors that have been bestowed on men who have deserved the high honor and upon whom it has been legally bestowed.

Everything that we have prized seems to have been cheapened. Exalted rank has been bestowed with a lavishness that is only exceeded by the lavishness of our spending of money. But the honors that a proud nation has given to men for their valor on the field of battle, "in action involving actual conflict with an enemy * * * by gallantry and intrepidity at the risk of his life above and beyond the call of duty" should never be trifled with or cheapened.

I know that the charge of partisanship will be made against the man who opposes the movement. But every dictate of patriotism requires that this travesty be not allowed. When an act of patriotic appreciation involves a violation of law it is a disgrace and not an honor to him who receives it. If anything in the country should be preserved sacred it is this medal of honor. If it is desired to strike a medal in honor of Roosevelt let the Congress provide for it specially. Let them not shove him as an intruder among these men whom we have honored with the highest honor because of their highest devotion and bravery.

If I were in your place they might shout partisanship forever but I would never consent to this disgraceful action. Suppose the law required that a copy of the recital of the reason for the action should be sent to all living men holding a like honor. Each of them would get out the similar recital of the reason back of his own honor. He would find some gallant and brave, outstanding action, "beyond the call of duty," at the risk of his life, "in actual conflict with an enemy." He would see that he had at that price won the honor according to the rules of the game. He would look in vain for a justification for this last bestowal. Can you imagine Colin Kelly and his fellows meeting Roosevelt on the other shore, all of them wearing their decorations and their citations and comparing notes? At last they come to the last recipient of the honor and they find that his decoration was not given according to law, for gallantry beyond the call of duty, nor in combat with an armed enemy. And they would ask him, How come? I can imagine them again reviewing the citations on all the other breasts and then saying to the newest comer, "Brother, you don't belong."

I cannot imagine a Congress of the United States conferring this highest of our honors on one whom they know not to be entitled to it.

My son was given the Distinguished Service Cross. It was conferred posthumously because of a dangerous mission voluntarily performed by him, in the doing of which he was wounded so severely that he died a few days later. His mother and I were very proud of the decoration and of the citation. But if the Congress or any other authority embarked on the program of conferring like decorations on men who never were on the line of battle, we should be very much inclined to return to the authorities who issued it the decoration they had robbed of all of its honor.

I suppose that technically the President might be supposed to be eligible to the Distinguished Service Medal, but I think that a fair reading of the law makes even that questionable. He is certainly not eligible to receive either of the two higher decorations. For you people to confer it on one man in violation of the strict conditions heretofore by law governing its bestowal, is to cheapen the decoration on the breast of every man living or dead on whom it has been worthily bestowed.

I hope that a movement will take form that will prevent this inroad on custom as it has prevailed for so long and that you may be identified with it. I should hope this even if I knew that it might prove unpopular. But I am satisfied that it will be recognized as a loyal action in behalf of a most sacred tradition and will not be unpopular.

Yours truly,

W. A. PETREE.

We Must Win the Peace

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1945

Mr. COFFEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Enumclaw Courier-Herald of May 3, 1945:

WE MUST WIN THE PEACE

The eyes of the world are upon the sessions of the United Nations meeting in San Francisco. The question upon the lips of everyone is "Will they succeed in establishing the right machinery for a permanent peace?"

It does not seem possible that this organization will fail. It cannot fail, for if it does it will mean the end of our civilization. The next war with its buzz bombs and other devastating methods of warfare would mean practically the extinction of human life on this earth.

With such a threatening cloud hanging overhead, it does not seem possible that we humans can fumble the chance to establish the foundations of permanent peace.

But after all, the leaders of our various world nations are but human beings. They are subject to the frailties of human selfishness, national patriotism, power politics and all of those suspicions that cause disagreements.

Because these leaders are human, we cannot expect a perfect peace but we can expect a machinery that will lay the foundation for a workable peace that will at least keep another world war from engulfing us once again. Let us direct our prayers that the peace will be won, that our leaders will meet with compassion and tolerance in their hearts so that a friendship of strength will be built that will overshadow the suspicions and quarrels that are the cause of wars.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

STATE OF CONNECTICUT,
SECRETARY'S OFFICE,
HARTFORD, *May 11, 1945.*

Hon. HERMAN P. KOPPLEMANN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN KOPPLEMANN: At the request of the Honorable Searls Dearington, clerk of the House of Representatives, and the Honorable John L. Sullivan, clerk of the Senate of the State of Connecticut, there is herewith transmitted a certified copy of House Joint Resolution No. 265, memorializing the Congress to pass universal military training legislation at the present session, adopted by both branches of the General Assembly of the State of Connecticut.

Respectfully,

SAMUEL S. GOOGEL,
Deputy Secretary of State.

Resolution memorializing the Congress to pass universal military training legislation at the present session

Whereas twice within the last 25 years the people of these United States have been forced to bear the terrible consequences of their lack of preparedness, in the loss of their sons and in the waste of their wealth; and

Whereas the lack of preparedness of this Nation in 1939 and again in 1941 undoubtedly encouraged the aggressor nations, Germany and Japan, in starting a world conflict; and

Whereas developments in modern warfare make it highly improbable that the United States in a future war will be given the time by a potential aggressor to prepare their defenses; and

Whereas the future peace of the world depends upon the cooperation of these United States in maintaining such peace, and on the conviction of other nations that these United States through their strength mean to preserve such peace; and

Whereas the hand of the President of these United States will be strengthened in future international conferences by the avowed determination of the people of these United States to hereafter maintain a state of preparedness; and

Whereas minority groups, despite the convictions of the majority of the people of these United States and the majority of the members of the armed forces, are already attempting to postpone necessary action to keep these United States strong and prepared; and

Whereas the President of these United States, in his wisdom and in his knowledge, has already stated to the Congress his conviction of the necessity for universal military training: Now, therefore, be it

Resolved, That the Representatives of the State of Connecticut in the Congress of these United States be respectfully requested to make effort to further the passage of universal military training legislation during the present session of the Congress, so that these United States may never again be forced to face a potential aggressor without adequate preparedness; and be it further

Resolved, That the clerk of the senate and the clerk of the house be directed to forward a copy of this resolution to the President of the United States, to each of the Senators and Representatives for Connecticut in the Congress, and to the chairmen of the Senate Military Affairs Committee and the House Military Affairs Committee.

Passed house of representatives April 25, 1945.

Passed senate May 2, 1945.

Address by Justice Douglas Opening Indiana Bond Sale Campaign

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. LUDLOW. Mr. Speaker, the Seventh War Loan campaign in Indiana opened most auspiciously at Indianapolis last Friday, May 11, with Justice William O. Douglas, of the United States Supreme Court, as the orator of the occasion. It was the greatest and probably the most successful War-bond meeting ever held in Indiana, with representatives from every county in the State in attendance. The address delivered by Justice Douglas was so masterful and inspiring that I have asked and obtained unanimous consent of the House to insert it in full in the CONGRESSIONAL RECORD so that it may be read by people all over the Nation. It was as follows:

Three days ago we celebrated VE-day. In one way, celebration seems an odd word to use for what we all felt when we knew the war in Europe was over. The sirens blew for victory. But at the same time the church bells tolled for the dead.

There will be more dead, and more wounded, before the war with Japan is won. Our dedication to the task of winning that war sobers our celebration of victory in Europe. There is no heart in America which does not feel it.

We have dedicated ourselves to another task, too—as gravely and as fervently as we have to final victory. That is the task of making victory secure and permanent. There must be no more war. To win the war against Japan, to win the war against war—these are the great jobs ahead.

It is easy to say there must be no more war. No one thinks it will be an easy thing to do. It can't be done by governments and security agreements alone. In this country, from its very earliest days, we have known that a government is nothing but the instrument of the people. Today, it is only the determination of the people of the earth to work for peace that can end the threat of war. The democratic processes are the surest guaranty that war will be ended.

We have a right to celebrate the end of the war in Europe—because of the way we won, because of what we fought against. The war in Europe was won by no single nation. We won it, and the Russians won it, and the English and the French and all the peoples who couldn't be conquered by tanks, or torture, or the idea of a master race. The Germans thought that brutality, and terror, and mass education for evil could conquer the human spirit. They were wrong.

It is part of our triumph that they were proven wrong in those ideas. Let us celebrate that.

The Germans thought military might could take the place of civil government and due process of law. They were wrong. Let us celebrate that.

They thought that Gestapo terror could beget through fear greater loyalty and devotion of people to their country than freedom could. They were wrong. Let us celebrate that.

They thought that betrayal was as easily learned as loyalty and as firm a foundation of national strength. They were wrong. The Nazis betrayed their own people. They found Quisling to betray the Norwegians, and Laval to betray the French. But they could not make the human spirit betray its own dignity. Let us celebrate that.

The Nazis could enslave millions and work them to death, starving them even as they put them at work making weapons for their conquerors. They could and did spread cruelty and ruin over Europe. They could and did destroy almost everything they touched. But the one thing they could not and did not destroy was the age-old determination of human beings to live in dignity, and decency, and honor.

It was the Nazis themselves who were destroyed.

And let us celebrate that.

But let us never forget the desolation they have left behind them. The Allies today find themselves the heirs of that desolation. To help Europe remake itself for peace will be very hard. Too much blood has been shed, too many children have starved, too many adults have lived with despair. There will be no easy solution, nor any quick one.

But we must never forget that the blood was shed by the Nazis, the starvation was allowed or enforced by them, the despair created by their will. This is what the Nazis did. This is what they would have done to us. This is what we fought against. And this is what went down to defeat before us.

We beat not only the German Army—we beat the Nazi idea. Let us celebrate that.

We have a right to celebrate it. Our victory is a real victory. Because it is real it imposes some definite obligations upon us.

The Germans are beaten. Their domination of Europe and their threat to the rest of the world is at an end. That was true once before, in 1918, but it did not remain true. The Allies dissipated their victory because they failed to accept the obligations it imposed. Cynicism was easier than responsibility. It is easier now. It will always be easier. And it will always be disastrous.

Victory in Europe will certainly be followed by victory in Asia. To say that we are sure of this is not to belittle the effort necessary for complete victory over Japan.

And when that war is won we shall again find ourselves faced with desolation and despair created by the Japanese. There will have to be an answer to that despair in Asia as in Europe.

Charity to those who suffer is no answer. Food for the hungry, medicine for the sick, clothing for the ragged are only partial answers. What we can give, we will give, and gladly. But material aid alone cannot cure the sickness of this war-torn world or begin to solve its problems. If we expect to buy gratitude with gifts we shall be unfair to those we help. They need more than that. They need their self-respect.

Self-reliance is a good American word. It has become a good European word, too. The peoples who need our help want to and can help themselves. They know the price of national failure in the modern world. Freedom cannot be imposed and peace cannot be bought. Only a people who themselves lack self-respect would try to barter the help that must be given freely, or to buy the friendship that must flow from cooperation between nations.

If we deny the power of moral idealism—if, instead, we idealize mere power—we shall be untrue to the men who died in this war—to our sons, to the countless dead we never knew and whose names are strange to us, and to unborn generations.

If we forget that America is rich because it is free, and that it is respected because it is both, we shall be untrue to the memory of that great leader of America and of the world, for whom we mourn—Franklin Roosevelt. He knew that we cannot buy prosperity for ourselves or peace for the world by loans and exports alone. He and his great coworker, Cordell Hull, fought not only the illusion of political isolation, but the temptation of ceonomic isolation as well.

Franklin Roosevelt knew that we dare not shut ourselves up within our own boundaries, and within our own minds. He knew that we cannot divide the world in two, at once expecting to get on with the rest of the world, and for the rest of the world to leave us alone. We tried that course, and we failed.

Economic break-down in Europe was cause of economic depression in America. Japan's attack on China led inevitably to Japan's attack on the United States. German aggression against Czechoslovakia became a threat to our shores. No words or bribes—no kind of appeasement—could restrain those bent on conquering the whole world.

Governments begin when human beings realize that they have mutual concerns. Our society is now more clearly seen as world-wide. Therefore, we now more clearly see that our concerns are world-wide, too.

We can never again "help China," or "feed Belgium," because we are sorry for the people of those lands. China and Belgium and the United States are together part of something bigger. If we help China we help ourselves, in the simplest and most literal meaning of the word. And there is no other way that we can help any part of the world, except by understanding our concern in each other. There is no other road to world order and to peace.

Mutual concern and mutual trust are founded on mutual respect. There is a strange kind of fear, in some places, over America's ability to command respect. There is, at times, doubt whether we are smart enough to deal successfully with the other powers of the world; doubt over our trading position. Respect for others—nations or individuals—is impossible without self-respect. Our self-respect ultimately turns on our own achievements in peace as well as in war. Our trading position with the rest of the world is just as good as we make life in America.

If we fail in our national task we shall fail in our international task. If our soldiers come home to depression and unemployment, to the kind of blindness and irresponsibility that flourished in the decade after the last war, we will lose our chance to influence the world. Machiavelli himself would not be able to make a good trade for us. Defeat in foreign affairs will simply reflect failure in national affairs.

The people of Europe, like the people of Asia, have seen with their own eyes how great is our strength. They have seen us land in Italy and France and overrun half a continent. They have seen us beaten bitterly in the Philippines, only to come back, help those islands to regain their freedom, and drive on past them to threaten the Japanese homeland. They have seen us build a transportation system across the other end of the world. They have seen us build airports and arsenals overnight in swamps and desolate islands. They know

just how good we can be. They now have good and new standards, American standards, by which to judge America. They will know if we fail to meet the standards we ourselves have set for us and for the world.

The good people of the world pray that we will not fail. More than anything in the world, they want us to succeed. They hopefully believe that their success is tied up with ours. American ideals of freedom and justice under law, American industrial ability and inventive genius, have become most important and precious to people all over the world who have suffered under the aggressor nations.

They have just one question to ask us—can you make your ideals and your wealth work for good in peacetime, too? They are emerging from the war as new people, with unlimited expectations from the new life and opportunity which has been granted them. The peoples who are fighting their way into the peace are thinking more like Americans than many of us realize.

The only sure way for us to keep the respect of the rest of the world, the respect that has been won so impressively during this war by our soldiers overseas and by our workers at home, the only way for us to keep that respect is to be worthy of it.

But America cannot serve either itself or the human family, unless it is as strong economically as it is strong at waging war against aggressors. That brings us to the immediate problem of today.

War bonds are a very important part of our American system. First of all, they are fine investments—investments in dollars, investments in peace. The savings they represent are also an essential check on inflation and run-away spending. There is indeed no occasion to worry about inflation if we continue to put every dollar over rock-bottom expenses into the purchase of War bonds.

But War bonds have a different kind of importance too. They are symbols of the Nation's participation in the war. They are service stripes for the home front.

Every time we buy a bond, we buy a part of a secure peace for ourselves, for our countrymen, and for the rest of the world. Every time we buy a bond, we buy part of a gun, or a tank, or a plane These tools have gone overseas. They have done their job. They have done it through the sweat and the blood and the skill of American fighting men. And what paid for them here was not just money. It was the sweat and the skill of the men on the job who made the tools. The bonds are one way the tools go overseas. They are, indeed, bonds between the people who have won the war on the home front and the people who have won it overseas. They are the living symbols of our unity, of democracy in action. The character of the Nation and ourselves as individuals is indeed judged by great voluntary activities such as sustain the War bond program.

Symbols, like weapons and investments, are things we own and use. America's pool of war savings is important in a way that mere property alone can never be. It is a challenge—a challenge to use our savings, no matter how much or how little, as seed, to put our accumulated wealth to work. For the war savings pool can become an instrument to guarantee for tomorrow both security and opportunity. Security and opportunity must indeed be woven together inseparably into the pattern of our future.

Here at home is not the only place where War bonds are bought. It is not only here that plans are laid for the future we all want. Overseas, our men and women in service are buying bonds, too. The day after Manila fell to us, our boys were buying bonds there. They are still buying them in the fox holes.

The bitter past and the bloody present are not the whole world to our fighting men. It is with War bonds that they get an option on the future—an option on our national unity, our prosperity, and our dignity.

Shall We Give the Air to Congress?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1945

Mr. COFFEE. Mr. Speaker, the daily Times-Dispatch of the grand old historic city of Richmond, capital of Virginia, and quondam capital of the Confederacy, is one of the leading liberal and brilliantly edited newspapers of America. Its editorials are widely quoted throughout the United States. It is an ideal example of what newspapers can and should be.

The Daily Advertiser, of Montgomery, Ala.; the News and Observer, of Raleigh, N. C.; the Observer, of Charlotte, N. C.; the Tennesseean, of Nashville, Tenn., are among other splendid newspapers of the Southland.

On April 26 there appeared an editorial of the Times-Dispatch which is well worth the attention of my colleagues and of the country. It is in reference to a statement made by me before the congressional joint committee headed by the Honorable ROBERT LA FOLLETTE, Senator from Wisconsin, in which I urged the enactment of legislation introduced by me, providing for the broadcasting to the country of congressional proceedings.

Some newspapers have made fun of the proposal, indulging in good-natured derision of such a plan. They are, apparently, unaware that broadcasting proceedings of national legislative business is not unprecedented. The experiment has proved very successful in New Zealand since 1935.

Naturally, such an undertaking would be enshrouded with every practical protection to the end that the privilege not be abused and that no one Member would hog the program; also, that only debates of national and international importance would be offered the public.

Considering the character of much of the tripe which appears in soap operas during the day and considering the bilge which commercial announcers spew on the air in phony enthusiastic endorsement of dubious nostrum and quack remedies, I am of the serious opinion that the congressional body contains some of the greatest wits and orators in the United States, who might well compete for public appeal.

Here is the editorial:

PUTTING CONGRESS ON THE AIR

The suggestion by Representative COFFEE, of the State of Washington, that sessions of Congress be broadcast by radio probably will tempt some people to indulge in puns and wisecracks. We can just hear the quipsters saying, "Congress is up in the air all the time, and now it wants to go on the air," and "Instead of putting Congressmen on the air, we should give 'em the air." You know the kinds of things people are prone to say about Congress, always, of course, in a spirit of good, clean fun—or sometimes anyway.

For our part, we have no wish to make any quips. We think the proposal deserves serious consideration. Why not put Congress on the air and let the people hear it tick? It's the people's business they are transacting, and the people should be interested in following the proceedings while they are going on. Of course, the newspapers give accounts of the doings of Congress, and so do the radio news broadcasts. But perhaps something new would be added if the legislative proceedings came to us hot off the congressional griddle.

We have no disposition to spoof the suggestion, but we question one statement made by Mr. COFFEE. "I am convinced that if the people are given a chance to listen to their lawmakers, Congress would soon become the most popular program on the air," he says. "Even housewives would follow their Senators more closely than their soap operas." Congressional broadcasts more popular than soap operas with the housewife audience? Or more popular with the general public than quiz programs and the radio comedians? It's hard to imagine, with all due respect to Congress. Of course, some good, clean funsters would say that there are comedians in Congress, too, or, at any rate, some of the Members are comical. And it might be said also that there no $64 questions on the quiz programs comparable to some of the questions asked in the House and Senate. We leave such jibes to others. But even so, in all seriousness, from long familiarity with the contents of the CONGRESSIONAL RECORD, which some persons profess to find dreary reading, we doubt that broadcasts of the same material would put Congress at the top of the Crossly and Hooper radio ratings.

Mr. COFFEE's proposal is no kidding matter, so far as we are concerned, and we do not intend to make light of it. If Congress can get the networks to give it time on the air, let the broadcasts go on. But we just had a sudden thought—in saying that Congress "would soon become the most popular program on the air," is Mr. COFFEE kidding?

Salary Increase for Postal Workers

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include the letter of transmittal and Resolution No. 12, adopted by the honorable Board of Aldermen of the City of St. Louis, Mo., on May 11:

BOARD OF ALDERMEN,
St. Louis, Mo., May 11, 1945.

Hon. JOHN B. SULLIVAN,
Member of Congress, Eleventh Missouri District, Washington, D. C.

DEAR SIR: Herewith find copy of Resolution No. 12 which was adopted by the board of aldermen of the city of St. Louis on this date. It is self-explanatory.

Very respectfully,

GEO. W. HARTMAN,
Clerk, Board of Aldermen.

Resolution 12

Whereas H. R. 3035, a bill to reclassify the salaries of postal employees, to establish uniform procedures for computing compensation, and for other purposes, has been introduced in the Congress of the United States; and

Whereas this bill would provide an urgently needed upward revision in compensation for these public servants; and

Whereas postal employees have not received a salary increase since January 1, 1925,

except for a temporary increase which expires June 30, 1945; and

Whereas the cost of living has risen approximately 30 percent in recent years, making it imperative that Congress enact legislation to provide an American standard of living for the postal employees and maintain a highly efficient Postal Service: Therefore be it

Resolved, That the board of aldermen of the city of St. Louis urges the enactment of H. R. 3035 by the Congress of the United States; and be it further

Resolved, That copies of this resolution be sent to the Representatives in Congress from St. Louis, the United States Senators from Missouri, the Postmaster General, and the President of the United States.

Organization of Congress

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. HARRIS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me to the Congressional Joint Committee on the Organization of Congress:

Mr. Chairman and members of the committee, may I say first that I appreciate this opportunity of appearing before your committee on this tremendous undertaking you have assumed. The Members of Congress, as well as the entire Nation, are deeply indebted to this committee for undertaking the tremendous task of making Congress more efficient in the performance of its proper functions on behalf of the American people.

May I also say, Mr. Chairman, that although in my opinion there are many ways in which Congress may be made more proficient, I am not one of those who believe that our basic and fundamental system should be changed to conform to the system of legislative procedure of some other nation. I believe fundamentally and basically that we have the greatest legislative system established under our Constitution in the world—and I may include—in all history. It is the greatest democratic and representative system in the annals of history, and it is an esteemed privilege and an exceptionally high honor to be a Member of such a great legislative body.

Needless to say to you gentlemen that our Constitution provides the functions of Congress and that "each House may determine the rules of its proceedings." It is with this particular provision of our Constitution that you are now concerned in that it determines the organization. Every 2 years the Congress meets and reorganizes. In many instances it is merely a formality as the same rules and proceedings are adopted that we used in the previous Congress.

From time to time, however, this or that rule or proceeding has been changed—or more often additions to meet this or that condition have been provided.

It was on April 6, 1789, when enough Members assembled legally to organize the first Congress. We are now in the one hundred and fifty-seventh year and the Seventy-ninth Congress. It is obvious with the progress, growth, and development that we have had and the Congress determining its proceedings every 2 years to meet these new conditions, that it may become top heavy. During the course of these years, we have continuously added to but rarely taken from, regardless of how obsolete a particular rule of proceedings may become.

Therefore, Mr. Chairman, I am firmly convinced that the time is long past due that we stop and see just where we are and what has been done and what can be done toward the greatest efficiency in Congress and the performance of its functions in behalf of the people.

One of the things that makes our system the greatest in all history is the flexibility in determining the procedure to meet the condition that exists from time to time. The Seventy-ninth Congress has entirely new and different problems than the first Congresses, and under our Constitution it is our duty—a part of our function in establishing these proceedings and in the reorganization of each Congress to obtain the greatest possible efficiency and in strengthening our congressional machinery. This is what we are concerned with today and it is of tremendous importance to the future welfare of this Nation.

I have a few suggestions, Mr. Chairman, that I wish to make and which occurs to me should be considered in our attempt to obtain the best possible service from this branch of our Government.

1. The primary responsibility of Congress is to legislate. The very first article of our Constitution, section 1, says: "All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives." That doesn't mean, in my opinion, that the legislative function belongs to the Executive, or to some agency, or bureau established, whether independently or otherwise.

There has been a tendency gradually developing that the executive department of our Government actually perform the legislative function and for Congress merely to review such proposals after their origin and presentation.

I would not go so far as to say that the Executive should not make legislative proposals, because as a coordinating branch of our Government and in carrying out policies given as a mandate of the people, it is the duty of the Executive to present his program in order that the Congress may properly legislate on these issues of importance to all the people.

Therefore, in meeting this No. 1 problem, in my opinion, Mr. Chairman, we should organize and equip the Congress with the proper staff for us to actually perform our responsibility of making laws. Instead of doing this in the past, we have been providing the skilled and technical staff for the executive departments, agencies and bureaus for this function. We have the "cart before the horse," and sometimes I am afraid an example of "the tail wagging the dog."

We have an example as to the effectiveness of such a staff, although it is limited, and that is with our joint Committee on Internal Revenue. Of course, that is not a legislative committee, but such technical and professional experts should belong to the proper committee.

Our legislative service is so limited that they cannot properly provide the technical assistance in the many research fields necessary in dealing with the many complicated and tremendous problems in our legislative work. Therefore, it is easily understood why committees in a great many instances depend on the technical advice from the staffs we provide in the various departments. I suggest, Mr. Chairman, that we reduce to a very great extent such technical staff in the various executive departments, and that Congress provide itself such a staff necessary for good and wise legislating.

2. Speaking about becoming top-heavy, I believe this to be especially true by the establishment of its many committees from time to time. I believe very strongly in the committee system. I believe that it is the best system yet to be devised for orderly procedure. I am fearful that many of our committees have overlapping and duplicating jurisdiction, which causes jealousy, enviousness, confusion, and makes it very difficult in many instances to definitely fix the responsibility for particular legislation.

I therefore suggest, Mr. Chairman, that for better efficiency that our committees be reorganized, reducing the number to eliminate the overlapping and duplicating jurisdiction and to define definitely and clearly the legislative responsibility of each committee.

I suggest further that each full committee be divided into subcommittees and assigned fixed and definite responsibility in a field under the jurisdiction of that committee.

It is also my opinion that insofar as possible, it would be much better in setting up special committees to make them a part of whatever committee has jurisdiction over the particular subject for which the special committee was established.

I am also inclined to agree with a great many others that the chairman and ranking minority of the full committee should designate the responsibility of the chairmanship of the subcommittees to other members of the committee, and they remain as ex-officio members of all subcommittees and in a supervisory capacity. This is done by many of our committees, but in a great many it is not the practice. It is humanly impossible for any individual to personally attend to all of the important matters that should be within the jurisdiction of one of these great committees.

3. Another thing which seems to me would be highly desirable in consideration of streamlining our Congress would be for Congress to have our own liaison organization.

It is recognized that one of our proper functions is to inspect and review the action of the Executive in the administration of the laws provided by Congress. To have the proper contact in carrying out this responsibility, we should have an organization that is responsible to the Congress. Here, we again have the cart before the horse, in that we provide for the Department to establish these liaison contacts and to obtain the information necessary to efficiently perform this function of review and inspection. It is only natural and without any disparagement toward any individual for the viewpoint to be expressed of those to whom the individual is directly responsible.

To have better efficiency in our work on behalf of our people, I suggest that we have such an organization established in dealing with the executive departments and agencies, who will be directly responsible to us as Members of Congress. We have some very good legislative and liaison people delegated by the various departments to this responsibility. They have worked hard in most instances and I believe have tried to accomplish the objective reposed in them, but it still holds true that we all are human, and it is human to err.

It is not my intention to propose that the Congress encroach on the authority and responsibility of the other branches of government. We must be very careful not to do this and I am fearful that we sometime do overstep our limitations. However, in these more modern times, it has been necessary to delegate unusual, and at times, unlimited authority and to appropriate large and excessive funds. It, therefore, devolves on the Congress as direct representatives of the people to see that that authority so delegated is administered as was intended for the best interest of the people, and that such funds be expended to obtain the greatest benefit. Therefore, it is for this reason, Mr. Chairman, that I think these three suggestions are

highly important on our internal organization.

There are some other thoughts that occurred to me would be highly desirable that do not relate to the internal organization of Congress, but which I believe to be of vital importance to the people and I think should be considered in this over-all study.

4. This next suggestion that I have had in mind for some time was considered in the House a few days ago, and that was in reference to the making of treaties. I was one of a great many who introduced a resolution providing for the making of treaties by the President with the advice and consent of a majority of both branches of the Congress. The House as you well know passed this resolution overwhelmingly and I trust the Senate will concur, in order that it may be presented to the States for ratification as an amendment to our Constitution. I have a feeling that it would be a more representative procedure and more nearly in accordance with our democratic processes.

5. While we are endeavoring to modernize our congressional machinery, we should not overlook the importance of the relationship between the Members of Congress and their constituents. To properly ascertain the sentiment of the people and to know their feelings, it is going to be absolutely necessary to have more opportunity than we have had in the past few years of being with them.

Also, if we as a part of our duty and responsibility, and being in a position to attain more information, are going to promote a better public understanding of our legislative work, it is going to be necessary that we have the opportunity of personally placing these matters before our people.

I assume following the war, and I believe this study is for post-war consideration, most of the Members of Congress will have more time to be back in their districts. However, if the work continues to be heavy, and I believe it will take many years for readjustment, some systematic plan should be devised in order that this function may be properly performed.

6. Finally, I want to call your attention to what to me is a very serious situation—that is, our absentee problem in Congress. If in carrying out the thought above suggested we can devise some systematic plan, I think we could very definitely improve our absentee problem, which has at times reached staggering proportions. This is in no sense critical, as many Members find it necessary to be back home or other places on official matters as important in many instances as what may be considered in Congress at that particular time.

From my viewpoint, absenteeism is no small matter and certainly retards efficiency. I have been absent a few times myself, not because I wanted to but because it was necessary in the performance of my official duties. I therefore suggest, Mr. Chairman, that if provisions can be made for Members to have an opportunity to take care of these outside duties, that we will materially improve our absentee situation and thereby have greater efficiency in our legislative work.

We must approach these problems, Mr. Chairman, in my viewpoint, in a practical and realistic manner. We must first recognize our handicaps and then courageously make the necessary adjustments that Congress will keep pace with the times and the growing problems that are being heaped upon our shoulders continuously. Many suggestions, and good ones, have been made, I am sure, to the committee and as one Member of Congress I am confident that you will thoroughly explore the many possibilities and make such recommendations that may be effective in consummating the objective sought by this undertaking.

VE-Day

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. HARRIS. Mr. Speaker, today I join with all of our people throughout the Nation and our allies everywhere, in rejoicing that VE-day has come. Let us lift up our hearts in humble and grateful thanks for our victory—that at long last the war in Europe is over.

Mussolini is dead. Hitler is reported to be dead. Nazism and fascism in Germany and Italy are prostrate, and their infamous aggression and unholy attempt to conquer and enslave the people of the world has been overcome and gloriously destroyed.

Except in Japan, aggressor nations have loosened their licentious hold on all the countries of the world. Their destruction—root and branch—is certain and sure everywhere in the world.

Yes; only Japan is holding on in a last-ditch struggle of death and destruction. Her day of reckoning is near, too. The end of the war will come only when victory over Japan is final and complete.

Our motto now is, "On to Tokyo!" and let Japan and its fanatical military power take note.

The climax has come, and the end of this horrible and terrible conflict is in sight. It has been no easy task. Freedom and liberty have always been attained and maintained at a heavy cost. Nothing, however, will stop us in achieving total and certain victory, unconditional in the Pacific as in Europe, and complete destruction of the military hordes and war lords, who would disturb the peace of the world and enslave all the people.

As a Member of Congress, that unhappily, though unhesitatingly, was forced to declare war on the ruthless and destructive aggressor nations, I have, with never-failing interest, observed the courage and valor with which our boys have gone to war.

I have also glowed with pride when our gallant men were properly recognized and cited for their valiant deeds of bravery.

My heart has bled with yours in deep and profound sympathy on receiving the shocking news that many loved ones that gave their lives that democracy may live—yes, who gave their lives that we may be spared the horrors and tortures experienced by innocent men, women, and children in the conquered nations of Europe.

I pray to God that you will never have cause to feel your sons have died in vain—that you will never have cause to feel that your sacrifices for freedom and liberty have been forgotten.

God grant this time we may reap the rewards of victory; that nazism, fascism, or any other phalange, may never again rise to threaten the peace and safety of the world. That peace on earth, good will toward men may ever be the beacon light that guides men's souls to bring the "four freedoms" to suffering humanity everywhere.

To achieve these objectives, these aims and ideals, not only victory but lasting peace, let us dedicate the remainder of our lives.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Tom Linder, Georgia commissioner of agriculture, before Ways and Means Committee of the House, on reciprocal trade agreements, May 2, 1945:

Gentlemen of the committee, the most vital test of this Reciprocal Trade Agreements Act is whether it will get us into war or keep us out of war.

I am convinced that the reenactment of the reciprocal trade agreement law in 1937 was directly responsible for our involvement in this war with Japan.

Let us see what incontrovertible evidence we have that our present war with Japan was caused by the Reciprocal Trade Agreements Act of 1937.

PEACE AND WAR

On January 2, 1943, the Secretary of State released a booklet or white paper, which was entitled "Peace and War."

Peace and War is a resumé of the United States foreign policy during the decade 1931 to 1941.

On page 1, in the third paragraph, beginning in the second line, we read:

"In 1937 Japan again attacked China."

The records show that after the enactment of the Reciprocal Trade Agreements Act in 1937, and after Japan attacked China the second time our shipments of iron and steel to Japan increased 1,000 percent.

It is evident that we would not have increased shipments of iron and steel 1,000 percent at that particular time unless we had been forced to do so.

In 3 years we shipped enough iron and steel to Japan to build a fleet of warships and to equip an army.

On page 34 of Peace and War, the third paragraph reads as follows:

"In line with the policy enunciated by the President of restricting the export to belligerents of abnormal quantities of war materials, which had been urged by the Government since the beginning of the war between Italy and Ethiopia, a neutrality bill containing such a provision was introduced in Congress in January 1936. Secretary of State Hull, in supporting this proposal before the Senate Committee on Foreign Relations, emphasized that a neutral should not 'deliberately help to feed the fires and flames of war' by delivering essential materials to belligerents, thus helping 'not only to carry on war but to prolong it indefinitely.' This proposal was not adopted by Congress."

In January 1936 the administration realized that we were responsible for encouraging and abetting the war. Yet, after this our exports of iron and steel to Japan increased 1,000 percent. Why? It is evident that not only the President, but the administration

in general, realized that all of the iron and steel we shipped to Japan would be used in a war of aggression.

Why then did we not stop these shipments of iron and steel?

Instead of stopping these shipments of iron and steel in 1936, 1 year later in 1937 we reenacted the reciprocal trade agreements law and increased shipments of iron and steel to Japan 1,000 percent.

On page 44 of Peace and War, in the first two lines of the first paragraph we read:

"On July 7, 1937, a clash occurred between Chinese and Japanese troops near Peiping in north China."

Immediately after this clash between Chinese and Japanese troops we increased our shipment of iron and steel to Japan 1,000 percent.

How can you explain this tremendous increase in shipments in iron and steel to Japan in the face of Japan's unjustifiable attack on China, unless there was a compelling reason why this administration was forced to concede to Japan's demands for this iron and steel?

On page 47 of Peace and War, the next to the last paragraph reads as follows:

"A year later, in a conversation with the Canadian Minister, Secretary Hull said that since August 1937 he had proceeded on the theory that 'Japan definitely contemplates securing domination over as many hundreds of millions of people as possible in Eastern Asia and gradually extending her control through the Pacific Islands to the Dutch East Indies and elsewhere, thereby dominating in practical effect that one-half of the world'."

In other words, the Secretary of State said that he had proceeded on the theory that Japan definitely contemplated a war of aggression. And yet, through those very years when the Secretary of State contemplated a war of aggression by Japan, we stepped up our shipments of iron and steel to Japan 1,000 percent. Is it reasonable to suppose that we would have done this unless Japan held a club over our heads?

On page 49 of Peace and War in the second paragraph we read as follows:

"On October 6, 1937, the assembly of the League of Nations adopted a report stating that the Japanese action in China was a violation of Japan's treaty obligations. On the same day the Department of State issued a statement that the action of Japan in China was inconsistent with the principles which should govern the relations between nations and was contrary to the Nine-Power Treaty of February 6, 1922, regarding the principles and policies to be followed in matters concerning China, and contrary to the Kellogg-Briand Pact."

On page 51 of Peace and War, the first paragraph is as follows:

"PANAY INCIDENT

"On December 12, 1937, the Government and people of the United States were deeply shocked by the news of the bombing and destruction by Japanese aircraft of the United States gunboat *Panay* and three United States merchant vessels on the Yangtze River in China. The bombing and machine-gunning of the crews and passengers resulted in loss of life to citizens of the United States. This Government immediately sent a note to the Japanese Government stating that the United States vessels involved were on the Yangtze River by uncontested and incontestible rights, that they were flying the American flag, and that they were engaged in legitimate and appropriate business. The Government of the United States requested and expected of the Japanese Government 'a formally recorded expression of regret, in undertaking to make complete and comprehensive indemnifications; and an assurance that definite and specific steps have been taken which will insure that hereafter American nationals, interests, and property in China will not be subjected to attack by Japanese armed forces or unlawful interference by any Japanese authorities or forces'."

This attack on the *Panay* occurred on December 12, 1937, and yet for several years after that time we continued to ship Japan iron and steel at a rate of 1,000 percent of normal shipments prior to the enactment of the reciprocal trade-agreements law of 1937.

Would you have believed any administration in the United States could have been so deluded as to continue to supply unlimited amounts of iron and steel to Japan after and in the face of this unwarranted attack upon an American vessel?

You know that no administration in the history of this country would have permitted these shipments to go on unhindered unless Japan either had us bluffed or had us in a corner.

On page 113 of Peace and War, the first paragraph reads as follows:

"Secretary Hull discussed Japan's actions in the Far East, on January 15, 1941, at a hearing of the Foreign Affairs Committee of the House of Representatives on the lend-lease bill. The Secretary recounted the various steps in Japan's program of expansion, including the conquest of Manchuria, the denunciation of the Naval Treaty of 1922, the intensified construction of military and naval armaments, and the large-scale military operations against China which had begun in July 1937. He said it was clear that 'Japan has been actuated from the start by broad and ambitious plans for establishing herself in a dominant position in the entire region of the Western Pacific'; that Japan's leaders had openly declared their intention to achieve and maintain that position by force of arms and thus to make themselves masters of an area containing almost one-half of the entire population of the world."

Let us see what was the reason that United States permitted an increase of 1,000 percent in shipments of iron and steel to Japan during the very years that the Secretary of State says he knew that Japan was preparing for war of aggression to bring all that portion of the world under Japanese domination.

Turn to page 87 of Peace and War and read the last pargraph:

"As evidence accumulated of the endangering of American lives, the destruction of American property, and the violation of American rights and interests by Japanese authorities or Japanese-sponsored agents in China, and after diplomatic representations had failed to effect a substantial alleviation of the situation, further consideration was given to the possibility of commercial retaliation against Japan. It was felt that the 1911 commercial treaty between the United States and Japan was not affording adequate protection to American commerce either in Japan or in Japanese-occupied portions of China, while at the same time the operations of the most-favored-nation clause of the treaty was a bar to the adoption of retaliatory measures against Japanese commerce. Consequently, in July 1939 this Government gave notice of termination of that treaty at the end of the 6-month period prescribed by the treaty. That termination removed the legal obstacle to an embargo by the United States upon the shipment of materials to Japan."

It is evident from the above paragraph of peace and war that the treaty between the United States and Japan of 1911 was the club which Japan held over our heads.

There was nothing, however, in the treaty of 1911 which committed us to increase shipments of iron and steel to Japan 1,000 percent.

Why then, did the treaty of 1911 with Japan amount to a club over our heads, which made compulsory these shipments of iron and steel to an aggressor nation?

Why in particular did we ship iron and steel to an aggressor nation whose very geographical location made it inevitable that the United States would be involved in any war of aggression on an unlimited scale which might be launched by Japan?

The Reciprocal Trade Treaty Act of 1937 provided among other things that any concession made to any one most-favored-nation would apply equally to any other most-favored-nation.

Our commercial treaty of 1911 with Japan constituted Japan a most-favored-nation.

Under the terms of the Reciprocal Trade Agreements Act of 1937, Japan automatically became the beneficiary of other trade agreements with other most-favored-nations.

The international traders and influences who were profiting because of the Reciprocal Trade Agreements were not willing to forego their profits in international trade in order to avoid the necessity of this country supplying iron and steel to Japan.

An internationalist cannot be a patriot. In the very nature of things, an internationalist must put his own business above the interest and welfare and peace of any one nation.

On page 93 of Peace and War the last four lines are as follows:

"After it was announced in September that the export of iron and steel scrap would be prohibited, Japanese Ambassador Horinouchi protested to Secretary Hull on October 8, 1940, that this might be considered an 'unfriendly act.' "

The record shows that our shipments of 2,000,000 tons per year of iron and steel to Japan continued through October 16, 1940.

These reciprocal trade agreements have forced us to arm our enemy for a world war in one instance. It is only fair to suppose that the reenactment of this law by Congress at this time may well involve us in wars to come.

The meeting in San Francisco and world plans for peace are doomed if this country is committed to a policy of free trade and low prices before we have an opportunity to reduce our national debt and stabilize our money to prevent this wild inflation which is now knocking at our gate.

This country is in just as great danger today from inflation and panic as was the danger of our military unpreparedness on December 7, 1941.

For 4 years we have made a superhuman effort to overcome the danger which we faced in December 1941. For the next 4 years we must make an equal superhuman effort to overcome the danger to our internal economy. This we cannot do with low prices, and we will have low prices if we have low tariffs or free trade.

On April 21, 1945, this Government held gold in the amount of $20,375,011,829.91.

After shipment of some thirty-odd billion dollars in lend-ease to our allies we now owe our allies $6,000,000,000 in gold. This reduced our actual gold assets to $14,000,000,000.

Under the Bretton Woods agreement, it is proposed that we shall donate another $4,000,000,000 in gold to an international fund to stabilize the money of the world.

If we do this, we will be undertaking to do for the world what we are at present utterly incapable of doing for ourselves—that is, to stabilize our money.

If an additional $4,000,000,000 is transferred to an international fund, then our gold assets will be reduced to $10,000,000,000.

In 1932 the total of outstanding money or medium of exchange, including coins, was, in round figures, $6,000,000,000.

At that time the Government was substantially out of debt. At that time $6,000,000,000 in money would have been stable with or without gold reserve because of what then appeared to be the unlimited assets behind our Nation's money.

It is true at that time there was not enough money in circulation. The limited amount of money available was largely responsible for the condition in which we found ourselves during the years 1930, 1931, and 1932. That fact is beside the point at this time. The point was that we had sound money.

In 1944 our circulating medium or money had increased to $27,000,000,000—an increase of almost 500 percent. Our gold reserve behind this money had been reduced to 40 percent in some cases and 35 percent in some cases.

Under Senate bill 510, which is now pending, it is proposed, and actually it is necessary under the circumstances, to reduce this gold reserve to 25 percent, or 25 cents on the dollar on our outstanding medium of exchange or money.

I have never been an advocate of the gold standard. I have never been an advocate of the idea that sound money was necessarily based on gold or any other metal. I have been an advocate of the idea that money was as sound as the Government which issued that money, and I still believe in the soundness of this doctrine.

If our Government today were as free of debt as it was in 1932, if its assets were unencumbered and unspent, then we could sustain a floating medium of exchange of $27,000,000,000 without serious threat of inflation.

However, the picture had entirely changed, and our money today is being based not on the assets of the Government or its ability to pay, but our money is actually being issued on the Government's inability to pay.

It is based on Government bonds which have been issued to the extent, as I understand it, of $300,000,000,000.

We now have in round figures $300,000,000,000 of outstanding bonds and $27,000,000,000 of outstanding money or circulating medium, including coin.

As the gold reserve is reduced and as the bonded debt of the Government increases, our circulating medium is based not on an asset, but on a liability.

As the war comes to an end, as Government spending recedes as it must, regardless of the wishes of Congress, the administration or anyone else, it will be imperative to issue national circulating medium in lieu of billions of dollars of outstanding bonds as well as to carry on necessary Government expenditures.

In view of the above stated facts, it does not require a seer or a Solomon to see that this Nation is now on the brink of the wildest money inflation imaginable.

If through our failure to avert this danger the country is plunged into inflation, we will have broken faith with every bond holder in the United States.

What is worse we will have broken faith with every man who has served in the armed forces in this great conflict, but above all, we will have broken faith with those who died to preserve this country from destruction.

Unless the Congress and the Chief Executive take immediate cognizance of this situation, and unless immediate action is initiated to meet this dire threat, then it will not for long matter what you do with regard to this so-called reciprocal trade agreements bill.

The signs of this condition into which we are now entering can be seen on every hand. There are a great many people who fear inflation, but many of these people have the illogical idea that they, as individuals, can escape the evil influence of inflation if they have their assets in cash. Many people do not realize that cash is the very thing that is most affected by inflation. As a result of this fear of inflation, it is a matter of common knowledge among people who are in position to know, that hundreds of millions of dollars in cash is being tucked away in lock boxes and in secret hiding places.

There are, of course, many persons who imagine that we can carry a three- or four-hundred-billion-dollar debt indefinitely with the payment of a normal price. If such were the case, then indeed the world would be Utopia.

If it were possible for a man or nation to spend all they have and then continue to enjoy it by the payment of a nominal fee we would have found out actually how to have our cake and eat it, too.

This debt cannot be carried indefinitely for the reason that outstanding bonds are short-term bonds generally. It cannot be carried indefinitely for the reason that outstanding bonds are not in the hands of private parties. Outstanding bonds are largely held by the banks of the country.

These bonds in the hands of banks have largely replaced the moneys belonging to the depositors in those banks. These banks have simply substituted Government bonds for their depositors' money.

Under the F. D. I. C., the Government guarantees every dollar of these depositors' money. When these depositors call on the banks for their money the Government must see that the depositors get their money instead of bonds. The only possible way the Government can pay these depositors off is by printing some more money and substituting this inflated money in the bank in place of the Government bonds which the banks now hold.

It should be obvious to any thinking person that this creates a situation which is dangerous in the extreme. It should be clear that our entire national monetary and economic system is "riding on a wing and a prayer."

This special trade treaty which is just a subterfuge and a camouflage for free trade is the match that will set off this powder keg.

For this Nation, at this time, to enter into a program of low prices is just a form of national economic hara-kiri.

WHAT IS THE REMEDY?

There is but one course of action, to my mind, that would be prudent under conditions which face us today. This course of action has been set out in the program presented to you by the National Association of Commissioners, Secretaries, and Directors of Agriculture, which is fully concurred in by the association, Southern Commissioners of Agriculture; that course of action is necessary and imperative if we are to keep the "Old Ship of State" on an even keel and ride out the storm which is before us.

That course of action is not only inconsistent with reduced tariffs and free trade, but it is impossible of attainment under anything approaching free trade conditions.

The only prudent course that we can follow is to maintain high prices in every line. High wages, high salaries, high-priced commodities, high raw products, and high everything.

We must maintain the national income as high in peacetimes, without Government spending, as it has been in wartime, with unprecedented Government spending. If we maintain a national income of $150,000,000,000 outside of Goverment spending and then collect Federal taxes amounting to one-third of this national income we would have a national revenue of $50,000,000,000 per year.

If we assure that the total cost of Government operation, including provisions for our veterans and all other purposes, will amount to $25,000,000,000 per year, then we would have only $25,000,000,000 left with which to pay the interest and principal on the national debt. Remember it must cost many billions per year to maintain our armies in Europe and Asia. Remember this must be continued for a long number of years.

If we assume it would be possible to finance the national debt, including interest, for $5,000,000,000 per year this would leave only the amount of $20,000,000,000 per year to apply on the principal.

If we assume that the national debt will be $400,000,000,000 by the time Japan is defeated our armies disbanded, it does not take a mathematician to figure out that it will be 20 years, with the people paying one-third of their income as Federal taxes, to pay this war debt. And this is on the assumption that the national income will be $150,000,000,000.

Remember also that the taxpayers, after paying one-third their income to the Federal Government, must still support their State, county and municipal governments.

After this war debt is paid off in 20 years, with the people paying one-third of their income to the Federal Government, all of us who are now middle aged and over will be passed on to the Great Beyond before this country can be freed once more.

Recember, too, that the $25,000,000,000 principal allowed for Government spending will not begin to suffice if we are to maintain large standing armies in Europe and Asia during the coming years. That alone will cost $25,000,000,000 to say nothing of other national expenditures.

If, on the other hand, we permit prices to fall, the wage scale to go down, salaries to go down, commodities and farm prices to go down, and economic assistance to an army of unemployed, then our national income instead of being $150,000,000,000 will be seventy-five billion or possibly only fifty billion.

If our national income should fall to $50,000,000,000 it would be necessary to tax the American people 100 percent of their income simply to carry on.

If this so-called Reciprocal Trade Agreements Act were entitled: "A bill to provide for a tax on the American working people to the extent of one-half of their income to pay for free American goods to other countries," not a man on this committee would vote for a measure that carried such a title.

If this Reciprocal Trade Agreements Act were entitled: "An act to provide that every holder of an American obligation shall receive the amount he now holds of American obligations but shall be paid with inflated money," not a member of this committee of Congress would cast a vote in its favor.

If this reciprocal trade agreements bill were entitled: "A bill to require all the working people in America to labor one-half of all their time for the next hundred years without compensation," not a member of this committee of Congress would cast a vote for it.

Not a man in the House or Senate would vote for a bill carrying either of the above captions, and yet, the effect on the American people would be the same in bills carrying such captions as it will be, in the long run, if we persist in following the phantom of world free trade.

In all of the testimony heard by your committee the most vital effect of this kind of legislation has been entirely overlooked insofar as I know.

The most vital effect of legislation of this character is to take away from the American working people, in industry and on the farm, the pay to which they are entitled for their sweat and toil.

Whether or not a few international traders in the United States and foreign countries are able to make money out of these international treaties is entirely beside the point.

Whether or not a few exporters and importers of Argentina, Brazil, Peru, Mexico, and other nations will have a monetary interest in preserving peace with the United States is entirely beside the point.

A peace that must be purchased at the price of slavery of the American working people is bondage.

The Pharaohs of Egypt and the children of Israel lived without open war for 400 years, but the Israelites enjoyed this peace at the price of slavery to the Egyptians.

Undoubtedly each and every member of this committee, and each and every Member of the Senate and House, must know that free trade means low prices. That it means low prices in industry as well as on the farm.

Many leaders of labor, capital, and politics in the industrial sections of the Nation seem to have an idea that they can have low farm prices by free trade through the reciprocal tariff route and still maintain high prices in industry and business.

This is simply wishful thinkng. It cannot be done because of natural laws over which the Congress and Executive have no power. You cannot repeal them nor amend them.

SEVEN-TO-ONE RATIO

In a complete economy, with its complexities of production, transportation, processing, and distribution, when you fix the price of the raw materials—agricultural, mining, forests, etc.—you automatically fix the national income.

If the farmers of the Nation receive $20,000,000,000 in peacetimes, the national income will be $140,000,000,000. If your farmers and miners together receive $28,000,000,000, your national income will be $140,000,000,000.

Seven times the farm income is the national income. Five times the farm income and mine income is your national income.

This is not a theory. It is a business principle which works. It is not a theory by an academic economist whose theories do not have to pan out. It is a fixed practice some of the largest business institutions in America use who have to buy for future sales.

These big business houses place their orders a year ahead for sales based on a national income that is calculated by the amount of money the farmers and miners receive during the preceding 12 months. If the place of purchasing these raw products is moved out of the Continental United States it will not affect the operation of this natural law. If the farmers here in the United States receive $20,000,000,000 your national income will be $140,000,000,000.

If, on the other hand, instead of paying the farmer here in the United States $20,000,000,000, you go to South America, the East Indies, and other countries and buy exactly the same amount of the same farm products for $10,000,000,000, you will have apparently saved $10,000,000,000. But this is only half the story. The sad part of the story is that in your 12 months' cycle this $10,000,000,000 in foreign products will turn into a national income of only $70,000,000,000.

If you pay $20,000,000,000 to the farmer your income will be $140,000,000,000. If you pay $10,000,000,000 to the foreign farmer your national income will be $70,000,000,000.

It is very simple. If a merchant buys a pair of shoes for $5 and makes 25 percent profit he makes $1.25. If, on the other hand, he pays $10 for the pair of shoes and makes 25 percent, he makes $2.50 profit.

The same thing happens to a nation on the farmers' income. If the nation buys a farmer's crop for $10,000,000,000, they make $60,000,000,000 profit on it. If the nation buys the farmers' crop for $20,000,000,000, the nation makes $120,000,000,000 on it.

I note that the War Labor Board has recently been given authority to still further increase industrial wages.

Increasing industrial wages and, at the same time, attempting to lower farm prices and prices in general with trade treaties is inconsistent and must prove fatal to our national economy.

Sic Transit Gloria Mundi

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1945

Mr. COFFEE. Mr. Speaker, the passing of Mussolini from the world scene marks, we hope, the end of an era. When we toppled these sawdust Caesars from their papier mâché thrones and isolated them from their gingerbread edifices of statecraft, we have reached a significant milestone on the thorny path of the world's progress.

Well do I recall, Mr. Speaker, during the twenties, the vast number of American tourists who, upon returning from a visit to the Peninsula of Italy, would extoll the virtues of this autohypnotic chest thumper.

It has always seemed to me that one who could view the world with dispassionate eyes could penetrate through the aura assumed by Mussolini. Anybody who gazed upon this incredible creature and noted the manner in which his jaw was thrust out belligerently would know that he was psychopathic personality. Psychiatrists and psychologists readily classify individuals who fall within the well-defined Mussolini categories. There are many paranoiacs in the world.

An editorial in one of the two daily newspapers in my home town of Tacoma, Wash., sums up the situation very well.

This editorial provides one of the most trenchant appraisals of Mussolini and his era I have yet seen. Here it is:

[From the Tacoma News Tribune of May 1, 1945]

MUSSOLINI'S END

"Imperious Caesar, dead and turned to clay, might stop a hole to keep the wind away." So wrote Shakespeare many decades ago describing the death of the ancient Roman dictator. The assassination of the despot who ended the Roman Republic and began the empire, has intrigued historians for more than 2,000 years.

Benito Mussolini, in his days of power, liked to think of himself as a modern prototype of the ancient Caesar. He strutted and grimaced in a fashion that would have shocked the original Julius but he aped the symbols and revived the Caesarian traditions. He called the Mediterranean as did Caesar: Mare noster—"our sea" and tried to recreate the old empire. But his death was even more ignominious than his ancient predecessor.

According to authenticated reports from Milan, Mussolini was fleeing with his young mistress and 17 Fascist leaders to the Swiss border when he was taken prisoner by Italian patriots. He was held in prison overnight and executed the next morning, passing away like the craven coward that he was. The man who had sent thousands of others to execution including his own son-in-law, was not able to die like a man, but screamed: "No, no!" to the firing squad as the bullet that killed him entered the back of his head in the fashion decreed by Italian law for traitors.

Mussolini's favorite device was to leave the bodies of his victims on exhibition in public squares to terrorize his subjects. So the Italians for a day left the corpse of the former dictator hanging in a public exhibition that for sheer barbarity reminds one of the brutalities of the Dark Ages.

It was a horrible and dramatic end for the man whose example inspired Hitler and who started the world on the mad course of events which have resulted in the greatest catastrophe that Eurpoe has ever seen.

Mussolini's fate is symbolic. As one Rome editorial writer commented: "With the death of Mussolini, disappears the most evident incarnation of the evil of the century."

Now that Mussolini has gone, what of Hitler? This neurotic weakling, whom fate permitted to wield unprecedented power, approaches an equally inglorious end in the final hour of his life. Whether he is alive or dead, whether he is hidden in some Bavarian cavern or is suffering in a mental hospital, or has fled, is variously reported. Hitler has always been in fear of his life. He has had doubles trained to talk and act as he does, with physical characteristics so similar that only intimates can tell them apart.

Perhaps Hitler is already dead and one of these doubles takes his place. Perhaps the real fuehrer has gone to some neutral country and the body of his double may be exhibited as proof that he is dead. Whether he dies now by his own hand, which would be the manlier way, or dangles from the gallows as he so richly deserves, Adolf and his gang are finished. In a few more days or weeks they will no longer cumber the earth and the world will be cleansed of their horrors.

The chapter now ending is one of the most incredible passages of human history. For thousands of years civilized men may ponder the mystery of how such low and vicious criminals as Hitler and Mussolini could "so get the start of the majestic world and bear the palm alone."

The President's Mother

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. STEVENSON. Mr. Speaker, in honor of the memory of all mothers, I want to call attention to the editorial from the Washington Evening Star on Mother's Day, 1945, titled "The President's Mother," which follows:

THE PRESIDENT'S MOTHER

When Mrs. Martha Truman was a little girl Abraham Lincoln was President. She has lived through an age of wonders since then—the railroads lacing the continent, the coming of the telephone, the invention of the electric light, the debut of the automobile, the development of the radio, the birth of aviation, and any number of other marvels that have revolutionized the life of America and the world. Ninety-two years old, she has seen so much happen in her time that precious little can surprise her now. Yet even she, despite all her rich and eventful years, must find it a truly wonderful thing that today—after her first trip by plane, on her first visit to Washington—she is stopping at the White House as the Nation's most distinguished mother. Pierce was living there when she was born, and after him Buchanan, and then Lincoln, and then Johnson, and then Grant, Hayes, Garfield, Arthur, Cleveland, McKinley, Theodore Roosevelt, Taft, Wilson, Harding, Coolidge, Hoover, Franklin Roosevelt, and now her own son Harry. This

is an American story. Nothing quite like it could take place anywhere but in our country. All hail to this remarkable, bright-eyed lady who says "Fiddlesticks!" to people who naturally make a fuss over her.

Political Status of Puerto Rico

EXTENSION OF REMARKS

OF

HON. JESÚS T. PIÑERO

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. PIÑERO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include in the Appendix of the RECORD a joint statement made by Representatives of the Legislature of Puerto Rico before the Senate Committee on Territories and Insular Affairs. This statement was unanimously presented by a delegation from the Legislature of Puerto Rico which included representatives from all the island political parties, and was headed by the Honorable Luis Muñoz-Marín, president of the Senate of Puerto Rico. It was made pursuant to a joint resolution of the Puerto Rican Legislature, also unanimously approved, to bring before this Congress a petition of self-determination.

I urge that special consideration and thought be given to this statement, since it represents the expressed desire of the people of Puerto Rico, with regards to political status and to the method of approach to that problem. When the statement was read before the Senate Committee on Territories and Insular Affairs, during the hearings held on May 7, 1945, in connection with S. 227, the chairman, the Honorable MILLARD E. TYDINGS, said:

I think that this is an intelligent presentation from both the Puerto Rican and the American standpoint. It is as fair a statement as any that I have heard during the whole discussion of the independence bill, or any other bill.

STATEMENT BY THE HONORABLE LUIS MUÑOZ-MARÍN

The undersigned joint commission of the Legislature of Puerto Rico represents all political parties and its conclusions, contained herein, have been unanimously adopted.

We hold that the colonial form of government which now prevails in Puerto Rico is contrary to the democratic rights of our people and to the democratic tradition of the United States.

We therefore believe that a prompt and satisfactory settlement should be made as to the permanent political status of Puerto Rico. Such settlement should be made democratically on the basis of self-determination. Such is our mandate from the people and the Legislature of Puerto Rico.

In pursuance of this end we respectfully request the Congress of the United States that it submit to a referendum of the people of Puerto Rico the different forms of permanent political status that the Congress may be willing to establish in Puerto Rico. We request that such forms of political status be submitted in the detailed form in which the Congress feels that it could establish any of them which should receive the favorable vote of a majority of our people.

In fairness to all sections of opinion in Puerto Rico it is our request that all forms of political status that may have some support among Puerto Ricans be submitted. Broadly speaking, the forms of political status that have support in public opinion are independence, statehood, and a form of dominion government based on full and final political rights.

We submit that under any political status that may be finally established certain minimum economic conditions must be met, if chaos, through a total disintegration of civilized life in the island, is to be averted. We equally recognize that if the legitimate interests of the United States are to be fully protected, military establishments and rights must be permanently enjoyed by the United States in Puerto Rico. The United States Government will, of course, counsel and determine what these military establishments and rights should be.

We hereby express our conclusions as to the minimum economic conditions referred to. They are:

1. Free trade between Puerto Rico and the United States, limited from time to time by bilateral agreement;

2. Exemption of Puerto Rican exports to the United States from internal-revenue taxes provided that Puerto Rico collects export taxes on such products at the same rates that the United States imposes or may at any time impose on such products;

3. Maintenance for a suitable time of conditions for cane farmers now established by United States law; and

4. Temporary continuance of other grants and aids to Puerto Rico, these to be discontinued as productivity and commerce reach certain agreed levels.

If, as we hope, Congress should accede to our people's request that alternatives be submitted to their choice in accordance with the principle of self-determination, the bill now being considered (S. 227) could be one of those alternatives, and as such it could command substantial public support if amended to meet these minimum conditions necessary for survival.

The close relationship of the United States to our island during almost half a century, the development of our economy under American norms and legislation during that time, the responsibility assumed thereby by the United States, fully warrant, in our view, that such minimum economic conditions be recognized under any permanent form of government that the Congress of the United States and the people of Puerto Rico may democratically work out and establish.

Fundamental economic realities in Puerto Rico—small territory, small extent of usable land therein, large population, scarce natural resources—make such conditions for economic subsistence and development an irreducible minimum for the maintenance of modest civilized life and of a stable and orderly government in Puerto Rico.

Luis Muñoz Marín, Ernesto Ramos Antonini, Leopoldo Figueroa, Celestino Iriarte, Ernesto Cádiz, Rafael Arrillaga Torrens, Bolívar Pagán, Samuel R. Quiñones, Antonio Pacheco Padró.

It is signed by the full membership of the Commission, which is myself, Luis Muñoz Marín, Mr. Bolívar Pagán, senator, of the Socialist Party and former Resident Commissioner; Mr. Ernesto Ramos Antonini of the House of Representatives; Dr. Leopoldo Figueroa speaking for the Republican Party; Mr. Ernesto Cádiz, representative for the Liberal Party; Mr. Samuel R. Quiñones, Vice President of the Senate, the Popular Party; Dr. R. Arrillaga Torrens, Member of the House, Popular Party; Mr. Celestino Iriarte, Chairman of the Republican Party and Member of the House of Representatives of Puerto Rico; and Mr. Pacheco Padró, Member of the House of Representatives, all members of this Joint Legislative Commission.

Green Be Their Memory

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Bryan (Ohio) Press, listing these heroes of this great world conflict, shows graphically that our people need no propaganda, no synthetic treatment to make them realize there is a war on:

GREEN BE THEIR MEMORY

In this war Williams County has lost 59 young men killed, 9 missing, 25 prisoners of war, and over 170 wounded out of 2,102 who entered the armed service of their country. In a sense, this is a breathing space in the war, a time of memorial for those who have died. Their survivors must determine to have as unfaltering a resolution in the field, though they may pray that it have a happier issue.

In the words of Thucydides, these men failed not to deprive their country of their valor, but laid it at her feet as the most glorious contribution they could offer. And for this offering of their lives, they, each of them individually, received that renown that never grows old, and, for a sepulcher, not so much that in which their bones have been deposited, but that noblest of all shrines wherein their glory is laid up to be eternally remembered upon every occasion on which deed or story shall call for its commemoration. For heroes have the whole earth for their tomb; and in lands far from their own, where the cross with its epitaph declares it, there is enshrined in every breast a record unwritten, with no tablet to preserve it except that of the heart. For men of spirit who rightly judge happiness to be the fruit of freedom, and freedom of valor, may never decline the dangers of war, but rather invite that unfelt death that strikes them in the midst of their strength and patriotism.

THE LIST OF DEAD

Lloyd Clark, Jr., Montpelier, killed in France, November 22, 1944.

Corp. Charles Butzin, Montpelier, killed in France November 22, 1944.

Lt. Thomas Roberts, Montpelier, died on flight in New Guinea, January 12, 1944.

Pvt. (1st cl.) Earl W. Hart, Bridgewater, killed in Germany, December 1, 1944.

Lt. Don Neff, Pioneer, shot down over Bremen, Germany, December 17, 1943.

Andrew Hornyak, fireman, second class, Bryan, drowned on Destroyer *Hoel* in the Battle of the Philippines, October 25, 1944.

First Lt. John W. Ingram, Edon, shot down over Berlin, Germany, May 24, 1944.

First Lt. Stanley Throne, Bryon, killed in England, February 1945.

Pvt. Darwin Hemenway, killed in marine invasion of the Marshall Islands, January 31, 1944.

T-Corp. Jack Yoder, Edgerton, killed in France, February 1945.

Pvt. Monroe "Pete" Shouf, Bryan, died in France, February 1945.

T-5 Warren Custar, Montpelier, killed in Luxembourg, December 31, 1944.

T-5 Rex Rutledge, West Unity, killed in Belgium, January 13, 1945.

James B. Wallace, seamen, third class, Bryan, drowned at sea April 13, 1945.

Pvt. (1st cl.) Arthur Woolf, Montpelier route, killed in Germany, April 15, 1945.

T-5 Albert J. Fenicle, Kunkle, killed on Luzon, January 10, 1945.

Pvt. Lester Zeigler, Blakeslee, killed on Luzon, March 17, 1945.

Pvt. (1st cl.) Arthur Hemenway, Edgerton route two, killed in Belgium, December 7, 1944.

Clyde Ridenour, Jr., Bryan, at Pearl Harbor, December 7, 1941.

Lemuel Johnson, Edgerton, off Java, February 19, 1942.

Capt. Richard Miller, Montpelier, off Newfoundland, April 1, 1942.

Joe Atis 3d, Bryan, down off Gibraltar, July 1942.

Sgt. Lavere Sharp, Northwest township, New Guinea, December 28, 1942.

Lt. Laverne Tingle, Montpelier, plane crash in New Mexico, January 29, 1943.

Lt. Ervil Eyster, Edon, over Europe, April 4, 1943.

Corp. Maurice Kosier, Kunkle, crashed in India, September 1943.

Carl Welly, Edgerton, died in camp, June 18, 1943.

Sgt. Frank Myers, Bryan, died in Africa, September 9, 1943.

Pvt. (1st Cl.) Raymond Calvin, Bryan Route 3. Tarawa, November 20, 1943.

Technician (5th Gr.) Clinton Wheeler, Pioneer Route I, Italy, February 4, 1944.

Lt. Doyle Zimmerman, Montpelier, crashed in Yugoslavia, March 24, 1944.

Lt. Jack Laws Buda, Edgerton, Hollandia, New Guinea, April 28, 1944.

Pvt. (1st Cl.) Gerald Weber, Melbourn, Italy, May 17, 1944.

Ensign Robert Munk, Pioneer, airplane crash in South Carolina, May 1944.

Lt. James Sanders, Bryan, shot down over Germany May 25, 1944.

Sgt. Orland Mixter, Bryan, Marshall Island campaign, 1944.

Staff Sgt. James Boucher, Bryan, shot down over Germany, April 29, 1944.

Sgt. Richard Gabriel, Montpelier, unreported on flight to Latin America, March 24, 1943.

Master Sgt. Paul D. Zigler, Montpelier, France, June 6, 1944.

Pvt. (1st cl.) Maurice Lovejoy, Bryan, Saipan, July 1944.

Pvt. Paul E. Johnson, Montpelier, France, July 4, 1944.

Lt. Richard Breininger, Montpelier, France, July 20, 1944.

Lt. Richard Wilhelm, Bryan, France, July 12, 1944.

Pvt. (1st cl.) Kenneth Cunningham, Montpelier, route 3, Saipan, July 12, 1944.

Corp. Jack Phillips, Bryan, Italy, February 11, 1944.

Pvt. Carmon Thorp, North Bridgewater, France, July 1944.

Pvt. (1st cl.) Richard Moore, Montpelier, France, July 12, 1944.

Pvt. (1st cl.) Carl Burkhart, Bryan, France, August 13, 1944.

Pvt. Raymond Coon, Bridgewater Township, France, August 1944.

Hillard Rogers, Pioneer, died at Great Lakes Naval Station, September 1944.

Corp. Burl Knapp, Jr., Edon, France, August 25, 1944.

Lt. Harold McFann, Jr., Montpelier, crashed in California, September 29, 1944.

Pvt. (1st cl.) Warren U. Mills, Montpelier, Holland, September 18, 1944.

Lt. Walter Shambarger, Montpelier, shot down over Germany, July 7, 1944.

Pvt. (1st cl.) Perry D. Hopkins, Edon, France, September 8, 1944.

Pvt. (1st cl.) John King, Alvordton, Pacific theater, 1944.

Sgt. Daniel Kuszmaul, Bryan, Holland, September 19, 1944.

Sgt. Chares W. Buda, Bryan, route 3, shot down over Germany, October 7, 1944.

Richard Henry Johnston, Bryan, route 3, gunners' mate, third class, November 1944.

Presidential Succession

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, May 15 (legislative day of Monday, April 16), 1945

Mr. O'MAHONEY. Mr. President, the delicate and important problem of Presidential succession was discussed on May 9 at the annual meeting of the Hazleton, (Pa.) Chamber of Commerce by the Honorable James A. Farley. I ask unanimous consent that his address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I need hardly say how glad I am to have an opportunity to see and talk with my friends in Hazleton and in this part of your great State. Every time I visit with you Pennsylvanians I learn more than I impart. Tonight's experience will be the same, I am sure, as I raise with you one or two questions for your consideration.

At the outset we would all want to refer to the fact that we are meeting in the shadow of a great tragedy—in the personal sense, the national sense, and the international sense. Yet the passing of our President and Commander in Chief, deeply as it shook us, gave opportunity for a demonstration of the strength of character of our people and of the solidity of our institutions. The passage of the enormous powers of the Presidency was accomplished without panic, without the issuance of emergency orders, without any of the incidents that such a transition would cause in a less stable nation. We already think of President Truman as our leader who is entitled to call upon us for our utmost in the desperate phases of war still before us. We will give him our best.

And the manner of his coming to office is a sober reminder of the fact that though we may choose a President we cannot know that under the will of divine providence he will be allowed to complete his term. Seven times in our short history the Vice President has succeeded to the highest office because of the death of the man the people had selected as President. It is interesting to note that of six previous successor Presidents four did not at the expiration of the interim term offer themselves for election for a regular term. Two were later elected for a regular term when they ran for President after having served an interim period.

Here is the record, known to all of us:

John Tyler succeeded William Henry Harrison in 1841. He did not become President.

Eight years later Millard Fillmore, of New York, succeeded Zachary Taylor. He did not go on.

Then came the immortal Lincoln, who left his chair to Andrew Johnson. Johnson fought the Congress and was lucky to serve out Lincoln's term.

Now we move to James A. Garfield, who was succeeded by another New Yorker, Chester A. Arthur, after Garfield was assassinated in 1881. Arthur's political career stopped at the end of Garfield's original term.

Thus, we have completed the record of four Vice Presidents who did not go on under their own power.

The third Presidential assassination and fifth succession occurred in 1901. McKinley was shot at Buffalo. Theodore Roosevelt succeeded him and then went on to be elected in his own right in 1904—the first time a Vice President who had succeeded by death had been elected for a regular term.

We come to 1923, when President Harding died and Vice President Coolidge succeeded him. President Coolidge had touched the public imagination, and he was elected, traveling under his own steam, in 1924.

Now what of the history of our Vice Presidents?

Thirty-four times the people have filled the second highest office in the land by election and 15 times that office has become vacant. In addition to the gap left by the 7 Vice Presidential successions to the Presidency, at 8 other times the country has been without a Vice President because 7 Vice Presidents have died in office and 1—John C. Calhoun—resigned to become a Senator from his native State, South Carolina.

This may be an appropriate time to review the grave problems involved in the ever-present possibility that death may strike down a President or a nominee before his election; and my thinking has led me to submit to you a suggestion in which I deeply believe and which I bring forward for your most serious consideration.

Under the Constitution, of course, the Vice President succeeds in the event of removal, death, resignation, or inability to perform Presidential duties. And under the same paragraph of the Constitution the Congress may by law provide for the situation that would be presented if a succeeding Vice President likewise were to be removed, to die, to resign, or become incapacitated. The present statute in this respect was enacted in 1886 and provides that the Secretary of State is next in succession, and after him in series the Secretary of the Treasury, the Secretary of War, the Attorney General, the Postmaster General, the Secretary of the Navy and finally the Secretary of the Interior—in short, for a Cabinet succession based on seniority among the departments.

But this raises a question. Under our present method, a Vice President who succeeds to the Presidency is in the unique position of being able to choose his own successor without reference to the electorate. In his case, a vacancy caused by his death, resignation, or removal, is filled, as I have stated, by the Secretary of State whom he appoints, subject only to Senate confirmation. This possible short-circuiting of the electorate is a gap in our democratic procedure that we have not yet solved.

There are other aspects to the problem of succession which have never been worked out by law. Under the twentieth amendment to the Constitution, commonly known as the Norris amendment, the choosing of a President in the case of the death of both a President-elect and a Vice President-elect before they take office apparently devolves upon the House of Representatives. The same amendment provides that the House meet on January 3 and that the Presidential inauguration occur on January 20, or 17 days later. In this instance we are faced with a real possibility of confusion. If the President-elect and the Vice President-elect should both die before January 20, there is now no provision, either in the Constitution or in the Federal Statutes, which would provide for a successor to the highest office in the land. Presumably the House-elect meeting on January 3 could pass some kind of a law of succession to meet the emergency, but here once more another real possibility arises. If the House-elect should be closely divided in its membership—so closely divided that a deadlock might result—then conceivably the date of January 20 might arrive and pass while the House fought over the question of control. The appalling result would be that from January 20 until such time as the deadlock was broken this country would be with-

out a Chief Executive. There are Members of Congress who are aware of this situation and they have considered a bill in the past which would provide that the Speaker of the House would become President. But, as has been pointed out, this would not remove the possibility—in fact, it might increase it—that a paralyzing deadlock in the organization of the House would occur for such a period as to leave this Nation for a time without a President.

I, therefore, think that a special commission should now be set up, composed of Members of the Senate and of the House and with one or more members appointed by the President and perhaps one Supreme Court Justice selected by the Chief Justice. There might be other groups which should be associated with the work of such a commission. This commission should study and recommend with respect to the whole problem of the succession to the Presidency, including the succession after the Vice President, which now is in the Secretary of State. If a constitutional amendment is called for, it should be initiated. If legislation alone is called for, this body should suggest such legislation. It seems to me common sense and governmental wisdom to study this question now and to act as soon as we wisely can.

I now turn to a topic always of interest in a State with Pennsylvania's vast manufactures and trade. I want to discuss with you for a few minutes what our postwar interests are in this respect. It seems to me that it will be upon the margin represented by foreign trade after the war that national prosperity or depression will depend. And considering the vast necessities that will be present in this country for employment, for goods and for the use of a great industrial plant, our margin of foreign trade, while relatively small, will be the critical balance on which our well-being may well depend.

I am not going to indulge in prophecies about the amount of our foreign trade after the war. There are many such estimates—some modest, some utterly too hopeful. But what we know is that in the business that will follow this war, foreign trade is certain to play a very large part. The important thing is not to indulge ourselves in estimates, but to set to work now to develop the changed national viewpoint which will make a large increase in foreign trade possible. That is a task to which business, labor, and Government can well devote their united strength.

It is a hopeful sign that in both political parties there is developing an increasing interest in foreign trade and, in consequence, a recognition that the modern position of the United States in the world makes it necessary that we reconsider many of the tariff policies of the past. Under the great leadership of Secretary Cordell Hull, this change of attitude has taken form in our reciprocal trade policy. That policy was sound, but in its beginning it was experimental, tentative, and modest. But now that American prejudices in favor of higher tariffs are subsiding before the great facts of American efficiency and necessities, we may more resolutely proceed in the direction of enlarging our imports. A test of opinion on this subject will come within a few weeks when the reciprocal trade agreements are submitted for congressional action. If the above is close, it may mean that the administration will hesitate to move resolutely toward a larger exchange of goods. If the vote is by a wide margin, we may expect sentiment in both parties to move progressively toward a real reconsideration of our tariff policies.

We hear a good deal about increasing our exports, but not so much about the necessity of imports. It is time for a considerable change in this emphasis, if we are to take steps in the direction of making it possible to liquidate our prospective postwar loans.

But in our preparations for postwar responsibilities, we must break off the habit of delay. Too much of our financial machinery consists of an apparatus for putting things off. A great part of our credit system consists of means of postponing payments through notes, mortgages, and the like. The financing of foreign trade seems to be arranged in the same spirit of delay. And in that trade the parties are farther apart. Decisions are postponed, procrastination governs our actions, and all too often we postpone settlements until they can no longer be made without defaults. These delays in the past, which were largely due to the complicated machinery of international finance, resulted in some very serious international problems. The weight of our trade balances became so heavy that collapse finally resulted. Depression swept the world, and war came in its wake. There is nothing new in this deadly cycle. Philip II of Spain long ago decided to have done with all of the financial machinery involved in his foreign borrowings and he simply repudiated, throwing weaker countries into chaos and ruin.

The danger of postponing settlements in foreign trade is similar to the old habit of long delayed reparations after a war. The fact is that the longer actual payments of reparations are deferred the greater the danger is that no reparations will be paid.

We must, as Americans, resolve to walk squarely up to these questions of how we are going to be paid for our exports and face them honestly. Republican Senator WHERRY, of Nebraska, gave some sound advice to his party in a speech in January. He said, "If we are going to sell abroad, we must buy abroad." And I would add to this statement of Senator WHERRY that if we are going to lend abroad, we must accept goods from abroad.

We are going to need more from the rest of the world than we have ever needed before. We have scraped to the bottom of the barrel in many of our resources. Some of our resources of which we still have considerable quantities, such as our forests, might well be given a rest in order that they may grow again. We shall have to import more zinc and lead, more iron, petroleum, and timber. The development of our new industries which will follow the war will require much more of materials than we have, in the past, imported in small quantities, such as manganese, nickel, wool, vegetable oils and oil seeds, pulp and paper. The list is extensive and impressive.

There are a few items, such as rubber, of course, in which the process will be reversed, but the trend will be toward large import of raw materials.

We will have to do some importing of things that we shall need for essential defense, such as the elements necessary for steel alloys. Our stock piles should be here and not in Arabia or Central Africa.

There are other offsets to trade—things which have traditionally helped us to balance our accounts. There is foreign travel, for example. There will be more of that. There will be foreign investments which leave money abroad. All these factors will still leave room for greater imports of luxuries and goods of general utility, and our tariffs always must be adjusted to take account of them.

But the greatest necessary adjustment must be in our thinking. The great argument for high tariffs in the past has rested on the fallacious belief that there is just so much work to go around. Our thinking on this subject has looked upon work as a constant and sterile substance which, having been measured and weighed, need not be measured and weighed again. But the amount of work in the world is not a sterile and unchangeable commodity; it is a vital organism capable of growth. We shall have to revise the thinking on the basis of which we have sought shortcuts to limited employment, such as shorter workweeks and other share-the-work plans. We shall have to revise the belief, so widely prevalent in this country, that if somebody else makes any kind of goods which can be made here, then somebody here loses his job.

It is time that we realize that there is no limit to the quantity of the many things we could import and consume in this country, and, on the other hand, that there is no limit to the amount of goods in the production of which we unquestionably excell—goods that are made in accordance with the highest standards of efficiency the world has ever seen.

If we are going to bring about this readjustment of trade, of our laws governing trade and of our past and obsolete thinking which lies behind those laws, the time to do it is when European production is being slowly and gradually resumed. If we take time by the forelock and prepare now for this new era in our economic policies and thought, the amount that we will have to accept will be small at first and increase only gradually. That is because European production must, of necessity, be slow in moving back to its normal capacity. In dealing with our tariff laws we might well learn a lesson from the philosophy of Secretary Hull, which viewed tariff adjustments as a matter for progressive action. The Tariff Act of 1933 provided for five biennial reductions. Such a progressive plan makes it possible for business to anticipate changes, plan ahead and meet slowly increasing imports with new programs of essential production.

Our adjustments to reductions in tariffs may not be as great as we think. Our merchandise imports came pretty close to balancing our merchandise exports from 1922–29. Indeed, if the growth of our foreign trade had continued from 1929 at a steady rate, we would not now be viewing the trebling of our peacetime trade as a distant goal. We would already have attained something like that proportion.

A good deal has been said for the view that a prosperous America is the best single guarantee for a prosperous world. But this statement, however true, needs to be spelled out in terms of what it takes to make a prosperous America. A prosperous America is an America going forward, with investment at home and investment abroad, with confidence in the essential friendliness of its government, with confidence that there may be profit in trade and in international finance, with confidence that obligations, public and private, will be honored.

We talk of how a prosperous America can carry the benefits of its prosperity to other countries. How can we do this best? Should we merely tell them that they ought to raise their wages, or should we enable them to engage in a trade so profitable, through buying their goods, that their wages will increase as a natural consequence?

The grim handwriting is on the wall for everyone to see. Unless we do arrange in some way to obtain payment for our goods, and now is the time to start arranging for that—then we risk having to go through the experience of another great series of defaults. Once more we may have the bitter experience of unpaid debts, of hard feelings between nations, of a paralyzed trade and of the unpredictable results beyond. I have spoken of the danger of another series of defaults. Three of these have already come within the memory of most of us.

The first consisted of those debts to American private investors contracted abroad in the 1920's. Not all of these failed by any

means, but a lot of good American money went down the drain.

The second series of defaults took place in the early 1930's. They were the debts to our Government by other governments, contracted during and after the First World War. This series of defaults led to the passage of the Johnson Act, which was the expression of a country which was sick and tired of all dealings with foreign nations. It was a gesture of isolationism, but to be perfectly frank it was a gesture which rose out of despair, anger, and disillusionment.

The third series consists of lend-lease obligations which we are probably going to forgive in large part, as a portion of the cost of winning the war.

Let us not go beyond this and permit defaults to occur in a fourth series of loans—loans which are proposed in such institutions as those suggested by Bretton Woods. Let me make it clear that I am not objecting to these loans. I am trying to make the point that when we make them we must adjust our economic thinking to a proper means of permitting those loans to be repaid.

Let us face these problems squarely. Let us admit that if we are going to lend abroad, we must buy abroad. Let us put our traffic in such order that we can accept payment in the only way in which payment can be made. Let us make loans to Europe, not necessarily out of our generosity but out of our business sense, because Europe will need loans for her reconstruction. The impoverished countries over there will need, on the physical side, industrial and transportation equipment, building materials, and tools of every kind. A Europe rising from her ruins will be a good customer, and a good supplier of valuable products to us, if we are willing to accept them in payment for what we sell.

In our attitude toward countries which, in the past, have been, in the main, merely suppliers of raw materials, let us encourage them in their efforts to develop an industrial system. Always remember that our greatest volume of trade has always been with nations industrially developed—not with poor and backward countries. The great economic paradox in international affairs is that our greatest benefits come from countries which are our natural competitors.

Once our thinking is adjusted to these principles, we need not spend our time and energy talking of employment first. Employment is a result and not a cause. Employment will come from increased confidence among nations, from a sound maintenance of international credit and, above all, from the promises of a lasting peace.

That, of course, is the theme to which all thoughts return—a lasting peace. We are seeing now at San Francisco the laying of the ground work of an international organization to implement our hopes of a lasting peace. Even as thousands of American men and women pass through the Golden Gate to the battle zones of the Pacific we and the other peace-loving nations are trying to insure that our ports shall not again be clogged with the traffic of war. We Americans have grown experienced in our appraisal of efforts like those being made at San Francisco. We did not expect when San Francisco convened that a perfect system would emerge which would never need to be altered in even a detail. We did expect—and we have seen our hopes justified—that a good start would be made. Having seen the degree of cooperativeness manifested by the United Nations at those great deliberations, we now face the future with hope and we can plan for an international political and economic life that will give mankind some of the things denied it for so long.

Postwar Era Big Challenge to Daily Press

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 15 (legislative day of Monday, April 16), 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able article on the subject Postwar Era Big Challenge to Daily Press, written by Mrs. Agnes E. Meyer for the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POSTWAR ERA BIG CHALLENGE TO DAILY PRESS

(By Agnes E. Meyer)

To be invited to address the students of this eminent school of journalism is the highest professional recognition my work on the Washington Post has received. I value it the more because my entry into journalism has been unorthodox. I did not become a newspaperwoman because I wanted to, but because time and circumstances compelled me to do so. The social impact of the war effort with its tremendous repercussions on future development of our Nation, was and still is inadequately reported by the daily press.

When the war came, I tried to carry out the admonition of the Missouri School of Journalism "to make righteousness readable." I had no training for this task. Three years ago my experience did not entitle me to be called a reporter. That is why the honor your dean and the faculty are doing me by inviting me to speak here today will always give me an encouragement and a stimulus that I need. I have never filed a story without suffering agonies of doubt, self-distrust, and a sense of inadequacy. Perhaps those inner conflicts will always reappear, but henceforth, in moments of despair, I shall think back to the kind words Dean Mott has spoken with profound gratitude and go about my work with renewed courage and determination.

PEOPLE COUNT

To any loyal American, especially any reporter, life today is a perpetual battle for the survival of the good and for the extension of the good life to all human beings. As President Truman admonished us, in his inspiring proclamation on VE-day, it is work, work, work in the public interest. It became daily more clear to me as I journeyed through our war centers, that we are in the grip of a revolution which I had already seen in Great Britain, a movement of the hitherto inarticulate mass of the people for a new place in the democratic structure.

The gist of that Nation-wide movement lies in the fact that our millions of neglected citizens are beginning to feel that they count. They are determined to escape from the horrible anonymity, the spiritual poverty of slums and neglected rural areas. The education which war workers derived from their migrations, from the training they received and the money they earned in the factories, from working side by side with all sorts of other people, has set a ferment in motion that will not come to rest until the new hopes aroused in many breasts are recognized as legitimate and given the satisfaction which they deserve.

The ultimate question is whether democracy is better fitted than authoritarianism to create broader social patterns that satisfy these yearnings. The victory in Europe is only the first step in that debate. When the war is concluded we shall still have to win the social battle against authoritarianism, and in that struggle no single weapon of democracy is more powerful than the daily press.

For this reason I cannot make you any of those light-hearted speeches considered appropriate for the neophyte about to enter his profession. But surely it is more encouraging to welcome you to hard and unremitting toil whose rewards are greater than they have ever been before, especially to women, if you see the new opportunities that lie before you.

When men return from the front lines to the city room, as they must and will, the newspaper woman's usual ambition to be "as good as a man" won't be good enough. The world being what it is, women reporters will have to let the men have first call on routine work and make themselves a place in new and experimental fields of observation. Now that we are about to enter a crisis in our national history even more hazardous than that of war, there is no greater public service any reported can render than to fight for social justice and human dignity; not dignity in the abstract, but the personal, individual dignity of our neighbors in the social setting of our own environment.

CAN SERVE ANYWHERE

Wherever you may be living and working, you can serve that cause. Have no doubts about the results of work done in that spirit. To study practical social situations and report faithfully your findings always meets with response from honest people and affects their thinking in the most immediate way. The influence of such work, however small it may see to you, will reverberate slowly but surely throughout the whole Nation and travel to the ends of the earth.

There, it seems to me, is the great new field of reporting, especially for women. Surely we women can claim a greater awareness of the terrible threat total war has been to the family and greater sensitiveness to the destruction that war has wrought in the whole fabric of social relations which is the basis of a decent life. At the same time we women have a more immediate interest in social justice and order because they are essential to the well-being of our children and our children's children.

Since I was untrained as a reporter, you may wonder, as many people have, why I undertook such a career late in life. While my children were growing up, I tried to do my duty as a citizen and filled for 18 years a public voluntary job as chairman of my county's recreation commission. There I learned how the wheels of Government go around in a local community, county and State. I learned practically how and why things are done or not done in our democratic structure. I found out, especially during the depression, how remote Washington is from the grass roots and how vitally important to our Nation's progress and welfare are the local independence, initiative, and courage of our people as a whole.

Our institutions and forms of government differ somewhat in different sections of the country, but if you learn your way about thoroughly in your own home town and county, you can walk into any other American community and feel yourself equally at home with its people and problems.

I have been on many stories, in widely different parts of the country, with reporters whose skill is infinitely greater than mine, but I have frequently been able to get a better picture of such trouble spots as Willow

Run, of the problems of the soft coal miners, of the sufferings of war workers in Mobile, only because I know how an American town ticks and where I can get exact information as to the underlying difficulties. As training for any kind of newspaper work that knowledge is useful, but with our country facing perhaps the greatest social upheaval in its history, when veterans return in great numbers and war workers are dismissed, knowledge of our community organization in its strength and its serious weaknesses seems to me essential to anyone who wishes not only to report but to anticipate the turmoil that we are bound to experience.

I should like to emphasize that word anticipate. For on the Washington Post we are not content to report grave social problems and labor tensions when they burst into flame and become "spot" stories, but we try to dig into these situations beforehand in the public interest.

WORRY STARTS WORK

After we went to war, I flew to England to study British administration of the war effort. Having seen how great the burden of total war is upon the people, particularly upon woman and children, I grew apprehensive after my return over the fact that our Federal Government was trying to run social aspects of the production program from Washington. My local experience taught me this could not possibly be done efficiently with centralized control and, out of sheer worry as to what was happening to the migrant war workers and their families, I planned a swing around the country.

My first itinerary of 4 months had to be fixed in advance, with no knowledge of how much work I was facing.

The first stop was Buffalo in February 1943, at the height of the manpower chaos. Before leaving Washington, I followed a technique I used throughout the journey. I wrote to the key people of industry, labor, of the Federal and the local government, asking them to meet a reporter from the Washington Post at 10 a. m. of my first day in Buffalo to discuss their war problems.

BUFFALO RECEPTIVE

I thought two or three of these busy people might show up. To my amazement, word had gone around and there were more people than I had invited. Coming from a Washington paper turned out to be an advantage in every community. People were impatient with the Federal Government and nobody from Washington had as yet asked local citizens to tell their troubles.

Before I left that meeting in Buffalo, to go and see things for myself, I knew I had walked straight into pandemonium. For 4 days I visited factories, talked to workers, labor leaders, social workers of public and private agencies, to youngsters on the loose with money itching in their pockets, to desperate mothers struggling with a job and horrible living conditions, to children wan with fatigue from overwork or homesickness, to racketeers and to patriotically inspired war workers. I knew then for the first time that my story had to be filed before I faced the next chaotic situation. How was I to organize that mass of pulsating material within a few hours?

Indeed, I hammered out my first story of eight columns despairingly, with the conviction I was not equal to the task. What saved me was knowledge that the story was such an indictment of many people that my facts had to be carefully sifted until they were accurate. In fact, I made my figures and descriptions conservative, and I cannot recommend too highly that you never yield to sensationalism when describing sensational material.

Understatement, I have found, is always more effective in the long run. Moreover, it is a sound procedure from the practical point of view.

Only one city, a sink of iniquity near a big camp, attacked my veracity, but the attack was serious because it was made in the CONGRESSIONAL RECORD and signed by the mayor and half a dozen clergymen. If I had not understated the case, I would have had no reserve ammunition. As it was, I could defend myself with additional facts, including the city's venereal-disease rate. That ended the discussion.

CAN REPORT TRUTH

The most important deduction from my experience is that you can report anything that is true, no matter how terrible the truth may be, if you are factual and have no political axe to grind, no "isms" to support, no personal animosities to serve. Your main difficulty when evaluating human conflict will be to dig below the surface claims of interested parties to uncover basic truths.

I visited more than 26 war centers in a year's travel, my primary purpose to get immediate relief from housing and food shortages for war workers; better provisions for the education, health, and general welfare of their children. It never occurred to me then that this reporting might have permanent value. But gradually it became evident that the evils I was portraying were due to our neglect of human welfare before the war began; and that the pressure of the war production effort had simply highlighted the weaknesses that we had long failed to recognize in our social structure. The greatest of our many injustices is the fact that a child born in some parts of our country has every opportunity for self-development—mental, physical, and emotional—while those born in other sections have next to none.

My efforts are now turned toward securing for all children, regardless of race, color, or creed, a chance to grow up to be independent citizens, sound in mind and body, and thus able to bear their share of responsibility in our democratic government. Again I use the reportorial method but instead of the critical studies I made during the war, I am now piecing together the ideal American community by reporting the outstanding experiments for social betterment going on in many parts of our country. These differ in character but have the same objective in every case—to stabilize the American family by stabilizing the local community in order that we may create a stronger and a happier America ready to help the veteran return to civil life and the war worker to a peacetime economy.

FREEDOM, NOT LICENSE

I don't want to leave with you the impression that I am the only one on the Washington Post who is stirring up the citizens to a broader sense of social responsibility. Throughout the staff, of which I am a very humble member, a high degree of social consciousness prevails. A democratic code of principles exists among us that has never been formulated but which has gradually developed out of a free exchange of our very different points of view.

Under my husband's leadership there has sprung up for all members of the Washington Post's staff great freedom of expression. But we do not interpret that freedom as a license to say what we please. It is a freedom to evaluate conflicting interests by the objectives they seek, freedom to select among those objectives what is intrinsically most worth while to the greatest number of people. It is a mandate to maintain freedom of communication between all nations and all kinds and conditions of men. Such freedom of communication is the heart and strength of American life, because it inevitably breaks down the prejudices of economic status, of race, of religion, of all forms of isolationism that estrange human beings from each other.

Used to maintain that freedom of communication, the press becomes one of the most important and one of the most effective tools of social unity and world-wide democracy. To be an instrument for the maintenance of liberty, equality, and justice for all human beings is the highest ambition of the publisher of the Washington Post and his associates.

This responsibility, I honestly believe, you younger members of the press are better trained and better equipped to understand than most of the older members of the profession. The fight for democracy versus authoritarianism will not end with the military victories. It has only just begun. Wholeheartedly I welcome you to the hard battle before us. You are to be envied, for you will live to see the new world whose outlines are already visible just beyond the horizon.

The future can bring you no greater happiness than the knowledge that you have followed the mandate of your great school of journalism and made your own contribution to the ultimate triumph of international good will and human brotherhood.

Labor-Management Agreement on Bonneville Power Project

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 15 (legislative day of Monday, April 16), 1945

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Paul J. Raver, Administrator of the Bonneville Power Administration, relative to a recent labor-management agreement between the Bonneville Power Administration and the Columbia Power Trades Council, together with certain editorial comment in connection therewith.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE INTERIOR,
BONNEVILLE POWER ADMINISTRATION,
Portland, Oreg., May 9, 1945.

Hon. WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

MY DEAR SENATOR MAGNUSON: The recent signing of an agreement between the Columbia Power Trades Council and the Bonneville Power Administration establishing a labor-management mechanism for treating with problems of mutual concern has been publicly regarded with considerable favor. It occurred to me that you would be interested in reviewing some of the editorial comment which appeared following the signing of this important instrument.

In my belief, it was particularly significant to have arrived at this agreement now, as the importance of maintaining sound labor-management relations cannot be minimized if the return of servicemen and war industry workers to peacetime activities is to be accomplished smoothly and effectively.

Sincerely yours,

PAUL J. RAVER, *Administrator.*

[From the Vancouver (Wash.) Sun, of May 3, 1945]

BONNEVILLE COLLECTIVE-BARGAINING AGREEMENT MARKS MILESTONE

An agreement entered into yesterday by the Bonneville Power Administration and the Columbia Power Trades Council truly marks a milestone in Federal labor-management relations. It is a pact that will work for efficiency in management and delivery of the goods on the part of labor. No Federal agency has taken such an advanced step, and the agreement very likely will become a model in other Federal projects employing a large number of men and women of diversified training and responsibilities.

Now, it is up to those responsible to make the plan work, and judging from the spirit with which all parties have entered the agreement, results would not appear to be in doubt.

According to announcement of Bonneville Administration:

"The agreement will be applicable to all Bonneville hourly employees in the trades and crafts who are not subject to the Classification Act of 1923. By the terms of the agreement conference and consultative machinery and procedures, through the processes of collective bargaining, are set up (1) to provide for joint determination of fair and reasonable rates of pay, hours, and working conditions; (2) to insure the making of appointments and promotions on a merit basis; (3) to promote stability of employment and to establish satisfactory tenure; (4) to provide for improvement and betterment programs designed to aid the employees in achieving their acknowledged and recognized objectives; (5) to promote the highest degree of efficiency and responsibility in the performance of the work and the accomplishment of the public purposes of the Bonneville Power Administration; (6) to adjust promptly all disputes, whether related to matters covered by the agreement or otherwise; (7) to promote systematic labor-management cooperation between the Administration and its employees; and (8) to aid the reestablishment in civilian life of returning veterans.

"The agreement provides for joint cooperative committees which will give consideration to such matters as elimination of waste in construction and production; conservation of materials, supplies, and energy; improvement in quality of workmanship and services; promotion of education and training; correction of conditions making for grievances and misunderstandings; encouragement of courtesy in the relationship of employees with the public; safeguarding of health; prevention of hazards to life and property; betterment of employment conditions; and the strengthening of the morale of the service."

The agreement grows out of long discussions and exchange of ideas in which all conceivable situations are taken into account. The scope is such as to provide for procedure on negotiations relating to hours, compensation, conditions of employment, labor improvement, cooperation, and assistance, adjustment of disputes, etc.

The pact is one that well may be studied by private industry, because here may be found the foundation for industrial peace, a plan for management and labor cooperation in the postwar era, without which the Nation cannot attain the levels of prosperity essential to our national well-being in the immediate years to come.

[From the Oregon Journal of May 5, 1945]

UNION CONTRACT MAKES HISTORY

Federal labor and management took a history-making step Wednesday when representatives of Bonneville Power Administration and the Columbia Power Trades Council signed a collective bargaining agreement affecting various trades and crafts not governed by the Classifications Act of 1923, under which rates of pay and working conditions are fixed by law.

The bargaining machinery was set up to provide for joint determination of fair and reasonable rates of pay, hours and working conditions, to insure promotions and appointments on a merit basis, to promote stability of employment and establish satisfactory tenure, to provide for improvement and betterment programs for employees, to promote efficiency and responsibility, to adjust promptly all disputes, whether related to matters covered by the agreement or otherwise, to promote systematic labor-management cooperation, and to aid the rehabilitatio nof returning veterans.

It calls for the establishment of joint committees to consider such matters, as elimination of waste in construction and production, improvement in quality of workmanship, promotion of education and training, correction of conditions making for grievances and the safeguarding of health and life.

In addition to establishing those fact-finding committees and the machinery for mediation in wage-rate matters, the agreement provides for a joint board of adjustment to act as the final determining body. The pact remains in force until December 31, 1946.

Besides Dr. Paul J. Raver for the administration, and Robert B. Sheets for the trades council, signers of the agreement included:

Allen C. Crowder, teamsters; John O'Neill, iron workers; Harry Ames, steamfitters; Oscar Harbak, electricians; D. L. Marlett, Assistant Administrator; Dan Hallowell, labor relations representative; David Blakeman, personnel director; Claude A. Miller, chief of operations and maintenance; Walter H. Kanzler, chief of engineering and construction; Gilbert Sussman, assistant general counsel; S. E. Schultz, chief engineer; John T. Richardson, assistant controller, and Jeanette C. Hahner, attorney.

German Brutality Described

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. LUDLOW. Mr. Speaker, an astonishing eye-witness account of the atrocious mistreatment of prisoners of war by the Germans is told in a letter just received by William L. Batt, Vice Chairman of the War Production Board, from his son, Lt. Robert R. Batt. The lieutenant, writing from amid the scenes where these acts of bestiality occurred, calls his letter to his family "my own personal first-hand indictment of Nazi brutality." The letter, which is of entrancing interest and a notable contribution to the literature of the war period is as follows:

APRIL 23, 1944.

DEAREST FAMILY: You all know what a skeptic I am. I'm the original guy from Missouri; I don't believe anything I read if I think the author is trying to sell me a bill of goods. So I want you to be sure to keep this letter. It's my own personal first-hand indictment of Nazi brutality. This won't be table talk exactly, but I saw it and I want to get it on paper for the record.

Gardelegen makes Lidice seem like a garden party. You may have read about it: It has caused quite a stir. Everybody is on the way to investigate it officially now, but it will never be the same as when I saw it. Which was in turn mild as compared to the day before. Soon there will remain nothing but eleven or twelve hundred crude wooden crosses neatly arranged in a green meadow next to a burnt-out barn. The graveyard should be neat and well-kept for years; each grave has been registered and a male resident of nearby Gardelegen assigned the responsibility of caring for it for the rest of his life.

I guess that is necessary. My idea, I am afraid, would outrage convention. But I can't help thinking that a great opportunity has been lost, and that the victims, most of them nameless now anyway, wouldn't mind. I should like to see that barn and the area around it somehow kept exactly as it was discovered. Preserved, frozen, by some process of casting in plaster, for all to behold. That is my idea of what a monument should be. It would speak, eloquently, a million words, in the merest glance.

Gardelegen looks just like any other rural German town. Reasonably prosperous, happy. The people are reported to have admitted they heard the screams of the dying, and many of them have been taken to view the aftermath. Daily a large number of their menfolk are going out to the barn to get on with the grim work. But time works wonders, and the people you see on the streets look quite unselfconscious.

As you leave town to the north, traveling the route that the hundreds of political prisoners were made to travel that day a week ago, you come into an area of broad, fertile fields that bounds the town. The barn stands out prominently, its bricks blackened but intact. There is no other building in sight. Yesterday a friend tells me, there were still bodies along the side of the road. Those were the lucky ones; they were shot on the march from town, but before they ever reached the barn.

There is a great hole, now filled, behind the barn. In it and in other holes the townspeople had already burned some 700 bodies when the first Americans arrived. Most of those bodies have by now been dug up and reburied in the new graveyard. Those I saw were all charred, just as are the remains in the barn.

Four hundred and twenty bodies were found unburied, most of them in the barn in the various attitudes in which death had caught them. The sliding doors, all four of them, were partially open. At each door was a mound of burnt bodies, partly within, partly without the barn. Most of those to the outside had been shot. One had burrowed under a door so that his head and one arm projected outdoors. He was shot in that posture. Several had clawed clear through the brick walls of the barn and were shot with their heads to the apertures.

The fire, caused by drenching the straw on the floor of the barn with gasoline and igniting it with tracers, must have been intense but superficial. The timbers, for example, were scorched but still standing. Here and there, patches of straw showed yellow. Few of the bodies were consumed in the flames.

The bodies of the victims were for the most part unbelievably emaciated empty sacks of bones. Of calves and things there were few. Just a spark of life that must, judging from the signs, have flared up in each to a frantic blaze in those last insanely active moments.

All the clothes I saw—to the extent that clothes remained on their bodies—were striped. Political prisoners. I saw the 6 survivors as they were brought back to the scene today. One of them was a good-looking Polish officer, now wearing a British uniform. I read the testimony of one in Stars and Stripes. He lay for 2 days, he says, under a pile of dead. Once some soldiers came back and asked who needed medical

assistance. One man stirred in answer, and was shot.

I could see no trace of emotion on the faces of the survivors, as they walked among the civilians trying to make identifications.

I was one of hundreds of American soldiers on the pilgrimage to Gardelegen. They react variously. Most are something from sobered to stunned. I saw a medic go virtually berserk, cursing and kicking the civilian burying crews as they hurried by. The soldiers in charge—combat troops all—are near the thin edge.

But the reaction of the civilians working around the barn and graveyard is something to ponder to infinity. Young and old, strong and infirm, they are all working at an hysterical feverish pace to end the nightmare. In teams of four they deposit the bodies, each with a clean, white shroud, and rush back for another. They are forced to run, and to handle the bodies with their bare hands. They are hazed every moment and worked almost until they drop.

I saw a boy of about 14, crying his heart out. Fear, horror, shame, hysteria, exhaustion, all flew like a flag on his face. The older men exhibit the same emotions, all canceled out to an expression of anguished nothingness. Some break. One tried to run and was shot in the leg. The others worked a little harder. One litter squad came by me with the man at the feet doing the work of two. His companion was lagging, exhausted. With part of its support gone, the body began to slip off onto the ground. The poor man was in a dilemma, trying to keep up the run, recover the body, and make his partner catch up, all at the same time. I doubt that he, or any of the others, will ever forget this day.

I understand that the SS officer and his 30 men who carried out this little affair were apprehended recently. They tried to pass themselves off as Wermacht troops, but were recognized.

Love,

BOB.

(Lt. Robert R. Batt, headquarters, 216 Field Artillery Battalion.)

Shall Alien Minds Determine America's Future?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. SHAFER. Mr. Speaker, the State and Treasury Departments are flooding the country with propaganda designed to influence Members of Congress on pending legislation. The number of letters being received by Members of Congress from members of women's organizations, ministers, and even high-school students clearly indicates the effectiveness of this campaign.

If Government agencies are permitted to continue their propaganda activities, Mr. Speaker, our entire democratic process of intelligent consideration of legislation and the independence of Congress will be destroyed.

The people of America must be informed as to what is going on. I therefore extend my remarks and include portions of a letter published by the National Economic Council, Inc., which came across my desk this week:

SHALL ALIEN MINDS DETERMINE AMERICA'S FUTURE?

Never in our history has it been more important for Americans to think clearly. The question of whether the United States will continue toward national socialism will probably be settled in the next 4 years—possibly in the next 24 months.

The San Francisco Conference in which vitally important decisions can be made is just beginning.

Pending before Congress are such proposals as Bretton Woods, Dumbarton Oaks, and the several other agreements or treaties negotiated the past year or two by Mr. Roosevelt's administration. Adoption of them without important modification would so enmesh us in the affairs of other nations, every one of them less devoted to genuine freedom than ourselves, that nothing short of an upheaval would ever extricate us. And domestically there is the question whether we are going to retain all existing New Deal measures—and perhaps add others; or to reject the newer proposals "Cradle-to-grave security," "60,000,000 jobs—or else," etc., and modify or eliminate some of the more drastic laws we now have.

It is hard to base a prediction for the future on past history, because a new factor has entered in. The art of modern propaganda has been developed. It has been clever, thorough, ruthless, and often untruthful. Relatively few Americans understand either its source or its extent and potency.

Every day we meet business and professional men of standing in their fields, as well as men and women highly regarded for their generous attitude toward their fellow men, who simply do not know what it is all about. They do not realize that many of the very views they express have been formulated by cunning men and women; and that through New Deal control of radio and New Deal influence among most of the country's writers, these ideas have been implanted in their minds so cleverly that they never doubt they are their own. They fail to note that the minds of the Germans were molded by Hitler in precisely similar ways.

They do not know that, with rare exceptions, many of the country's best writers simply cannot get magazine articles published if they express views contrary to the New Deal. They do not know that, while in 1944 Martin Dies and his friends could not find a publisher courageous enough to print his book telling the truth about the New Deal and its communistic supporters, the counters of our book shops have groaned under the weight of books extolling the New Deal, Russian communism, and pretty much everything Russia has ever done. For fear of Washington retribution, the American people have been denied, in true totalitarian style, the right to know both sides.

One book, Under Cover, written by an Armenian immigrant with a communistic background, and which scurrilously and falsely attacked scores of patriotic Americans for the sole reason they opposed the New Deal and Communist Russia, sold more than 600,000 copies. We listened several times to grave conversations in well-known New York clubs between supposedly intelligent men who had been completely fooled by this book, which was, of course, a mere document in the 1944 political campaign.

This propaganda is alien in origin and conception. It stems directly from eastern and central Europe. It is designed to undermine and destroy America; and it is having that effect.

It follows the best techniques of Hitler and Mussolini. John T. Flynn, in his book, As We Go Marching, has traced the step-by-step development of fascism in Italy and nazism in Germany. In both cases the cornerstone of those edifices was deficit financing. And in tracing the growth of our own totalitarian government in Washington he has shown how closely it has paralleled these two European dictatorships. Austrian-born Friedrich Hayek, in his The Road to Serfdom, has written in the same vein.

The fact that American Communists and their fellow travelers have been supporters of our American fascism need surprise no one. Their hope has been that, following the analogy in Italy and Germany, the next step after American fascism will be American communism.

In passing, it is worth noting that alien-minded persons, whether in public office or outside, are among the leading molders of public opinion in the United States today. Some of them, for reasons best known to themselves, have changed their names. Some are Communists or fellow travelers, and nearly all are more or less tolerant of communism. Many are artists in the technique of smear. Few, if any, give more than lip service to traditional American principles. Their writings are welcomed by publishers and reviewers; they have the freedom of the radio, while many advocates of the American system are refused radio time. * * *

Several aliens, like Sir Bernard Pares, have taken up temporary residence here, apparently for the purpose of indoctrinating our people. John Maynard Keynes is the actual author of our 12-year policy of deficit financing and the principal inspiration of the Bretton Woods agreement. * * *

We question at this time neither the ability nor sincerity of any of these persons. But they are not believers in the American way of life. They and others like-minded, dominate our public opinion. The independent American republic will be destroyed if their domination continues.

Two characteristic current propaganda activities deserve mention. The International Latex Corporation, Abraham N. Spanel, president, has for many months been publishing in many American newspapers quarter-page advertisements urging New Deal policies, national and international. Thus, the New York Herald Tribune of April 21 contained such an advertisement endorsing Bretton Woods. Over the company's name at the end of each advertisement is the legend, "Presented as a public service." The Blue Network carries a news program five nights a week under the sponsorship of the Electronic Corporation, of which Russian-born Samuel Novick is president. The broadcaster is William Gailmor, who changed his name from William Margolies, under which he pleaded guilty to grand larceny and is now out on parole. He has a communistic record.

Considerable inquiry reveals that the business of both the International Latex Corporation and the Electronic Corporation is so modest as to suggest their chief activity may be the propaganda they are carrying on, if, indeed, they were not organized for this purpose.

America has two great needs today.

The first is to return to the American way of life. If we do not return to the American way of life, American liberty will have been lost. "What can it profit a man if he gain the whole world and lose his own soul?" What can it profit America if it set up a world organization in which its identity and independence are lost or even impaired, with the further result that in order to do our part in such an organization we must continue for the indefinite future to be a regimented people?

Of course, the current propaganda has it that America cannot return to the American way of life. We are told that, having

achieved total employment in wartime (under coercion, of course) we can likewise achieve it in peacetime. We can. But only if the state tells every man where to work, for how long, and for how much; how he may spend his money, and where; only if we Americans permit the state to plan and regulate our lives. We can do this, but only if we continue deficit financing. But in doing it, we will have turned our back on all American experience. We will have deserted the principles that made America great and rendered her able to subsidize her allies and thus win the war. We will have rejected America and will have embraced the very Fascism we say we hate.

Those of our boys overseas who come home will find the America they were told they were fighting for has irretrievably gone.

It is of more importance to the 130,000,000 American people that we return to the liberty we have always known—than it is even to achieve a world organization.

America's second need is to try to build a kind of world organization that will do something to prevent war in the future. But one grave danger of such a world organization is that we shall place too much reliance on it; and another is that, if controlled by Roosevelts, Stalins, or Churchills, it will tend to become a totalitarian superstate, just as the United States has tended the past 12 years to centralize all power in Washington.

We believe the greatest factor for peace is the existence of a strong, independent, law-abiding nation, unwilling to make war against any of its neighbors, and prepared to defend itself against all comers. The example of one such nation (and the United States during much of its history has been such a nation) will be far more potent than treaties or agreements, no matter how high-sounding their phrases. Just one such powerful nation possessed of the complete will for peace can go far in maintaining the peace of the entire world. If the United States, Britain, and Russia all determine upon peace, then there will be peace, unless other nations believe that before reaching that determination one or more of them have first despoiled other countries, which Russia has actually done.

So, it is an open question whether the existence of an elaborate world organization, constantly tempted to mess into all sorts of matters, will not tend to increase rather than decrease the chance of war. We know this thought flies in the face of the propaganda barrage we live under today. But our problem is not to accept highly propagandized ideas, but to think.

Several fallacies of the propagandists are widely and unthinkingly accepted. One of these is the old saw that after the last war the United States "turned her back on Europe"—that if the United States had entered the League of Nations there would have been no more war. But we did not turn our back on Europe. It was the willfulness of President Wilson that prevented our entering the League of Nations. Even Sir Edward Grey, British Foreign Minister, in 1919 expressed the opinion that the reservations asked by the United States Senate were reasonable and should have been approved. No nation in the world did more to preserve the peace of Europe after 1919 than the United States. We scrapped nearly a million tons of our war vessels—though other nations scrapped few, if any; we loaned Europe $6,000,000,000 for rebuilding—little of which was ever repaid; we took part in numerous international conferences; we led in pushing the Kellogg-Briand pacts to outlaw war.

What brought on this war was not our staying out of the League of Nations, but rather the fact that Britain and France refused to lift a finger to stop Hitler when he made his first aggression by moving into the Rhineland in 1936. Though they were, of all parties to the Versailles Treaty, the most vitally concerned, yet, owing to Red pacifist propaganda, they did not have the will to enforce their own treaty.

Another fallacy, constantly reiterated, is that economic inequalities in different parts of the world make for war. There is little in history to back this. If this argument had serious weight, why did not other nations far more powerful militarily than the United States make war on us when we were overtaking and passing them in the standard of living? Is it not possible the idea has its source in the have-not nations who have long had envious eyes on the United States and wish to force us to divide our living with them?

Then there is the one-world argument—the theory that in the future it will be impossible to maintain peace unless all nations are welded together in one organization. The speed of communication, especially by airplane, is assigned as the reason for this. But on analysis this argument also falls down. There has been peace between the United States and Canada for a hundred and thirty years; and the reason is that there has been a will to peace. At least five countries in Europe—Spain, Switzerland, Sweden, Turkey (till very recently), and Ireland—have kept out of even this present war; and, similarly, the reason has been the will to keep out.

Lastly, there is the fallacy that we cannot have prosperity in the United States unless all other countries have comparable prosperity. No good reason is given why this should be so, and all human experience indicates it is not so. As a matter of fact, the history of the past hundred years indicates the precise opposite, so far as the United States is concerned, namely, that the rest of the world can become more prosperous if the United States is prosperous. For the United States, by reason of achieving general liberty for its people, released energies of the body, mind, and spirit which have placed us far in the lead of all nations in the manner of our life and living. Practically all the world has sought to imitate us, but most of them have failed because they did not understand that our cornerstone was individual liberty. Testimony before Congress recently showed that we are far ahead of the Russians in the productive power of the individual, and that even in Britain it takes—on the average—the work of two and three-tenths men to produce what one man produces in the United States.

The proper course for the United States is to keep the sovereignty and independence of her Nation and her people. For only so can she continue in the future to be the example that has inspired the whole world in the past. And we can do no better than set an example.

After the war all Europe and Asia will be poverty stricken. American wealth, imagination, and creative ability—provided they are preserved—will alone be able to help those countries. For us to enter into agreements with other nations that will give them the first call on our wealth and a large control over our affairs would, for us Americans, be the height of folly. To adopt the Bretton Woods agreement, for instance, by which, in effect, other countries may vote taxes on the American people by assessments against our resources, would suggest that both our love of independence and our sanity had departed. We would have lied to our fighting men to whom we have promised a better future.

We know we can help the people of other countries, if only we are free to help them. But to get down to their level, and to surrender the freedom of our people, would be practically to insure that our ability to help them in the future would be cramped if not destroyed. We would have sold ourselves and our descendants into bondage to them.

Party Congress Is Held on Eve of Transition

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. JUDD. Mr. Speaker, the world is about to witness a remarkable event—a political party which possesses practically complete power voluntarily setting out to surrender that preferred position, in accordance with pledges made many years ago.

The Chinese Kuomintang Party was established by Dr. Sun Yat-sen. It succeeded in overthrowing the Manchu Empire and, under Chiang Kai-shek's leadership, ended the period of feudal war lords, secured for China tariff autonomy, abolition of the foreign concessions and extraterritoriality, and made almost unbelievable progress between 1932 and 1937 in modernizing China in such fields as education, transportation, industry, public health, and first steps in political democracy. This was the period of political tutelage under the Kuomintang as Dr. Sun had advocated. The period was scheduled to end with the convention called to meet in Nanking on November 12, 1937, to adopt a constitution establishing a true republic. On July 7, 1937, 4 months ahead, Japan struck without warning, and when November 12 came, Japan's armies were threatening Nanking itself, capturing it in December.

Obviously when a nation's very existence hangs by a thread, as China's has all these war years, it is not feasible to effect a drastic change in the whole character of its government. So Chiang postponed the constitutional convention, but announced repeatedly that it would be called within a year after the end of the war—just as Churchill postponed England's election scheduled for almost 5 years ago and has not yet announced when it will be held.

In China's case, however, Chiang agreed to hold the constitutional convention even before the war is over, setting the date for November 12, 1945. The Kuomintang Party is now meeting in Chungking to plan for that convention. It is one more evidence of the steadfast determination of Chiang Kai-shek and most of the Kuomintang leaders to establish a real democracy in China at the earliest practicable moment. It will be a most difficult task but all true friends of China and of America wish them well, because a strong friendly democratic China is our best assurance of security in the Pacific.

Under leave to extend my remarks I include a news story from an American paper, the Shanghai Evening Post and Mercury, of May 4, 1945:

PARTY CONGRESS IS HELD ON EVE OF TRANSITION

(By Charles S. Miner)

CHUNKING.—China's biggest step toward democracy is expected when the Kuomintang convenes Saturday for the first time in 10 years.

The foremost item on the agenda will be the national assembly to ratify China's new constitution, which automatically will change the Kuomintang from the undisputed ruling party to just one of many which will be dependent on public support to stay in power.

APPROVAL EXPECTED

President Chiang Kai-shek's proposal to call a national assembly on November 12 is expected to be approved with enthusiasm. But with it the Kuomintang must tackle the problem of swiftly teaching the people how to exercise the powers the constitution will give them.

Few political parties anywhere have ever adopted with any great degree of enthusiasm a program legislating themselves out of power. The Kuomintang, however, may be about to do just that, although it by no means follows that they will lose power at any time in the near future. At the same time, they are about to substitute power by sufferance for power by monopoly.

With a new form of government in prospect is a result of its own action, the Kuomintang is expected to inaugurate a strong campaign to get closer to the people; to plumb heavily for more equitable land ownership, for a better livelihood for the masses of the people, for more rigid monetary control, and for an end of bureaucracy.

NATIONALISM TO FORE

Nationalism also looms heavily on the program. Steps are expected to be launched to make China's five races into one. The Mongolian, Tibetan, Mohammedan, Manchurian, and Chinese each will be told they're one people living in one country; in effect, in a United States of China.

The election of new central executive and central supervisory committees is expected to touch off the liveliest political skirmish in China's recent history. Observers hold that the political rule of the C. C. clique now is at long last being seriously challenged, and the opponents to the clique have recruited formidable support.

There is, for instance, Minister of War Chen Cheng, with Army backing; Chiang Ching-kuo, with the powerful youth movement behind him; Minister of Education Chu Chia-hua, and his "intellectuals," Gen. Wu Teh-chen, Gen. Chang Chih-cheng, and others. One prospect is the union of all anti-C. C. forces behind Chen Cheng, who will surprise no one if he emerges from the Congress as the second most powerful man in China, outranked only by the Generalissimo himself and wielding more authority than even Dr. T. V. Soong or Dr. H. H. Kung.

Incidentally, the absence of these latter two leaders from the forthcoming congress will be in itself history making. For never in recent years has so important a conclave seen neither Dr. Soong nor Dr. Kung among those present.

POWER TO DICTATE

Few here dispute that the generalissimo could with a wave of his hand dictate the entire proceedings. That he has apparently chosen instead to leave the Congress to its own devices—beyond pointing the way toward democratic reform and constitutional government—is believed by his friends to put an end for all time to charges of dictatorship.

Already a democratic leader, the generalissimo is expected to guide the Kuomintang in its task of developing a democratic country for him to lead. The path is not an easy one. The Communist problem, troubles in Sinkiang, the delicate question of Russian relations, disastrous inflation, commodity shortages, threatened economic chaos, and all the inevitable evils of 8 years of war stand in the way.

The Kuomintang, too, has its own internal problems. In turning over the governmental reins to the nation at large, it must dispose of many former exclusive activities such as youth training, information work, overseas work, political training of troops, and kindred efforts which will be relinquished as fast as conditions permit.

Rumors have been widely circulated, moreover, that personnel switches are in prospect, including a change of several ministers, ambassadors, and key executives, and possibly exceeding the sweeping reorganization of last fall.

We're Getting on With the Job

REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1945

Mr. SIKES. Mr. Speaker, we have waited many long months for this day, months that meant sacrifice and sorrow to untold thousands. But now victory in Europe is here. I am happy and humbly proud to join in the spirit of this day of rejoicing and of solemn thanksgiving to Almighty God for the success of our arms. We have come a long way since that black day of Pearl Harbor. We're getting on with the job. Germany and Italy have fallen. Only the Japs remain to be crushed, and their time grows short.

We have been battling a giant conflagration which threatened to consume the world. The flames in Europe have been reduced to embers; but those in the Far East still burn fiercely. But it is all the same fire. We are compelled to stamp out the working of an evil doctrine among men.

World War No. 2 is not over. The job is not done. Our momentum will sweep us on to victory, but there must be no pause or relaxation. If our war effort should be permitted to slow down, we will find it many, many times harder to get under way again. We are facing a foe who is desperate and cornered, but a foe who is dangerous to the last.

The men who fight the Japs have no illusions about the toughness of the job ahead. The men who are behind the barbed wire of Jap prison camps have no illusions about the weary, tortured months which still separate them from their homes and their loved ones.

Japan remains a formidable enemy. Whipped in the air and on the sea, deprived of Germany's aid, driven back to its inner bastions, it still retains as allies great oceans and distances. The bulk of the Japanese armies are intact, their soldiers tough and fanatical fighters. And there are millions of them.

Our fighting men will face the task promptly and unflinchingly. They have learned discipline and they know from battle trials that no one can lay down his arms with a dangerous foe still in the field.

Allied home fronts face a greater challenge to keep unwaveringly mobilized behind the fighters. We must renew our willingness to keep working for the war, to forego still longer not only comforts but many things we once thought were necessities. Hardest of all, we must again send our young men into battle.

We need not and shall not feel driven along this last long mile. There is a high courage granted only to free men in a righteous cause that buoys them over deep waters which the minions of brute force must wallow through.

The inspiration of the great works already accomplished will buoy us in days ahead. The words "VE-day" carry a significance which escapes no person, be he friend or foe.

There are many who wish that our great departed Commander in Chief might have witnessed the triumph of this day. But other great triumphs are his, for his is the triumph of immortality. He led the Nation out of the depths, helped it to find itself, then led it on to those heights which have made it invincible in war and an inspiration to the freedom-loving peoples of the world.

With full confidence in the right, and our ability to see and do the right, we shall rally behind the man who has been given us to lead our Nation. We shall stand with and support President Truman in the final task of defeating the transgressor nations. And as certain victory comes nearer, we shall also plan for those great tasks which must come with peace, tasks which may be greater even than those of war.

We shall accept without fear or compromise the task of properly readjusting into useful and happy private life the 15,000,000 men and women who will have been sent to fight the Nation's battles and to win its greatest war. We shall attack without hesitancy the terrific responsibility of providing gainful jobs in private industry for the millions who are now engaged in war production, knowing that in gainful jobs lies the surest basis for prosperity. We shall not again allow this Nation to sink again into the misery of depression.

F. E. P. C.: A Challenge to Democracy

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 15 (legislative day of Monday, April 16), 1945

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the CONGRESSIONAL RECORD an article entitled "F. E. P. C.: A Challenge to Democracy," by Father Richard J. Roche, published in America, April 14.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

F. E. P. C.: A CHALLENGE TO DEMOCRACY

(By Richard J. Roche, O. M. I.)

A steady job which pays wages is a very important thing. Very few people are able to live without using their hands and brains in exchange for money. Without a job, most men may not eat; without a decent job paying relatively decent wages a man cannot live anywhere but in a slum, cannot keep the

ravages of disease from his home, cannot hope to plan for his children any brighter future than the drab, hand-to-mouth existence which is his own.

Most working people, many politicians, and even some businessmen have at last come to the Christian—and Papal—point of view: that since man is bound to lead a good life, and since a decent job with decent pay is at present a practically necessary means to a good life, there is a right to work, to use one's skills for just wages which will support a man, and his family in decent comfort.

Recent years have seen this right extended, at least in theory, to workingmen in general. Yet here in the United States, many of those who have come to recognize the fundamental nature of this right to work are failing—out of a false self-interest—to recognize the fact that this same principle applies to the minority-group working man (notably the Negro) exactly as it applies to all working men, or to working men in general.

It is not necessary to prove that the Negro worker has been the special object of the denial of the right to work. That is known to all of us. It has also become known to us that even a war-induced shortage of white manpower in the face of a most grave international situation could not break down the barriers to any appreciable degree, not only in industry, but also in many branches of government.

QUALIFIED BUT BLACK

As an example in point, there is the case of the large and extremely important Federal agency which, not long after the outbreak of the war, was engaged in most vital war research. The research was impeded by a lack of skilled electrochemists. A young man, a university graduate with specialized knowledge in the very field of research, was sent to the agency by a Federal referral office. The young man was a Negro. But the personnel officer of the agency shook his head sadly when the young man presented himself: "I'm so sorry, but the position has been filled." The Negro chemist left.

He had forgotten, however, to obtain the personnel officer's signature to his admission slip, and discovered that he was not allowed to leave the building. So he went back to get it. The sign on the door read "Enter," so he entered. The personnel officer was talking on the telephone and did not even look up. He was saying: "* * * the best qualifications I have seen in a long, long time. Just what we need. * * * Yes; would have hired him on the spot if he could only erase his color."

Because there was a President's Committee on Fair Employment Practice (F. E. P. C.) the Negro chemist soon obtained the position, and vital war research, halted by a false labor shortage, went forward once more.

There is no doubt that this F. E. P. C. was not set up with the whole-hearted approval of the American people, nor with the united support of the majority (Democratic) party, nor was it even established from an unalloyed sense of justice on the part of the administration. There was a large dose of the pragmatic in its founding: the knowledge that the war effort was being seriously hampered by discrimination plus the effects of pressure brought to bear by interested citizens and civic groups. It was established by an original Executive order (8802) which was not very strong and, in addition, not too clear. Even the amending Executive order (9346) under which the F. E. P. C. now operates is open to interpretation on certain very important points, and still does not give the Committee any powers which are really effective in practice.

If you search the pages of the CONGRESSIONAL RECORD you will discover that last summer, during Senate debate on the F. E. P. C., a Democratic Senator from the South gave vent to some very impassioned phrases in which he characterized the F. E. P. C. as the "most powerful * * * ruthless" of New Deal agencies. Of course this was oratory which would look good to prejudiced voters back in the home State. But was it truth? Examine the Executive orders under which the F. E. P. C. operates. The plain fact of the matter is that the F. E. P. C. cannot seize anything, cannot even stop anything—it can only investigate, judge, attempt to conciliate, and, that failing, finally request the President or some congressionally established agency to do the stopping for it. This is overwhelmingly demonstrated by too many cases to need proof.

But, to put the matter beyond argument, look at what happened to the proven cases of flagrant discrimination involving certain railroads and railway-labor unions. The F. E. P. C., after trying in vain for months to negotiate an adjustment, finally passed the matter on to the President—and the President created the special Stacey committee whose original purpose was to effect a just settlement of the cases. More than a year has passed now since the Stacey committee took over, and some people are beginning to wonder if it is not the intent of the Stacey committee to put the matter on ice forever. That is not good government. Rather than having a "powerful" and "ruthless" F. E. P. C., it seems that we have some business enterprises and some labor unions more powerful than the Federal Government.

F. E. P. C.'S 3-YEAR RECORD

Yet, in the less than 3 years of its effective existence, the F. E. P. C. has, by peaceful negotiation and with the help of some friendly businessmen and some friendly labor unions, adjusted thousands of cases. This has been done in almost all instances without riots, without strikes or publicity.

Most of us agree that "Government by Executive order" is something which is at times necessary, but which is dangerous and can be overdone. We are also agreed that it is the duty of the Congress to pass laws which are just and necessary. Since the right to work, as outlined, is fundamental, and since this right has been flagrantly denied to the Negro (13,000,000 Negroes), it seems that we have here a pressing need for congressional action. In this case a law of Congress would both fulfill a duty of Congress and eliminate the necessity for what has been a very controversial (but much maligned) Executive order.

Shortly before the last national elections the Republican Party announced that it had seen the justice of the minority worker's case and that it had also seen the necessity for speedy and effective congressional action. It pledged itself to such action. Seemingly the administration and its Democratic supporters saw the same facts when the antidiscrimination Executive orders were issued. It is too much to hope, of course, that what is known as the Southern bloc in Congress has also seen the light; but even without the aid of that block it seems that, given forthright good faith on the part of the duly elected representatives of the American people, a very safe majority of Senators and Representatives is committed to the support of just and intelligent legislation designed to insure every worker's right to consideration for employment for which he possesses the skill and qualifications.

NOT JUST A WAR NEED

The present F. E. P. C. is a war agency erected under the war powers of the President. The war was the occasion which necessitated an attempt to give employment opportunity to qualified minority-group workers. But the war was not, is not, and cannot be the basis for the right of the minority worker to decent employment opportunity. War does not change the basic principles of morality and justice. The right of the minority worker existed before the war (although it was not generally recognized), it exists during the war (when it is partially recognized), and it will exist after the war, despite the fact that many may then want to deny it. On the other hand, in the light of all experience with discrimination in employment, it may be said with almost equal certitude that the injustice which existed before the war will flare to even greater intensity after the war—unless the Congress of the United States, which purports to represent all the people and to serve all the people, does something about it now.

There is now before the Congress such legislation. The bill is known officially as S. 101. It aims to establish a permanent F. E. P. C. with rights and obligations outlined in law; actions taken under it will be subject to review by the Federal courts. The bill as it now stands, is a sane, effective, constitutional piece of legislation. If America is to keep faith with the democratic credo it is supposed to have, that bill must pass. If the Congress is to keep faith with its own promises, that bill must pass without important revision or amendment; emaciated substitutes, such as the Taft effort, will not serve to keep congressional honor clean. Support of S. 101 is not action in behalf of minorities alone. It is to the interest of the Nation as a whole.

An Answer to the "Have Nots"

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ira L. Wright, general manager, Black Hawk Consolidated Mines Co.:

[From the Industrial News Review of May 1945]

AN ANSWER TO THE "HAVE NOTS"

(By Ira L. Wright, general manager, Black Hawk Consolidated Mines Co.)

(Reprinted from Mining Year Book, of the Inter-Mountain Region, 1945)

Recently I had the opportunity to visit the largest copper refinery of the Southwest. There, both electrolytic and fire-refined metal is produced and in such huge amount that the visitor is lost in wonder at where it all comes from and where it all goes. The answer to the first question is that it comes from mines right here in the Southwest. Those "have not" alarmists who advocate removal of import duties to permit free entry of foreign metal to conserve "our dwindling supply" would find little here to support their views. Part of the answer to the second question was given by Lieutenant General Somervell in an address on the evening of November 11 to visitors to the International Mining Day celebration held in El Paso, November 10 and 11, when he said the Southwest is furnishing 60 percent of the copper needed in the war effort, nearly 50 percent of the zinc, more than 50 percent of the lead, 50 percent of the silver, and a substantial amount of mercury. He could have mentioned the not inconsiderable amounts of iron, manganese, molybdenum, magnesium, and other metals furnished by the Southwest and the very large production of those highly essential nonmetallic minerals from which potash salts are obtained as well as the important output of fluorspar, pumice, and other useful minerals.

But the "have nots" want the country to believe that this huge production for war

purposes is the last spurt of a dying industry. What are the facts? Surely the great copper mines of the Inter-Mountain region will be able to supply our peacetime requirements for many years to come if the metal price is such as to enable our mines to operate under probably higher labor and supply costs. The great production from Morenci alone can for a long time take up any slack caused by the exhaustion of many smaller mines.

MANY YEARS' SUPPLY

We are told that the zinc mines of the great Tri-State district are nearing exhaustion and only a meager production may be expected when premium metal payments are withdrawn. This may be true but to offset this loss we have large districts in the Inter-Mountain area which are just beginning to be developed. I believe production from the States of Idaho, Colorado, and New Mexico added to that from the eastern and southeastern area can supply the needs of the Nation for many years if the price of the metal is maintained at a level that will allow our mines to pay the relative high labor and supply costs that may reasonably be expected. As an example of a district which, though an old producer of zinc ore, has only since the beginning of World War No. 2 reached a production commensurate with its possibilities, the central district in Grant County is cited.

A noted geologist with long experience in the district makes the guess that the district will produce 100,000,000 pounds of metal annually for 30 years from ore averaging 10 percent zinc. Seven large mining and smelting organizations with both foreign and domestic interests are operating in the district. In 1943 New Mexico output of zinc was second only to that of Idaho among the Western States. And 5 years ago hardly anyone thought of New Mexico as having other than secondary importance as a zinc producer. In predicting the early exhaustion of metals or minerals the prophets often overlook a factor that frequently rises up to confound them. That factor is technological advance. This may be in improved methods of finding ore by geological or geophysical methods, our present knowledge of which is admittedly hazy—well, anyway, inexact—or improved metallurgy of the already known ore deposits. Even back as far as the beginning of this century there was worry over the early exhaustion of our rich copper mines. Then Utah copper came along with a production that has since been nothing but embarrassing to those wise and experienced copper producers who were so certain of its failure when it was being promoted. But its success was only a forerunner of a score or more of successful porphyry or low-grade mines with an aggregate production which makes that of the former high-grade mines seem puny. With the advent of World War No. 1 there was great uncertainty of our ability to wage war with a country on which we had depended for a large part of our chemicals, particularly those having a potash base, since the larger part of the salts of potassium came from Germany. Yet in a few years after the end of that war discoveries of large deposits of potash minerals were made in New Mexico and the operations since built up around these discoveries have freed the Nation of any anxiety in regard to a supply of potash for chemicals or fertilizer.

WHAT A DISCOVERY!

Some of us can remember when aluminum metal was barely more than a laboratory curiosity yet the oxide, alumina, is second only to silica in abundance in the earth's crust. Then Hall developed his method of reducing the metal in the electric furnace and so cheapened the production of the metal that it is today a much-feared competitor of the older known and heavier metals. Similarly the production of magnesium has become commonplace where it was formerly shown to students in chemistry as somewhat of a triumph of a chemist who was able to reduce even a small piece from its oxide. And yet magnesia is one of the more abundant minerals in the earth. Not so many years ago some of us can remember when a prospector usually qualified his description of his lead-silver prospect by stating that there was not enough zinc present to carry a very large penalty at the smelter. Large deposits of zinc and lead were known in the West, but the minerals of these two metals were poison to each other at the smelter and no one knew how to separate them. Flotation was known as a method adapted to the concentration of sulfides but it was not known how to float one sulfide mineral and prevent the other floating at the same time. Then it was discovered that alkaline cyanides would hold down zinc sulfide while lead sulfide floated, and then the zinc could be reactivated with copper sulfate and a valuable concentrate of zinc suitable for the zinc smelter obtained. And what a discovery! Mine owners no longer excused the presence of zinc but bragged about the added value of their mines. At once another Tri-State district, perhaps several, were made ready in the West for development and production.

ONE OF BEST MINERALIZED DISTRICTS

In a less spectacular way but of great value to our western economy has been the discovery and development of our nonmetallic minerals and certain rare metal minerals. Fluorspar, that increasingly valuable mineral in various manufacturing and smelting industries, is being developed in many of our Western States. New and successful methods of concentration have been developed to render formerly valueless deposits capable of contributing important supplies of metallurgical or acid grade to industry. Space does not permit the listing of all the valuable minerals produced in this intermountain area but it is difficult to mention one that does not occur here. Recently I had occasion to show a geologist around a portion of our mineralized area here in southwestern New Mexico. He is a scout for a very large mining organization with headquarters in the East and has prospected in many parts of the world. One who spends most of his life in one mining area is prone to underestimate the potentialities in his own backyard and I was therefore both surprised and gratified to hear this gentleman say that this is one of the best mineralized districts he has ever visited. He had been told that the area had been thoroughly prospected but as he pointed out, a few shallow diggings by the old timers does not constitute thorough prospecting.

LOOK TO THE HOME INDUSTRY

There seems to be more concern among some of our statesmen about the welfare of the mining industry in foreign countries than here at home. While we in the mining industry realize that a flourishing home industry requires a prosperous international trade and to maintain such a trade it is necessary to import as well as export, we do not believe the development of our own natural resources should suffer from the effects of tariffs that too cheaply permit the importation of minerals and metals from abroad. We had a great investment in treatment plants before World War No. 2 and during the war it has been tremendously expanded. With some exceptions we believe we can supply the ore to keep these plants busy. And it is going to be necessary to keep these plants working if we are to provide the employment that a domestic prosperity requires. Give us the markets and this intermountain region will supply the mineral. There is still "gold in them thar hills."

The Moral

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. LUDLOW. Mr. Speaker, an editorial entitled "The Moral" by John W. Hillman, an outstanding journalist of Indianapolis and chief editorial writer of the Indianapolis Times, is attracting unusual attention. The editorial is a fine contribution to sound thinking in this troubled era. The philosophy contained in this editorial points the way to the highlands of permanent peace and away from the law of the jungle, and I wish everybody could read it. I have asked and have obtained permission of the House to insert the editorial in the CONGRESSIONAL RECORD. It is as follows:

In the wave of horror and revulsion that has followed the publication of pictures and descriptions of the Nazi death camps, perhaps some of us have lost sight of the moral underlying these demonstrations of bestiality.

We are not so far removed, culturally, from the law of "an eye for an eye, and a tooth for a tooth." That is proved anew by the wave of letters proposing that similar punishments be meted out to Nazi criminals—suggestions that they be exhibited as beasts in a cage, or tortured as were their helpless victims.

But such is not the way of civilized people, however outraged. We can not afford to stoop to the level of those we fought or, in defeat, they will have destroyed us as they could not in battle. Rather we should learn from their example. And there is an important lesson for all of us in those heaps of broken bodies, and in the calloused souls of those who, by their cruelty, have shown how little ground humanity has won in its struggle to rise from the slime of the past.

WELL AND CLEARLY STATED

That lesson is well and clearly stated in a thoughtful editorial by Sgt. H. F. Butler in Top Billings, the weekly newspaper published at Billings general hospital.

"If this writer were the praying sort," writes Sergeant Butler in the current issue, "he would pray not merely for the souls of the miserable victims of Nazi concentration camps, not merely also for the hopelessly diseased souls of the criminally insane keepers, but still more for the souls of all humanity. For what the Americans discovered at Belsen and Buchenwald * * * and what the Russians earlier discovered at Maidanek represents the possibilities latent in all people.

"Cruelty is not localized, nor is it a Nazi or Jap monopoly. Popular interest in bloodshed may take various forms, from enthusiasm over bullfighting to enthusiasm over lynchings, from absorption in murder mysteries to the irresistible impulse to gape at the mangled victims of an automobile accident. The religious and moral principles of a well-ordered society impose restraints which keep all but the criminally insane from yielding to obscure impulses to shed blood or inflict suffering.

"'DESTROYED AS MUCH AS THEY COULD'

"But the Nazis destroyed as much as they could of the religious and moral influences that stood in their way. They legalized the hunting down and torturing of their religious and political opponents, and thus

made possible the eventual horrors of Maidanek, Belsen, Buchenwald, and other murder factories.

"Let us not feel too smug and superior. The rest of the world knew, even before the Nazis seized power in 1933, what the doctrines of Mein Kampf would almost certainly produce. Everybody could predict it, but nobody did anything important about it.

"The lesson to be learned from Belsen, Buchenwald, Maidanek is not just the commonplace conclusion that the Nazis are fiends. The lesson is rather that those horrible places represent the logical end of violence and aggressiveness. There is what can happen to any society that throws its restraints overboard. With a multitude of lynchings and bloody labor battles to our past discredit, we Americans must be careful to observe the law and keep the peace in what may turn out to be our most difficult years, the postwar era."

THOSE PICTURES REMIND US

Sergeant Butler is obviously a man who knows what he is fighting for. Just as obviously, he knows what we must fight against—not only now but in the years ahead. And he knows how we must fight. His are words to remember lest we, like the Pharisees, praise God that we are not like others, forgetting that we, too, are clay and that only good will and tolerance and humanity stand between us and the spawn of the jungle. Those pictures of the torture chambers, those shriveled skeletons of living death, those piles of bones, and rotting flesh remind us.

It could not happen here?

Let us not be too sure.

It cannot happen—if we learn well the lesson of Buchenwald and Maidanek and Dachau, if we remember that they are but the last way station on the road of violence and intolerance—the road that leads to destruction.

We must not let it happen here.

The United States Chamber of Commerce Committee on Agriculture Study the Trade Agreements Law

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. CURTIS. Mr. Speaker, the Doughton bill to extend the trade agreements law for a period of 3 years with permission to further reduce tariffs by an additional 50 percent may come before the House soon.

The greater part of the agreements already entered into are with nonindustrial countries whose exports consist of agricultural products and raw materials. The relation of exports and imports of agricultural products to American agriculture should be given very careful study.

The United States Chamber of Commerce have what they call a department committee for agriculture. The chairman is Mr. Elmer H. Sexauer. They made a report on May 3, 4, 5, 1945, entitled "Agricultural Imports and Exports in Relation to American Agriculture." This report is a very thorough and comprehensive one. I wish to quote certain excerpts therefrom. Speaking of agriculture they say:

Even if large-scale exports of these products should be possible, the domestic agricultural industry must continue to be largely dependent on the domestic demand resulting from a high level of productivity and employment in other industries. * * * during the course of World War No. 2 the total crop acreage in the United States has been increased from approximately 342,000,000 in 1939 to 364,000,000 acres in 1944, and a further expansion may occur in 1945. The 1944 increase over the 1939 acreage is equivalent to 6½ percent, but the volume of production has increased 32 percent.

Concerning the foreign outlets for our agricultural products this United States Chamber of Commerce committee says:

The possibility of maintaining a large volume of agricultural exports for any considerable period after the war is clouded by conditions both at home and abroad. Abroad there is a pronounced tendency for the production of the major agricultural products to be increased. This is associated with the fact that many countries, which in the past have been economically backward, are rapidly expanding their production both for home consumption and for export. This is being done as a means of increasing the national income and raising the standard of living of the peoples concerned. It is a regrettable fact which may be noted in passing that exports of agricultural products from the United States may compete with exports from these other countries and to some degree hinder their economic developments, which from both humanitarian and economic considerations, may be quite undesirable.

This committee stresses the importance of the American market for the American farmer. They say:

Many persons, both within and without the agricultural industry, are very doubtful that an American standard of living can be maintained among farmers in the United States if price levels for agricultural products decline to levels at which they will be competitive with products produced under conditions existing in foreign countries.

* * * * *

Because of the conditions, both at home and abroad, which have been described, the agricultural industry of the United States is peculiarly interested in the maintenance of all those conditions which will contribute to the largest practicable domestic market for its products.

This committee of the United States Chamber of Commerce concedes the desirability of not disturbing noncompetitive imports, but they make a very careful analysis of the effect upon our whole economy of the competitive imports. I again quote from their report:

The competitive imports are similar to the products of the United States. This class of imports contributes to the economic well-being of the country to the extent that they bring about a better balance of supply and demand. This may occur when the imports supplement an adequate domestic supply. If, however, the imports displace a portion of the domestic supply of any product because the demand does not increase as imports increase, the effects may be far-reaching. The effects to be anticipated from such a displacement are numerous and varied. First, outlets for domestic production will be curtailed. Second, the price of the entire domestic supply will be governed in large measure by the price at which imports are available. Third, the buying power of domestic producers subject to foreign competition will be curtailed to the extent that their incomes are reduced by lower price levels and curtailed outlets. Fourth, the expanded imports will shift buying power from domestic-producers groups to foreign producers in proportion to the volume and price of the competitve imports, while no assurance will be given as to the particular domestic-producer groups which will derive a benefit from this shift in buying power. Fifth, the shifts to foreign sources of supply will lead to displacement of labor and capital of domestic producers until such time as their labor and capital can be utilized in the production of goods acceptable to foreign markets.

Because of the lower price level at which it is presumed that the foreign supply may be obtained, it is obvious that the buying power generated by a given volume of imports will be smaller than that resulting from the purchase of corresponding amounts from domestic sources. Accordingly, the amount of labor and capital in nonagricultural industries required to supply the new foreign demand thus created will not be so large as that formerly required, with the result that, while certain nonagricultural industries may be benefited by lower costs of raw materials, other industries may suffer from the shift in sources of supply and in the volume of demand for their products.

In the agricultural industry from which markets and the resulting buying power have been shifted, there will have to be a shift of workers and capital to other forms of production and quite possibly to nonagricultural industries. Such shifts on the part of the agricultural industry are especially difficult, expensive, and slow.

Furthermore, the very conditions which seem to make an expansion of the export trade desirable, particularly as they relate to the labor supply, will operate to make a migration of labor from agriculture to other industries difficult and uneconomic.

If the farmers of America are to have a standard of living equal to our industrial workers, who are protected by wage and hour laws and other legislation, they must be protected in the American market and they must have every opportunity to find new uses for their products. One of these new uses is the production of synthetic rubber made from alcohol made from grain of this the United States Chamber of Commerce committee on agriculture says:

To produce from grain alone a volume of synthetic rubber equivalent in amount to normal domestic requirements would require about 250,000,000 bushels of wheat, equal to the production of about 22,000,000 acres. Improved alcohol production methods might reduce this somewhat, but, after making due allowance for these factors, the amounts are sufficient to indicate that the production of rubber alone could utilize all the surplus wheat acreage and raise domestic consumption to around a billion bushels a year.

The detailed analysis to which the United States Chamber of Commerce Committee for Agriculture has made in reference to the problems of the farmer is quite revealing. They point out the vast imports into this country of vegetable oils. They have translated this into possible opportunity for the American farmer, and again I quote the report:

The major competition with domestic oils is furnished by coconut and palm oils and to a lesser extent by babassu and palm kernel oils. All are hard oils and all but palm oil are quick lathering, a characteristic which makes them highly desired as constituents

for high quality soaps. In 1938 the imports of these four oils amounted to a billion pounds, of which 470,000,000 were used in soap.

The amount of these four oils used in other products than soap in 1938 was equivalent to the production of about 4,000,000 acres of soybeans. The amount used in soap was equivalent to the fat production of 3,000,000 cattle, and the acreage required for soap alone to 16,850,000 acres. If livestock and meats were produced and consumed in liberal amounts, the supply of domestic animal fats would be adequate to make the substitution.

Linseed oil, tung oil, and perilla oil are the principal drying oils and are chiefly used in paints and varnishes. These three oils were imported to the amount of 430,000,000 pounds in 1938. Linseed oil can be produced in the United States but the flax area in the past has been small in relation to the amount of oil used. In 1938, flax production was a little over 8,000,000 bushels. This rose to 52,000,000 bushels in 1943. This latter amount is sufficient to produce nearly a billion pounds of oil. The 1944 production was 24,000,000 bushels. There is an import duty of 65 cents a bushel on flaxseed, but the large amount of seed imports, chiefly from Argentina, indicates that this tariff is not sufficient to encourage the domestic industry.

* * * * *

The significance of these imports of the three major drying oils is indicated by the fact that they are equivalent in volume to the linseed oil which might be produced from about 3,875,000 acres in the United States.

Imports of cottonseed, peanut, soybean, and corn oil are of particular interest because of the large domestic production.

These imports supplied a portion of the domestic demand and were equivalent to the production of over 800,000 acres.

Obviously these amounts would go far to offset the estimated reduction of 25,000,000 acres which many believe will be necessary after the war. As the acreage of soybeans, peanuts, and flax in 1944 was 10,676,000 acres above the 1938 level it is evident that the producing capacity of the country is ample to supply the needed oils and that if domestic consumption were supplied from domestic sources the additional acreage would utilize practically all and possibly much more than is now devoted to the production of oil seed other than cottonseed.

In reference to animal fats and oils the committee says:

These fats supplement the domestic supply which is a byproduct of the meat industry. The domestic supply is largely determined by the consumption of domestically produced meats. If the beef and pork imported in 1938 had been produced domestically, the supply of animal fats would have been increased by about 61,000,000 pounds and thus would have reduced the needed imports to about 32,000,000 pounds. A more liberal consumption of domestic meats will reduce the need for fat imports, except possibly that of cod oils and cod liver oil.

The United States Chamber of Commerce committee supports the contention of the beef producers by saying:

In comparison with the domestic production of beef cattle, the total number imported is not large, but by reason of the fact that the imported animals compete on the domestic market on a par with animals produced in this country and constitute a part of the total supply, they introduce an adverse price influence on the entire domestic production which would not otherwise be present.

* * * * *

Substantial amounts of fresh beef were received from Canada and New Zealand. Nearly all the imported pork came from Canada and Lithuania. Corned, canned, and cured beef were imported almost entirely from Argentina, Brazil, Paraguay, and Uruguay. Cured ham and bacon were imported from 29 countries, nearly 75 percent of this ham and bacon, as well as more than half the salted pork having come from Poland. Sausage casings have come from 37 countries, half of them from Australia, New Zealand, and Morocco. These meat imports are equivalent to a volume of domestic meat which would require about 4,000,000 acres to produce.

As production costs in the domestic livestock industry are largely dependent on wage rates and the amount of capital invested, large reductions are not possible without serious impairment of living standards and the wiping out of capital values in agriculture.

In reference to butter, the agricultural committee of the United States Chamber of Commerce says:

Butter imports were larger than usual in 1938 because of a high price. About two-thirds was from New Zealand. The remainder came from many countries, including those in central and eastern Europe. The amount imported from all sources was equal to the production of about 380,000 acres.

Supply and demand for butter in the United States are generally so nicely balanced that comparatively small imports create very definite depressing effects on prices of the entire domestic supply.

Much of the time the tariff of 14 cents a pound is not fully effective, but it does operate to prevent the domestic price from falling to the level of other countries which could not supply the entire requirements of so large a market as the United States, but which could have a depressing influence on the market price.

In reference to poultry and poultry products, this committee said:

In 1938 the greater part of the commercial imports of turkeys came from Argentina and Uruguay. Chickens and guineas came from a larger number of countries, including Japan, Hungary, Poland, and the United Kingdom.

Birds and poultry, prepared and preserved, came from still more numerous sources, including China, Poland, France, Japan, and 10 other countries. It is possible that in some cases the source named was not the original source.

Most of the eggs and egg products were imported from China. It is quite apparent that with the egg-producing capacity and egg-drying capacity of the United States, there will be no future need for the domestic supply to be supplemented by imports.

It is estimated that about 66,000 acres would be required to produce the equivalent of these imports.

Grain production in the United States in reference to imports was analyzed by this United States Chamber of Commerce committee as follows:

At times the importation of limited amounts of hard wheat may be desirable for mixing with softer domestic wheats in order to improve the quality of flour and there is some deficiency of malting barley. It is possible, however, that the availability of barley malt in Canada, Czechoslovakia, Hungary, and Belgium, with a duty of only 4 cents a pound may have had something to do with causing barley production in the United States to be insufficient to supply the demand.

Many of the items in this grain group are imported in such small amounts as to suggest that they are odd lots. However, most of these contribute a bit to an oversupply already tending to accumulate from domestic production. In the aggregate they are equivalent to the production from over 500,000 acres of farm land in the United States.

Cotton has for several years been a problem crop. In the hearings before the Ways and Means Committee a showing was made that Brazil has become the fourth largest producer. They undersell us in the world market in spite of our export subsidy. If the Doughton bill, as written, is enacted into law and the present embargo on cotton is removed, cotton growers will soon become high-tariff advocates, because Brazil with its new merchant fleet would soon be providing New England textile mills with Brazilian cotton. The United States Chamber of Commerce committee on agriculture makes these observations:

The imports of raw cotton in 1938 were equivalent to 184,000 bales. Of these, about 145,000 bales were under 1⅛-inch staple. Of this amount, about half came from India and China, and most of the remainder from Mexico. The equivalent of about 39,000 bales was imported from Egypt, and 4,500 from Russia.

These imports combined were equivalent to the production of about 370,000 acres of domestic cotton.

Jute is used in the manufacture of coarse bagging where its comparative cheapness enables it to displace cotton. The imports in 1938 were equal to approximately 190,000 bales of cotton, and on the basis of current yields, to the production from 585,000 acres of cotton.

Other vegetable fibers imported include sisal, manila or abaca, kapok, itsle or Tampico, orin vegetal, coir, as well as several others in small quantities. These fibers have distinctive characteristics so that cotton would not in all respects be a satisfactory substitute, but it is of interest to note that a similar weight of cotton would be equivalent to the production of about 1,335,000 acres.

Wool was commented upon by this committee in their report as follows:

The amounts of the competitive type wools which are imported vary widely from year to year. In the 1938–39 year the amount imported was approximately 66,000,000 pounds. Two years earlier it was 181,000,000 pounds. These amounts are equivalent to the average production of 8,000,000 and 22,000,000 sheep, respectively, in the United States.

Starch is imported into the United States in great quantities. The agricultural committee of the United States Chamber of Commerce says:

To produce in the United States an amount of starches equivalent to that imported in 1938 would require about 325,000 acres of corn. It has been estimated that the importation of these products valued at $4,500,000 displaced farm products and opportunities for the employment of capital and labor in transportation and processing industries to the extent of $11,000,000.

Import disadvantages for American agriculture were summarized by the United States Chamber of Commerce committee as follows:

In view of the prevalent demand for higher living standards among agricultural producers it is a question whether production will continue for export at its former volume if export prices are maintained at levels at which foreign producers appear willing to maintain their production.

A second feature is that the export trade does not necessarily or even usually result in a direct exchange of goods between two groups of producers or even two regions. For example, the export of oranges to Canada may be paid for by imports of Canadian beef cattle or Canadian bacon into midwestern or eastern markets where these products come into competition with livestock producers who enjoyed no apparent benefit from the export of the oranges.

Likewise the export of grain to Europe may be paid for by importations of vegetable oils from the Netherlands Indies which compete with beef tallow, lard, and soybeans from the Corn Belt and with cottonseed oil and peanut oil from the South.

Because of these conditions there is an open question as to whether groups producing primarily for the domestic market and in volume approximately sufficient for that market will continue to countenance the competition on the domestic market of the imports resulting from export trade in agricultural products.

Congress

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to call the attention of the Members of Congress to a series of articles by N. E. A. Washington Correspondent Peter Edson concerning the establishment of our joint committee on the organization of the Congress, in which he stresses the need for improvements to strengthen Congress. The following editorials should be of particular interest to each Member:

CONGRESSIONAL SELF-REFORM

(By Peter Edson)

WASHINGTON, D. C.—The Seventy-ninth Congress will probably have before it this year no domestic issue of greater importance than its own reform.

The House has approved a proposal by Congressman A. S. (MIKE) MONRONEY of Oklahoma, calling for a joint committee of six Senators and six Representatives to study congressional reorganization. Senate confirmation is expected and the new joint committee is expected to organize a staff and make its first report by April 1.

Every one of the more than 500 Congressmen has a few ideas on how Congress could be "streamlined" but that is only the beginning. Books have been written about it and magazine articles by the score. Private organizations like American Political Science Association and National Planning Association have made independent studies.

A FEW SUGGESTIONS

Suggestions range all the way from removing the snuffbox which by Senate rule must be filled daily with fresh sneezes, to removing many of the Congressmen themselves, making the Congress a smaller body, paying the Members more money, giving them pensions to boot, and providing them with more help at higher pay so they can do more work and keep a better check on the rest of the Government. The problem is going to be one of getting any kind of agreement on what, if any, changes should be made, boiling down all the proposed reforms into a program acceptable to practical politicians jealous of their historical prerogatives.

That being the case, many of the suggested alterations simply aren't going to get any place at all. Many of the things which seem the silliest—like the Senate snuffbox and the right to filibuster—are a part of now-traditional rules which will be changed only over some solons' dead bodies. Proof of that is the fact that although several hundred bills and resolutions to change the structure of Congress have been introduced by Congressmen in the last 50 years—there were 50 reform bills offered in the Seventy-eighth Congress—the last reorganization was in 1921.

As Governor Dewey might say, "That's why it's time for a change," but as Governor Dewey found out, there won't be so many changes made.

A straw in the wind is provided by the recent House vote to reconstitute the Dies Committee to Investigate Un-American Activities, making it a permanent instead of a temporary committee. Senator ROBERT M. LA FOLLETTE of Wisconsin introduced a bill to cut down the number of Senate committees so as to streamline and simplify the work of the Members. The need for something of this kind is generally recognized. Yet on Mississippi Congressman JOHN E. RANKIN'S slick move to keep the un-American committee going, the House voted to add one more permanent committee instead of simplifying by subtraction.

MORE POWER URGED

This whole business of congressional reform in its broader aspects is hinged on what you want your Congress to do. That's why you find suggestions for giving Congressmen less to do alongside suggestions that Congress should do more. Part of the agitation in the latter direction comes from Congressmen and others who feel that the executive branch of the Government has usurped many of the legislative functions and that Congress should regain lost powers. Reformers who think this way would therefore build up a big congressional staff, give it police powers over the executive departments and further curb the President himself.

Counter to this is the sounder belief that reforms of Congress should be aimed at taking it further out of the executive business and keeping it what the founding fathers intended to be—a law-making and a policy-making group, leaving administration and execution of its orders to others.

CONGRESS NEEDS MORE HELP

(By Peter Edson)

WASHINGTON, D. C.—There were 8,852 bills dumped in the legislative hopper in the Seventy-eighth Congress, January 1942 to December 1944. That is an average of more than 16 bills per Congressman.

Only about 1 out of 9 of these bills, or 989 of them, became laws. If this average of 1 public and 1 private bill per Congressman in 2 years makes you wonder what the solons do with their spare time, it gives a false impression and doesn't begin to tell the story.

The sheer bulk of proposed measures which must be studied so that Congressmen will know which bills to vote for and which to vote against is staggering in itself, and this brings up one of the major reforms which has been suggested for modernizing Congress—increasing and improving its staff. Congressmen claim they need more and better and better-paid help to do their jobs.

In the closing days of the last session, Congressmen voted themselves an extra clerk to help them take care of the business of their districts and States. This will give each Representative $9,500 a year to hire not more than four clerks. Each Senator may hire up to six clerks or seven if the Senator comes from a State of more than 3,000,000 inhabitants. Pay of these clerks is from $1,500 to $4,500, and averages less than $2,500.

CONGRESS HAS STAFF OF 300

In addition to these personal assistants, the congressional staff consists principally of clerks and counsels assigned to the 81 standing congressional committees. They number about 300 in all—200 for the Senate, 100 for the House, and with few exceptions they are limited to tops of $3,900 in the Senate, $3,300 in the House. Many congressional clerks are relatives, resulting in nepotism, which is considered bad.

To help Congressmen draft laws, there is an office of legislative counsel consisting of four lawyers, one assistant, and two clerks for each Chamber. Total cost for this service is $83,000 a year.

The Joint Committee on Internal Revenue has a full time professional staff of 15 headed by an $8,000-a-year tax expert, but aside from this the only research staff available to Congressmen is in the 66-employee legislative reference service of the Library of Congress. In all, Congress has less than 2,500 employees including pages, messengers, and janitors whose combined pay is less than $6,000,000 a year.

Compare these figures with the staffing in the executive departments. As Congressman MIKE MONRONEY, leader of the congressional reformers, has pointed out, the Solicitor's Office in the Department of Agriculture alone has 600 employees. Treasury and Federal Reserve Board alone have 30 or 40 banking specialists at $5,000 a year. The entire cost of the legislative arm of the Government, including Congressmen's $10,000-a-year salary, is only fifteen million—less then half of what it costs to run the Bureau of Indian Affairs.

DEPARTMENT STAFF PROPOSED

In short, Congressmen interested in modernizing their honorable Assembly feel that if it has been a bit backward and dumbish at times it may be because it was not properly staffed to do a good job. In a way, this may be Congress's own fault. It appropriates the money for the executive branch, and for itself.

It has also been proposed that Congress build up a permanent staff—removed from any temptation of patronage appointments—to keep constant check on the executive departments of the Government and see that they live up to and within the mandates of Congress.

Against both of these reforms it has been argued that they would merely duplicate work already done by the executive branch of the Government and so would merely add a congressional bureaucracy to that of the administrative agencies.

Before streamlining the staff of Congress it is argued that the entire committee structure of the Congress must be reorganized. This will be considered in the succeeding article.

CONGRESS AND JOHN Q. PUBLIC

(By Peter Edson)

WASHINGTON, D. C.—Of all the proposed reforms of Congress, those which would seek to change the relationships between Congress and the people are most controversial.

Basis for the belief that some change is needed is the fact that Congressmen have

to run too many errands and do too many petty chores for their constituents. This is supposed to keep the Congressmen so busy they don't have time to legislate in the national interest. Yet if all these tasks, like helping their people get jobs, pensions, war contracts, or settlement of claims against the Government, were taken away from Congressmen and given to some other agency, there is possible danger that the whole system of representative government would be weakened. After all, Congressmen are elected to represent the people of their district in Washington and look out for their interests. If Congressmen don't look after the interests of their constituents, they don't get reelected. Most of the would-be reformers of Congress forget that.

Yet it is seriously proposed that all routine requests for information sent by voters to their Congressmen be turned over to an Inquiries Service, set up in the Library of Congress. That might ruin one of the Congressman's best contacts with his people.

CLAIMS COMMITTEE SWAMPED

Since the Federal Government can't be sued without its consent, anyone with a claim against the Government must have his Congressman introduce a private bill for his relief. These private bills make up about half the number of acts passed by Congress each session. Some are reintroduced year after year. The Claims Committee, which handles them, is usually swamped. To remedy this situation it is proposed that the Claims Committee be abolished and this work turned over to the Claims Division in the Department of Justice for all claims of under $5,000. For bigger claims, relief could be sought through the United States Court of Claims.

To relieve Representatives of the necessity of running for office so frequently that it amounts to all the time, it has been proposed that their terms of office be lengthened from 2 to 6 years, like Senators. It would take a constitutional amendment to put this over, and the chances are slim. It can be argued that forcing Representatives to run for office every other year makes them watch their step and behave better, keep in closer touch with their districts than if they were cut loose for 6-year terms.

Other ideas for improving the relations between Congress and the people range all the way from having Congress hire a press agent, to doing a much better editing job on the daily CONGRESSIONAL RECORD and putting Congress on the radio.

CONGRESS ON THE AIR

This last is particularly intriguing. To watch visitors come into the galleries, linger a few moments, then leave in disgust gives a faint idea of how fast listeners might spin the dial if they happened to tune in on the congressional frequency. At the other end of the scale, there is the thought of how congressional spellbinders might be tempted to make political speeches for home consumption, if they knew they were on the air and it wasn't costing them anything.

The whole question of improving relations between Congress and the people really boils down to a problem for the electorate, not to a problem for Congress. It is the matter of choosing better Congressmen. It has been proved time and again that most people don't know who their Congressman is. Too few good men want to make public service a career, considering the risks too great.

There are many able men in Congress in spite of this situation, and it is the opinion of some of them that Congress could be made much more efficient, even under its own antiquated rules and procedures, if only the voters would elect better Congressmen. And that puts the responsibility for the primary congressional reform right where it belongs, on the people who cast the ballots.

MODERNIZATION IS NOT EASY

(By Peter Edson)

WASHINGTON, D. C.—The 122 standing and special committees of the United States Senate and House of Representatives pose one of the toughest problems which must be considered in studying the modernization of Congress.

In 1927 the number of congressional committees was reduced from 55 to 42, principally by merging into 2 committees the 11 which had previously considered expenditures for the executive departments. Since the early nineteenth century, however, the number of committees has grown like twin Topsys. In the last session of Congress there were 47 standing and 8 special committees in the House, 33 standing and 12 special committees in the Senate, 4 joint committees, 18 commissions and boards.

Each of these committees is a little ministry in itself, with powers and privileges duly appreciated by the members thereof, who will see the merging or liquidation of their group effected only over their political dead bodies.

BUT THE REFORMATION MUST COME

Yet, reform of the committee system must come if Congress is to be made into a more efficient organization. So much of the work of Congress has to be done in committees, yet the Congressmen simply haven't the time to attend all the meetings of all the committees of which they are members. No Senator serves on less than five committees, the House average is two, membership on big committees being exclusive.

It has been estimated that of the 122 committees in Congress only 27 are really important—16 in the House and 11 in the Senate. Many of the committees duplicate each other.

Creation of more joint committees has been proposed as a remedy for this. And instead of having one committee in Congress to match every department or activity in the executive departments, it has been suggested that there be created only 9 or 10 policy committees, each to deal with 1 broad field of public affairs.

All such oversimplification might in the end defeat itself. A few big committees might be much more cumbersome than a lot of little ones. And if all the work must be done anyhow, in the end there may be 122 or even more subcommittees carrying on just as usual under a purely paper reorganization.

SENIORITY RULE CALLED VICIOUS

Far more vicious than the committee system itself, perhaps, is the unwritten seniority rule by which a member once assigned to a committee may stay with that committee during his career, advancing in rank in his committee as he is reelected term after term until, being the oldest in point of service he is eligible to become its chairman regardless of his ability.

Modification of congressional custom to permit the election of chairmen is opposed, however, on the ground that it would encourage log rolling and deals among Congressmen for votes on coveted chairmanships. One compromise to meet this objection would be to limit the number of years a Congressman might hold a chairmanship.

Whatever reform of the congressional committee system may be decided upon and recommended to Congress, there is a still further reform suggested by Roland Young, former chief clerk of the Senate Foreign Relations Committee, to create a legislative cabinet in each House, made up of the chairmen of the major committees. The function of this legislative cabinet would be to work more closely with the President, create a coordinated legislative program in each session of the Congress and then work for the passage of that program. Such a legislative cabinet would replace the present party leadership of Congress.

CONGRESSIONAL REORGANIZATION

(By Peter Edson)

WASHINGTON, D. C.—Every idea for reorganizing Congress, regardless of its desirability, meets with some more or less valid objection.

There is in Congress itself considerable sentiment to change the procedure which requires two-thirds Senate approval for any international treaty negotiated by the President. This rule is considered bad for three reasons. First, 33 isolationist Members of the Senate might block a broad international post-war security plan. Second, the House is cut out of any participation. Third, the President is driven to making executive agreements with foreign countries, not requiring congressional approval when it was the intent of the founding fathers that the Senate should participate in making foreign policy and treaties.

Letting the full Congress ratify or reject all international deals by simple majority vote is proposed as a remedy for these evils. Yet students of Congress point out that the House of Representatives is the most unpredictable thing in Government, subject to strange moods and temperamental acts which at times defy reason. Recent action of the House in bringing to life the committee formerly headed by Martin Dies, after everyone thought it was safely dead and buried, is cited as an example of this whimsy. And if foreign relations are to be subjected to such irresponsible actions as this, say the experts in international affairs, the country would be letting itself in on many strange upsets should the Congress be reformed in this manner.

SUFFRAGE FOR D. C. CITIZENS

Another desirable reform of Congress is the proposal that the governing of the District of Columbia be taken away from Congress and given back to the people who are resident in the Capital, along with the right to vote. Granting suffrage to the D. C. inhabitants is a long and involved issue in itself. But the necessity for Congress to turn itself into a city council every so often and worry about local schools, sewers, garbage collection, and such matters is unquestionably a handicap to Congress, besides which it doesn't exactly make Washington the best governed city in the world.

Changing the rules of Congress to remove a few traditional though questionable procedures presents a problem of extreme difficulty, and the investigating committee will be restricted in this effort. However, there are just grounds for criticism of the Senate's rule which permits unlimited debate on any subject and makes it possible for one Senator to hold the floor until he has talked to death a bill to which he alone may be opposed. A strengthened cloture rule of some kind, limiting debate on any one issue, would correct that procedure. Yet it is pointed out that no essential piece of legislation has ever been defeated by a filibuster. And the right to filibuster is held up as a safeguard for the minority's rights in a democracy.

UNDESIRABLE RIDERS

Another procedural trick in which the Senate sometimes indulges, though House rules limit the practice, is the passing of riders to pending legislation. The rider

may incorporate the pet project of some one Senator or one congressional bloc. The rider may have no bearing on the legislation to which it is attached. Yet because the main bill is desirable, the less-desirable rider sometimes gets adopted along with it, the President preferring to save the bad with the good than to let the good die with the bad.

Creating some system of party responsibility which would make individual members of a political party live up to the principles of a party platform has been advanced by some students of government. But again that may lead to a political dictatorship of the most vicious sort, and it involves a limit to freedom of individual thought and action.

Opponents of any kind of congressional reform have their points. The present system has worked for 160 years, giving the American people what they believe is the best government in the world, for all its faults. No change is now proposed in the form of American Government, but limited strengthening of Congress through modification of some of its procedures to meet changing times and conditions may be needed. Radical reform is not.

International Office of Education

REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. BALDWIN of New York. Mr. Speaker, the item I have asked consent to insert in the RECORD today deals with a subject about which we shall soon have legislation to consider.

I have reference to the establishment of a national bureau of education.

It is my contention and the contention of a great many Americans that it does not suffice to feed children and adults with good democratic food for their stomachs if we do not provide some means of getting to them good democratic ideas for their minds. We know what has happened in Europe and the tragedy involved; we also know that many people in this country have come from Europe, including Germans, who through American education, good democratic education, have become oustanding citizens.

I hope when that legislation comes before this House the House will give it serious consideration.

The following is from a report of the committee on education of the New York State Federation of Labor, August 1944:

The interest of labor in the extension of educational opportunity and in the need for education for world understanding and peaceful international relationships has long been expressed. Labor has taken a leading role in every effort to raise the standards of education and to help bring about a genuine understanding among peoples, nations, and races the world over.

At its sixty-third annual convention in October of 1943 the American Federation of Labor expressed itself vigorously in behalf of a world educational agency.

We wholeheartedly support that decision and call upon our constituent bodies to take an active part in securing public awareness of and governmental support for the establishment of an international office for education.

The interests of progressive labor in such a permanent agency are self-evident. There is not only a universal relationship between low standards of education and substandard working conditions, there is also our basic reliance upon the peaceful institutions of world collaboration, of which education for peace and understanding among peoples is the foundation. We recognize the action already taken by our Government in collaboration with others of the United Nations for programs of educational rehabilitation and reconstruction. We regard these steps as of temporary and transient value only, because incapable of themselves in meeting fully the world need for education in which labor has so vital a stake.

Only a permanent agency having the full support of Government and participated in by representatives of all basic groups can attain the necessary objectives.

We recommend that our delegates work with their own members and with other like-minded groups toward the establishment of such an office and in support of congressional action toward that desired end.

The War in the Pacific

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. GAVIN. Mr. Speaker, I might say to the Membership of the House that I was gratified with the statement of Prime Minister Churchill that Japan with all her treachery and greed remains unsubdued. That the injuries she has inflicted against Great Britain, the United States and other countries and her detestable cruelties call for justice and retribution. We must now, he said, devote all our strength and resources to the completion of our task both at home and abroad. This statement from the British Prime Minister indicates to me that the British Empire will go all out with the necessary support to the United States to bring total victory in the South Pacific.

We can now await anxiously the utterances of the Prime Ministers of the British Dominions as to their positions—to determine what policies and support we are to receive from their countries in the South Pacific warfare. This is a great opportunity to create good will to bring closer unity and solidarity on the North American Continent.

We have heard a lot about the "good neighbor" policy and "hands across the border" slogans, but recently we heard loudly proclaimed over the radio that no Canadian troops would be transferred to the South Pacific unless they volunteered for South Pacific service. We also heard that all future inductions will be stopped in Canada. So, it will be interesting to watch the course of future events from our Canadian neighbor to ascertain what help we are to receive in this all-out effort for total victory to erase the Jap menace from the face of the earth. It is time for plain speaking.

Certainly this war in the South Pacific is not just our war. Britain and her dominions have as much at stake, and far more, than we have in oil, rubber, spices, and minerals. And the question is what are we to gain in fighting to recover and return these possessions to our allies?

It would bolster the American morale if our Canadian brothers would loudly proclaim to the world that they expect to see the South Pacific warfare through, with us, to the bitter end. I feel if the great majority of Canadian people had their way, that is exactly what would happen. So we anxiously await a proclamation from the Dominion of Canada as to the support we are going to receive in the South Pacific war effort.

Statement on Behalf of American Paper and Pulp Association

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made before the Ways and Means Committee:

I am appearing before your committee today as the representative of the American Paper and Pulp Association, the central organization of the United States paper industry, including manufacturers of every grade of paper manufactured in this country.

The United States paper industry will be adversely affected—probably to a greater extent than any other major American industry—by further reduction of rates of duty.

The United States paper industry is peculiarly sensitive to foreign competition, for it is unique among American industries in being forced to compete with foreign nations whose production methods and abilities are identical with ours, but whose wage rates are substantially lower than the wage rates of American workers in comparable jobs.

Broadly speaking, United States paper mills have no advantage by reason of mass production or improved techniques over mills abroad. This is particularly the case in the truly mass grades such as newsprint, book, sulfite writing, kraft, and so forth. This fact may be startling at first blush and its implications difficult to appreciate because of the general conception which nearly everyone has of American industry as being much more geared to straight-line and mass production than that of other countries; but it is a fact, and one which must be thoroughly understood if the economics of paper tariffs are to be properly appraised.

The automobile industry seems to have become in nearly everyone's mind the typical example of all American industry and when contrasted with foreign production of automobiles, the typical example of superior ability of Americans to manufacture. In that industry (in this country) we have straight-

line assembly in great volume with a tremendous number and variety of automatic single and multipurpose tools and a very high production per man per day. In other countries the process of automobile manufacture ranges from hand production of individual machines to what appears to us to be rudimentary assembly-line technique applied to relatively small volume with no tooling at all comparable to ours and the result is that production per man per day is very low. Inevitably in the United States automobiles can be made much cheaper than in any other country even though higher wages are paid in the United States.

This situation may be typical of many or possibly most industries but it emphatically is not at all true of the paper industry.

In the paper industry we find a situation where in Sweden, Norway, Japan, Russia, Czechoslovakia, Germany, Chile, Mexico, Canada, Austria, Finland, United States, Great Britain, and anywhere and everywhere else in the world where paper is made, it is made in exactly the same way, of the same materials, with the same kind and quantity of machinery, by the same kind of labor (that is, labor long familiar with paper processes) and in quantities which reflect the savings due to mass production. No country has any manufacturing or "know-how" edge on any other country. This is due to the fact that paper manufacture is inherently a completely straight line, machine-made production proposition. Paper machines require the same number of workers to operate them in any country. With identical machine crews, what makes capacity of the machine and per man per hour production is the width and speed of the machine and the weight of the paper made, not the number of workers. Paper machines in all countries are comparable in size, speed, and weight of product made. Consequently the productivity of workers is identical everywhere. This is nothing new, as in the automobile or aircraft industries, for example, but has existed for over a hundred years. There have been no basic changes in the method of manufacturing anywhere in all of that time for the very simple reason that the process can hardly be improved, since from the first it has been 100-percent mechanized and straight line. What developments there have been are in the nature of refinements and in increasing the capacity of the individual paper machine. This is accomplished by increasing the speed or building wider machines, or both. Any such developments have been equally available to and have been availed of by all manufacturers everywhere.

The result of this situation inevitably is that the only advantage in cost any country can have over another country is in wages—wages in the paper mill, in woods operations, and in the production of other raw materials, in the production of steel and the fabrication of paper-making machinery from steel. The country with the lowest wages and the poorest standard of living is automatically the lowest-cost producer of paper. Every paper-making country in the world is a lower-cost producer of paper than the United States. This is inevitable in any industry where equal machinery and equal know-how are available to all, as they are in paper.

With these facts understood, it is as clear as two plus two equals four that if the United States paper industry is to survive it must either be by means of reduced wages and living standards or by means of such tariff equalization as will permit the continuance of United States standards of wages and living. There can be no other alternative.

Even were raw material and production costs equal, foreign mills could deliver paper to this country at less than American cost to deliver at the same port. Foreign mills, whether by subsidies to shipping, or by lower wages to workers in transportation fields, can deliver paper in this country at a freight cost of less than that involved in a shipment from important United States mill points to New York. An average freight rate from Sweden, for instance, to New York is $5 to $6 per ton. This is lower than the freight from many eastern mills to New York. Typical rates from important production centers are as follows: Printing paper, Ohio and Wisconsin to New York, $8 to $9.80; wrapping paper, Michigan, Ohio, and Wisconsin to New York, $7.40 to $11.20 per ton.

In support of my statements as to the relative cost of producing paper in the United States and foreign countries, I am including with this statement as appendix A a tabulation showing comparable wage rates, job by job, in Norway, Sweden, Canada, and the United States. These figures are for 1939, since which time it has been impossible to secure any comparable data. A survey by the American Paper and Pulp Association, however, shows that average wage rates in paper mills in the United States increased 37 percent between 1939 and January 1945.

The United States paper industry is not a proponent of high tariffs. The record made of the hearings before this committee in 1929 and 1930 demonstrates that it asked no increased rates at that time on any mass production grade, even though the printing-paper duty rate was then only 15 percent as against much higher rates in other countries. The same was true as to other basic paper grades, and when the act of 1930 was passed there was no increase in the rate of duty on any major grade of paper above those in effect under the Act of 1922. At that time, as in 1922, the United States paper industry did not seek a high protective tariff, but asked only that rates be established sufficient to enable its manufacturers to compete in its home market on even terms with comparable foreign papers. It takes the same position today. However, it has no choice except to oppose any measure which would permit drastic reduction of duties already insufficient to equalize foreign and domestic production costs.

The United States experimented with reciprocity in 1911 and the United States newsprint industry in particular, and the entire industry in consequence were the victims of that experiment. When the United States made newsprint duty-free as its part of a reciprocal trade agreement with Canada—an agreement which Canada failed to ratify—the newsprint industry moved to Canada. Since that time American mills have been compelled to abandon that field, while it has had tremendous growth outside the United States, principally in Canada, England, and the Scandinavian countries; in 1944 the United States produced only 22 percent of her consumption when before 1911 she produced between 80 and 100 percent.

Following the irreparable loss of that great industry to the American economic system there were no further efforts to negotiate specific reciprocal trade agreements until the present administration came into power.

The United States paper industry, because of its experience in the newsprint reciprocity deal, and the loss of domestic markts which has followed each of the reciprocal trade agreements negotiated since the present Reciprocal Trade Agreement Act was passed, is opposed to such agreements. The paper industry has been forced to give up its own markets to foreign competitors on the unspoken but actual theory that the national economy will be strengthened by allowing the sacrifice of some American industries in the interest of other industries which seek export markets.

The United States ranks as a great industrial Nation, but when this phrase is used people think of its tremendous, highly centralized industries such as steel, automobiles, and chemicals. The paper industry is not sufficiently recognized as one of the Nation's major industries because it is not centralized and but few of its individual units are of tremendous size. Its mills are located in 38 States. Also, its product is of such everyday use that the consumer does not realize its essentiality in his daily life, just as he gives little thought to the air he breathes. Nevertheless, the United States paper industry represents a capital investment of approximately $2,900,000,000.

The United States paper industry is essentially what might be called a "Main Street" or a "home town" industry. It consisted in 1939 of 969 units located largely in smaller manufacturing communities where water power is available. Approximately half of the industry's investment is in towns wholly or largely dependent on the business developed through these mills. Fifty-eight percent of the Nation's mills are in communities with a population of under 10,000, and the largest percentage of the primary industry is in communities estimated to be from 70 to 100 percent dependent on the mills. Appendix B is a comprehensive analysis of the dependency of communities on the paper mills in the various States.

But paper is a great industry even when compared with steel and automobiles. The United States paper industry is the largest paper industry in the world and now, during the war, the United States is making and consuming about 70 percent of the world's entire supply. Its export markets are negligible and always have been largely because its high wage rates do not permit competition with low-wage producers in other countries. The United States should not permit its paper industry to be so hamstrung by tariff concessions to other countries that this Nation will become more and more reliant on foreign mills for its own needs, as has already become the case with newsprint. That the placing of newsprint on the free list has not even yet ceased to have its effect on the American industry is shown by an article in Editor and Publisher, April 7, 1945. This publication said that the profit margin in the manufacture of newsprint has become so slim that many mills are turning to other paper products and added: "This is particularly true in domestic mills, and has been going on for the last dozen years."

Paper manufacturing is an industry which must maintain a high rate of production, roughly 75 percent of capacity, in order to carry its overhead costs. The value of annual output under present conditions is about equal to the capital investment. This ratio is the smallest of any major industry, but prior to 1939 the ratio of sales to capital was much lower. Other great industries produce a sales volume averaging from two to four times the dollar investment. Even a slight reduction of sales volume, such as that caused by foreign importations, has an immediate effect on the paper manufacturer's balance sheet. This is demonstrated by a recent 10-year income survey covering a broad cross-section of the industry. This survey shows the operations were at a loss in 1934 and 1935, and that a peak was reached in 1941 when the profit after taxes was 7.18 percent on the capital investment. In 1943 the profit was 4.58 percent, and in only 2 of the 10 years was profit above 5 percent. The National City Bank of New York in its April 1945 review of economic conditions shows the very low relative earnings position of the paper industry in comparison with other industries. The industrial group, Pulp and

Paper Products, comprising 74 corporations with a total net worth of over $711,000,000 is 39 in a list of 44 groups in which the financial return is shown as a percentage of net worth. The industry's own analysis of earnings in comparison to production shows the losses were in years when production was low, and the peak of profit was when the industry operated at its maximum level in history.

Labor is a controlling factor in the cost of producing paper. The paper industry leads all major industries in the amount of capital invested per worker. The mill pay roll alone amounts to about 25 percent of the total sales value of the finished sheet. This does not include such labor costs as those involved in transportation, pulpwood cutting and delivery, and production of other raw materials.

The importance of labor can be appreciated when we estimate the production of paper on the basis of man-hours involved. An over-all estimate, covering mill employment only, shows that paper is produced at an average rate of 111 tons per man per year. Every ton of paper imported deprives an American paper mill worker of 3 days' employment to say nothing of the loss of employment by subsidiary workers. The number of man-hours required to make a ton of paper varies with the grade produced, from 10 to 14 hours in the coarse grades to 45 hours in writing paper. On the average every ton of paper imported deprives 1 American worker of 3 days' employment, but in the writing-paper mills 1 ton of such paper would represent a full week of work. Any tariff reduction which increases imports thus results in an immediate proportionate idleness of American paper mill employees.

Just as the placing of newsprint on the free list caused an American industry producing a commodity valued at $200,000,000 a year to move to Canada, reductions made by later trade agreements are causing other grades of paper to disappear from the list of American-made products.

The manner in which reciprocity acts as a "one way street" as far as the United States paper industry is concerned is shown by the fact that in agreements which have been concluded with 27 countries, concessions on American paper have been granted by only 8, and these of a minor character. No concessions on paper were granted by the following countries: Belgium, Brazil, Czechoslovakia, Ecuador, Finland, Guatemala, Haiti, Holland, Honduras, Iceland, Iran, Mexico, Nicaragua, Peru, Salvador, Sweden, Switzerland, United Kingdom, and Turkey. Inasmuch as we could not compete with other foreign countries in these markets, concessions to the United States paper industry were unimportant in the eyes of our negotiators, thus demonstrating the manner in which we made sacrifices for the benefit of others.

Argentina granted the United States preferential exchange; Costa Rica cut its rate of duty on paper napkins, Colombia on printed wrapping, and France increased its allowable quotas of imports of vulcanized fiber, cardboard, and printing paper. Uruguay cut its rates of duty on hygienic papers, building boards, and impregnated cardboard. Venezuela reduced its duty rate on writing and toilet paper. Cuba reduced its rates to a comparatively minor extent. In most or all of these cases the items involved were not an important part of the production of these countries, which were therefore willing to reduce duties on goods which they could not make.

A striking example of reciprocity as it is known to the United States paper industry is found in the 1939 agreement with Canada. Paper of all kinds not otherwise provided for, including printing paper, was bound at the former Canadian rate of 22½ percent, but our rate was cut an average of about 40 percent and now is from 9 to 12 percent as against the Canadian rate of 22½ percent, although Canada also has a 10-percent exchange advantage over us. Canada levies a duty on newsprint if valued at over 2¼ cents per pound, but its newsprint comes into the United States duty free. Rate reductions granted by Canada were: Prepared roofings, wallboards, paper and fiber boards, from 25 percent to 22½ percent; electrical insulating pressboard, from 25 percent to 12½ percent; hanging paper, from 32½ percent to 30 percent; electric cable and insulating and condenser paper from 22½ percent to 10 percent; wrapping paper from 30 percent to 25 percent, and manufactures of paper from 30 percent to 27½ percent. Canada made material reductions only on papers which she does not herself manufacture in volume sufficient to supply her own demand. On its part the United States reduced its rates on paper as much as 50 percent, and in addition Canada enjoys under most favored nation treaties the reduced rates on paper granted in other trade agreements.

A tabulation of tariff rates now in effect shows that the rates on many principal grades of paper are not only lower than those in effect under the Tariff Act of 1922, but even below those fixed by the Underwood Tariff Act of 1913. Today's rates on 18 out of 23 grades of paper on which rates have been reduced in various trade agreements are at or below those in the act of 1913, which set the lowest rates in American history. The proposed Reciprocal Trade Agreements Act would permit a reduction in tariff rates to as much as 50 percent below those in effect under that act, known as a "tariff for revenue only."

The appended table, appendix C, lists the papers already subjected to rate reductions under the existing reciprocal trade-agreement program with a comparison to the rates in the Tariff Acts of 1913, 1922, and 1930.

The United Kingdom is one of the nations whose spokesmen have been loudest in criticizing the "high tariff barriers" of the United States. Average British duty rates, however, are 18 percent higher than those of the United States before the war, and have been sharply increased since that time. An appended table, appendix D, gives comparable rates of duty on standard grades of paper in which it is seen that in 10 out of 19 items the British rates are higher than our own.

There is no intent in this discussion to attack Canada or the United Kingdom. We are using figures and illustrations involving these two countries merely because in many grades the effects of reductions of duty rates were not apparent as to any other countries because of the war. It should, however, be emphasized that any concessions made by us would be even more disastrous in the case of the Scandinavian and other European countries through operation of most-favored-nation treaties with those nations.

The problem before American industry is not solely one of specific rates. It is also confronted with other acute problems. Foreign cartels, not subject to American antitrust laws, by fixing prices in their own countries set the values at which the United States authorities, under existing customs laws, must compute duties. Antidumping laws, as they now stand, are not enforced because imposition of any antidumping duty is optional with Government agencies, not mandatory. By means of currency depreciation, foreign countries are able to ship paper into this country at prices not compensated by existing duties. In any form of tariff legislation, including the proposed extension of the Reciprocal Trade Agreements Act, some steps should be taken to correct these abuses.

From the foregoing the position of the United States paper industry should be perfectly clear. It opposes the proposed change in the Reciprocal Trade Agreements Act permitting a 50-percent reduction in present duty rates. In taking this position, the industry is not forgetting the basic economic premise behind the reciprocal trade-agreement theory; that is, that we must have more international trade if there is to be peace on earth, and that the United States cannot year after year export unless it imports in substantially equal dollar volume, so as to create dollar exchange with which payment can be made for our exports. We have no quarrel with that argument. But the industry does claim that it has contributed its share, and far more than its share, in the acceptance of imports and the creating of dollar exchange available to foreign countries. Imports of paper and pulp into the United States are far larger than the imports of any other commodity. In 1938, for example, importations of paper and pulp amounted to over $185,750,000—approximately 25 percent more than the importations of coffee, the next largest commodity, and still a larger percentage above cane sugar, crude rubber, and raw silk, the three next largest importations, all of which are produced either in very small quantity or not at all in the United States. Paper and pulp imports were over twice as large as those of chemicals, which constitute the second largest importations of manufactured goods produced in substantial quantity in the United States. That last pre-war year is no exception; the facts are the same for the 10-year period 1930–39, inclusive. No other imported commodity came anywhere near equaling paper and pulp. During that same period the net dollar exchange created by the absorption of imported paper and pulp by the paper market of the United States was $1,635,289,759. Total imports in these years were $1,957,438,412 and exports only $321,548,613. In view of these figures, the paper industry feels that it can fairly assert that further tariff reductions on paper should not be considered as a necessary contribution to the furtherance of international trade but must be considered on their own merits. The question of whether or not paper tariffs should further be reduced must, in all fairness, be determined by considering whether or not the United States wishes to become further dependent for one of its prime necessities on foreign countries and whether or not it wishes directly to displace United States workers engaged in the paper and pulp industry. It is the paper industry's contention that this is a specific decision to be made by Congress, not something to be decided indirectly as a part of generally determined policy to foster international trade.

In terms broader than the scope of its own industry, the United States paper industry believes that it is impossible under present conditions to appraise the economic situation which will exist 2 or 3 years from now and after the war is over. To mortgage the future of American industry in advance without any knowledge of what may transpire in that time seems to us to imperil the entire financial structure of our industry, if not the entire country. We believe that the limit to which Congress should now submit the industrial economics of the country is a continuance of the present reciprocal trade-agreement legislation for a year, or perhaps as much as 18 months, which we all hope will mean that both wars will be over, and until known economic developments can permit a consideration of tariff problems on a realistic basis.

APPENDIX A

Comparison of wages in European and American mills

(Average rates per hour on comparable machines)

Position	Norway	Sweden	United States	Canada
Machine tender	$0.41 to $0.44	$0.38½	$1.16 to $1.37	Wage rates in mills average 10 to 12 percent below American wages.
Back tender	$0.31½ to $0.33¼	$0.33½	$0.98 to $1.16	
Third hand	$0.30½ to $0.32	$0.32½	$0.84 to $0.85	
Fourth hand	$0.30 to $0.31	$0.30¾	$0.64 to $0.68	
Oilers	$0.32	$0.31½	$0.54 to $0.66	
Head beaterman	$0.31¼	$0.31½ to $0.38½	$0.68	
Electricians	$0.32¾		$0.60 to $0.77	
Acid maker	$0.36½	$0.35¼	$0.55 to $0.82	
Laborers	$0.31¾	$0.30¾	$0.62½ to $0.70	

Sources: Special committee of American Members of International Brotherhood of Pulp, Sulphite, and Paper Mill Workers. American Paper & Pulp Association. Averages include mills comparable to foreign mill in size and speeds of operations.

NOTE.—The union committee commenting on the relative cost of living in Scandinavia and the United States states that it takes the worker in Norway and Sweden 100 hours of work to buy what the American worker can purchase with 65 hours of work.

GENERAL NOTE.—The wage rates are those available in January 1940 Since that time American wages have risen materially, but there is no information on the results of the war on Scandinavian rates. No effort has been made to weight the wage rates given to compensate for any depreciations of currency.

APPENDIX C

Duty rates on paper 1913 to 1945

(Grades on which duty rates have been reduced by reciprocal trade agreements)

Grade	1913	1922	1930	Jan. 1, 1945	
				Actual rate	Equivalent to ad valorem computed on latest available statistics of actual importations
	Percent				
Printing	12	¼ cent per pound and 10 percent	¼ cent per pound and 10 percent	⅛ cent per pound and 5 percent	10.8 to 12 percent.
Paperboard:					
Plain	5	10 percent	10 percent	10 percent (bound)	
Processed	25	30 percent	30 percent	$14.50 per ton, not less than 15 percent or more than 30 percent.	
Pulpboard in rolls for use in manufacture of wallboard.	5	10 percent	10 percent	5 percent	
Same, processed	25	30 percent	30 percent	15 percent	
Tissue:					
Lightweight [1]	30	6 cents per pound and 15 percent	6 cents per pound and 20 percent	If valued at not over 15 cents, 3 cents per pound and 10 percent.	30 percent.
Heavyweight [1]	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	If valued at not over 15 cents, 2½ cents per pound and 7½ percent.	28.7 percent.
Stereo, carbon, pottery, lightweight. [1]	30	6 cents per pound and 15 percent	6 cents per pound and 20 percent	If valued at more than 15 cents, 4 cents per pound and 15 percent.	21.5 percent.
Same, heavyweight [1]	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	If valued at more than 15 cents, 4 cents per pound and 10 percent.	17 percent.
India Bible (over 10 pounds)	12	4 cents per pound and 15 percent	4 cents per pound and 15 percent	2 cents per pound and 10 percent	13.6 percent.
Crepe paper	30	6 cents per pound and 15 percent	6 cents per pound and 15 percent	3 cents per pound and 7½ percent	32.5 percent.
Simplex decalcomania	35	5 cents per pound	5 cents per pound and 10 percent	2½ cents per pound and 10 percent	22.1 percent.
Drawing paper	25	3 cents per pound and 15 percent	3 cents per pound and 15 percent	2 cents per pound and 10 percent, if over 40 cents per pound.	13.7 percent.
Hand-made paper	25	do	do	2 cents per pound and 10 percent, if valued at over 50 cents.	12.9 percent.
Bristolboard	25	do	do	2 cents per pound and 10 percent, if valued at not over 15 cents.	33.7 percent.
Hanging raw stock	12	10 percent	10 percent	7½ percent	
Filtering	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	2½ cents per pound and 7½ percent, if valued at 75 cents or more.	8.5 percent.
Blotting	30	30 percent	30 percent	15 percent	
Wrapping kraft	25	do	do	20 percent	
Wrapping, other	25	do	do	25 percent	
Vegetable parchment	25	3 cents per pound and 15 percent	3 cents per pound and 15 percent	2 cents per pound and 10 percent	29 percent.
Straw board and paper, less than 12-point, not less than 8-point.	5–25	10–30 percent	30 percent	15 percent	
Cigarette	50	60 percent	60 percent	45 percent	

[1] Lightweight refers to paper weighing not over 6 pounds per ream of 288,000 square inches. Heavyweight is paper 6 pounds or over, less than 10 pounds.

APPENDIX D

Comparative tariff rates—United States and United Kingdom

Grade	Actual rate	United States rate—equivalent ad valorem based on latest actual available import data	British rate
Printing	⅛ cent per pound and 5 percent	10.8 to 12 percent	20 percent.
Paperboard, plain	10 percent	10 percent	15 to 20 percent.
Same, processed	$14.50 per ton not under 15 percent or over 30 percent.	15 to 30 percent	Do.
Pulpboard in rolls for manufacture of wallboard	5 percent	5 percent	20 percent.
Same, vat-lined	15 percent	15 percent	Do.
Sheathing paper	10 percent	10 percent	Do.
India and Bible	2 cents per pound and 10 percent	13.6 percent	Do.
Simplex decalcomania	2½ cents per pound and 10 percent	22.1 percent	Do.
Vegetable parchment	2 cents per pound and 10 percent	29 percent	16⅔ percent.
Tissue, lightweight	3 cents per pound and 10 percent	30 percent	Do.
Same, heavy	2½ cents per pound and 7½ percent	28.7 percent	20 percent.
Drawing paper, over 40 cents per pound	2 cents per pound and 10 percent	13.7 percent	Do.
Hand-made paper	do	12.9 percent	Do.
Bristolboard, not over 15 cents	do	33.7 percent	Do.
Wrapping:			
Kraft	20 percent	20 percent	16⅔ percent.
Other	25 percent	25 percent	20 to 25 percent.
Strawboard	15 percent	15 percent	15 to 20 percent.
Blotting paper	do	do	20 percent.
Filtering paper, if 75 cents or more	2½ cents per pound and 7½ percent	8.5 percent	Do.

Public Housing and Rent Control

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include herewith a letter from one of the largest home builders in the city of Detroit, Mich. His experience reflects that of many other builders and property owners in the Detroit area. His views are those of a loyal American who believes in American principles of freedom and opportunity and our long established American way of life.

MILLER HOMES, INC.,
Detroit, Mich., May 1, 1945.

Representative GEORGE A. DONDERO,
House Office Building, Washington, D. C.

DEAR MR. DONDERO: There are two matters coming before this Congress that are of vital interest to me and to all people interested in the home-building industry. The first is the subject of the continuance of the Office of Price Administration; and, secondly, the subject of homes built by the Government.

I do not believe any well-thinking American citizen has objected to the purposes of the O. P. A. as set up by Congress. If we had any complaint, it was that Congress had not gone far enough and included everything in price control at the inception of the war. Our "beef," if you wish to call it that, has been due entirely to the administration of the act.

The O. P. A. was captured by left-wingers at the very beginning and, although you have seen fit to change the leadership, the proper job of housecleaning has never been done. Therefore, the O. P. A. has been used continuously to advance the purpose of left-wing planners rather than a fair and honest administration of price control, and nowhere has this been more evident than in rent control. There has been no attempt to be fair and equitable in the administration of this part of the act. My organization has suffered tremendously because of this policy, and I am acquainted with numerous others who have likewise been unfairly dealt with.

I recommend an immediate housecleaning of the O. P. A. and a definite decision by Congress that its will be carried out so that instead of allowing groups, such as the C. I. O. to enforce their wishes, a fair deal be given to everyone alike. It is my opinion that when the truth is actually told, you are going to be very red faced regarding what has gone on in this organization right under your nose.

Concerning the matter of public housing at governmental expense, there is a movement on to further establish public housing as a part of our national economy. This program is entirely out of step with our traditionally American way of life. If you are not very, very careful, you will find that in spite of his very admirable attitude while holding public hearings on housing, Senator TAFT has, apparently been inoculated with the idea that we should have a little bit of pregnancy in the housing field, a matter of about 8 percent, or something like that, of families that private enterprise cannot serve. I had sincerely hoped that Senator TAFT would finally see the fallacy of the public housers' position, but I have now been led to believe this is not the case. The history of housing has clearly demonstrated that private enterprise built much cheaper and better than public housers.

Senator TAFT has failed to explain who these people are in our society who should be made wards of the Government. If these people turned out to be wounded soldiers, mental delinquents, or driftwood of society that was proven incapable of making their own livelihood, certainly it is a public duty to institutionalize these people in some manner. However, society as a whole is made up of one complete economic structure and the people in the low-rent bracket today may be in the middle or high-rent bracket tomorrow, and even be able to own a good home of their own.

Society is not made up of an 8, 20, or 35 percent class, it is not made up of the lower third, the middle third, the upper third, we do not have a caste system in America, and I don't believe we want one. Given the same benefits of low interests rates, long-term amortization, low tax rates, the private builder can do the entire job of building, and do it cheaper and better, and keep out of the hands of the Government the maintenance of these homes, and this will be done not in the spirit of socialism or socialistic democracy or governmental autocracy, and we need not fear anything about communism, fascism, or nazism, it will be done in the simple American way that has proven itself equal to do the best housing job that has ever been done on the face of the earth.

Private home building cannot and will not compete with public housing. I personally asked Dr. Hayek, author of The Road to Serfdom, his opinion of public versus private housing. His first words were these: "The two cannot exist together."

If you men in Congress want to see the job of housing properly done, stop the public housers cold, give them not one cent, but, instead, instruct the governmental agencies that are interested in housing to extend to private enterprise all possible aid in setting up ways and means of reaching every class of our society with suitable homes. I feel positive that this will result in all of the necessary housing being produced as quickly as labor, materials, and proper methods of financing are available for the purpose; and these homes will mark a vast improvement over any other period to date in our American life.

It is worth a note that despite the enormous increases in cost of maintenance and taxes, some as much as 200 to 300 percent, the O. P. A. has not granted one dime of increase in rentals—this during a period of wage increase of 250 percent. This fact alone is positive proof that property owners have been compelled to bear an unfair proportion of the cost of war. This condition must be remedied as soon as possible if properties are to be retained and maintained. The loss is fast becoming unbearable. I personally have homes now rented for 3 years with monthly mortgage obligations of $48, and total income of $50. These homes badly need painting and repairs. Where will the money come from?

It is not my thought in discussing public housing that the Congress should not cooperate with private enterprise, for I feel such cooperation is positively essential to the cause of progress and national well-being. However, this cooperation should be such as has already been exemplified by Congress, in the F. H. A., an institution that has been of great benefit to both the home builder and the home owner and, instead of being operated at national expense, has actually operated at a profit.

Very truly yours,
MILLER HOMES, INC.,
GEO. W. MILLER,
President.

Sheepmen Oppose Extension of Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the statement of J. M. Jones, secretary of the National Wool Growers Association, before the House Ways and Means Committee:

The National Wool Growers Association is a voluntary organization with permanent headquarters in Salt Lake City, Utah. This organization was founded in 1865; first, in order to secure for the business of wool growing equal encouragement and protection with the other great industrial interests of our country; second, to protect the interests of sheepmen in the framing of a protective tariff on wool.

The history of tariff, as far as the sheep industry is concerned, dates back to 1867, and there has been a continual fight as to where duties should be placed. In 1913, the Underwood Simms Act placed wool on the free list, but following the last war when almost all of our agricultural commodities were in need of some protection, this protection was given under the Emergency Tariff Act of 1921. Just prior to the passage of this Emergency Tariff Act of 1921, imports of meat, wool, butter, and other products were so large that all interests united in the passage of this act.

The present market for domestic wool is the military market. Ordinarily consumption of wool in the United States exceeds production by 25 to 35 percent. Today foreign wools are sold here at Government-fixed prices which are below our own cost of production, and the result is that consumption of wool under the present conditions amounts to approximately 75 percent foreign and 25 percent domestic.

This deprives the American wool grower of practically his entire civilian market, and a large share of the temporary wartime markets. The question, therefore, resolves itself down to the effect that these large importations of foreign wools under the present price schedules will have on the domestic market.

ASSOCIATION REPRESENTS

The membership of the association consists principally of wool growers in Texas and 12 other Western States which have State wool-grower organizations affiliated with the national. Over 70 percent of the sheep industry in the United States is located in this area representing an investment of three-fourths billion dollars and requiring the services of 175,000 operators. These States, according to the estimates of the Department of Agriculture, on January 1, 1945, have 29,335,000 head of stock sheep out of a total of 41,315,000 head in the United States. There has been a decrease of 16 percent in numbers, however, since 1942.

IMPORTANCE OF LIVESTOCK TO THE WEST

Ninety-six percent of the western range lands occupied by this great industry is adapted only to the raising of livestock. Also, a large percentage of the remaining land is used in raising feed for livestock. Except for the livestock industry, this land would be nonproducing and nontaxable, and the whole region would be of little value

for the mineral deposits—and oil—but these resources are expendable and are being expended at a rapid rate—they are not replaceable. Livestock utilizes only the annual resource of this country, and over the years to come will be the principal source of wealth.

In 1943 the cash income received from the principal commodities produced in the 12 Western States and Texas was divided into the following: All minerals amounted to $1,652,000,000. The livestock industry ranked second in importance with a total income of $1,288,766,000, or over three-fourths as much as the income from minerals. Petroleum ranked third with a total cash income of $887,404,000. Fruit crops followed with over $700,000,000; vegetable crops $626,000,000; dairy products over $409,000,000; food grains $334,000,000; poultry $156,000,000; and sugar beets $41,638,000. It is readily recognized from these figures that the financial stability of the West is dependent to a large extent on the livestock industry which will continue to increase in importance as the natural resources are depleted.

ASSOCIATION'S POSITION

The position of the wool growers and their associations has been consistent. The following resolution was unanimously adopted by the eightieth annual convention on January 30, 1945:

"The present administration is committed to the revision of tariff through reductions and replacements by international and reciprocal trade agreements. We oppose this program because the successful contribution of meat and fiber, and of agriculture, industry, and labor has shown that those industries having protective tariffs have been able to make a greater contribution to the war effort than those not having such protection and dependent upon foreign sources of supply."

This association's representatives, on May 1, 1934, gave extended testimony in opposition to the enactment of the Reciprocal Trade Agreements Act. Concern of the woolgrowers and their representatives was so great that Senator O'MAHONEY, of Wyoming, secured from the President of the United States, under date of June 5, 1934, a letter giving assurance that nothing would be done under this act to injure wool prices. This letter from former President Roosevelt follows:

"MY DEAR SENATOR O'MAHONEY: My concern that agricultural prices should be protected and, where possible, substantially raised ought to be well known by this time. That is why I was surprised that a question should be raised about wool. The new tariff bill has been thought of as one of the emergency measures which would help in the general effort to rehabilitate agriculture and industry together. The wool industry is one of those which needs price protection, and the suggestion that the new tariff bill might be used to lower those prices is one which would not have occurred to me. That is the thought I expressed to you, Senator Costigan, and others on May 9. I have read the statement which you issued, and, as I might expect, it correctly reports the facts.

"I hope you have no further concern for fear that something damaging to the industry may result from the legislation.

"Very sincerely yours,

"FRANKLIN D. ROOSEVELT."

Congressman REED asked Mr. Henry A. Wallace, on March 8, 1934, if he believed that lower tariff would help agriculture. Mr. Wallace, then Secretary of Agriculture, replied, "Well, I am to some extent a partisan of agriculture, and I would hold on to all the agricultural tariff I could get; from the national point of view, it seems to me that agriculture is entitled to exactly the same kind of tariff benefit as industry, to that, and no more."

Mr. Francis B. Sayre, Assistant Secretary of State in 1934, stated: "I can say this, sir, and I am speaking for myself alone, that no blanket tariff revision is contemplated. It is not to my mind a proceeding which will mean a tariff revision. It is a proceeding which will mean finding bargins which will prove to advantage to foreign trade without undue injury to American producers.

"Now those responsible for this program will have the program and a reel problem of finding just how trade can be increased without undue injury to American producers."

The record, of course, shows that Mr. Sayre was wrong in his opinion that no blanket tariff revision would be made because as the record shows, many commodities have been affected by these tariff changes.

In every instance when the interests of the sheep industry were affected, the National Wool Growers Association has submited a brief to the Committee for Reciprocity Information in regard to the various proposed agreements.

The submission of these briefs to this committee has been a formality to conform to the law. So far as anyone can determine, neither the State Department nor the committee gave any consideration to these briefs. The agreements entered into under the act have been made with the utmost secrecy and without regard to opinions of industries affected.

Tariff reductions have been made with countries in which the commodity under consideration was of little importance, but under the "favored nations" agreements, the reductions apply to all of the other countries in that group. The State Department has said that it is the general policy of the United States in negotiating trade agreements with foreign countries to consider concessions only on products of which the other country is the chief or an important source of our imports.

Apparently this is just another policy statement that is not adhered to. For example, in the agreement with Mexico, in 1942, the duty on sheep and lambs was reduced 50 percent, or from $3 to $1.50 per head. The year before the trade agreement, however, Mexico imported into the United States only 4,000 head of live sheep, which is very unimportant when considering the sheep population of the United States of over forty million head.

The country for which the reduced duty was particularly effective was Canada. Up to the middle of November 1944, 93,647 head of lambs were imported from Canada. On the days those imports were received the effect was to lower the market price of domestic lambs. During the time these Canadian lambs were being imported into this country, agencies of our Government were sending large quantities of meat to Great Britain. The question naturally arises as to why Canada did not send this meat to Great Britain instead of shipping the lambs to this country while, at the same time, our Government was shipping large quantities of meat to Great Brtain under lend-lease.

Another point deserving serious consideration is the fact that the Defense Supplies Corporation paid the packers the same subsidy for the imported lamb as was paid on domestic lamb.

REASON FOR RECIPROCAL TRADE AGREEMENTS ACT

When the reciprocal trade agreements bill was being considered in 1934, former Secretary Hull stated repeatedly, and particularly, when important questions were asked of him which were not answered in a direct manner—"the bill frankly proposes an emergency remedy for emergency conditions. Most persons are still passing through a grave economic crisis, it is my judgment that extraordinary conditions call for extraordinary methods of treament. Its support is only urged as an emergency measure to deal with a dangerous and threatening emergency situation. It is an emergency measure, temporary in its nature, to meet emergency conditions. Of course, you know what an awful condition the world is in economically and socially. We have had as high as fourteen and fifteen million unemployed persons in this country who were accustomed to employment and who, with their families, would amount to thirty-five million human souls of our one hundred and twenty million living an utterly hopeless existence, out of employment.

In asking for the extension at this time, the economic situation is reversed, particularly from the standpoint of workers. In fact, as far as the sheep industry is concerned, the threat of future reciprocal trade agreements made in this manner is causing grave concern. It is not impossible that, under the proposed provisions of the extension of this act, more and more farm and livestock people will be forced into cities to constitute a surplus of industrial labor.

SOME REDUCTIONS SINCE 1934

Through trade agreements with the United Kingdom, France, Argentina, and Mexico, duties on wool and lambs, and on wool imported in manufactured form have been reduced.

The duty on wool imported in the form of rags was reduced from 18 to 9 cents per pound. This agreement became provisionally effective on November 17, 1938. In the next 2 years, the imports of rags, chiefly from Great Britain, increased over 200 percent, from the average imports the past 8 years, which of course, displaced the use of that much domestic wool. The increases in imports of two types of cloth and clothing in the same year were 219 percent and 69 percent, making a total of the equivalent of 20,000,000 pounds of wool. Because of the fact that the domestic manufacturer is our only customer, any reduction in the duty of wool in the manufactured form has an effect upon domestic wool, it being impossible to export wool from this country due to our higher costs of production. Consequently, the domestic producer is concerned over the reduction of tariff duties on manufactured products made of wool.

In 1936, an agreement with France reduced duties on yarn, pile, and knit fabrics, thus increasing the imports of foreign wool and decreasing the potential demand for domestic wool by American manufacturers.

On October 14, 1941, an agreement was signed with Argentina which reduced the rate on dutiable wools not finer than 40's from 24 to 13 cents per pound clean content. On wools not finer than 44's, the reduction was from 29 to 17 cents per pound.

An agreement with Mexico, signed December 23, 1942, reduced the duties on sheep and lambs from $3 per head to $1.50 per head.

We also know that negotiations with Australia were under discussion until interrupted by the outbreak of the war, and of course, the war situation makes it impossible to fairly determine the effect of these tariff decreases on the imports of wool, rags, and wastes and the manufacturers of wool. However, Australians recently asked a reduction in the usual duty and suggested that our wool growers be given a subsidy in place of it. As explained above, we have had an example of what effect the reduced duties on sheep and lambs have had on our domestic products.

It is readily seen, therefore, that this reciprocal agreement program is a continuous threat to the domestic sheep industry as long as it is handled in the present manner.

THE EFFECT OF TRADE AGREEMENTS ON AGRICULTURE

The United States Tariff Commission prepared material showing the value of agricultural imports and exports for the years 1934, 1937, 1938, 1939, and 1940. Because of the effect of the war upon foreign trade, only the comparison of the 1934 figures with those of 1939 are shown. Of course, it must be

stated that this study does not include trade with Argentina, Uruguay, or Mexico, since the agreements with those countries were negotiated after 1940. In this report, noncompetitive agricultural imports are not separated from competitive. But inasmuch as noncompetitive imports are practically duty free and have not been affected by trade agreements, it would seem fair to consider that increases in imports were on competitive commodities.

From 1934 to 1939 agricultural imports from trade-agreement countries increased from $512,000,000 to $717,000,000, or 40 percent. Exports during that same pericd to the same countries increased $57,000,000 or 14 percent. The net effect was an additional volume of agricultural imports amou ting to $148,000,000.

We feel that H. R. 2652 should be amended. *"Provided, however,* That nothing in this act shall be construed to give the President any authority to reduce any existing rate of duty on any agriculture or livestock product on which ceiling prices have been established as a war measure, until such time as the stocks of such material within the United States have been reduced to the quantity on hand at the time ceiling prices were established."

The policy of increasing agricultural imports in order to promote industrial exports will ultimately place the United States in the position of some other countries which have produced chiefly manufactured goods and were dependent for food from other countries.

The war has demonstrated the necessity for domestic production of both food and fiber.

This whole question as far as sheep industry is concerned is, Does our Government want a domestic sheep industry in this country? If the answer is in the affirmative, then assurance must be given the industry that it will receive prices for its products which will cover the cost of production.

The United States Tariff Commission, in its report on costs of production of wool, sheep, and lambs, released January 1945, shows a loss of $1.22 per head of sheep. These losses, brought on largely by Government regulations, coupled with threats of lower tariffs and other adverse factors, are occasioning tremendous liquidation. It is our considered opinion that reduction in breeding stock since 1943 has been 25 percent.

In spite of all of these adverse conditions a remarkable record has been set up by the sheep industry in the supplying of meat and fiber. But using the words of former Secretary Hull, when speaking during the discussion of the reciprocal trade agreements bill, "commodities will not long be produced unless they can be distributed and sold at cost or more. * * *" The sheep industry is exactly in this position. Production is decreasing because costs are not being met.

This present conflict has undoubtedly taught us the need for our ow nproduction of raw materials. Agriculture and labor of the United States have produced for the allies, and without doubt has had much to do with the defeat of our enemies. George Washington said: "If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, it must be known that we are at all times ready for war." That is the price of peace.

Protection of industries producing raw materials through a protective tariff is very inexpensive insurance. This fact is brought very forcibly to mind by the tremendous expenditure of $600,000,000 to construct a synthetic rubber industry in this country during the present war.

The executive branch of our Government, including the bureaus, are continually grasping for more power, more control. The request for the extension of the Reciprocal Trade Agreements Act in the bill under consideration is an example of not only increased power, but a continuation of the present unsound delegation of power to the executive branch of the Government.

In the words of Hon. J. C. O'MAHONEY, United States Senator from Wyoming, "The Reciprocal Trade Agreements Act does invade the field of treaties—it does invade the field of revenue legislation—it does invade the field of regulation of commerce."

All that is asked by our people is the return of the Congress of the legislative power given the representatives of the people under our democracy. The request for the adherence by our representatives certainly cannot be construed by foreign nations as a lack of interest in international relations. After all, at least 22 out of the 26 countries with which we have negotiated trade agreements require in some form or another the legislative appraisal of such agreements.

Our people of the West urge that the Congress of the United States assume again its responsibilities by not passing this bill to extend the authority of the President, under section 350 of the Tariff Act of 1930.

The Sugar Situation

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ARTHUR R. HURST CO.,
Grands Rapids, Mich., May 9, 1945.

Hon. BARTEL J. JONKMAN,
House of Representatives,
Washington, D. C.

DEAR BARNEY: I have been interested in reading the reports of your Washington comments on the sugar situation, and just thought I would mention once more the Washington O. P. A. office still refuses to rezone Michigan so that Puerto Rican and Cuban granulated sugar coming into this country through New Orleans, Mobile, and Pensacola cannot be shipped into Michigan, although, as I wrote you recently, there are plenty of these sugars stored by dealers in public warehouses at a point as near as Gary, Ind. We need these sugars badly, even a few thousand bags a month would help.

A letter from our New York connections this morning makes the plain statement: "National Sugar Refining Co. are still tremendously handicapped by the enormous demands made on them by Government agencies, which are taking almost their entire bulk granulated product."

The inconsistency of this program, details of which are not given the public, is brought to light when you consider the Interstate Creameries at Cedar Springs, Mich., are working 100 percent on sweetened condensed milk for W. F. A. and yet they can't get enough sugar to operate consistently, and our friends the W. R. Roach Co., who will have to set aside about half of their pack of peas for Government agencies, can't be sure they will have sugar with which to pack these peas, even though the local O. P. A. gave them the sugar certificates 6 weeks ago. Orders for 3,200 bags were placed with the eastern refinery who is accustomed to supplying Roach's demands, and only one out of the four cars involved has been shipped.

The local O. P. A. rationing office will begin to issue coupons for home-canning sugar on the basis of 15 pounds per person by the end of this week, and there isn't enough sugar in distributors' hands around here to take care of the demand that will come from the "cashing" of these coupons.

You are probably well aware that throughout the South and Central States the home-canning program went into effect some time ago and those fortunate persons were issued canning-sugar coupons on the basis of 20 pounds per person, but, of course, in this fruit and berry raising State the cut from 20 to 15 pounds per person was made prior to the issuance of any canning coupons, so our good citizens are the ones who suffer.

Very truly yours.

A. R. HURST.

Resolution Adopted by Jewish War Veterans of the Department of Massachusetts

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following resolution adopted May 6, 1945, in Boston, Mass., at a convention of the Jewish War Veterans of the United States of the Department of Massachusetts:

We, the Jewish War Veterans of the United States of the Department of Massachusetts in convention assembled at Boston, on May 6, 1945, are meeting in a time replete with problems staggering to a world bled and bleeding in its effort to overcome tyranny and reestablish civilized processes. We are met at a moment when the second of the three beasts that attacked the civilized nations is gasping its last and when we are assured that the third will soon do likewise. It may be noted here that we are meeting on the eve of the fiftieth anniversary of the birth of our national organization of the Jewish War Veterans of the United States. It is well, therefore, and timely that we give expression to our thoughts, our hopes, our aspirations and reflect, as we plan for the future, on the happenings of the past which brought about the present state of affairs.

We pause as we open our deliberations in solemn reflection upon the memory of our departed President, Franklin Delano Roosevelt. Deeply do we mourn his loss. A great American; a great humanitarian; beloved of the whole world, he symbolized in human form true Americanism, liberty, and democracy, courage, and perseverance and the adherence to the death to principles which were right. The world will long remember his valiant fight to which he truly gave his last full measure of devotion. Yet, while we mourn his passing, we stand firmly behind Harry S. Truman, the President of the United States of America, who in these short weeks has proven himself a true leader of our great Nation. To him the Jewish War Veterans of the United States pledge their wholehearted support in the great tasks which it has fallen to his lot to further and complete. For this is America; Government of laws and not of men. A Government which knows no dictatorship whether benign or tyrannical; a dictatorship which appoints its successor irrespective of the wishes of the people and without their counsel.

As we emerge from the smoke of horrible battle and approach the dawn of a new era

of peace, we are constrained to think back to recall the things that led up to the conflagration which has envelcped the entire world. Economic want, unjust distribution, greed, ambition for political and economic power; all played their part in the rise of fascism, Hitlerism, and aggression. Then followed persecution of a peaceful people who afforded the aggressors a scapegoat. Propaganda was one of the many means used to deflect attention from the real aims of the aggressors. Scapegoatism, isolationism, and nationalism were nurtured by the aggressors. How very nearly they succeeded is something which should cause the world, as it gropes for a future of peace, to ever keep before it as a constant reminder of how close we came to the brink of the abyss.

One hundred and thirty-eight million Americans were so firmly imbued with the true spirit of Americanism and all that it embodies, so firmly steeped in right that they stood as a solid barrier against all the undermining forces directed against them. For this posterity will be forever grateful.

In the great struggle for freedom the veteran organizations of our country stood side by side harmonious and cooperative for they, above all others, know exactly the path along which America must go. Be it known that the Jewish War Veterans of the United States are grateful to the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the Spanish-American Veterans, and the rest of the veteran organizations for having stood side by side with us during the very trying periods through which we had gone with the advent of Hitlerism and dictatorship.

At this moment the United Nations are sitting in conference at San Francisco planning for an organization of the powers of the world to make for future world peace. In this planning it is our hope that the principles laid down at the Dumbarton Oaks Conference and at the Bretton Woods Conference will be adopted recognizing that in planning world security, economic problems lie at the very foundation. That the solution of economic problems is as important in the maintenance of peace as the use of military power. It is our hope that in the plans for a security organization we afford such an organization necessary and practicable police powers which cannot be nullified by a handful of men from any one or more of the powers. Withal, it is our hope that such an organization may be speedily established even if perfection cannot at once be attained. Once established, like our own Constitution, we may strive for improvement as experience points the way. One thought presents itself in these plans for stopping future aggression; That is, it shall be an act of aggression on the part of any Government which fosters or permits the persecution of any of its minorities because of race, color, or religious preference. It was the first means used by Hitler.

Recalling that 12,000,000 American men and women of all faiths, creeds, and colors will be giving of their all in the armed services of our Nation and of whom all too many will have sacrificed life, limb, and career, we urge upon all Americans the adoption of a program which will establish permanently the security for which they made their sacrifices. Quibbling over benefits to the returning veteran should not be tolerated. Interpretation of the so-called G. I. bill of rights must be liberal. For those who require it, the best in hospital and medical care; financial assistance where needed without embarrassing red tape. It should be constantly borne in mind that veterans benefits are not doles, they are not charity, they are not gifts, they are not even compensation. For, be it remembered that these 12,000,000 men and women were deprived of those years of their lives upon which in civilian life they would have built their entire future.

At the end of this war more than 500,000 men and women of the Jewish faith will be eligible for membership in the Jewish War Veterans of the United States. To them we extend an invitation and an opportunity to join with us in our program of Americanism and service.

Let our memorials to those who made the supreme sacrifice in the wars of our Nation be more than mere monuments of stone. We urge such memorials to be of the nature of permanent reminders of the things for which they fought; beautiful roads in their memory, great forests in their name, camps for needy children, hospitals, homes and humanitarian projects generally.

As our men have fought for freedom let us implement their successes by the universal adoption of fair employment and antidiscrimination and practices acts. We favor the enactment in Massachusetts of legislation patterned after the so-called Ives-Quinn bill of the State of New York.

We favor the immediate bringing to trial and the punishment of the war criminals following the cessation of hostilities.

As a civilized and democratic people, we recognize the humanities of the Geneva Conference with respect of war prisoners but notwithstanding that recognition, we urge the adoption of methods in their treatment which would indicate our awareness of the inhuman treatment suffered by our own men who had the misfortune of being taken prisoner by the Axis powers. Being civilized we cannot invoke the rule of "an eye for an eye," but we can and should stop nonsensical coddling of arrogant whelps mothered by inhuman beasts.

Finally, we urge upon the United Nations the adoption of the proposals by our Senator VANDENBERG of Michigan to effect the permanent and total disarmament of Germany and Japan for the safety of the world and the happiness of our future generations. Be it *resolved*, That the foregoing be adopted by this convention of the Jewish War Veterans of the United States of the Department of Massachusetts at Boston on May 6, 1945, as a statement of policy.

JOSEPH H. CINAMON,
Past Department Commander,
National Vice Commander,
Chairman, Committee on Resolutions.

H. R. 2788

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. JUDD. Mr. Speaker, I hope the Committee on the Judiciary will soon be able to complete its study of and report out favorably H. R. 2788. Under leave to extend my remarks, I enclose a letter which sets forth clearly some of the difficulties under which both business and labor are operating and which this bill would, in part, relieve:

VALENTINE CLARK CORPORATION,
St. Paul, April 27, 1945.

The Honorable WALTER H. JUDD,
The House of Representatives,
Washington, D. C.

MY DEAR SIR: I take the liberty of inviting your attention to Representative JOHN H. GWYNNE's bill, H. R. 2788, which would amend the Judicial Code to establish time limitations within which public and private action could be brought, based on Federal law. This is quite important in the light of present conditions.

So long as we in the lumbering industry dealt only with union organizations, we found they did observe their contract obligations after the usual period of negotiation and discussion had resulted in a signed contract. Then along came the wage-and-hour law and the various controls set up by the Manpower Commission, and the evolution of that was that the employer knew that at least once a year his entire procedure would be subject to the routine labor negotiations with the union, and then in due time the matter would be referred to the War Labor Board where they sat on it for months and months, and finally a panel would appear, take up a few more days' time and expense for all concerned, and then the situation would be reviewed again somewhere, and sometimes a year after the discussion started a ruling is handed down which is just filled up with decisions that change the entire understanding under which industry has been working. They always give something in the way of a raise or a ruling that increases the income and they make it retroactive.

It is impossible to set up reserves anticipating these belated decisions, and with just three of our men in the plant here the last year we have already gone back over the records twice to catch up on some retroactive pay, plus overtime, plus Social Security, less withholding tax. Now we have to go over the records back 2 years for the same men, all because the labor panel, in its final conclusions, left out a couple of words that both the union organization and the employers had agreed to for years. It is another one of those cases where people who know nothing about the industry they are dealing with apply the same interpretation they made on a slaughterhouse or peanut factory.

This accumulation of retroactive adjustments is getting to be so complicated that we never know whether we are doing it right or not, and we notice that the workers have gotten to the state of mind where they are completely bewildered and admit that they simply cannot figure out whether they were correctly paid or not.

In view of this it certainly seems reasonable to us that Mr. GWYNNE'S bill is going to be almost necessary if we are going to retain our sanity in trying to operate a business, as there certainly must be a definite period established within which these matters must be disposed of or be outlawed.

May I urge your consideration and interest in support of this measure.

Respectfully yours,

M. H. SPERRY.

Salaries of Members of Congress

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Assembly Joint Resolution 42

Joint resolution relative to memorializing Congress to adjust the salaries of its Members

Whereas the salaries of Members of the Congress of the United States have not been changed for several years; and

Whereas a Member of Congress usually must maintain a home in his resident State as well as in Washington, D. C.; and

Whereas living expenses have greatly increased and taxes are very high and will likely remain so for a number of years after the war; and

Whereas the Members of Congress occupy positions of great importance and responsibility, which demand men and women of ability, integrity, industry, honesty, and character: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Legislature of California hereby respectfully memorializes the Congress of the United States to provide, as soon as may be, for the adjustment of the salaries of the Members of Congress so that each Member will receive not less than $12,500 nor more than $15,000 annually; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President of the United States, the President pro tempore of the Senate of the United States, the Speaker of the House of Representatives of the United States, and to each Senator and Representative from California in the Congress of the United States.

Organization of Congress

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of recommendations and statement of Hon. Lindsay C. Warren, Comptroller General of the United States:

RECOMMENDATIONS OF THE HONORABLE LINDSAY C. WARREN, COMPTROLLER GENERAL OF THE UNITED STATES, INCLUDED IN HIS STATEMENT BEFORE THE JOINT COMMITEE ON THE ORGANIZATION OF CONGRESS, MAY 15, 1945

1. Better informed scrutiny by appropriations committees of Budget estimates.

a. More information in Budget as to agency programs.

b. Increased staff for appropriations committees.

c. Increased use of General Accounting Office on particular matters relating to expenditure and application of funds.

d. Closer cooperation between Congress and Bureau of the Budget.

2. Joint committee to receive, act on, and route to other committees reports of Comptroller General on expenditures, economy, and efficiency.

3. Reexamination of statutes exempting administrative agencies from general laws controlling expenditures.

4. Removal of many small statutory restrictions which hamper administration without accomplishing legislative thought.

5. More careful scrutiny of requests by disbursing or certifying officers or sureties for legislative relief from charges raised by General Accounting Office for improper payments.

6. Audit of Government corporations (already enacted).

a. Development of techniques for furnishing Congress increased information, which may prove applicable in some degree to regular departments.

STATEMENT OF THE HONORABLE LINDSAY C. WARREN, COMPTROLLER GENERAL OF THE UNITED STATES, BEFORE THE JOINT COMMITTEE ON THE ORGANIZATION OF CONGRESS, MAY 15, 1945

Mr. Chairman and members of the committee, I appreciate the invitation which you have extended to me to appear before you and discuss methods of strengthening congressional control of Federal expenditures, in connection with the studies which your committee is making of various phases of the organization of Congress.

Because of my long service in the legislative branch and continuing close relationship, official and personal, with its Members, I am intensely interested in the whole problem of strengthening the Congress and equipping it with modern machinery to enable it to perform properly its appropriating and other legislative functions. The number of proposals made to this end, both within and without Congress, and the high standing and character of the proponents, shows the importance of the question. And indeed, it is important. At present we have a situation where Congress annually appropriates billions to the executive branch, but treats itself so poorly that it has to go to the executive branch and beg, borrow, or steal personnel to help run its business.

I am generally familiar with the proposals in the field of reorganization and reduction of committees, improving the staffing of Congress and of its committees and members, formalizing the relations of Congress with the executive branch through such measures as the "question period," and increasing the control of Congress over administrative procedures, actions, and expenditures. All of these have their good points and many should be adopted without too much delay. The most constructive step, I think, was the establishment of this committee to study the organization and operation of the Congress and recommend improvements. I only regret that your authority does not go further. However, I shall confine my remarks to those matters which concern the relationship of the Congress and the General Accounting Office, and the broader question of legislative control of expenditures.

Control of the purse is one of the most important prerogatives of the legislative branch. It was written into the Constitution as section 9 of article I, providing that no money shall be drawn from the Treasury but in consequence of appropriations made by law. Ever since the Congress has sought in many ways and with varying success to give effect to this principle. As early as 1802 the Nicholson committee of the House of Representatives, appointed to inquire and report whether moneys drawn from the Treasury had been faithfully applied to the objects for which they were appropriated and whether they had been legally accounted for, said:

"There are two previous requisites which are necessary to justify the expenditure of public money and without which no legal expenditure can be made: First, that the expenditure for the object to which it is applied should be authorized by law; and, secondly, that an appropriation should have been made to cover that authorized expense."

In its efforts to put teeth into these rules Congress has written countless restrictions and prohibitions into appropriation statutes, but those restrictions sometimes have been evaded, sometimes have been impractical, and sometimes have defeated their own ends. At other times, such as the present, due to war or emergency conditions, Congress has practically given a blank check to the executive branch in the matter of expenditures. I feel that it is not too soon to begin to reexamine these large grants in the light of the progress of the war and to draw back to the Congress the control of expenditures.

For the enforcement of all of its directions as to the expenditure of the public funds Congress has relied upon the accounting officers of the Government. Until 1921 these officers—the comptrollers and auditors of the Treasury—were in one of the executive departments. A principal purpose of the Budget and Accounting Act was to make the Accounting Office of the Government independent of the Executive and responsible to Congress. This intent is shown not only by the language of the act but by its legislative history.

The act created the General Accounting Office as an establishment independent of the executive departments. It gave the Comptroller General and the Assistant Comptroller General a 15-year term and made the Comptroller General ineligible for reappointment and both officers removable only by joint resolution of Congress or by impeachment. It provided that all claims and demands in which the Government was concerned, either as debtor or creditor, should be settled and adjusted in the General Accounting Office, and that the balances certified by the Comptroller General should be final and conclusive upon the executive branch. It directed the Comptroller General to investigate all matters relating to the receipt, disbursement, and application of public funds, and to make reports to Congress, either House, and certain committees of either House.

As to the legislative history of the act, during consideration of the bill in the House, Representative Byrns, of Tennessee, ranking minority member of the House Select Committee on the Budget, which had initiated similar legislation in the preceding Congress, and later chairman of the Committee on Appropriations, majority leader, and Speaker of the House, said: "The Comptroller General is the representative of Congress. He does not represent the Executive in any sense of the word, and the whole idea of the Budget Committee was to make him absolutely and completely independent of the Executive. (Sixty-first CONGRESSIONAL RECORD 1081.)

A little further on, Mr. Byrns stated with respect to the Comptroller General:

"He acts as the auditor for Congress, to see that the appropriations made have been expended properly and honestly and in accordance with the intent of Congress as expressed in the appropriating act." (Id., p. 1082.) And on page 1857 of the RECORD, Representative Garner, later Speaker of the House and Vice President, one of the House conferees on the bill, said of the Comptroller General, "I wanted him to be absolutely independent."

Thus it is clear that the General Accounting Office is not a part of the executive branch but is the institution of Congress in fiscal matters, under the Comptroller General and the Assistant Comptroller General as the agents of Congress.

Today there is a widespread misconception of the functions and duties of the General Accounting Office, not only among the public, but among Members of Congress itself. There are less than 25 Members of the present Congress who were here when the Budget and Accounting Act was enacted in 1921. This seeming lack of knowledge has undoubtedly been due primarily to the fact that we do not invite interviews or give out releases or propaganda statements. To do so would destroy the effectiveness of the Office.

Within the past year a highly respected Member of the Congress and chairman of an important committee, who was a Member when the Budget and Accounting Act was passed, made the startling statement that the principal duty of the General Accounting Office was to detect fraud. Even recently it was said on the floor of the House that we were merely an auditing and bookkeeping establishment. Of course, the General Accounting Office is doing the biggest auditing job in the world, as an agent of the Congress. But against the comments I have just noted, set this statement made during the debates on the Budget and Accounting Act by Representative Good, chairman of the Select Committee on the Budget, in charge of the bill on the floor of the House:

"It was the intention of the committee that the Comptroller General should be something more than a bookkeeper or accountant; that he should be a real critic, and at all times should come to Congress, no matter what the political complexion of Congress or the Executive might be, and point out inefficiency, if he found that money was being misapplied—which is another term for inefficiency—that he would bring such facts to the notice of the committees having jurisdiction of appropriations." (61 CONGRESSIONAL RECORD 1090.)

In order to insure the carrying out of this desire the Congress in the Budget and Accounting Act provided in considerable detail as to the investigating and reporting functions of the General Accounting Office. These functions have been carried out by the Office ever since. There has been criticism, some well-founded, of the manner in which it has been done. However, it has been my constant effort since assuming the office of Comptroller General to improve this service to Congress. During the past fiscal year, 233 reports were made by the General Accounting Office to the Congress or to its committees. Besides these reports, a detailed list of which appears in the House hearings on the independent offices appropriation bill for 1946 commencing at page 112, 184 cases of erroneous or extravagant payments were reported to the House Committee on Appropriations. Many of these reports, however, are little used, and it has even been reported to me that some could not be found up here in Congress. I will come back to this in a moment with a specific recommendation.

The investigating and reporting functions of the General Accounting Office are very broad, but little understood. Section 312 (a) of the Budget and Accounting Act requires the Comptroller General to investigate, at the seat of government or elsewhere, all matters relating to the receipt, disbursement, and application of public funds, and to make annual reports to the Congress containing recommendations concerning the legislation he may deem necessary to facilitate the prompt and accurate rendition and settlement of accounts and concerning such other matters relating to the receipt, disbursement, and application of public funds as he may think advisable. This subsection also requires him to make recommendations, in his regular report or in special reports, looking to greater economy or efficiency in public expenditures.

Section 312 (b) requires the Comptroller General to make investigations and reports ordered by either House of Congress or by any committee of either House having jurisdiction over revenue, appropriations, or expenditures, and at the request of any such committee, to direct assistants from his office to furnish the committee such aid and information as it may request. Other provisions of section 312 require still further reports from the Comptroller General to the Congress.

It is under this general authority, as implemented by annual appropriations, that the investigating and reporting functions of the General Accounting Office have been carried on ever since the Office came into existence. However, the function of making investigations and reports ordered by either House or by any committee of either House having jurisdiction over revenue, appropriations, or expenditures—that is, the House and Senate Committees on Appropriations and on Expenditures in the Executive Departments, the House Committee on Ways and Means, and the Senate Finance Committee—has been emphasized by a new provision in the Independent Offices Appropriation Act for 1946 making an appropriation of $67,930 to the General Accounting Office for investigations for, and detail of assistants to, committees of Congress as authorized in section 312 (b) of the Budget and Accounting Act.

This appropriation for the purposes of section 312 (b) of the Budget and Accounting Act does not affect the general duty of the Comptroller General to investigate all matters relating to the receipt, disbursement, and application of public funds and to make to Congress reports concerning such matters and recommendations concerning economy or efficiency in public expenditures, as set out in section 312 (a), or other reporting functions covered by the remaining portions of section 312. However, it may result in increased use of the facilities of the General Accounting Office by the committees designated in section 312 (b), especially the Appropriations and Expenditures Committees.

The foregoing statements show the close relationship between the Congress and the General Accounting Office, and the information and assistance being furnished to the Congress by the Office, in addition to the performance of its function as the agent of Congress to settle and adjust all accounts and claims in which the United States is concerned. I believe that analysis of these statements will also show the possibility of Congress obtaining increased help from the Office.

The Budget and Accounting Act set up the machinery for executive compilation and revision of the budget estimates, and for their presentation to the Congress through the Bureau of the Budget and the President. It also set up the machinery for the independent audit and settlement of the public accounts, and the furnishing of reports concerning the receipt, disbursement, and application of such funds, by the Comptroller General as the agent of Congress. However, with all the information the Congress is receiving as to budgetary requirements and expenditures, I have been forced to the conclusion, previously expressed to committees of the House, that Congress has no idea how appropriated funds are spent. Since I first made that statement steps have been taken to strengthen the staffs of the Appropriations Committees, and we are cooperating with the Senate committee by furnishing two men for their staff.

This brings me to my first recommendation concerning measures to strengthen the control of Congress over expenditures; that is, a closer, better-informed scrutiny and analysis by the Congress—the Appropriations Committees—of the budget estimates submitted by Government agencies. This could be done without destroying the concept of the executive budget as contemplated by the Budget and Accounting Act. In fact, to attempt to set up a parallel legislative budget would completely duplicate the work which you have set up the Bureau of the Budget to do. Now it is the job of the Bureau of the Budget, and not of the General Accounting Office, to prepare the budget. I think, however, that if you could have the budget show more of the programs they expected to undertake with the money which you appropriate, that is, state the job to be done in specific terms within the general authority of the agency rather than merely the receipts and expenditures, man-years and salaries, and other information classified according to type of expenditure, you would have a better idea of what that money is really to be spent for.

Then, by increasing the staffs of the Appropriations Committees, perhaps even beyond the limited increase which has already taken place, and by increasing use of the General Accounting Office on particular matters relating to the expenditure and application of funds, the Congress could better inform itself as to how expenditures have been made and as to the soft spots in the organization or activities of the agencies requesting funds. This information would be available for use when the agencies appeared before the Appropriations Committees requesting funds. In other words, the committee would have both sides of the story. While the present manpower situation and the tremendous job the General Accounting Office now has due to war expenditures and the new corporations audit work enjoined upon us by the George Act would make it impossible for the General Accounting Office to undertake the job immediately on a Government-wide basis, this function could be developed gradually and I sincerely believe would in time become a great aid to the Congress and its committees dealing with appropriations and expenditures. I feel, too, that notwithstanding the distinction between the executive and legislative branches here could be closer cooperation between the Congress and the Bureau of the Budget, particularly in regard to information as to the standards applied by the Bureau in reducing or approving particular estimates.

My second recommendation is that a joint committee be set up by Congress to receive and act upon reports submitted by the Comptroller General on expenditures, efficiency, and economy in the executive branch, and to route them to other interested committees such as the Expenditures and Appropriations Committees. Upon receipt of such reports, representatives of the department, the Bureau of the Budget, and the General Accounting Office could be called to the Committee on Public Accounts and the whole matter could be threshed out. This would keep our reports from getting lost, or simply being disregarded, and would encourage us to make more and better reports.

A third and a most important step would be the reexamination of the numerous statutes enacted by the Congress granting authority to administrative officials to make expenditures without regard to general laws controlling and safeguarding the use of public funds. Many such statutes are listed in my annual reports for the fiscal years 1941 to 1944, inclusive. While Congress no doubt deemed it necesary in the early days of the war to authorize administrative officials to act without regard to the provisions of many laws otherwise controlling, the present progress of the war makes continued granting of such authority highly questionable if the Congress is to regain its control over the purse. Now is the time to begin to draw in this authority.

Closely related to the suggestion just made is another concerning the restrictions and limitations on the use of public funds. It may be that in some cases, you will find that the reason for exempting so many agencies from a particular restriction is that the restriction has become outmoded or unworkable. In such cases the solution will not be to put the agencies back under the restriction, but to remove the restriction and hold the agency accountable for its actions under its general grant of authority from Congress. It will take careful study to determine just when this should be done, but I can see a fertile field for study in the removal of many small limitations which hamper administation and do not always accomplish the legislative thought.

A fifth improvement would be more careful scrutiny of requests by disbursing or certifying officers for relief from charges on account of illegal or improper payments. These charges are raised by the General Accounting Office as the agent of the Congress in the settlement of the public accounts. A liberal treatment of such requests for relief tends in the long run to encourage a careless attitude on the part of the spending officers and to discourage the General Accounting Office in its efforts to apply, in the settlement of the accounts, the rules laid down by the Congress to control expenditures.

Another notable step toward increased congressional control of expenditures, long recommended by the General Accounting Office, has already been taken with the enactment of the Government corporation audit

provisions of Public Law 4, approved February 24, 1945—the George Act. That act provides that the financial transactions of all Government corporations shall be audited each fiscal year by the General Accounting Office in accordance with the principles and procedures applicable to commercial corporate transactions, beginning with the current fiscal year, and that a report of each such audit shall be made to the Congress not later than the following January 15. The complete program for financial control of Government corporations is set forth in the Byrd-Butler bill, S. 469, and the Case and Whittington bills, H. R. 2051 and H. R. 2177, now pending. This legislation will give the Congress an annual review and report of the financial transactions of all Government corporations. In the meantime, the audit by the General Accounting Office under the George Act will be a laboratory in which we can develop and test the techinques for providing the Congress with better information as to the use of public funds by these corporate agencies—techniques which experience may prove suitable for application in some degree to the regular Government departments and establishments.

With these suggestions for improving the control of Congress over expenditures, I will close my general remarks, gentlemen. I will be glad to answer any questions which you may have on these matters.

Vermont Leads the World With Its 46 Ton-of-Gold Cows

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. PLUMLEY. Mr. Speaker, for the information of those who would really like to rate as representatives from dairy States, let me modestly and facetiously offer the advice that they come to Vermont to learn the business. This is said in all kindness and only with an intent to be helpful to those to whom I have had to listen patiently for the last 12 years as they have tried to make me believe they came from a real dairy State.

Now, they should read of the world record made by the Jersey herd owned by their former colleague, the Honorable E. S. Brigham, of St. Albans, Vt., and Montpelier, Vt., and forever after hold their peace; or at least they should acknowledge the correctness of my statements, that when it comes to the dairy business Vermont leads the world, and it takes second place for nobody either as to quality, or as to quantity of cows per capita.

Under permission heretofore granted to extend my remarks, I include an article from the Burlington Free Press of date May 11, 1945, which reads as follows:

BRIGHAM WITH 46 TON-OF-GOLD COWS IN ST. ALBANS HAS MADE WORLD RECORD AMONG BREEDERS—MOREOVER, HE HAS HAD FOR 5 YEARS HERD OF 100 OR MORE PRODUCERS WHICH HAVE UNUSUAL PLACE IN JERSEY ANNALS

New honors have been heaped upon the outstanding Jersey herd of Brigham Farm, owned by E. S. Brigham, St. Albans. He has built up the greatest number of ton-of-gold cows of any breeder in the world—46. And he has had for 5 years the highest producing Jersey herd of 100 cows or more.

"This great producing herd has carved its record into the annals of Jersey history," reported the American Jersey Cattle Club. Brigham shares all credit with his herdsman, Cesaire Lacoste, and his good pasture growing farm manager, E. Dupre. His entire herd of 141 head is by 8 sires, as shown by latest records.

The herd is made up of five yearlings in milk, twenty-seven 2-year-olds, nineteen 3-year-olds, nine 4-year-olds, fifteen 5-year-olds, five animals over 10 years old, and the balance of the herd between 6 and 10.

In 1944, with 141 cows in the herd, 10,171 pounds of 5.11 percent milk, 520 pounds of fat were produced, with records made on a strictly twice-a-day milking basis. In 1943, with 127 cows, 10,058 pounds of 5.26 percent milk, 529 pounds of fat; 1942, with 112 cows, 10,116 pounds of 5.11 percent milk, 517 pounds of fat; in 1941, with 124 cows, 9,734 pounds of 5.26 percent milk, 512 pounds of fat; in 1940, with 118 cows, 9,441 pounds of 5.12 percent milk, 484 pounds of fat; in 1939, with 104 cows, 8,796 pounds of 5.18 percent milk, 455 pounds of fat; in 1938, with 102 cows, 8,398 pounds of 5.21 percent milk, 438 pounds of fat; and in 1937, with 94 cows, 7,617 pounds of 5.06 percent milk, 386 pounds of fat.

HAS OUTSTANDING SIRES

The eight sires and their tested sire averages are in themselves "one of the finest tributes to a breeder's ability to select herd sire that I have had the privilege of ever finding in 20 years of making herd analysis," comments the American Jersey Cattle Club representative. Their records, calculated on the basis of what the cows produced in 305 days a year with twice-a-day milking, follow:

Sy' il Ashburn Baronet Owl 396681, superior sire, 22 daughters who averaged 10,930 pounds of 5.41 percent milk, 591 pounds of fat. His 23 classified daughters average 83.15 percent.

Josephine's Royal King 250214, tested sire, 91 daughters, 10,605 pounds of 5.35 percent milk, 567 pounds of fat.

Floss Duke's Model 369058, tested sire, 37 daughters, 10,248 pounds of 5.36 percent milk, 549 pounds of fat.

Killingly Torono Lass' Lad 291790, tested sire, 47 daughters, 10,175 pounds of 5.02 percent milk, 511 pounds of fat.

Lilac Remus Unrivaled, 409293, three daughters, 10,431 pounds of 5.26 percent milk, 549 pounds of fat.

Lucille's Golden Owl, 251626, tested sire, 47 daughters, 9,150 pounds of 5.3 percent milk, 485 pounds of fat.

Smoky Pure Gold Duke, 356655, tested sire, 10 daughters, 10,471 pounds of 4.95 percent milk, 518 pounds of fat.

K. Torono Lass Lad's Omar, 361613, seven daughters, 10,629 pounds of 4.93 percent milk, 524 pounds of fat.

RECORD IS 10,831 POUNDS

The highest record made for 1944 by Brigham's cows was 10,831 pounds of milk, 683 pounds of fat, credited to the 3-year-old, Sybil Owl Verinda, 1289893. She is the daughter of Sybil Ashburn Baronet Owl, 396681, himself one of the highest ever proved in the Bureau of Daily Industry's sire program and a superior sire son of the great superior sire, Sybil Ashburn Baronet.

The highest of the 46 ton-of-gold cows is K. Torono Lass Lad's Olga, 1026871, credited with 56,885 pounds of milk, 2,553 pounds of fat. She is a daughter of Killingly Torono Lass' Lad and out of the cow Lucille's Golden Owl's Ina, 773938. The greatest dam of ton-of-gold cows, who is herself a ton-of-gold cow, is K. Torono Lass Lad's Nerissa, 1000269, dam of 4 ton-of-gold cows.

The 1944 herd improvement registry certificate issued to Brigham farm shows the following production groups into which all cows milked 270 days or more fell. Actual records only are quoted:

Twelve cows, 600 pounds of fat or more; 41 cows, 500–599 pounds of fat; 37 cows, 400–499 pounds of fat; eight cows, 300–399 pounds of fat; and only 1 cow under 300 pounds of fat.

Views of the Ball Bearings Tariff Committee

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the views of the Ball Bearings Tariff Committee with reference to the Trade Agreement Act:

I. THE IMPORTANCE OF THE TRADE AGREEMENTS ACT

In the matter of the proposed extension of the Trade Agreements Act, whatever may be its other aspects, its primary purposes are economic. This fact may be seen in the opening words of the act itself. (See transcript attached.) Time and the war have altered these purposes which may now be stated as: The prevention of a recurrence of economic depression; the provision of sufficient employment for returning veterans and others; and the preservation of peace. These purposes being entirely worthy and of vital importance, the question is whether or not this legislation will achieve its purposes.

II. ACT AS AMENDED BY H. R. 2652 SHOULD NOT BE EXTENDED

For the reasons hereinafter stated the committee is opposed to the passage of H. R. 2652. Statistics have shown that in the years before the war and after the conclusion of trade agreements under the act, its avowed purposes were not accomplished. It is believed that the further extension of the policy inherent in the act would result in economic disaster.

III. FURTHER TREATY REDUCTIONS WOULD PAVE THE WAY FOR FLOODING OF THE DOMESTIC MARKET

The State Department, which in the last analysis has and will carry this legislation into effect, has stated its case over the radio and has distributed copies to the press and public. In the March 10 broadcast Mr. MacLeish asked, "If we lower tariffs, wouldn't we be flooded with cheap goods?" To which Mr. Clayton replied, "I don't think so. I'd like to point out that there is an implied contradiction in that phrase 'flooded with cheap goods.' The consumer would like to be flooded with cheap goods that are honestly cheap—that is cheap in price, because other countries can make them more efficiently than we can these are exactly the goods we should import."

It should be noted that, although productive efficiency has little to do with it, with further tariff reductions every nation's goods will be cheap but our own and the consumer will buy them. No good will derive from increased exports, if achieved, if domestic consumption is supplied largely by imports.

IV. FURTHER TARIFF REDUCTIONS WILL CAUSE CONVERSION OF INDUSTRY

At another point in the same broadcast Mr. Clayton said: "After victory most plants will have to convert from war to peace production. They can convert in various ways,

and if they see tariff rates coming down and foreign markets opening up they will convert to the things that offer the best opportunities under those conditions."

There you have the proponents of lower tariffs telling you what is going to happen. United States industries which can only meet foreign competition with the aid of tariffs must convert to something else, if they can, and if they can bear the cost of conversion and find convertible labor.

V. EFFECT ON THE ANTIFRICTION BEARING INDUSTRY

The antifriction bearing industry did not have to convert for war because it is vital to the vast majority of other war industries. Antifriction bearings are essential components in the following combat units: airplanes (a Flying Fortress uses approximately 1,700 ball bearings), aircraft propellers, aircraft engines, gun mounts, instruments (including bomb sights), electric motors, machine tools (on which all other industries are dependent), tanks, and trucks.

The antifriction bearing industry had its start in Europe, and had it not been for tariff protection it would never have been able to develop in this country. Under these circumstances we would have been dependent on others in this war, as we could not have built up the industry without experienced technicians and laborers. In 1939 the industry employed an average of 18,248 workers for a total of 35,481,311 man-hours annually. It now employs approximately 70,000 workers for an estimated 155,000,000 man-hours for this year. As far as America's ability to defend itself in the future is concerned, the further reduction of duties on its products would prove even more disastrous to America than was the bombing of Schweinfurt to Germany.

Under the Tariff Act of 1930 the duty on these items was 45 percent and 10 cents per pound. Under the Swedish trade agreement this was reduced to 35 percent and 8 cents per pound. The duty on balls and rollers only was further reduced to 25 percent and 8 cents per pound under the United Kingdom trade agreement. If H. R. 2652 is passed as written these duties may be reduced to 17½ percent and 4 cents per pound, and 12½ and 4 cents per pound, respectively.

If this is done it is gravely doubted that the American industry can survive. As it is, the industry will be at a distinct disadvantage after the war with labor representing 60 to 70 percent of the cost of its product. In 1938 hourly wages in the various competing countries were United States 80 cents, England 40, France 38½, Germany, 35, Sweden 30, Belgium 24, Italy 16, and Japan 9½. The present average hourly wage in the United States is $1.233. Moreover, while American industry enjoys no technological advantage, foreign industry in some cases enjoys an advantage in raw material costs as well as in the productive rate per hour. These advantages may be further accentuated by the depreciation of foreign currencies in post-war years.

The State Department has branded this industry inefficient and therefore unworthy of protection, but its loss would be an irreparable disaster to our economy, our technical independence, and our safety.

VI. EFFECT OF CONVERSION OF PROTECTED INDUSTRIES

Further along these lines Mr. Clayton said: "If they have to depend on protection it is because they are less efficient. Our export industries are able to pay the highest wages because they are the most efficient industries."

Formerly protected industries then must become more efficient or convert to more efficiently produced products. These industries will then either employ less people for the same value of product or develop exportable surpluses which must produce more imports.

VII. THE QUESTION OF EXPORTS

As to our export industries, we have the automobile industry for example, though it is not mentioned by Mr. Clayton. If all production in the United States were as efficient as the auto industry we would probably have to export 30,000,000,000 annually in order to maintain full employment, and take only money in return. The exports mentioned by Mr. Clayton are cotton, tobacco, grain. Must we reduce the standard of living of everyone in the country to that of the producers of these products?

VIII. RAISING OF FOREIGN LIVING STANDARDS

Dean Acheson gives the answer: "Of course, in the long run and not too long a run either, living standards in other countries must be brought closer to ours * * *. As their standards are raised, and become equalized with those of the United States, they will be less likely to undercut our market by producing goods that are low in price because of sweated labor."

IX. CONCLUSION

When and if that millenium arrives will be time enough to cut tariffs further, but until then we must protect our economy from the results of our unique position. Low wages, longer hours of labor, depreciated currencies, and even technological superiority on the part of the majority of foreign industrialized countries makes it impossible for us to trade with them on a nearly free basis, without suffering ruinous competition and resultant unemployment.

Respectfully submitted.

Presidential Veto of House Joint Resolution 106

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. FLANNAGAN. Mr. Speaker, very few men, if their names were not mentioned, could be identified by their obituaries. The same is true of the obituary written in the form of a veto message on House Joint Resolution 106. Were it not for the fact that the resolution is mentioned by name in the veto message no one would ever suspect that the President was administering the last rites to the Tydings amendment and House Joint Resolution 106. Instead of quoting from the Tydings amendment and House Joint Resolution 106 in order to establish a premise, whoever penned the message simply set up a straw man and then proceeded to knock him down with a sledge hammer.

Now it is not my purpose to hold a post mortem, because in spite of the veto the policy laid down by Congress in the Tydings amendment is not dead unless we are going to kill food production, and no one, of course, is going to let that happen. My purpose is simply to acquaint the Congress and the country with just what has happened. It is this: The Tydings amendment declared the policy of Congress with respect to farm labor. The policy so declared, after being respected for over 2 years, was annulled by a directive issued by the Selective Service. The Congress then passed House Joint Resolution 106 reaffirming its policy as set forth in the Tydings amendment and directing Selective Service, notwithstanding its directive, to respect that policy. The President vetoed the resolution which, in effect, was equivalent to saying that an act of Congress can be annulled by a directive issued by some governmental agency. There can be no question as to this because the veto killed the resolution thereby reviving the directive. Of course, I do not believe the President intended to do such a thing; nevertheless that is exactly what he has done by his veto.

THE TYDINGS AMENDMENT

Let me first give you the background of this amendment. After the passage of the selective-service law industries essential to the war effort, such as munition factories, and so forth, were classified as critical industries, and provision made to keep those industries supplied with sufficient help, even though young men of draft age working in those industries had to be deferred from military service. This was right, because we all realized that it would be foolish to draft an army unless we supplied the army with the necessary implements of warfare. Strange as it may seem, though everyone recognized that food was just as essential in warfare as guns and tanks, agriculture was never classified as a critical industry, and hence farm boys prior to the Tydings amendment, were drafted into the armed forces regardless of their essentiality to the production of food. Realizing that farm labor, simply because farming had not been classified as a critical war industry, was being drained off in an alarming manner, not only by the draft boards but by industries paying a higher wage, the situation was taken up with the Selective Service by those in Congress interested in seeing that the farmers were given the necessary help to produce the food so essential to our war effort, to see if a solution could be found whereby the farm boys who were found by their local boards to be essential to the war food effort would be left on the farms. And to those who seemingly think the farm representatives were attempting to put something over that would give the farm boys preference, let me state that the Tydings amendment was not only agreed to by the Selective Service but was prepared by the Selective Service.

Now let me quote the text of this much maligned amendment, which when it was up in the Senate for passage, was favored by the author of the veto, who, of course, was then Senator Truman:

(k) Every registrant found by a selective service local board, subject to appeal in accordance with section 10 (a) (2), to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the

war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained: *Provided*, That should any such person leave such occupation or endeavor, except for induction into the land or naval forces under this act, his selective service local board, subject to appeal in accordance with section 10 (a) (2), shall reclassify such registrant in a class immediately available for military service, unless prior to leaving such occupation or endeavor he requests such local board to determine, and such local board, subject to appeal in accordance with section 10 (a) (2), determines, that it is in the best interest of the war effort for him to leave such occupation or endeavor for other work.

The amendment had two purposes, namely:

First. To give the local draft board the authority, in the event it found the registrant "necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort," to defer the registrant "so long as he remains so engaged and until such time as a satisfactory replacement can be obtained."

Second. To freeze the farm boy to the farm in the event he was found by the local board "to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort." This was necessary in order to keep such boys from leaving the farm and going to work for some war industry paying several times the farm wage, and this purpose was accomplished by providing "that should any such person leave such occupation or endeavor, except for induction into the land and naval forces under this act, his Selective Service local board shall reclassify such registrant in a class immediately available for military service."

That part of the amendment that House Joint Resolution 106 attempted to preserve from the death knell of the Selective Service directive, and which is dealt with in the Presidential veto, is plain and unambiguous. The Congress, and so did Selective Service until its directive of January 3, 1945, construed the amendment to mean exactly what it said, namely, that if the local draft board found a registrant to be "necessary to or regularly engaged in an agricultural occupation or endeavor essential to the war effort" the board, having made such determination, was required to defer the registrant "from training and service in the land and naval forces so long as he remains so engaged and until a satisfactory replacement can be found." The only question under the amendment the local draft board was called upon to determine was the essentiality of the farm boy to the war food effort. No question of comparative essentiality between the farm and the armed forces was ever contemplated.

The effect, and the only effect, of the first provision in the amendment, which is the provision dealt with in the veto message, was to classify agriculture as a critical war industry and place the farm boy upon the same footing as boys engaged in critical war industries. Had not this amendment been passed, the local draft boards would have been forced to put all farm boys who passed the physical into the armed forces, which, of course, would have wrecked agriculture. This amendment was not passed until November 1942; and remember that prior to its passage a great deal of essential farm help had been drained off either through the draft boards or by industry paying a wage a great many times higher than the farm wage, and agriculture thereby placed in a precarious condition.

The Tydings amendment was passed in November 1942, and observed by Selective Service until January 3, 1945. On the later date Selective Service issued a directive known as Directive No. 288, which, for all practical purposes annulled the Tydings amendment by requiring the local boards to determine whether or not the registrant was more essential to the war food effort than he was to the armed forces. Moreover, Selective Service did not stop here, but went further and told the local boards that this determination had already been made in favor of the armed forces and if the registrant passed the physical there was nothing left for the board to do but put him in the Army.

There can be no question as to the meaning of the directive. And this meaning is confirmed by the testimony taken by the House Committee on Agriculture, which shows that in many instances Army officers appeared before the local boards and gave this interpretation of the directive. Now, up to January 3, 1945, the Congress had construed the Tydings amendment as placing upon the local boards only one determination, namely, is the registrant "necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort." Moreover, the Selective Service had so construed the amendment. Hence, when the directive of January 3, 1945, was issued, stripping the farms of all boys between 18 and 26, a storm of protest came up from all farming sections, and many local draft boards resigned rather than follow the directive which in effect told them to ignore an act of Congress. In answer to this protest, the House Committee on Agriculture asked General Hershey to appear before the committee and explain why he was attempting to annul an act of Congress by a directive. Accordingly, on January 22, 1945, General Hershey appeared before the House Committee on Agriculture, and after engaging in considerable talk—he is a pretty hard man to corner—finally admitted that Selective Service construed the act as it had been construed by Congress, and further agreed to issue a directive correcting the erroneous interpretation of the amendment as set forth in directive No. 288. Thereupon, the House Committee on Agriculture and General Hershey drafted a directive correcting the erroneous interpretation placed upon the amendment by the directive of January 3, 1945—No. 288—which is as follows:

Questions of interpretation of State directors advice No. 288 have been brought to my attention by Members of Congress and by others.

The directive of January 3, 1945, State directors advice No. 288, did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State directors advice No. 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.

Section 5 (k) of the Selective Training and Service Act, known as the Tydings amendment, places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant, whether or not the registrant meets the requirements prescribed by this section.

Notify all local boards immediately.

Everyone was now satisfied, as we thought the matter had been amicably settled. Then what happened? Why this is what happened: In the January issue of a publication gotten out by Selective Service, published subsequent to January 22, 1945, General Hershey inserted a signed editorial in which he wiped out the interpretation he placed upon the Tydings amendment in the corrective directive of January 22, 1945, which was the interpretation Congress had always placed upon the amendment, and which was also the interpretation Selective Service had agreed to January 22, 1945, and reaffirmed the interpretation set forth in directive No. 288 of January 3, 1945. In other words General Hershey went back on everything he told the House Committee on Agriculture on January 22, 1945, and which he confirmed by the directive of that date.

Directive No. 288 of January 3, 1945, and the editorial appear in my remarks to the House on February 7, 1945, and as they are rather lengthy I will not reinsert them.

On February 5, 1945, the House Committee on Agriculture again held a hearing on the matter and examined, among other witnesses, General Hershey. It was at this meeting that General Hershey, after much hedging, finally admitted that he placed upon the Tydings amendment the erroneous construction that I have referred to. Having obtained this admission, there was nothing left to do but introduce House Joint Resolution 106 if we intended to protect the production of food and maintain the integrity of Congress.

The record on this point is as follows:

The CHAIRMAN. Now I just want to get the issues clear. As I understand it, the issue is this: The Congress believes that under the Tydings amendment, the determination for the local board to make is whether or not the boy is essential to the farm. Under your interpretation, it is a question as to the relative needs of the farm and the Army.

General HERSHEY. Yes.

The CHAIRMAN. And that the local board should determine, when they examine a farm inductee, whether or not he is more essential to the farm than he is to the Army, or whether or not he is more essential to the Army than he is to the farm?

General HERSHEY. Yes.

THE VETO MESSAGE

The veto message is predicated upon the assumption that the Tydings amendment gave a blanket deferment to farm labor. This is clearly shown by the following excerpts from the message:

The indicated purpose of the amendment is to cause the deferment of a large number of registrants engaged in agricultural production.

* * * * *

Congress, when it passed the Selective Training and Service Act in 1940 wisely provided * * * no such deferment shall be made of individuals by occupational groups.

* * * * * *

I do not believe it was the intent of Congress that agricultural workers should be given blanket deferment.

* * * * *

In my opinion no group should have any special privileges, and, therefore, I return the joint resolution without my approval.

Now the Tydings amendment does not, as set forth in the veto message, attempt to defer a particular class or some particular group. It only attempted to keep on the farms those boys who were essential to our war-food effort, and these boys, regardless of their essentiality to the farm, were only to remain on the farm until satisfactory replacements could be obtained. The language of the amendment, as I have stated, is "every registrant found by a selective service local board to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained."

If the farm worker was found essential to the war food effort by the local board he was left on the farm. If, on the other hand, the local board found that the farm worker was not essential to the war food effort he was inducted into the armed forces. The farm worker was dealt with by the local board as an individual. And remember House Joint Resolution 106 was simply a reaffirmation of this amendment. House Joint Resolution 106 did not, in any way, change the Tydings amendment. It only attempted to force Selective Service to respect the amendment. And also remember the Tydings amendment left with the local draft boards to determine, with respect to each individual registrant, the essentiality of such registrant to war food production. There is just as much reason in arguing that we gave blanket or group deferment to men working in some factory producing bombers simply because we deferred men working therein found essential to the successful production of bombers, as it is to argue that we gave blanket or group authority to men on the farm under the Tydings amendment, simply because under said amendment we deferred men working on the farm found essential to the successful production of food. Of course, blanket or group deferment was not given in either case.

But, for the sake of argument, let us assume that Congress under the Tydings amendment gave blanket or group deferment to those working on the farm; and let us admit that the Selective Service Act passed in 1940 contained a provision providing that "no such deferment shall be made of individuals by occupational groups." This violent assumption and frank admission does not, in any way, fortify the veto message. Congress is the policy-making body of our Government and, of course, if it has power to establish a policy it has the power to change a policy. The policy of Congress as expressed in the original Selective Service Act of 1940 was that "no deferment shall be made of individuals by occupational groups." Now assume—of course, it did not—that the Tydings amendment subsequently passed, changed this policy with respect to those engaged in farming as contended in the veto message. Will anyone familiar with our system of Government contend that Congress did not have the power to make this change in policy? The executive branch cannot establish or change a policy of Congress. That power, under the Constitution, is vested in the Congress and in the Congress alone. It can only execute the policies promulgated by Congress. Yet the veto message assumed a power never granted to the executive branch of our Government in that it upheld a directive that absolutely changed a policy laid down by Congress.

HOUSE JOINT RESOLUTION 106

Having at last found out that Selective Service intended to wipe out the Tydings amendment by directive, House Joint Resolution 106 was introduced. This resolution directs the Selective Service to carry out the policy of Congress as set forth in the Tydings amendment. It does not in any way change the Tydings amendment. All it does is to wipe out Selective Service Directive No. 288 of January 22, 1945, and direct Selective Service to construe said amendment according to its plain meaning and in accordance with the intent of Congress, and, for that matter, in the same way Selective Service itself had construed the amendment up to January 3, 1945.

The resolution reads:

That section 5 (k) of the Selective Training and Service Act of 1940, as amended, is amended by adding at the end thereof the following new paragraph:

"In carrying out the provisions of this subsection, the selective-service local board in classifying the registrant shall base its findings solely and exclusively on whether the registrant is necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort and whether a satisfactory replacement can be obtained, without reference to the relative essentiality of the registrant to an agricultural occupation or endeavor as compared with any other occupation, service, or endeavor; and the foregoing provision of this sentence shall apply upon any appeal or review of a decision made thereunder by a selective-service local board. Such deferment shall be made by said board without consideration of any other circumstance or condition whatsoever; and during the period of such deferment for such purpose, no other classification, of said registrant, shall be made by said board: *Provided*, That no registrant who is qualified to serve in the armed forces shall be deprived thereby of the right to volunteer for such service."

The resolution was referred to the House Military Affairs Committee. Hearings were held and General Hershey appeared before the committee in opposition. The Military Affairs Committee, after hearing testimony and carefully considering the resolution, made a favorable report. A rule was asked for in order to speedily bring the resolution before the House. The Rules Committee held a hearing and General Hershey again appeared in opposition. The Rules Committee after a full hearing granted a rule. The resolution then came before the House where after full debate it was passed and sent over to the Senate where it was incorporated in what is known as the work-or-fight bill and passed. The work-or-fight bill having been killed, the resolution was reported out by the Senate Military Affairs Committee. It then came before the Senate, was fully debated, and passed. I give this recitation in order to show that the resolution was thoroughly and carefully considered.

Now permit me to quote a few excerpts from observations made by Senator TYDINGS, the author of the Tydings amendment, on directive No. 288 and the Hershey editorial, upon the floor of the Senate.

On February 8, 1945:

Mr. REED. On January 3 of this year General Hershey addressed to all State directors a letter, the concluding language of which is as follows:

"In considering the classification or retention of such registrants in class II–C, local boards will consider the President's finding"—I call the attention of the Senator from Maryland to that particularly—"will consider the President's finding that"—now I read what General Hershey quotes as the President's finding—"further deferment of all men now deferred in the 18- through 25-age group because of agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and Navy for young men."

Does the Senator from Maryland find in the language of the Tydings amendment anywhere a direction or authority or permission or requirement of the local draft board to give consideration to the need of the Army for men?

Mr. TYDINGS. The Senator from Kansas and all other Senators know that the head of the Selective Service System cannot do anything except in accordance with the acts of Congress. He cannot on his own motion draft anybody for the military service. He can only draft those within age limits and restrictions fixed by the Congress. He has no more authority to draft a man for the military service than I have, unless he is given the authority by law. Therefore my answer to the Senator is that what he has just read, contravening as it does the act of Congress, is worthless, and the fact that a Government official occupies a high position does not make his action any more valid than if he were a mere justice of the peace.

I should like to say for General Hershey—and I have had numerous dealings with him—that I have found him to be a very able man, who, until this recent action, it seemed to me was trying to stay within the acts of Congress and to perform at the same time a very arduous and difficult task, namely to supply men for our armed forces. That is the reason I feel all the more shocked that in this sweeping order, a part of which the Senator from Kansas read, and the remainder of which I shall shortly read, the whole amendment known as the Tydings amendment has been completely brushed aside insofar as what General Hershey said is concerned. Actually the Tydings amendment is just as valid and effective today as it was the day it was signed. No man coming within the provisions of the Tydings amendment can be drafted for any service until Congress changes the policy it adopted at the time it enacted that amendment, and the Tydings amendment provides "that if a man is regularly employed in an essential agricultural endeavor he cannot be taken for any other service unless a replacement for him shall first be found."

* * * * *

Mr. TYDINGS. Mr. President, it will be found that the third, the fifth, the seventh, and

the ninth paragraphs, particularly, of the editorial in effect say, "It does not make any difference whether a man is employed on a farm in an essential agricultural endeavor, and whether or not no replacement for him is available; if the draft board wants to draft him I say, 'Go to it.'"

That is exactly what the language means.

Mr. President, I do not believe Congress is going to stand for that sort of interpretation of its clear and express purpose in this matter, not only because of the merits of the legislation itself, inherent, in my opinion, in its wording and in the circumstances which now confront the country, but because the Congress will not be worth its salt unless it shall see to it that its acts are respected by those in executive position who are called upon to administer and enforce them.

* * * * *

Mr. TYDINGS. * * * Now we have a total striking down of that amendment, not by us, not even by the President of the United States, but by the head of the Selective Service System. I know that the pressure on General Hershey to provide men is tremendous and I sympathize with him. The way to obtain a change in anything we may have done so as to accommodate the country to the situation is by a new policy of the Congress; but so long as the policy of the Congress remains unchanged it must be interpreted as it has been interpreted up to now.

When House Joint Resolution 106 came before the Senate for consideration, the RECORD of April 18, 1945, reveals that the following proceedings took place:

Mr. TYDINGS. A number of Members of the Senate, as well as the House, have during the past 6 weeks asked for legislation reaffirming the provisions of the so-called farm deferment or Tydings amendment to the Selective Training and Service Act. A measure doing that has passed the House. When it came to the Senate it was referred to the Committee on Military Affairs. The Committee on Military Affairs has unanimously reported it favorably. The proper place to offer it would, of course, be on the bill which is now before the Senate. However, the Senator from Utah is not anxious to have the bill extending the Selective Training and Service Act go to conference. At the same time, in view of recent practice, I think the farm-deferment amendment ought to be restated and reaffirmed. Inasmuch as I know of no objection to it, with the consent and approval of the Senator from Utah [Mr. THOMAS] I ask unanimous consent that House Joint Resolution 106 be now considered. I do not believe it will provoke any debate. In that way we can avoid the necessity of offering it as an amendment to some other bill.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Maryland?

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. TYDINGS. I yield.

Mr. BARKLEY. Is the joint resolution in the same language as the amendment which the Senate adopted when it had under consideration the manpower bill?

Mr. TYDINGS. It is in the original language, with an interpretative sentence at the end, so as to avoid the conflict of opinion which seems to have resulted. There is nothing new in it.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Maryland?

Mr. WHITE. Mr. President, will the Senator yield?

Mr. TYDINGS. I yield.

Mr. WHITE. When was the joint resolution reported from the committee?

Mr. TYDINGS. It was reported on April 11.

Mr. WHITE. And it has been on the calendar since?

Mr. TYDINGS. Yes. There is no objection from any quarter. I believe it passed the House unanimously. I do not wish to offer it as an amendment to the bill to extend the Selective Training and Service Act.

Mr. WHITE. I have no objection.

Mr. GURNEY. Mr. President, will the Senator yield?

Mr. TYDINGS. I yield.

Mr. GURNEY. Let me ask the Senator from Maryland if the joint resolution is in the exact wording indicated in Calendar No. 182?

Mr. TYDINGS. That is correct; as reported from the Committee on Military Affairs.

The PRESIDENT pro tempore. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution (H. J. Res. 106) to amend section 5 (k) of the Selective Training and Service Act of 1940, as amended, with respect to the deferment of registrants engaged in agricultural occupations or endeavors essential to the war effort, which had been reported from the Committee on Military Affairs with an amendment, to strike out all after the resolving clause and insert:

(Here follows the text of H. J. Res. 106.)

The amendment was agreed to.

The amendment was ordered to be engrossed, and the joint resolution to be read a third time.

The joint resolution was read the third time and passed.

CONCLUSION

First. The Tydings amendment is clear and unambiguous and definitely defines the policy of the Congress with respect to the drafting of essential farm workers.

Second. Whether the policy was right or wrong it could not be changed even by Executive order much less by a directive issued by some governmental agency.

Third. The President's veto should have been overridden because it changed the policy of Congress and substituted therefor an entirely different policy.

Fourth. Moreover, the policy established by Congress with respect to the drafting of essential farm workers is the only policy that will assure us anything like an adequate food supply. If this policy is not established we are going to wake up with an empty bread basket.

Big Business and Government Policy

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Haven (Mich.) Daily Tribune of May 9, 1945:

BIG BUSINESS AND GOVERNMENT POLICY

What a contribution to the war effort!

The midnight entertainment curfew and the ban on horse and dog racing were lifted today. Once again transportation facilities will be crowded by pleasure seekers who like to stay out all night or lay a bet on the ponies.

VE-day seems to be the signal for spreading the idea that the Jap war will be a picnic.

Lifting the brown-out made some sense. This is summer and the downtown lights don't go on until late, anyway. Now, if our Government will only do something to make certain that there will be enough coal to keep those lights burning.

They say A-card holders may get a break, too. They deserve it, if anybody does. Most of them won't use their spare gas to go to the races but they could use a little more for shopping trips.

This whole question of the right of Americans to enjoy themselves in wartime once again comes to the fore. Just what is right and what is wrong for the people to do?

Motorists were asked first to save gasoline to save tires. Finally they were asked to save gasoline to save their autos. That makes sense. But a fellow with an airplane can get all the gas he wants. A fellow with a boat, which has no tires, can get very little. It is a crime this year to own a boat and use it for more than an afternoon or two. But you can burn up fuel of one kind or another to see the horses run.

It's all right to go to the resorts if you can get there. It's all right to play golf, tennis, or baseball, or to pay to see these games played. It's all right to let the miners strike even if you do have to burn less in your homes this winter.

The Government conserves on the one hand and wastes on the other. It asks people to be war conscious and makes them play conscious.

Would it have been too much to ask that civilians who must gamble and gallavant around should confine their fun to their own neighborhoods? Would it not have been much better, at the war's outset, if all play centers were completely closed, all pleasures and devices for pleasure put on the shelf for the duration?

Most of us would not answer these questions without prejudice. Most of us would not agree. There is much to be said, of course, for the value of wholesome recreation in wartime, a value which even England retained while under the fire of Nazi bombs. But while conceding that the Government has made many worth-while efforts to bring a balance between the grim business of winning a war and beneficial relaxation, we cannot escape the conviction that big business, rather than moral judgment, has been the determining factor too often in Government decisions.

Horse racing is a big business. The night clubs are big business. Least worthy of any consideration on an economic basis, they are the first to get consideration when VE-day comes.

We don't know how far the Government will go to meet other civilian and business demands for relief, but judging by the Government's action on the racing ban, the boys with the best organized pressure group are getting relief first.

Which makes one wonder why the various bans and prohibitions on pleasurable activities were enacted in the first place.

Reserves of Bauxite in Arkansas

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Bureau of Mines:

Several million tons of bauxite—an aluminum ore vital in the war program—have been marked out by Bureau of Mines engineers

during the past 3 years in an area of about 1,400 square miles in the central Arkansas bauxite belt, Bureau officials have reported to Secretary of the Interior Harold L. Ickes.

The plotting of these additional reserves of bauxite followed extensive geophysical surveys started by the Bureau early in 1942, or just a few months after Pearl Harbor. With sensitive geophysical instruments, the Bureau explored underground formations to weed out unfavorable areas and furnish a blueprint for the drilling program that followed.

On the basis of the geophysical exploration, a total of 1,300,245 feet of holes—more than 246 miles—were drilled by other Bureau crews or contractors in subsequent months, and an estimated 9,307,000 tons of bauxite of a grade suitable for direct use by industry for metals, abrasives, and chemicals were blocked out in Saline and Pulaski Counties. This is equivalent to a 12-year supply of commercial bauxite at the normal peacetime rate of consumption in the United States.

An additional 3,825,000 tons of marginal ore described as usable for metal or chemical purposes were charted, together with several million tons of high-alumina and bauxitic clays that must await further metallurgical developments before it can be used commercially.

A new Bureau of Mines publication just released to the public, Geophysical Survey of Arkansas Bauxite Region, describes in detail the early geophysical work. The drilling program and the estimated tonnages of bauxite are covered in other Bureau manuscript reports, some of which have been issued and some of which have not been published because of wartime security regulations.

Significant is the fact that the geophysical work eliminated many geological formations where there was little likelihood of finding bauxite, according to Bureau officials, resulting in economy and speed in the drilling and discovery program later. Although geophysical surveys were made in seven Arkansas counties, the search narrowed down to two counties—Pulaski and Saline—and it was here that the bulk of the reserves were charted.

At the peak of the drilling activity, there were 20 drill crews in the field in Arkansas, but the project is now nearing completion and there are only 12 crews working. Much bauxite was found at depths supposed to preclude economical exploitation, and the Bureau has undertaken studies to develop new methods of mining the material.

A break-down reveals that since May 1, 1942, the drilling program has blocked out 28,621,000 tons of bauxite and bauxitic clays in Arkansas, and this figure includes the 9,307,000 tons of commercial grade bauxite. Another 29,621,000 tons of bauxite and bauxitic clays are estimated to be present but this has not been completely delineated and proven. In addition, the Bureau crews charted 17,917,000 tons of high-alumina clay, and they place the indicated and inferred clays at about 73,000,000 tons.

As the supply of native high-grade bauxite in the United States is limited and the war has made heavy drains on resources, the Bureau of Mines is building a 50-ton-a-day pilot ore-dressing mill at Bauxite, Ark., to test the commercial feasibility of a Bureau process for concentrating low-grade bauxite for use in existing Bayer Alumina plants. Expected to go into operation this summer, the pilot mill is another step in the Bureau's program of utilizing large reserves of low-grade ores to make the United States as independent as possible of imported strategic minerals and metals. Only by charting accurately and exploiting fully its second-grade bauxite, alunite and alumina clays can the Nation be assured of supplies of aluminum in time of war, Bureau officials maintain.

In the 3 years preceding 1941, more than 70 percent of the bauxite used in the United States was imported, largely from South America, according to the newly published report on the Arkansas geophysical surveys written by J. R. Thoenen, district engineer in Arkansas, M. C. Malamphy, project engineer, and J. L. Valley, mining engineer. Soon after the war began, aluminum consumption increased so rapidly that it became difficult to import enough bauxite under convoy protection to supply the domestic aluminum industry.

To offset this emergency, Congress passed the Second Supplemental National Defense Act of 1941, authorizing the Bureau of Mines and the Geological Survey to investigate domestic reserves of bauxite and alunite ores and alumina clays. Since Arkansas already produced more than 95 percent of the bauxite mined in the United States and had virtually all of the known reserves, the Bureau drew up an exploration program for that State calling for geophysical surveys of the entire region surrounding the known bauxite deposits and core drilling to check the results of the surveys.

Bauxite is usually found near the earth's surface. The geophysical surveys in Pulaski and Saline Counties showed that the erosion-exposed outcrops where bauxite was concentrated were domes, or a huge, irregular buried mass of rocks, leading Bureau engineers to believe that other similar domes existed below the surface. Core drilling revealed the presence of 10 such domes, but only two protruded through the Midway geological formation and offered possibilities for the occurrence of bauxite.

Incomplete drilling on these two newly discovered domes has disclosed showings of bauxite, and one hole has indicated an ore body of considerable size. However, further drilling will be necessary to block out this and any other bodies of ore which may be present.

A copy of Report of Investigations 3791, Geophysical Survey of Arkansas Bauxite Region, which contains an explanation of the instruments and procedures employed, map illustrations, and logs of holes drilled, may be obtained without charge by applying to the Bureau of Mines, Department of the Interior, Washington 25, D. C.

Let Us Be Realistic

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, I recently received a letter from a constituent of mine, who, as I understand the facts, has been a lifelong Democrat and is a practicing attorney. He is a student of history and political science, is an accountant, and has a good understanding of the science of finance. He is vitally interested in the welfare of his family and of the people of this country. His family has contributed liberally to the present war effort, both in the armed forces and financially.

The letter which this constituent has sent me is thought provoking, and from a historical and prophetic standpoint, challenges our most earnest consideration. I am pleased to quote the following excerpts from the letter of this gentleman:

Now take the proposed peace formula called the Dumbarton Oaks proposal and Yalta Conference which is to be summed up at the San Francisco Peace Conference and let us look at the thing in a realistic manner. In the first place, no peace agreement or plan can amount to anything if it is just a mere paper document. There must be something more behind it; some reason for its existence—a real moral and spiritual backing by the contributing powers.

The fact that we want peace, that England would like to have peace and pursue her dreams of empire undisturbed, and that Russia wants peace does not necessarily imply that peace is to be achieved. Peace must be established upon a sound, moral, natural, geographical, and economic foundation; otherwise, it can never exist except at the point of a gun, and that, in my opinion, is not peace.

It seems to me that a peace to endure must be grounded upon the fundamental promise that there is a reason, naturally, geographically, and economically for the three contributing governmental units to exist. For example, Russia has every reason for a continued and expanding political and economic existence. She has manpower, natural resources, territory, and a working, virile people. France and England are two countries whose manpower and virility are decidedly on the decline. Both of these countries' colonial systems were outmoded 50 years ago and have continued to function only because the United States came to their aid, first in 1917 and now again. In fact, France's colonial empire is at an end now. England's colonial empire will fall also unless we maintain it. If we are to undertake the proposition of maintaining colonial empires for England and France, we have taken on a very large job indeed. When our leaders make the statement that our frontier is on the Rhine we are in fact saying to the world that we intend to maintain the French and British empires in status quo.

It seems to me that the world, if it is ever to achieve any degree of stability and peace, must fall into about three or four political, geographical, and economic spheres of influence.

Russia would dominate a large part of Europe and Asia, China and India dominating the other portion of Asia. The United States would dominate North and South America. Some country, possibly England or France, would dominate a portion of Europe and a portion of north Africa. A peace agreement which does not recognize these political and economic factors is artificial and can only mean another war.

The present peace proposal called the Dumbarton Oaks Proposal, as I see it, is an attempt on the part of England to secure the commitment of the United States to a plan which will protect her against Russia and which will guarantee her colonial position, particularly in India and China. That is a large responsibility for the United States to undertake.

At the risk of being called a midwestern isolationist I say to you that this country never had any business and does not now have any business trying to dominate European politics, unless it is our intention to become an imperialistic world power. If that is to be our future then we must insist on setting up our own controlled satellite European and Asiatic states and not permit Russia or England to establish them and then call on us for aid in maintaining some artificial economic or political unit. We must either stay out of European politics or get in with both feet. We cannot have England and France attempting to dominate European politics on one side and Russia on the other and when a clash comes have one or the other call on us to aid them.

If we are to be continually pushed into European wars and get the country involved

out of trouble, then we must be the one who will dominate the European political situation and say how and when these buffer countries shall be set up and how they shall be maintained; otherwise we waste our manpower and our substance on innumerable wars and accomplish nothing except to support European political units which shall be selected by us from time to time. In the past those selected by our politicians have been England and France.

The Russians and the English as well as the French have adopted very realistic viewpoints on the whole matter. Never at any time have their ever aided our Government in any of our difficulties except if it pleased or suited their then ruling powers. As a matter of fact, England has been against our country for years and even now is attempting to put us under trade disadvantages by the empire-dominated plan.

Sentimentalists have played upon our sympathies saying that France was the country to whom we owed our independence. This is partly true. History does not, however, bear out that unqualified statement. The fact of the business is that France was fighting England at the time and came over here as a means of forwarding her fight against England. England and France had been at war with each other for over a hundred years, prior to 1776. France has since proven herself to be realistically inclined when she sent her governmentally backed Maximillian with his dream of an empire to Mexico and brought about a very unpleasant situation for us. England has always been practical and has wasted no sentiment on us. She has cared little for this country except for what could be extracted by her from our people.

Over a hundred years ago we had the War of 1812. She then aided the Confederacy in its attempt to break up our country. Less than 50 years ago we almost had a break over the Colombian and Venezuelan situation. England sent a number of warships to enforce her demands and we very nearly came to blows. When we built the Panama Canal the Hays-Pauncefote treaty was negotiated with a gun at our head and we got the short end of the trade there. Incidentally this treaty ought to be abrogated and set aside at the San Francisco Conference or whenever the final wind-up of this affair in Europe and Asia is worked out.

This brings to mind another situation. We have been sending our manpower into the Southwest Pacific and we have withstood all of the attacks and all of the war there, have recaptured many islands taken by the Japs and almost before our men got out of battle the British flag was being raised over the islands which we had captured and the British High Commissioners were taking over the functions of running the islands' affairs. This has been done time after time in the Pacific but not a word has been breathed to our people about it.

Mention is being made that we are going to recover Borneo and Java and other areas by our manpower and our conduct of the war, and then hand them back to the Dutch who in turn will hold us up again on tin and rubber as they have been doing in the past in cooperation with their English financiers.

Turning to the western war front we find there our men who have been drafted by the millions, but do we find any men drafted by the British Dominions? Not a one. Australia has never sent a drafted man anywhere outside of Australia. Canada has not drafted a man to fight anywhere outside of Canada. The same is true with South Africa and India. Only a few English or British soldiers have ever appeared on the western front. Less than one army out of all the British Isles and the British Dominions is fighting on the western front while we have millions of men over there fighting in a European War expending our substance and our manpower in an attempt to maintain the English Empire.

We have drafted our men and sent them all the way to Australia and the Southwest Pacific, but never a drafted man has left Australia for any of the battles in the Southwest Pacific. Her country was threatened with invision by the Japs and even then she was not willing to pass a draft law such as we had passed in this country and which has sent our men thousands of miles to fight in foreign lands.

Not a Russian has ever left his country. They have manpower conscription there probably to even a greater extent than we have. Nevertheless, no Russian has ever fought in the Southwest Pacific or left his homeland except to repel actual invasion.

It is time that we in America begin to look at this situation and appraise it as realistically as Churchill and Stalin. We need someone who will be a militant leader and who will be for America, American people, American ideals, American manpower, and American property first, and for English colonies, English colonial aspirations, and Russian aspirations second.

We cannot have another world war sending our fighting men, our materials, and our manpower all over the world as we have in this war, and expect to win. If it is England's intention, and I firmly believe it to be, to use us in the event there is any trouble with the Russians (and that is bound to come because of the conflicting political and economic spheres of influence in Europe) then I doubt that we can win such a war against the Russians because we then will not have superior manpower and natural resources.

We have an opportunity to render a great service to humanity, an opportunity to become the leader among the countries of the world, but we must husband our own property; we must not fritter it away; we must not give it away; there must be an end to this lend-give-away proposition. Possibly it was warranted after we got into the war and had to get out of it some way; but certainly there is no excuse for us to give and give to a Europe which has been wrecked by its own hand and build it up so that it can help wreck civilization again.

Neither must be give away our ships to England or to France or to any other country. We have built these by great sacrifice of our own people and they must be used for our own people. Let us carry our own goods and the goods of the rest of the world. Let us keep our Navy strong so that no aggressor, be it England, Russia, a rehabilitated Germany, a rehabilitated Japan, or anyone will ever again be in a position to dominate the seas. We have that domination and should keep it. We should not share it with any other country.

It seems to me that the natural geographical and economic control of our country and the long-range plans for our foreign diplomacy should be the welding into one economic unit, if not a governmental unit, of Canada, United States, Mexico, Central America, and if possible, South America. Certainly there should be one dominant economic over-all control for all of North America. That should be our aim rather than to try to dominate Europe or Asia or some place that is thousands of miles away, leaving our back door open and unguarded.

In this war the lend-give-away program has reduced the mineral position of the United States to where our previous natural resources self-sufficiency will be at an end in the post-war years. We will be obliged to go forth into the world for a large part of our minerals and oil. Particularly, I refer you to a recent article by Elmer W. Pehrson, Chief Economics and Statistics Branch, United States Bureau of Mines, which appeared in Mining and Metallurgy of April, 1945 at page 204. We will be obliged to rely more and more on the foreign shipment of iron ore, zinc, lead, mercury, silver, copper, tin, and oil. The exhaustion of our commercial reserves in some of these items is almost complete within our continental areas. This only brings more emphasis upon that which I have just stated—that we should bring Canada and Mexico and Central America and at least a large part of South America within our economic and political spheres of influence. With these countries added we would have our reserves immensely supplemented.

If we do not undertake some long range planning of this sort we shall find ourselves out of these important reserves without which no country can exist economically for a period and without which no country can prosecute a successful war, and we will find England or some other country controlling the seas and dominating our country.

Another thing is that our Government is winning the war and should be the one to make the decisions. Instead, it is being pushed into the background. We are told that when Germany is finally conquered that the Russians will control all of northern and eastern Germany. The Briish will control all of the rich Ruhr area containing all the mines and industries; whereas, the Americans will control the mountainous areas and the poor part of Germany. The French will control the rich Rhine province.

In other words, we are being pushed into the position where we will be obliged to support a large part of the German people because the area which is proposed to be assigned to us will be nonsupporting. The area which the British control will be supporting; likewise the Russian and French areas of control. This again simply shows the manner in which American diplomats seem to get whatever nobody else wants and foots the bill for all.

I trust that the above has not been too long, nor too rambling, and that it gives you some of my ideas on the problems sought to be solved by the Dumbarton Oaks proposal and the coming San Francisco Conference.

Farley on Presidential Succession

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York World-Telegram of May 10, 1945, touching upon statements contained in a speech delivered by the Honorable James A. Farley at Hazleton, Pa., on the important subject of Presidential succession. It is my hope that the subject of this speech will be the basis for legislative action shortly.

The editorial is as follows:

FARLEY ON PRESIDENTIAL SUCCESSION

James A. Farley, in an address at Hazleton, Pa., yesterday, stressed an important matter which rises above politics to the plane of statesmanship and far-reaching public policy—namely, the defects and dangers in the present provisions for Presidential succession.

Pointing to the existing statute which puts the Secretary of State next in succession after the Vice President, followed by other Cabinet members, Mr. Farley says:

"Under our present method, a Vice President who succeeds to the Presidency is in the unique position of being able to choose his own successor without reference to the electorate. In his case, a vacancy caused by his

death, resignation, or removal, is filled by the Secretary of State whom he appoints, subject only to Senate confirmation. This possible short-circuiting of the electorate is a gap in our democratic procedure that we have not yet solved."

Mr. Farley also notes that in the event of a President-elect and a Vice President-elect both dying before they took office, the choosing of a President would apparently devolve upon the House of Representatives. But if the House should divide and deadlock beyond Inauguration Day, the "appaling result" might be that "until such time as the deadlock was broken this country would be without a Chief Executive."

The time has come, Mr. Farley urges, for a thorough study of this whole question by a special commission composed of Senate and House Members, one or more Members appointed by the President and "perhaps one Supreme Court Justice selected by the Chief Justice." The commission should recommend such constitutional amendment or such legislation, or both, as may be needed.

The Farley suggestion is not political. Neither is it academic. Death is no respecter of democratic processes. There is but duty and common sense in being prepared.

WAC's

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me to the WAC's on yesterday, their third birthday:

It is with a deep sense of personal pride that I greet the Women's Army Corps on still another birthday and offer my congratulations on a job well done. Able Colonel Hobby and her WAC's can well be proud of their record.

You are today proven soldiers of the armed forces. You are doing a vital work at home and on foreign shores that was a mighty factor in speeding victory over Germany, and will be even more helpful against the Japanese. Women everywhere in this country of ours could thrill with a new pride when the surrender of Germany came just a few days ago with the knowledge that they have a new and tremendously important status in the affairs of their country. The work of the Army Nurse Corps has been a source of pride to us for many years, but you have written a new and very important chapter in history. More glorious pages will be written before the peace we all pray for can be brought to every corner of the world.

There are no doubters today.

By your work you have made your place in the Army. High-ranking officers continue to testify to your value in their reports of operations abroad and preparations at home. Calls for your services continue to come in. Jobs that were entrusted only to highly trained officers and enlisted men are now yours. And you are doing them as they never were done before. Other jobs never thought of before you have quietly set up and made them function.

As these records of the efficiency of the Women's Army Corps come in day after day—as hard-boiled commanding officers at home and abroad continue to demand more and more be sent—as men who but a short time ago saw no place in the Army for women now rise day after day to sing your praises, you can understand my pride and satisfaction.

Pride and satisfaction—yes. But not surprise. I knew the capabilities of the American woman and I knew that she desired to stand side by side with her menfolk in this, the greatest struggle to preserve civilization the world has ever seen. And I knew, further, that she was capable of any job that the Army demanded of her.

The very fact that your work today is not dramatized now as it was 2 years or even a year ago, is testimony to your own efficiency, your own modesty, and your own ability. The Army and the country have accepted you in the status you asked for, that of soldier on equal terms with your men. You have been so accepted because you have earned it. You have earned it by quietly fitting into the Army routine, by doing your work as soldiers do it, with no thought of self, but of duty. In other words, you have become soldiers—and there is no higher tribute.

There is much ahead for the WAC's. The job is not finished. Even with the close of hostilities in the Pacific, which I pray may be sooner than we now expect, there will be a great need for your services. You have become such a vital part of the Army machinery that you will be demobilized on a point system, just as the male members of the Army. No special privileges or demobilization plans were considered for the WAC's, they were soldiers, and that is all there was to it. That in itself indicates your worth to the war effort and better still, that the Army has accepted you as you wished to be accepted. It is not now the time to speak of the future of the Women's Army Corps, but I can say, without fear of contradiction, that it has well earned a place in the peacetime establishment.

I can visualize for you a greater part in the peace because of your service in the war. Certainly, you will have a greater understanding of the tremendous problems ahead. You must, certainly, have a greater hatred for war than ever before, and will therefore be more effective in the fight to maintain future peace.

You will understand more clearly the problems of rehabilitation of our men. You can have a great and worth-while share in solving that very, very important obligation. Your place in the peacetime world will most certainly be greater, because you will speak from knowledge and the strength of service and suffering and sacrifice. You have earned the right to speak and the right to equality of participation in the future of our country.

On your third birthday, then, members of the Women's Army Corps, I greet you and congratulate you. I speak from the depth of my heart when I say that you have justified, many, many times over, all the efforts that were necessary to give you this opportunity. I am proud of you, each and every one, officer or enlisted personnel—in the eternal routine on the home camps, or in the exciting battle areas abroad—one and all, at home or abroad, you have well merited the accolade of "Good soldiers."

Editors' Report on German Atrocities

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, the congressional committee's report presented to Congress today as a result of their investigation of German atrocities is a splendid document, which presents logically, clearly, and forcefully the facts relating to the brutalities and atrocities which they found in Germany from their recent visit there, as a result of an invitation from General Eisenhower.

Several days ago there was released a report by 18 American editors and publishers, who also investigated the German prison camps at the invitation of General Eisenhower, and this report should also be incorporated in the RECORD, and under leave granted, same is submitted herewith.

It will be noted that this report confirms and corroborates that of the congressional committee with reference to the calculated and organized brutality of the Nazis, which makes the blood of civilized people everywhere boil with righteous indignation.

The report follows:

EDITORS CONDEMN NAZIS' BRUTALITY—EIGHTEEN WHO TOURED GERMAN CAMPS CALL FOR PUNISHMENT OF PARTY AND ARMY LEADERS

WASHINGTON, May 5.—Eighteen American editors and publishers who toured German prison camps at the invitation of Gen. Dwight D. Eisenhower today urged the United States to adopt a strong policy on war criminals and to empower speedily the War Crimes Commission to put such a policy into effect.

The statement, released by the War Department while the newspaper and magazine men were still abroad, said the investigation convinced them that the Nazis pursued a master plan of calculated and organized brutality.

TEXT OF STATEMENT

The text of the statement follows:

"This delegation of newspaper and magazine editors was brought to Europe at the suggestion of General Eisenhower to investigate reports of German atrocities.

"We have visited and spent considerable time investigating the prison camps at Buchenwald and Dachau. We have interviewed recently freed political prisoners, slave laborers and civilians of many nationalities. We have studied a great mass of documents covering the German occupation of France which contained photographic evidence and testimony taken in many places and painstakingly authenticated with the sworn statements of witnesses and victims.

"The conclusion is inescapable that the Nazis had a master plan for their political prison camps. That plan was based upon a policy of calculated and organized brutality. The evidence we have seen is not a mere assembling of local or unassociated incidents. It is convincing proof that brutality was the basic Nazi system and method.

"This brutality took different forms in different places and with different groups. The basic pattern varied little.

"Actual Nazi methods ran the gamut from deliberate starvation and routine beatings to sadistic tortures too horrible and too perverted to be publicly described. Murder was a commonplace.

"Prisoners whose only crime was that they disagreed or were suspected of disagreeing with the Nazi philosophy were treated with uniform cruelty. When death came, as to multiplied thousands of them it did, it must have been a relief from worse than death.

"By these tortures most of the Jews in prison camps had already been destroyed. After the Jews, the most cruelly treated victims were the Russians and the Poles.

"To the basic policy of brutality toward political prisoners there were, however, no significant exceptions.

"This, we believe, is the inexorable consequence of the whole Nazi-German philosophy. By this philosophy and the cunning and persistence with which it was propagated the German mind became contaminated and diseased.

"For these crimes the German people cannot be allowed to escape their share of the responsibility. Just punishment must be meted out to the outstanding party leaders and the German general staff, to party officeholders, to all members of the Gestapo, all member of the SS [elite guard]. Simple justice and the future peace of the world require that all these, by virtue of their position, be indicted as war criminals.

"In punishing these crimes the historic principle of individual and personal responsibility must be preserved and all those responsible for these atrocities must be punished in accord with the accepted laws of civilized nations.

"We strongly urge that United Nations policy in regard to war criminals be speedily agreed to and the War Crimes Commission speedily empowered to put those policies into action.

"As we witness the collapse of the Nazis' experiment in ruthlessness and totalitarianism, we are more than ever convinced that there can be no peace on earth until the right of the earth's peoples to life, liberty, and the pursuit of happiness is recognized and protected under law."

Benefits for Servicemen, Ex-Servicemen, and Their Dependents

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. LESINSKI. Mr. Speaker, it has several times pointedly come to my attention that benefits intended by Congress for servicemen, ex-servicemen, and their dependents are frequently not received by them, generally, I believe, because of the failure of potential beneficiaries to know what they are entitled to, and under what circumstances.

The technical language as to the many laws pertaining to those serving actively in our Nation's armed forces, or to those who have so served, and to their dependents, is very confusing.

As chairman of the Committee on Invalid Pensions, the oldest committee in Congress having jurisdiction over legislation affecting veterans and their dependents, I have been intensely interested in such legislation for many years. It is, nevertheless, very difficult for me to coordinate all such legislation in my mind. Not all of such laws are applicable to all such persons; in fact, most of them are applicable only to certain groups, under certain conditions.

How to bring order out of this chaos so that those in each such groups might be put on notice as to the rights, privileges, preferences, and benefits to which they might be eligible, without requiring them to read too much about other benefits to which they could never be entitled, has been very baffling.

The key to the solution of this maze of material was, I believe, formulated about 2 years ago by my good friend, Millard W. Rice, the national-service director for the Disabled American Veterans, now the dean among the national legislative representatives of the major veteran organizations.

Mr. Rice has recently revised the outline then prepared as to all such benefits, a scanning of which will speedily inform any serviceman, ex-serviceman, or his or her dependent as to what governmental benefits, if any, he or she might be entitled to under the circumstances indicated.

Those who read such outline should be cautioned that more detailed information concerning each such point can be obtained from the Veterans' Administration, or from such other governmental agency as may be concerned with the application of the particular law indicated.

Active servicemen, discharged veterans, and the dependents of veterans have the privilege of requesting needed advice and assistance from the service officers of any of the several congressionally chartered service organizations: The Disabled American Veterans—D. A. V.—which is composed exclusively of those American citizens who have been either wounded, gassed, injured, or disabled while serving honorably in the armed forces of the United States, or of some country allied with it, during time of war; the American Legion, composed of honorably discharged veterans of World War No. 1 and World War No. 2; the Veterans of Foreign Wars—referred to as the V. F. W.—composed solely of America's campaign-badge war, campaign, and expedition veterans; and the American Red Cross.

Most applicants would be wise to take advantage of the technical knowledge and experience of the service officers of such organizations. The D. A. V., incidentally, has made arrangements with the Veterans' Administration whereby handicapped veterans of World War No. 2, having the necessary educational prerequisites and qualifications, and deeply imbued with a desire to assist their fellow disabled veterans, and their dependents, are being trained, under the provisions of Public Law No. 16, toward the objective of becoming full-time employees of the Disabled American Veterans, as national service officers.

Such vocational training consists of 6 months of academic training at the American University, in Washington, D. C., supplemented by up to 18 months of on-the-job placement training under three different experienced national D. A. V. service officers. Such rehabilitated trainees will then be employed by the D. A. V. as full-time national-service officers, and will be located in the many regional offices and facilities of the Veterans' Administration, and in Army and Navy discharge centers.

During such period of vocational training, these D. A. V. national-service officer trainees have their disability pensions from the Veterans' Administration increased, if not already entitled to more, to $92 per month, plus $11.50 for a wife, and plus $5.75 for each minor child or dependent parent. In addition thereto, because of the high cost of living, the D. A. V. pays them $25 per month while at the University, and thereafter $50 per month, with periodic increases on the basis of their respective increased effectiveness as assistant national service officers.

The first class was started at the American University on October 16, 1944. Additional groups of up to 50 have since then been enrolled each 10 weeks and will, after May 21, 1945, be enrolled each 12 weeks, into such training course, for at least an additional year.

This expansion of its Nation-wide service setup by the D. A. V. is considered essential in order to extend needed advice and assistance to the increasing number of disabled dischargees, as to their varied rights under complicated laws, and as to how factually and technically to establish entitlement to benefits to which they may be lawfully and equitably entitled, and also to assist them in becoming integrated back into useful, self-sustaining, self-respecting civilian living.

Mr. Rice assures me that the outline prepared by him has been carefully checked by members of his staff and by the office of the legislative counsel of the Veterans' Administration to make sure of its accuracy.

I here insert the outline prepared by Mr. Rice, as follows:

OUTLINE OF BENEFITS FOR SERVICEMEN, EX-SERVICEMEN, AND THEIR DEPENDENTS

I. BENEFITS FOR AND AS TO PERSONS SERVING IN ARMED FORCES

1. Base pay ranges from $50 to $138 per month for enlisted personnel, from private or apprentice seaman, up through seven grades to master sergeant or chief petty officer. Base pay for commissioned personnel begins with $150 per month for second lieutenants or ensigns. All base pay of enlisted men is increased by 20 percent, and of all officers by 10 percent, while on sea duty or serving outside the continental United States or in Alaska. Active flying duty, including flights in gliders, or active submarine duty, increases the base pay by 50 percent, and active parachutist duty by $100 per month for officers and $50 per month for enlisted men. Enlisted men of the combat ground forces of the Army who are authorized to wear the expert infantryman badge or combat infantryman badge are entitled respectively to extra pay of $5 and $10 per month. Certain other pay increases are provided for specially skilled or dangerous types of service. Longevity pay is provided by adding 5 percent to the base pay for each 3 years of active or Reserve service, up to 30 years.

2. Monthly allowances will be granted after June 1, 1942, the dependents of any enlisted

individual, male or female, with certain exceptions, of the first seven grades, upon written application therefor by the service member or by or on behalf of a dependent in class A, class B, or class B–1, $50 for a wife alone, plus $30 for the first child and $20 for each additional child; for a child alone, $42 plus $20 for each additional child; for one dependent parent alone, $50, or $68 for both, plus $11 for each dependent brother or sister.

The monthly pay of the service member will be charged with the amount of $22 per month and an additional amount of $5 per month if the allowance is payable to more that one class of dependents. Class A includes a wife, child, or former wife, divorced; class B includes a parent, brother, or sister dependent upon the enlisted man for a substantial portion of his or her support. Class B–1 includes a parent, brother, or sister dependent upon the enlisted man for the chief portion of his or her support. In the event of death during active service the next of kin is entitled to a gratuity equal to the monthly pay of the deceased for a period of 6 months.

3. National service life insurance, obtainable without examination during first 120 days of active service and thereafter if found by the Veterans' Administration to be a good insurance risk (with privilege of conversion after 1 year; mandatory conversion before end of fifth policy year), in multiples of $500, from $1,000 to $10,000, for those in active service since October 8, 1940, maturable only by death of the insured, with proviso that premiums may be waived during continuous total disability, which commenced after he was insured, but before he became 60 years of age, which has continued for 6 consecutive months.

4. Mustering-out payments for members of the armed forces, with certain exceptions, discharged or relieved from active service under honorable conditions on or after December 7, 1941, in the amount of $100 for those who served less than 60 days, $200 for those who served 60 days or more only within the continental limits of the United States, and $300 for those having performed active service of 60 days or more who served outside the continental limits of the United States or in Alaska.

5. Certain protection for those in active military or naval service of the United States, and to American citizens, under certain conditions, in the active service of some country allied with it during time of war with reference to private life insurance and property rights and personal indebtedness, when ability to meet obligations is impaired by such service, through judicial process, under Soldiers' and Sailors' Civil Relief Act of 1940, as amended. (All matters affecting real or personal property rights should be referred promptly to competent local attorneys for assistance and advice.)

6. Allowances, in varying amounts, for clothing, subsistence, and quarters made to officers and, under certain conditions, to enlisted men, as well as up to $1,500 of their base pay and mustering-out payments, upon their discharge from service, are excluded from income for tax purposes.

7. Naturalization as an American citizen by the easy petition method as to any alien while serving in the armed forces, as well as for certain war veterans.

II. MONETARY BENEFITS FOR EX-SERVICE PERSONS

1. Compensation or pension for disabilities proven to have been incurred in, or aggravated by reason of, active service in the armed forces of the United States, ranging from $6.90 to $300 per month, depending upon the nature, degree, and permanency of the disability, and the time of incurrence, including the 15-percent increase effective July 1, 1944, in the monthly rates for service-incurred disability exclusive of the special awards or allowances fixed by law, but, if single and without dependents, not more than $20 per month while being furnished hospital treatment or domiciliary care by any governmental agency.

2. Retirement benefits at three-fourths of base pay for certain Regular officers with permanent handicapping disabilities, or after a certain period for certain types of service, or/and the attainment of certain ages; and for certain emergency, provisional, probationary, and temporary officers with permanent disabilities of requisite degree, clearly shown to have been acquired in active service, in fact, in line of duty.

3. Pensions on the basis of age, degree of inability to earn a living and/or length of service for——

(1) Civil War veterans in the amount of $75 per month, and Indian wars veterans, in amounts ranging from $20 to $60 per month, or $100 if in need of a regular attendant, but not in excess of $50 as to those in a United States National or State soldiers' home on July 13, 1943, but if thereafter furnished hospital treatment or domiciliary care by any governmental agency, only $20, where the veteran has no dependents.

(2) Veterans of the Spanish-American War, Philippine Insurrection, and Boxer Rebellion, in amounts ranging from $12 to $75 per month, plus varying amounts if in need of regular attendant, with total not to exceed $100, but not more than $50 monthly as to those in a United States National or State soldiers' home on July 13, 1943, but where the veteran has no dependents, if thereafter furnished hospital treatment or domiciliary care by any governmental agency, only $20.

4. Pensions of $50 per month for veterans of the Spanish-American War, Philippine Insurrection, Boxer Rebellion, World War No. 1, or World War No. 2, with 90 days or more of service and a discharge under conditions other than dishonorable, or where less than 90 days, if discharged for disability incurred in line of duty, who suffer with permanent total disability, regardless of service connection, if not due to misconduct; this rate is increased to $60 per month of rated permanent and total and in receipt of pension for a continuous period of 10 years, or when the veteran, suffering from permanent and total disability, attains the age of 65 years, but only $8 per month is paid to men, without dependents, while being furnished hospital treatment or domiciliary care by a governmental agency.

5. Enlisted men of the Regular Army, or of the Philippine Scouts, who have served 20 years or more and who have become permanently incapacitated for active service due to physical disability incurred in line of duty, may be retired at 75 percent of the average monthly pay received for 6 months prior to retirement. This retirement pay, or so much thereof as would equal the amount or pension or compensation to which such person may be entitled, may be waived for the purpose of receiving pension or compensation.

6. Enlisted men of the Regular Navy whose service began after July 1, 1925, may, after 20 years' service, be transferred to the Fleet Reserve at one-half base pay received at time of transfer, and, after the completion of 30 years of service, are transferred to the retired list with 75 percent of the pay of their rank at date of retirement, plus all permanent additions thereto, plus allowances to which they would be entitled after 30 years' active service. If their service commenced on or prior to July 1, 1925, they may be transferred to the Fleet Reserve upon completion of at least 16 years' service, with one-third of base pay, and after 20 years of service or more, one-half the base pay received at time of transfer, plus all permanent additions. This pay is increased by 10 percent for all men credited with extraordinary heroism in line of duty or whose average marks in conduct for 20 years or more shall be not less than 95 percent of the maximum. After 30 years of service they are transferred to the retired list of the Regular Navy with 75 percent of the pay of their rank at date of retirement plus allowances to which they would be entitled after 30 years' active service.

7. Enlisted men of the Army, Navy, or Marine Corps, after 30 years of service, are entitled to retirement with monthly pay at 75 percent of their last base pay plus allowances. Members of the Army Nurse Corps and the Navy Nurse Corps may also be retired after 30 years' service, or at the age of 50 years after 20 years' service. Temporary commissioned rank has been provided for members of the Army Nurse Corps and female dietetic personnel of the Medical Department of the Army with adjustment in their retirement pay on the basis of such commissioned service.

8. Statutory award of $10 per month is payable to all medal-of-honor men after age of 65 years.

9. Adjusted-service credit up to $50, payable in cash, or, if more, an adjusted-service certificate based upon adjusted-service credit for active World War No. 1 service in excess of 60 days, computed at the rate of $1 per day for domestic service, and $1.25 per day for oversea service, with maximum limitations, exchangeable for United States bonds bearing interest at 3 percent, redeemable at any time. In the event any allowance in the nature of adjusted compensation is hereafter authorized for World War No. 2 veterans, any benefits received by or paid for any such veteran under the so-called G. I. bill of rights will be deducted from any such adjusted compensation.

10. Government life-insurance policies, as to death or total or permanent total disability in multiples of $500 up to $10,000 for insurable veterans of (1) World War No. 1 or (2) World War No. 2 and (3) of peacetime servicemen who applied therefor prior to October 8, 1940, with lien loans permissible up to 94 percent of reserve value, at interest of 5 percent per annum.

11. Incompetent and minor beneficiaries generally receive their monetary benefits, if any, through guardians, whose accountings are periodically inspected by regional attorneys of the Veterans' Administration, but payment may be made to the wife of an incompetent veteran having no guardian or to a minor widow for herself and child or children.

12. All monetary benefits from the Veterans' Administration, as well as supplemental pay from an employer-trainer during on-the-job placement training under Public 16, are excluded from income for tax purposes, and are exempt from the claims of private creditors, or of the United States, except as to the indebted beneficiary and except as to overpayments or illegal payments by the Veterans' Administration, and are not liable to attachment, levy, or seizure by or under any legal or equitable process either before or after receipt by the beneficiary.

III. MEDICAL TREATMENT AND DOMICILIARY CARE FOR VETERANS

1. Hospital treatment, or out-patient medical or dental treatment, including necessary medicines and prosthetic appliances, with institutional training in the use of such appliances, may be furnished certain persons medically determined to be in need therof for service-connected disabilities. Out-patient treatment may also be authorized for any non-service-connected conditions, which is associated with and aggravating a service-connected disability, as adjunct treatment.

2. Hospital treatment or domiciliary care for non-service-connected disabilities under certain conditions may be furnished when needed for any war veteran discharged under

conditions other than dishonorable, or for any peacetime veteran discharged from service for disability incurred in line of duty or who is in receipt of pension for service-connected disability.

3. Transportation may be furnished to, and back from, Veterans' Administration facilities, when authorized in advance, for examination, medical treatment, hospitalization, or domiciliary care.

4. Clothing may be furnished at Government expense to beneficiaries receiving hospital treatment or domiciliary care in Veterans' Administration facilities, when necessary for protection of health or for sanitary reasons and when such beneficiaries are without means and receiving less than $10 per month for their own personal use. Toilet articles, barber service, tobacco, etc., are furnished beneficiaries receiving hospitalization or domiciliary care in Veterans' Administration facilities, whose total income is less than $6 per month.

IV. MISCELLANEOUS BENEFITS FOR VETERANS

1. Vocational rehabilitation courses not exceeding 4 years, including placement in suitable gainful employment, furnished by the Veterans' Administration for service-connected disabled veterans of World War No. 2, including persons who served in active military or naval service on or after September 16, 1940, discharged under conditions other than dishonorable, who are feasible therefor and in need thereof to overcome a service-incurred handicap, with tuition and books paid for by Veterans' Administration, with training allowance of $92 per month, plus $11.50 for wife, plus $5.75 for each minor child and dependent parent, unless entitled to more on the basis of service-connected disability.

2. Education or training, not to exceed 1 year, at any institution of the veteran's choice, for veterans of World War No. 2, including persons who served in active military or naval service on or after September 16, 1940, discharged under conditions other than dishonorable after 90 days' service or more or for disability incurred in service in line of duty, plus 1 month for each month of service, but not to exceed 4 years of education, under certain conditions, with subsistence allowance of $50 per month, or $75 per month if the veteran has dependents; tuition and all other fees and expenses not to exceed $500 per school year, to be paid by the Veterans' Administration.

3. Guaranty by the Veterans' Administration of not to exceed 50 percent of a loan or loans, the aggregate amount guaranteed not to exceed $2,000 for the purchase or construction of homes, farms, and business property. Such loans may bear interest not to exceed 4 percent and are payable in 20 years. This benefit is available to World War No. 2 veterans and persons who served on or after September 16, 1940, with service requirements the same as those for education or training.

4. Readjustment allowances of $20 per week for a period not to exceed 52 weeks for unemployed World War No. 2 veterans, including those persons who served after September 16, 1940, under the same service requirements as for education or training. Self-employed veterans earning less than $100 per month are eligible for readjustment allowances representing the difference between their net earnings and $100 per month.

5. A seeing-eye or guide dog for the aid of blind veterans may be provided blind veterans entitled to disability compensation. Also, there may be provided mechanical and electronic equipment to aid them in overcoming the handicap of blindness. Blind veterans, as well as other blind individuals, are allowed to deduct $500 from adjusted gross income in determining net income under the Federal income-tax law.

6. Certain preferences as to Federal civil service, as to physical and age prerequisites, examinations, ratings, appointments, retentions and reinstatement of Federal employment are extended to qualified service-connected disabled veterans, war and campaign service veterans, and the unremarried widows of such war and campaign service veterans, supplemented by extensive United States Employment Service and Veterans' Employment Service, in every State, for all unemployed veterans, and an effective job counseling and employment placement service so as to provide the maximum opportunity for gainful employment. Any World War No. 2 veteran who applies therefor within 90 days after relieved from active duty or service, or from hospitalization continuing after discharge for a period of not more than 1 year, is entitled to reinstatement to the Federal position held at time of entering service, or to one of equal grade and pay, or to his previous private permanent employment, for a period of 1 year, where at all practicable for employer, enforceable by court order if necessary.

7. Credit for all active military or naval service for Federal civil-service retirement, with minor exceptions.

8. Credit for all active war service for railroad retirement purposes.

9. Burial allowance, up to the amount of $100, may be paid as to any war veteran discharged under conditions other than dishonorable, or in receipt of pension or compensation, as to any veteran discharged from the armed forces for disability incurred in line of duty or in receipt of pension for service-connected disability. A United States flag to drape the casket, subsequently to be turned over to the next of kin, may be furnished as to any veteran whose death occurred after discharge from active service during any war or after serving at least one enlistment, or by reason of disability incurred in line of duty. Burial in a national cemetery may be arranged as to any honorably discharged veteran or as to anyone who dies while in active service, with the right of burial therein of his wife or widow, and, under certain circumstances, as to his minor children or adult unmarried daughters. The expenses incident to transporting the body of one who has died while in active service, or of a veteran who has died in a Veterans' Administration facility, to the place of burial, are, within limitations, borne by the Government. Headstone or marker—stone or marble—may be furnished for the unmarked grave of any honorably discharged veteran or as to anyone who died while in the active service.

10. Various benefits, rights, preferences, and privileges are also provided as to certain veterans, their dependents, and their organizations under State laws, as per the résumé thereof, published by the House Committee on Pensions, entitled "State Veteran Laws."

V. MONETARY BENEFITS FOR DEPENDENTS OF VETERANS

1. Death compensation or pension, under varying conditions and amounts, to widows, minor and helpless children, and dependent parents of those deceased veterans who have died in service or as a result of their service-connected disabilities.

2. Death pension, in smaller amounts, under certain conditions, to dependent widows and minor and helpless children of deceased veterans of World War. No. 1 and those veterans of World War No. 2 who, at time of death, have some service-connected disability of measurable degree.

3. Death pensions, under certain conditions, to widows and minor and helpless children of deceased Civil War, Spanish-American War, Philippine Insurrection, Boxer Rebellion, and Indian war veterans.

VI. BENEFITS FOR SERVICEWOMEN

The Women's Army Auxiliary Corps, which is no longer in existence, having been superseded by the Women's Army Corps, was an auxiliary component of the Army, and as such was not generally covered by laws administered by the Veterans' Administration, but its members are entitled to hospitalization and domiciliary care by the Veterans' Administration. Members of the Women's Army Corps, the Women's Reserve of the Navy and Marine Corps and Women's Reserve of the Coast Guard, which are components of the Army, Navy, Marine Corps, and Coast Guard, on the basis of active duty, are eligible for veterans' benefits.

As to rights to hospitalization, domiciliary care, and burial benefits, on a parity with war veterans, under laws administered by the Veterans' Administration, the term "active military or naval service" includes active duty as a member of the Women's Army Auxiliary Corps, Women's Reserve of the Navy and Marine Corps, and the Women's Reserve of the Coast Guard. Members of the Women's Army Corps, the Women's Reserve of the Navy and Marine Corps, and the Women's Reserve of the Coast Guard are also eligible for these benefits as members of components of the Army, Navy, Marine Corps and Coast Guard on the basis of active service in World War No. 2.

Statement on Behalf of American Jeweled Watch Industry

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Walter W. Cenerazzo, national president of the American Watch Workers' Union, before the Ways and Means Committee April 30, 1945:

Gentlemen, during the last few days I have sat in this hearing room and have tried to project myself mentally into your position. You sit here for hours and patiently listen to prepared briefs, loaded with statistics, and it is small wonder the end of the day does not find you completely confused and exhausted. You should be commended highly for the fine understanding attitude you take in listening to a cross-section of America present its case.

Democratic discussion of this type guarantees America a sound future.

Much has been said here in the last few days regarding the American jeweled-watch industry. It is impossible for any group of men to know all the facts about every industry, and by the exhibits and facts which I will present to you today I trust you will have a clearer picture of the absolute necessity of the American watch industry to the United States, the part that industry plays in time of war and what it can do for the Nation in time of peace. I shall prove to you that the American watch industry is as vital to national defense as are the generals of our Army, the admirals of our Navy, the G. I.'s, chemicals, guns, shells, planes, tanks, and ships.

The Army and the Navy will tell you that it is impossible to conduct any military maneuvers without the mechanical timing mechanisms which the American watch workers produce.

In all the world there are but two sources available for these timing devices—one is the United States and the other is Switzerland.

You are here as the elected representatives of the people and I come before you as the elected representative of over 8,000 Ameri-

can jeweled watch workers. It is not our job to match wits but to solve a problem.

Every one of the 8,000 workers I represent stands here with me today as definitely as though he were physically present in this room. These American watch workers desire that I speak frankly to you on this problem because management cannot or dares not tell the whole story. The sword of Damocles is held over the head of management by the Swiss watch monopoly and trust, for this cartel has under its absolute control the stream of life without which watches cannot be made—the supply of watch jewels. It is sad to note that if it chooses to do so, the Swiss monopoly can by simply placing the same embargo on the export of watch jewels as it has done in the past on watch machinery put the American jeweled watch industry out of business for a while at least.

At this point, I would like to explain to you what the jewels are.

The jewels referred to are not precious stones as the name implies. In the watch industry they are small bearing pieces used to save the wear of metal against metal. These stones are mostly synthetic and I understand are made from aluminum oxide.

The manufacture of these synthetic jewels is a highly specialized business in Switzerland; in America we did not prior to 1941 produce them in quantity. We were dependent on the Swiss monopoly because they had the "know-how" and could produce jewels at lower costs. In 1941, at the start of this war, the Axis shut off completely the use of jewels of over forty-thousandths diameter which were essential for military use. There was no American industry to supply them.

The Defense Supply Corporation, with the War Production Board, enlisted the services of two of our American jeweled-watch manufacturers and they started to produce jewels under the handicap of not having sufficient equipment or skilled workers. We lacked the "know-how" of experience.

With American ingenuity, plus the skill of engineers, the American jeweled-watch industry was able within 2 years to get into production and produce these parts for 80 percent less than the cost of the original lot produced here in 1941; given more time we would have been able to reduce production cost even more. We would not, of course, ever be able to compete with Swiss jewel monopoly because the employees of the Swiss industry receive wages of one-half to two-thirds less than the wages paid to the American watch workers, but at least we would have freed ourselves from the threat to our national security.

However, in October 1944, after the Swiss border had been freed of Axis control, the Defense Supply Corporation canceled almost all of its contracts and we found a thousand persons, members of our union, shifted from jewel production to other production. Thus, the experimentation—the progress that had been made on the production of jewel bearings in this country for 2 years—was scuttled.

I ask you, gentlemen, is it good judgment for an agency of the United States Government which was set up to establish national defense industries in order to guarantee national security by issuing a constant supply of critical material for war purposes to scuttle this industry?

The scuttling of the watch-jewel industry was protested by me to the War Production Board in 1944 and statements were released in the name of the War Production Board denying this cut-back. However, this cut-back did take place and gentlemen I invite you to investigate the record. You will truly find ghost plants in Aurora, Ill.; Lancaster, Pa., and Waltham, Mass., where jewels were once made. These buildings are now used on other production but so far as jewels are concerned they have become a haunted house of the past. Thus, for no conceivable reason, other than the possible influence of those who are a part or represent this Swiss monopoly, we now again find the American jeweled-watch industry dependent upon the supply of Swiss watch jewels.

I present this display of war equipment made at the Waltham Watch Co. by American watch workers. This picture of timing mechanisms for war made at the Elgin Watch Co. by American watch workers. This picture of timing mechanisms made at the Hamilton Watch Co. by American watch workers. This equipment was furnished in great quantities for the United States, Great Britain, Russia, and our allies, because the American watch workers, whom I represent, had the skill and know how to make them. These men and women have skills to work in many other industries, but no other industry can supply the skills or the machine tools necessary for the American jeweled-watch industry. Highly skilled men come into the machine shops of Elgin, Hamilton, and Waltham, look at the work and often refuse to take jobs because they feel they cannot do the precision work.

Please look at these exhibits and see for yourself, gentlemen, what the American watch worker has done in this war, and remember there are only two sources in the world for this equipment—one, the United States; the other, Switzerland. Kill the American industry and you will have only one source left—Switzerland.

I point out to you that a jeweled-watch factory is not easy to start; it takes from 4 to 5 years to get a plant ready for production; and I submit to you the record that in the past century over 60 watch factories have started in this country—only 3 are left. These are the three remaining companies: Waltham, which is 95 years old; Elgin, which is 80 years old; and Hamilton, which is 53 years old. All the rest are dead—ghost plants of our industry.

By allowing unrestricted importations, by cutting the tariff, by disregarding warnings by competent military men, our State Department has shirked its obligation to the citizens of the United States, and House bill No. 2652 seeks to further this great wrong.

In June 1935, when the State Department was considering our entry into a trade treaty with Switzerland, the Chief of Staff of the United States Army and the Secretary of War wrote the State Department and Tariff Commission—and I quote: "The War Department is vitally concerned in keeping the watch and clock industry alive, for the Department is depending on it in an emergency to assemble and regulate the large quantities of antiaircraft and bomb mechanical time fuzes which will be required in an emergency." I submit to you for the record copies of two letters which were written on June 24, 1935, and June 20, 1935, by Douglas MacArthur, then general, Chief of Staff, and George H. Dern, then Secretary of War of the United States.

The emergency arrived in 1941. The American watch and clock industry was understaffed because Swiss competition had thrown out of employment thousands of capable workers. This was due entirely to the fact that tariff reduction had permitted the products of the Swiss Government watch monopoly to take over a large part of the American watch-purchasing market. This same Swiss industry was at that time completely under Axis domination and working in full cooperation with our enemy.

Thousands of dead American heroes lie buried in foreign lands due entirely to the failure of our State Department officials to heed the foresighted warning of General MacArthur and the Secretary of War.

Faced with a terrific handicap the American watch worker and his employers met the challenge, though the delay was costly in loss of lives and dollars. The Axis Powers did not have this handicap for the Swiss industry which was stimulated and built up by our own State Department's action was on its toes ready to help our enemies with the skill and equipment which should have been ours. They were ready to time the blitzkreig.

It is interesting to note that less than 5 percent of the contracts given our industry were cost-plus contracts.

Gentlemen, history repeats itself. The record, as made by General MacArthur and the Secretary of War, and later by the action of our armed forces in taking over the entire production of the three American watch industries shortly after Pearl Harbor, has proven conclusively that the watch and clock industry is as essential to our national defense as any munition or any other product used by our armed forces.

Prior to Pearl Harbor, the Swiss Watch Monopoly supplied the world with navigation watches, chronographs, time and stop watches, elapsed time clocks, and other highly precise timing instruments and timing mechanisms. Following Pearl Harbor and our entry into the World War, all such equipment other than watches for civilian use made by the Swiss Watch Monopoly went exclusively to the Nazis, and most likely to the Japs, to be used to kill and maim our airmen, soldiers, and sailors.

Is it possible that American watch workers are to be deprived of a market for the products of their labor and that market turned over to those who for years aided the Nazis to kill those who went overseas and sacrificed their lives that democracy might be preserved?

No tariff alone can properly protect a vital national defense industry such as the production of watches and other highly precise timing instruments and mechanisms against the competition of a world-wide cartel. When one considers the relations and influence the Germans have in Switzerland as revealed by the Department of Justice reports on cartels, he finds a condition which is a hazard to our national security.

Legislation should be speedily enacted providing that products of foreign countries which are competitive with highly essential national-defense items, such as certified by the Joint Staff of the Army and Navy should be limited entry into American markets to not more than 30 percent of the domestic production of such items, under normal conditions, with not more than 50 percent of such imports of products of any one foreign country.

Surely in view of the experiences which we have had twice in the past 25 years, it is simply good judgment to assure ourselves that those American industries which furnish items highly essential to national defense should at all times be in a strong position.

Gentlemen, members of this committee, I submit to you that American watch workers, all of whom have been awarded the Army and Navy E for producing these essential war timing mechanisms, are in a quandry. On one hand they are told through our Army and Navy Departments they are doing a fine job, while on the other hand a bill (No. 2652) is introduced which, if passed in its present form, will take away their postwar job opportunities.

Congressman CURTIS developed in his examination of Chairman Ryder, of the Tariff Commission, that up to a few months ago all exports of Swiss watches to the American market were shipped through Axis military lines with the help and consent of the Germans. Considering the tactics used by the Nazis, is it possible that these watches were permitted free movement through their lines without the Swiss Watch Monopoly and those representing them contributing to the success of the Axis war effort?

Under questioning by members of this committee, Chairman Ryder admitted that his Tariff Commission had never bothered to check into the comparative cost of producing jeweled watches in this country and

in Switzerland. Without these facts, how can any Commission make intelligent recommendations? Are you going to allow an industry vital to American national defense to be scuttled by a Commission which does not even bother to look up all the facts in the case?

Chairman Ryder may not consider the watch industry important but the 8,000 American watch workers I represent consider it extremely important. The military and naval leaders of the United States know it is vital, and any one who looks at the facts at all will see that House bill No. 2652 will deal a death blow to the American watch industry for all time.

The Chairman of the Tariff Commission admitted as stated in their digest of the concessions granted in the trade treaty with Switzerland: "There is no doubt that smuggled watches have contributed a competitive problem of some importance not only for domestic manufacturers but for legitimate importers."

Incidentally, I submit to you two excerpts from a recent report of the president of the American Watch Assemblers' Association (The Swiss Import Trade Association) which may be of interest to the members of this committee. The first deals with the fact that the Swiss watch monopoly has apparently placed the United States under a quota and notified its distributors here that they will temporarily perhaps have to get along with the supply of five and one-quarter millions of Swiss watches annually. This representative of the Swiss watch importers in his report stated that "Under the general terms and conditions prevailing now total watch imports for 1945 may well drop to five and one-half million units, which is approximately the Swiss export quota for movements and watches to the United States, but as already stated the agreement concluded in Berne changes the aspect of the quota problem—and is expected to permit us to trade under fewer restrictions."

The members of the Ways and Means Committee dealing as you are with the problems of foreign trade may have been advised of the terms of the Berne agreement. I assure you that the American watch worker, vitally affected by imports of Swiss watches, has not been informed of the terms of such agreements made on behalf of the American people by representatives of the State Department. The other excerpt which may have a bearing on the legislation now under consideration by this committee reads as follows: "In my last report I mentioned that a special assessment might be needed. There are certain plans afoot which prompt the directors after a full discussion to recommend the raising of an important contingency fund. We hope you will approve the recommendation." This recommendation was subsequently approved. I submit to you for the record a copy of this speech, which was printed in the April 1945 issue of the National Jeweler. This report after the statement of this so-called contingency fund then goes on and deals almost wholly with the question of the renewal of the trade-treaty program and the legislation now pending before this committee.

Many Swiss watches masquerade as American, and to illustrate this point I would like to present an advertisement of the Gruen Watch Co. We pick up national publications, odd daily newspapers, we listen to the radio, and we find high-pressure, subtle advertising, such as this advertisement which I clipped from the April 1945 issue of the National Jeweler's magazine. This type of advertising disturbs every American watch worker. We find the Army and Navy E awarded this importer, the Gruen Watch Co., for work performed on manufacturing electrical measuring instruments in its assembly plant. All of Gruen's watches or parts are manufactured in a foreign country under the Swiss watch monopoly, yet they pretend through subtle advertising to be dedicating their entire facilities to the production of war materials for the United States.

I believe that this method of supplying misinformation to the American public by Swiss watch importers warrants me to refer to certain reports of Dun & Bradstreet dealing with two of the largest American importers of Swiss watches. A 1944 report on the Gruen Watch Co. states "the fact that the company has been able to continue the progressive trend throughout the period under review despite a general shortage of materials in this line is due to (1) (watch) movements are manufactured in Switzerland by its wholly owned subsidiary shipments of which have been continuous; (2) a reasonably large supply of critical materials used in manufacturing watch cases on hand." This report further states that this company has a large modern plant in Switzerland where the principal manufacturing of movements and movement parts is done and also one plant in Cincinnati, Ohio, where cases are manufactured and watches are assembled and regulated for civilian use, a privilege denied our American companies since our facilities are all devoted to essential production for the Army and the Navy, and our allies.

Friday afternoon one of the leaders of the American Jeweled Watch Industry, Mr. T. Albert Potter, president of the Elgin National Watch Co., appeared before your committee. He also submitted a brief, and among the signatories to that brief was one Bulova Watch Co., Woodside, Long Island, N. Y.

The American watch worker objects to this inclusion of the Bulova Watch Co. in this category of American jeweled watch manufacturers, because less than 10 percent of their production is American.

The Dun & Bradstreet report shows that Bulova owns a plant at Biene, Switzerland, where watch movements and watch parts are manufactured. Further speaking of Bulova it may interest your committee to know that evidence was revealed by the House select committee to investigate the Federal Communications Commission and radio activities which showed that several of those who used and operated the facilities of several of the radio stations operated by Bulova were interned as alien enemies shortly after Pearl Harbor by the F. B. I. and the armed forces.

This same report refers to the smuggling of 200,000 watches and shows that the Treasury Department levied a claim against Bulova (p. 4677) for $405,000 for smuggling watches which claim was settled by the payment on the part of Bulova of $38,000.

I seek to show the kind of people who ask to be benefitted by House bill No. 2652. Contrast these, if you will, with the good, honest, hard-working Americans that you and I both represent.

At this point I would like to define the term "American" as applied to the American watch industry. By the term "American" I mean purely, simply, directly American. I do not mean half Swiss, half American. I do not mean one-quarter Swiss, three-quarters American. I do not mean nine-tenths Swiss and one-tenth American, nor do I mean part Jap, part American, or part German or part American. I do mean simply, and directly, and honestly American; really American. As American as the ideal one has in mind when he pledges allegiance to the flag, the kind of stuff immigrants feel in their hearts when they first see the Statue of Liberty. As American as the Star Spangled Banner, as American as the President of the United States.

Many Swiss importers, Bulova, Gruen, Benrus, Longines, and the many others too numerous to mention are deluding the American public day in and day out with their advertising, and there seems to be nothing that we as American watch workers can do but straighten out the record.

Even in this campaign to bring attention to what this bill would do to our industry we have been denied radio time and newspaper advertising in one of the three communities that our industry is located in. In Lancaster, Pa., radio station WGAL refused to allow a radio transcription of a talk which was given on another radio station in Boston on their station, unless they were allowed to delete and to change most of the language which was effective in this speech.

American radio time signals, Bulova watch time, Benrus watch time, etc., are dominated by the Swiss monopoly. These time signals are not available to any American watch manufacturer on any important hours.

The Hamilton watch factory is a vital industry in Lancaster, Pa., and yet the Lancaster newspapers * * * incidentally owned by the group that control radio station WGAL refused to accept a paid advertisement which was carried in the Waltham and Elgin newspapers. I present to you a copy of that advertisement.

Where can the American watch worker seek redress against these wrongs? The only place is here, gentlemen, the legislative halls of Congress. Either this Congress is going to preserve this industry by forbidding the importation of Swiss parts or the American watch worker will lose his job.

Mr. Potter, in his statement, which was signed by not only the American jeweled-watch industry but by the American clock industry, warned "if Congress makes it possible for the clouds of importation that have been hanging over our heads to get too black, a part of the industry may have to transplant itself in order to survive."

Gentlemen, do you need any language plainer than that? The handwriting is on the wall. The Swiss are gaining control of our industry. House bill No. 2652 is designed to deliver the knockout blow to the American watch industry which we have proven essential to our national defense.

I now wish to present to you a petition which we call "the ghost town petition". Thousands of American citizens are petitioning for protection of our industry because it is essential to national defense and because it can create 60,000 new jobs in America. House bill No. 2652 can make "ghost towns" out of any industrial community in this country where labor costs represent more than half the factory costs. Included in this petition are the fathers, mothers, sisters and daughters of those now serving in the armed forces overseas, and other interested Americans.

I wish to present separately and as an indication of the intelligence and interest which those in our armed forces have in what is going on here, a sheet of this "ghost town" petition signed by some of those serving on the U. S. S. *Hermitage*, appealing to this committee to protect their job opportunities while they sacrifice their lives if necessary to preserve democracy.

I ask you, gentlemen, to contrast this petition and this plea for economic protection of jobs for American workers against the plea made last Saturday by the C. I. O. representative. His attitude, his argument, and that of the college professor who is now research director of the C. I. O., Dr. J. Raymond Walsh, who, in debate on Town Meeting of the Air, with Senator Brewster, took the attitude that if American industries could not compete, American workers should be willing to transfer into other industries.

Gentlemen, the fate of America is at the crossroads. House bill No. 2652 will decide whether we are going to have full opportunity for employment, or whether we are to give our markets to foreign lands so that importers may benefit.

The American Watch Worker says you need our industry for national defense. We want to work in this industry, our homes, our lives, our families are tied into these communities where watches are manufactured,

I ask you to save America against the day when we may need this vital industry again.

Gentlemen, I rest my case knowing that it is in the hands of 25 good Americans who have the interest of our Nation at heart and are not going to allow importers, whose only interest is profit-making and whose profits are not subjected to renegotiation, to scuttle our industry.

Thank you.

See the Triple-A Man

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. O'KONSKI. Mr. Speaker, a new farm machine—more gas for the tractor—a crop loan—a slaughter permit—the guy who runs the Government's big farm program takes care of all complaints—and runs his farm besides.

Organized programs to further Wisconsin's war-food production have for the most part been conducted by and through the A. A. A. county committees. Wisconsin has 213 elected county committeemen who are all farmers and operate 40,683 acres of land.

Just recently a survey was made into the details of these men's farming activity and volume of production, as they are leaders in the State campaign for increased production of milk, meat, dairy products, and eggs.

It is found that 200 of the 213 county committeemen own their own farms, average length of ownership 23 years. In education 177 of them finished eighth grade, 168 went to high school, and 58 went to college. They average 52.9 years of age.

On the 40,683 acres they operate these Badger farm community leaders in 1944 produced 23,874,000 pounds of milk, 1,012,200 pounds of pork, 3,144,400 eggs, and 8,980 pounds of wool. They milk 3,880 cows on these farms.

In the A. A. A. program three county committeemen are elected to administer the farm program, their term of office is 1 year, they are elected by delegates who in turn are elected by the farmers in the community; one delegate for each community, which in most cases represents a township.

Ben Hermundsen, vice chairman in Buffalo County, has the largest acreage. He owns and operates 774 acres. He has been on the county committee for 11 years and has owned and operated the farm for 38 years. He is now 63 years old.

Fred Schmid, vice chairman of Walworth County, is the largest dairyman with a herd of 80 milk cows. Mr. Schmid has for the last 35 years owned and operated 526 acres. He was one of the largest hemp producers at the Darien plant which was built on land purchased from him. Besides his large dairy herd he has about 30 other cattle, and raises about 200 hogs a year.

Ed Richard, vice chairman in Grant County, is the largest pork producer. He raises an average of 300 hogs per year on his 168-acre farm besides milking 25 cows and keeping 1,000 laying hens. He has operated this farm for the past 21 years, and has been owner for 17 years.

Herman Hanson, chairman of Dunn County, is the largest poultryman. He keeps an average of 1,200 layers on his 392-acre farm which he has operated for the last 28 years and owned for the last 24 years.

Ray O. Staupe in Douglas County is the youngest county committeeman in the State. He now owns a 160-acre farm which he bought a year ago and had previously operated it for 18 years.

Harvey Spriggs, in Racine County, is the oldest county committeeman; at 76 he is still hale and hearty. He has owned his good 449-acre Racine County farm for the past 54 years. In the time Spriggs spent in agriculture he has become connected with about every agricultural move that has developed in the last 50 years. He is a general farmer, milks about 23 cows, feeds over 100 hogs, has 300 laying hens and has about 50 sheep. He has produced hemp for the mill at Union Grove.

Most of the committeemen produce the feed for their stock with the exception of supplements to balance up their rations. Tractors and other modern machines are used on most of their farms.

A tabulation of horsepower on our county committeemen's farms revealed an average of 3.3 horses per farm. Many of the farms had no horses at all and were entirely mechanized as can be seen from the large acreages operated. The 3.3 per farm average for horses could not possibly furnish the power to operate these farms at maximum capacity.

DOUBLE DUTY FOR THEM

In addition to their regular farm management responsibilities, most of the committeemen do regular farm chores in the morning and evening and during the day carry on their responsibilities as administrators of their county A. A. A. program with its many varied and related war activities. The programs for which these committeemen were responsible during the year 1944 are the following:

Lime, superphosphate, aerial mapping, hay-seed harvesting, commodity-loans program, crop-insurance program, regional agricultural credit program, C. C. C. dairy production program, war crop goals program, sugar-beet program, rationing of farm machinery, rationing of milk cans, rationing of gasoline engines, rationing of crawler-type tractors, nonhighway gasoline, conversions on farm implements, certification of vegetable processors, protein 20 percent set-aside order, farm construction order, frozen-food locker plants, wool-purchase program, softwood lumber program, maximum transportation conservation, allocation of new farm trucks, copper-wire program, milkweed-floss program, surplus Government trucks, farm slaughter permits, and public auction of surplus equipment.

To give some idea of the amount of work involved in the conduct of these various individual programs, the county offices made a tabulation of the following specific items which when summarized on a State level give the following approximate figures for the year 1944:

Office calls:	
Farmers	519,616
Others	70,252
Communications:	
Letters written	673,852
Mimeographed letters	1,814,272
Letters received	825,600
Telephone calls:	
Incoming	132,260
Out going	78,780
Meetings:	
Number held	5,532
Number attending	274,992
Field contracts:	
By county committee	216,044
By community committee	614,104

Over one-half million farmers thus made personal calls at their county triple A offices in the State. These calls may have been for information on their regular triple-A program practices, to order limestone, for assistance in obtaining tractor gasoline, or information or assistance under any of the various war programs previously listed. A large amount of traffic to the county offices during the period January through September was in connection with the machinery rationing program which was suspended in September.

Under the triple-A farm program the county committeemen were directly responsible for the participation of 93.3 percent of the total crop acreage in the State. This in itself is a major achievement, and is the result of the conduct of an efficient administration on the county level. The conduct of the various rationing programs, maximum transportation conservation, farm lumber, and the nonhighway gasoline program in particular made necessary the holding of innumerable committee meetings after the evening chores were done. The time, gasoline, and tires for these meetings were for the major part donated by the committeemen.

This gives the major activities of some prominent Wisconsin farmers who in addition to their farm operations are actively administering their own farm program for the benefit of their friends and neighbors, the agricultural industry and the Nation as a whole. Triple A is a farmers' program which it can be truly said is actually run by farmers.

Hats off to the Wisconsin triple-A leaders.

Observations on Present-Day Problems

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. MASON. Mr. Speaker, I offer the following observations on present-day problems. I offer these remarks for the consideration of my colleagues on both sides of the aisle.

A GROWING WORLD MENACE

The people of Europe and the world are shocked and astonished at the attacks that are now being made upon the

Catholic Church by the Russian press in general and the official Soviet newspaper, Pravda, in particular. The Roman Catholic Church of Austria has been attacked as an obstacle in the Russian attempt "to create a democratic form of government for Austria," and it is urged that both the Catholic Party and the Socialist Party of Austria (the only political parties in Austria) be purged so that a "patriotic front" can be established. Stalin's policies in Poland and Rumania have long since brought disquiet to France and England; but now his proposal to occupy Denmark and also his direct interference in the political affairs of Austria have intensified this disquiet and brought it home to the whole western European world. Of course, Europe and her problems and worries are some 3,000 miles away. However, the same disquiet is being brought home to the people of the Western Hemisphere because Elias Laferte, the president of the Communist Party in Chile, speaking in Mexico City, May 18, 1944, singled out catholicism as the most formidable enemy of communism in America. He even pointed out the methods that communism must employ in the Western Hemisphere to disparage and destroy the religious forces which stand in the way of the advancement of communism in America. The Catholic Church of America is to be congratulated for being singled out as "the most formidable enemy of communism in America." Every Protestant Church should join up with the Catholic Church in a crusade to prevent the Sovietization of the world—Weekly News Letter, May 7, 1945.

THE ONLY SURE FOUNDATION FOR PEACE

In February 1941, the Federal Council of Churches of Christ in America—a Protestant organization—issued a rather remarkable pronouncement to the world. It stated, in substance, that the only sure foundation for lasting peace are the teachings of Christ as recorded in the Gospels. In a recent pronouncement of the Catholic bishops of America the world has again been told the same thing, in stronger and more specific words. In the bishops' pronouncement the statement is made that we must seek "the establishment of an international order in which the spirit of Christ shall rule the hearts of men and of nations." The pronouncement suggests that only when this is accomplished can we expect lasting peace. Men of good will of all nations, all races, and all creeds, can take heart today because of the similarity of thought and the unity of spirit that have been expressed in these two great pronouncements, one by the Protestant Churches of America and the other by the leaders of the Catholic Church of America—Weekly News Letter, December 18, 1944.

DUMBARTON OAKS AND SAN FRANCISCO

The Dumbarton Oaks Conference held last summer constructed a skeleton organization for world peace. The San Francisco Conference is expected to put flesh and clothes upon that skeleton in order to make it a living, functioning organization. Every American is in full accord with the objective of world peace and is hoping and praying that the objective will be accomplished. We must not blind ourselves, however, to the fact that the concessions made to Stalin at Yalta and the secret agreements arrived at by the Big Three at Yalta will hamper and handicap the delegates at San Francisco in their efforts to complete the task of building an organization that will insure world peace.

The Dumbarton Oaks peace plan is not a new one. It has been tried twice before in the history of the world and failed both times. First it was tried by the Big Four—Great Britain, Russia, Prussia, and Austria—in 1815, when they formed the Holy Alliance to keep the peace of Europe after they had defeated Napoleon. The Dumbarton Oaks plan, based upon a Big Three great-power dictatorship to keep the peace of the world, is in all its basic essentials very similar to the Big Four alliance that was created following the Napoleonic wars. The Big Four Holy Alliance became a Big Five in 1818 when it admitted a chastened, penitent Bourbon France. Its life was a short one, however, because in 1823 Great Britain seceded from the alliance and it broke up.

Woodrow Wilson's League of Nations was patterned after the Holy Alliance. It was similar in many respects, but was more universal and more idealistic. Wilson's League of Nations was doomed to failure before it began to function. Because Wilson would not accept some protective amendments, his plan for world peace was turned down by the United States Senate. Without the United States as a full-fledged partner the League was doomed to failure. Will the same thing happen again? Will our leaders become so enamoured over the Dumbarton Oaks plan, when it has been made into a living functioning organization for world peace that they will say, as Wilson did, "It cannot be changed; it must not be amended in any respect; it must be accepted as it is"? If so, will the Senate again turn thumbs down on a program for world peace?—Weekly News Letter, April 23, 1945.

SLAVE LABOR AS WAR PUNISHMENT

Should Stalin be permitted to use 2,000,000 German soldiers as slaves for 10 years to rebuild that part of Russia that has been destroyed? Should we agree to such a program? How many of the German soldiers fought of their own free choice, and how many had no choice but to fight when ordered to do so? We are told that Stalin's plan for enslaving 2,000,000 Germans for 10 years had the full approval of Roosevelt, Hopkins, Hillman, and Frankfurter. We know the Romans in the time of Caesar enslaved their war prisoners. But we also know that with the coming of Christianity that brutal degrading custom was abandoned. Is it to be resurrected and given approval by the Big Three? Is Uncle Sam to be a party to forced slavery? We realize that such a barbaric custom of enslaving war prisoners is in line with the Asiatic despotism and the serf traditions of Russia and Stalin. Hitler made slaves of the civilian population of the countries his army overran and conquered. The civilized world condemned his action as inhuman, the act of a madman. Are we now to approve the same act because Stalin desires to retaliate? What becomes of the Golden Rule, "Do unto others as ye would have them do unto you"?—Weekly News Letter, April 23, 1945.

POSTWAR IMMIGRATION QUESTIONS

After World War No. 1 this Nation faced a very serious immigration problem. A flood of European immigrants were pouring in through our gates, threatening our economic life. To stem this incoming tide Congress in 1924 passed our quota immigration laws, setting up immigration quotas for the various countries of Europe. These quota laws were both restrictive and selective and have worked wonderfully well during the past 20 years.

Following this war, we will again be faced with a serious immigration problem. Millions of Europeans will be clamoring for admission to the United States. Hundreds of thousands of the people of the subjugated countries of Europe who have been forced to do slave labor by the Germans say they do not want to go back to their own country when released; they want to emigrate to America. What shall our postwar immigration policy be? Shall we retain our quota system as it is? Shall we suspend all quotas for a period of 10 years? Shall we reduce present quotas or increase them? Shall we suspend quotas of enemy countries and increase the quotas of Allied countries? Germany today has a yearly immigration quota of 27,000. Shall we increase the Polish quota so that the 250,000 Polish patriots who have been fighting so bravely with our Allied armies may find a home here? We are told they will not be permitted to return to Poland after the war because they are persona non grata to Stalin. Perhaps these freedom-loving, Christian Poles would make better American citizens than Russian immigrants with their communistic background and their scorn of religion.

The House of Representatives has authorized its Committee on Immigration and Naturalization to investigate this whole problem of postwar immigration and make a report to the Congress so that the problems involved can be acted upon intelligently. This is a very important matter. It places a heavy responsibility upon the Immigration and Naturalization Committee of the House. The writer will be serving on that committee and will welcome suggestions from back home—Weekly News Letter, May 14, 1945.

Address of Archbishop Cushing Before Jewish War Veterans' Auxiliary

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRES-

SIONAL RECORD, I wish to include the following address of Archbishop Cushing before the Newton Post, No. 211, Auxiliary of the Jewish War Veterans, at the Copley Plaza meeting in Boston, Mass. The address appeared in the May 14, 1945, issue of the Boston Daily Globe:

ARCHBISHOP WARNS JEWS AND CATHOLICS OF DISCRIMINATION—BOTH VICTIMS OF INTOLERANCE—ARE OFTEN SET AGAINST EACH OTHER

When totalitarian states get going, Catholics and Jews are the first victims of discrimination, Archbishop Cushing told members of Newton Ladies' Auxiliary of the Jewish War Veterans Post at their annual luncheon at the Copley Plaza this afternoon.

He warned his listeners, too, that Catholics and Jews are sometimes mischievously led to think ill of each other.

"Let us be very careful," he said. "There are those who would gladly embarrass both of us.

"As the Archbishop of the Catholic Archdiocese of Boston I officially tell you that it is contrary to the dictates and to the doctrines of the Catholic faith for any Catholic to hate anyone.

"Catholics have many things in common with the people of Israel," began the Archbishop. "We acknowledge as the founder of our religion and as the son of God, Jesus Christ, a Jew. The first followers and apostles of Christ were Jews, men proud of their Jewish race. Today, in the midst of a world that ignores the right of God to speak to men in Divine revelation, both Catholics and Jews respect the revelation of the Almighty in the Old Testament. In the acceptance of this right of God to dictate to men their conduct and of the obligation of mankind to follow these dictates, Jews and Catholics stand on a platform of mutual agreement and concord.

COMMON ENEMIES

"We have a common respect for the voice of God expressed in the Old Testament which we, as Catholics, are bound to hear and which the Jews cannot ignore. Names that are sacred to you are hallowed to us. Names that you are not permitted to forget, we are charged to remember—Moses, Isaiah, David, Daniel are your heroes and ours.

"I might add that our enemies and our critics—we also frequently have in common. Abroad, the Jews and the Catholics are usually the first objects of the nationalist totalitarian's ban. At home, the vested interests which discriminate on one day against our people, discriminate the next against yours, and the next against both of us. I mention this because it is extremely important to be on guard against a serious danger to both our groups, a danger the more mischievous because it sometimes comes in the guise of friendship for one or the other of us. Some of your people are occasionally led to think ill of some of mine; some of my people are similarly victimized with regard to you. Let us each be very careful. There are those who would gladly embarrass both of us.

"We have common enemies and they are hard at work here in this city and elsewhere, trying to divide your people from ours. They have even tried it on occasion in the name of good will and, I regret to say, of democracy.

"But, far more important among the ties that bind us are those which are positive. In an era that is striving to dethrone Almighty God, Catholics and Jews, by reason of our religious belief, feel a need of the God above us. We as Catholics believe in prayer and worship, and we go to heroic extents to manifest this belief.

"The Jews who adhere to the faith of their fathers do the same. Faithful Jews have their days of worship, sacrifice, and self-denial, and they keep them. So do we. Faithful Jews have their schools in which they teach the young the rights of the living God and make sacrifices, financial and otherwise, to have their sons and daughters render their tribute of devotion to the God of nations and of men. So do we.

THE ROLE OF WOMEN

"Faithful Jews recognize the need of the love of God in the midst of a godless world; they warn their adherents against indifference in modern paganism; they recognize the need of placing the light of faith in their window, not just once a week or once a year, but of showing it at all times, without offense to anyone, and without neglect of God. And so do we. Being so sympathetic in matters moral and spiritual, I do not hesitate to speak to you today on a very controversial subject with profound moral and spiritual implications: woman's role in the modern world.

"Women in modern times, like men, can play the game of life on the side of the angels or with the forces of evil. Rallying behind what is best in life you have a twofold contribution to make to a new and better world. You can reintroduce into modern life the lost sense of reverence, and you can help in the reestablishment of the family, the unit of society which must be saved if democracy is to survive * * *.

"A wise man remarked some years ago, when feminism had done its work, 'Women were once our superiors—now they have become our equals.'

"But, equal or not, this is still a man-made and man-run world. The only difference since the feminist movement is that women figuratively, and in some cases literally, have put on trousers to take men's places. Men may be flattered by this imitation—though I doubt it—but the world has profited nothing from it.

"With the miscarriage of the feminist movement and with woman's consequent donning of trousers to take her place as a man in a world of men, the family and home began to suffer a decline. Woman's career as a politician, a professional or business or social worker began to supersede her natural, God-given career as mother and home-builder. Divorce laws, certain economic factors, and, finally, contraceptives completed the ruin of a marriage and threaten to sabotage the social unit which is the family.

"If you think I exaggerate, I ask you to consider with me the fact that there exists in the world today powerful political and social movements which are based on the theoretical and factual promise that the family no longer exists, nor has it any right to exist. These movements are based on the theory that the state is the only legitimate social unit. The family, representing as it does, a social unit, which guarantees the individual certain rights and privileges prior to and independent of the state has no place in the totalitarian state.

"Perhaps you think the family is safe here in our counry? The facts prove the contrary. We have the largest divorce record of any nontotalitarian state in the world—a fact which shakes the family at its source. We are now having about 250,000 divorces a year in this country—1,000,000 dreams of marital bliss ending in disaster in every 4-year period. We may well imagine how the children of these families are being trained. And yet the prime purpose of the home is children—their rearing as well as their procreation. Can we really express surprise at the great number of our delinquents? And the end is not yet. The war has made the family situation worse.

"Truly, only gigantic efforts will accomplish the task of reconstructing our family life.

"My dear Jewish women, from these and other noble women of the Old Testament have come your ideals. Do not sacrifice them for the fictitious heroines or the glamour girls of modern life. If you hold fast to the sacred traditions and types of womanhood in the old law you will make a grand contribution to the rebirth of reverence and to the rebuilding of the family life so vitally needed in the remaking of a world that came very close to annihilating itself with the sword of a war which exploded from the poisonous gases of secularism and immorality."

Prime Minister Churchill's Review of the War and Pledge for the Future

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Prime Minister Churchill, as published in the New York Times of May 14, 1945:

It was 5 years ago on Thursday last that His Majesty the King commissioned me to form a national government of all parties to carry on our affairs.

Five years is a long time in human life, especially when there is no remission for good conduct. However, this national government was sustained by Parliament and by the entire British Nation at home and by all our fighting men abroad, and by the unswerving cooperation of the Dominions far across the oceans and of our Empire in every quarter of the globe. After various episodes that occurred, it became clear last week that so far things have worked out pretty well and that the British Commonwealth and Empire stands more united and more effectively powerful than at any time in its long romantic history. Certainly we are in what may well, I think, be admitted by any fair-minded person—certainly we are in a far better state to cope with the problems and perils of the future than we were 5 years ago.

For a while our prime enemy, our mighty enemy—Germany—overran almost all Europe. France, who bore such a frightful strain in the last Great War, was beaten to the ground and took some time to recover. The Low Countries, fighting to the best of their strength, were subjugated. Norway was overrun. Mussolini's Italy stabbed us in the back when we were, as he thought, at our last gasp. But for ourselves, our lot—I mean the British Commonwealth and Empire—we were absolutely alone.

BATTLE OF BRITAIN RECALLED

In July, August, and September, 1940, 40 or 50 squadrons of British fighter aircraft in the Battle of Britain broke the teeth of the German air fleet at odds of 7 or 8 to 1. May I repeat again the words I used at that momentous hour—never in the field of human conflict was so much owed by so many to so few. The name of Air Chief Marshal Lord Dowding will always be linked with this splendid event. But conjoined with the Royal Air Force lay the Royal Navy, ever ready to tear to pieces the barges, gathered from the canals of Holland and Belgium, in which a German invading army could alone have been transported. I was never one to believe that the invasion of Britain with the tackle that the enemy had at that time was a very easy task to accomplish. With the autumn storms, the immediate danger of invasion in 1940 passed.

Then began the "blitz," when Hitler said he would rub out our cities. That's what he said—rub out our cities. This was borne without a word of complaint or the slightest signs of flinching, while a very large number

of people—honor to them all—proved that London could take it, and so could our other ravaged centers.

But the dawn of 1941 revealed us still in jeopardy. The hostile aircraft could fly across the approaches to our island, where forty-six millions of people had to import half their daily bread and all the materials they needed for peace or war. These hostile aircraft could fly across the approaches from Brest to Norway in a single flight or back again. They could observe all the movements of our shipping in and out of the Clyde and Mersey and could direct upon our convoys the large and increasing numbers of U-boats with which they the enemy bespattered the Atlantic—the survivors or successors of which U-boats are now being collected in British harbors.

The sense of envelopment, which might at any moment turn to strangulation, lay heavy upon us. We had only the northwestern approach between Ulster and Scotland through which to bring in the means of life and to send out the forces of war.

DE VALERA DENOUNCED

Owing to the action of Mr. De Valera, so much at variance with the temper and instinct of thousands of southern Irishmen who hastened to the battle front to prove their ancient valor, the approaches which the southern Irish ports and airfields could so easily have guarded were closed by the hostile aircraft and U-boats. This was indeed a deadly moment in our life and, if it had not been for the loyalty and friendship of northern Ireland, we should have been forced to come to close quarters with Mr. de Valera or perish forever from the earth. However, with a restraint and poise to which, I say, history will find few parallels, his Majesty's Government never laid a violent hand, although at times it would have been quite easy and quite natural, and we left the De Valera government to frolic with the Germans and later with the Japanese representatives to their heart's content.

When I think of these days, I think also of other episodes and certain personalities. I think of Lieutenant Commander Esmonde, V. C.; of Lance Corporal Keneally, V. C.; of Captain Fegen, V. C., and other Irish heroes that I could easily recite. And then I must confess that the bitterness by Britain against the Irish race dies in my heart. I can only pray that in years which I shall not see the shame will be forgotten and the glories will endure, and that the peoples of the British Isles and of the British Commonwealth of Nations will walk together in mutual comprehension and forgiveness.

My friends, when our minds turn to the northwestern approaches, we will not forget the devotion of our merchant seamen and our minesweepers, out every night and so rarely mentioned in the headlines, nor will we forget the vast, inventive, adaptive, all-embracing and, in the end, all-controlling power of the Royal Navy with its ever more potent new ally, the air. These have kept the lifeline open. We were able to breathe; we were able to live; we were able to strike. Dire deeds we had to do. We had to destroy or capture the French Fleet, which, had it ever passed undamaged into German hands, would, together with the Italian Fleet, have perhaps enabled the German Navy to face us on the high seas. This we did. We had to make the dispatch to General Wavell—all round the cape at our darkest hour—of tanks—practically all we had in the island—and this enabled us, as far back as November 1940 to defend Egypt against invasion and hurl back, with the loss of a quarter of a million captives and a heavy slaughter, the Italian armies at whose tail Mussolini had already planned to ride into Cairo or Alexandria.

AMERICAN ANXIETY CITED

Great anxiety was felt by President Roosevelt and, indeed, by thinking men throughout the United States about what would happen to us in the early part of 1941. The President felt to the depths of his being that the destruction of Britain would not only be an event fearful in itself but that it would expose to mortal danger the vast and as yet largely unarmed potentialities and the future destiny of the United States. He feared greatly that we should be invaded in that spring of 1941, and no doubt he had behind him advice as good as any that is known in the world, and he sent his recent Presidential opponent, the late Mr. Wendell Willkie, to me with a letter in which he had written in his own hand the famous lines of Longfellow which I quoted in the House of Commons the other day:

"Sail on, O Ship of State!
Sail on, O Union strong and great,
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate."

We were, however, in a fairly tough condition by the early months of 1941, and we felt very much better about ourselves than in those months immediately after the collapse of France. Our Dunkerque army and field force troops in Britain, almost a million strong, were nearly all equipped or re-equipped. We had ferried over the Atlantic a million rifles and a thousand cannon from the United States, with all their ammunition, since the previous June. In our munition works, which were becoming very powerful, men and women had worked at their machines till they dropped senseless from fatigue. Nearly 1,000,000 of men, growing to 2,000,000 at the peak, although working all day, had been formed into the home guard. They were armed at least with rifles and armed also with the spirit "conquer or die."

Later in 1941, when we were still all alone, we sacrificed unwillingly, to some extent unwittingly, our conquest of the winter in Cyrenaica and Libya in order to stand by Greece, and Greece will never forget how much we gave, albeit unavailingly, of the little we had. We repressed the German-instigated rising in Iraq. We defended Palestine. With the assistance of General de Gaulle's indomitable Free French, we cleared Syria and the Lebanon of Vichyites and of German alienators and intriguers. And then in June 1941, another tremendous world event occurred.

You have no doubt noticed in your reading of British history—and I hope you will take pains to read it—it is only from the past that one can judge the future, and it is only from reading the story of the British Nation, of the British Empire, that you can feel a well-grounded sense of pride to dwell in these islands as you have sometimes noticed in your reading of British history that we have had to hold out from time to time all alone, or to be the mainspring of coalitions, against a continental tyrant or dictator, and we have had to hold out for quite a long time—against the Spanish Armada, against the might of Louis XIV, when we led Europe for nearly 25 years under William III and Marlborough, and 150 years ago when Nelson, Pitt, and Wellington broke Napoleon, but not without assistance from the heroic Russians of 1812. In all these world wars our islands kept the lead of Europe or else held out alone.

And if you hold out alone long enough, there always comes a time when the tyrant makes some ghastly mistake which alters the whole balance of the struggle. On June 22, 1941, Hitler, master, as he thought himself, of all Europe, nay indeed soon to be master of the world, so we thought, treacherously, without warning, without the slightest provocation, hurled himself on Russia and came face to face with Marshal Stalin and the numberless millions of the Russian people. And then, at the end of the year, Japan struck her felon blow at the United States at Pearl Harbor. And at the same time attacked us in Malaya and Singapore. Thereupon Hitler and Mussolini declared war on the Republic of the United States.

Years have passed since then—indeed, every year seems to me almost a decade—but never since the United States entered the war have I had the slightest doubt but that we should be saved and that we only had to do our duty in order to win. We have played our part in all this process by which the evil-doers have been overthrown, and I hope I do not speak vain or boastful words, but from Alamein in October 1942, through the Anglo-American invasion of north Africa of Sicily, of Italy, and with the capture of Rome, we marched many miles and never knew defeat.

And then last year, after 2 years' patient preparation and marvelous devices of amphibious warfare—and, mark you, our scientists are not surpassed in any nation in the world, especially when their source of supply is considered—last year, on June 6, we seized a carefully selected little toe of German-occupied France and poured millions in from this island and from across the Atlantic until the Seine, the Somme, and the Rhine all fell behind the advancing Anglo-American spearheads. France was liberated. She produced a fine army of gallant men to aid her own liberation. Germany lay open.

And now, from the other side, the mighty military achievements of the Russian people, always holding many more German troops on their front than we could do, rolled forward to meet us in the heart and center of Germany.

At the same time, in Italy, Field Marshal Alexander's army of so many nations, the largest part of which was British or British Empire, struck their final blow and compelled more than a million enemy troops to surrender. This Fifteenth Army group, as we call it, British and American, joined together in almost equal numbers, are now deep in Austria, joining their right hand with the Russians and their left with the United States armies of General Eisenhower's command.

It happened, as you may remember, but memories are short, that in the space of 3 days we received the news of the unlamented departures of Mussolini and Hitler, and in 3 days also surrenders were made to Field Marshal Alexander and Field Marshal Montgomery of over 2,500,000 soldiers of this terrible warlike German Army.

I shall make it clear at this moment that we have never failed to recognize the immense superiority of the power used by the United States in the rescue of France and the defeat of Germany. For our part, British and Canadians, we have had about one-third as many men over there as the Americans. But we have taken our full share of the fighting, as the scale of our losses shows. Our navy has borne incomparably the heaviest burden in the Atlantic Ocean, in the narrow seas and the Arctic convoys to Russia, while the United States Navy has had to use its immense strength mainly against Japan. We made a fair division of this latter and we can each report that our work is either done or going to be done.

It is right and natural that we should extol the virtues and joyous services of our own most famous commanders, Alexander and Montgomery, neither of whom was ever defeated since they began together at Alamein. Both of them have conducted, in Africa, in Italy, in Normandy, and in Germany, battles of the first magnitude and of decisive consequence.

At the same time we know how great is our debt to the combining and unifying command and high strategic direction of General Eisenhower. And here is the moment when I must pay my personal tribute to the British Chiefs of Staff with whom I have worked in the closest intimacy throughout these heavy, stormy years. There have been very few

changes in this small parcel and capable body of men, who, sinking all service differences and judging the problems of the war as a whole, have worked together in perfect harmony with each other. In Field Marshal Brooke, Admiral Pound, succeeded after his death by Admiral Andrew Cunningham, and in Marshal of the Air Portal, a team was formed who deserve the highest honor in the direction of the whole British war strategy and in its relation with that of our allies.

ALLIES' COOPERATION PRAISED

It may well be said that our strategy was conducted so that the best combinations in closest concert were imparted into the operations by the Combined Staffs of Britain and the United States, with whom, from there onward, the war leaders of Russia were joined. And it may also be said that never have the forces of two nations fought side by side and intermingled in the lines of battle with so much unity, comradeship, and brotherhood as in the great Anglo-American armies.

Some people say: "Well, what would you expect if both nations speak the same language, have the same laws, have a great part of their history in common, and have very much the same outlook upon life with all its hope and glory?" or "Isn't it just the thing that would happen?" And others may say: "It would be an ill day for all the world and for the pair of them if they did not go on working together and marching together and sailing together and flying together whenever something has to be done for the sake of freedom and fair play all over the world." That is the basis of the future.

There was one final danger from which the collapse of Germany has saved us. In London and the southeastern counties we have suffered for a year from various forms of flying bombs—but you heard about this—and rockets and our air force and our ack-ack batteries have done wonders against them. In particular the Air Force, turned on in good time on what then seemed very slight and doubtful evidence, hampered and vastly delayed all German preparations. But it was only when our armies cleaned up the coast and overran all the points of discharge—and when the Americans captured vast stores of rockets of all kinds near Leipzig, which was added to our information only the other day, and when all the preparations being made on the coast of France and Holland could be examined in detail, in scientific detail, that we knew how grave had been the peril, not only from rockets and flying bombs but from multiple long-range artillery, which was being prepared against London.

Only just in time did the Allied armies blast the viper in his nest. Otherwise the autumn of 1944, to say nothing of 1945, might well have seen London as shattered as Berlin. For the same period the Germans had prepared a new U-boat fleet and novel tactics which, though we should have eventually destroyed them, might well have carried anti-U-boat warfare back to the high peak days of 1942.

Therefore we must rejoice and give thanks not only for our preservation when we were all alone but for our timely deliverance from new suffering, new sorrows, new perils not easily to be measured.

WARNS OF TASKS AHEAD

I wish I could tell you tonight that all our toils and troubles were over. Then, indeed, I could end my 5 years' service happily, and, if you thought you had had enough of me and that I ought to be put out to grass, I assure you I would take it with the best of grace. But, on the contrary, I must warn you, as I did when I began this 5 years' task—and no one knew then that it would last so long—that there is still a lot to do and that you must be prepared for further efforts of mind and body and further sacrifices to great causes if you are not to fall back into the rut of inertia, the confusion of aim and the craven fear of being great.

You must not weaken in any way in your alert and vigilant frame of mind. Though a holiday of rejoicing is necessary to the human spirit, yet it must add to the strength and resilience with which every man and woman turns again to the work they have to do and also to the outlook and watch they have to keep on public affairs.

On the continent of Europe we have yet to make sure that the simple and honorable purposes for which we entered the war are not brushed aside or overlooked in the months following our success and that the words "freedom," "democracy," and "liberation" are not distorted from their true meaning as we have understood them. There would be little use in punishing the Hitlerites for their crimes if law and justice did not rule and if totalitarian or police governments were to take the place of the German invaders. We seek nothing for ourselves. But we must make sure that those causes which we fought for find recognition at the peace table in facts as well as words. And, above all, we must labor that the world organization which the United Nations are creating at San Francisco does not become an idle name, does not become a shield for the strong and mockery for the weak. It is the victors who must search their hearts in their glowing hours and be worthy by their nobility of the immense forces that they wield.

We must never forget that beyond all lurks Japan, harassed and failing, but still a people of a hundred million, for whose warriors death has few terrors. I cannot tell you tonight how much time or what exertions will be required to compel the Japanese to make amends for their odious treachery and cruelty. We, like China so long undaunted, we have received horrible injuries from them ourselves, and we are bound by the ties of honor and fraternal loyalty to the United States to fight this great war at the other end of the world at their side without flagging or failing. We must remember that Australia and New Zealand and Canada were and are all directly menaced by this evil power. They came to our aid in our dark times and we must not leave unfinished any task which concerns their safety and their future. I told you hard things at the beginning of these last 5 years; you did not shrink, and I should be unworthy of your confidence and generosity if I did not still cry: "Forward, unflinching, unswerving, indomitable, till the whole task is done and the whole world is safe and clean."

This Subsidy Juggling Is Difficult to Explain

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. CLEVENGER. Mr. Speaker, I have never been able to see how the War Food Administration arrived at the conclusions they come to when they decide on the milk subsidy for the various States. The fact that the milk production has not been increased 10 percent even though millions were spent as milk subsidies indicates that other factors are involved. The amount of the subsidy is not based on the cost of labor nor on the governmental official report showing the hourly returns per hour of labor on typical dairy farms of the various States.

One fact is evident and that is that the amounts of the subsidy are to continue to be juggled as long as the present political agriculturists stay in power.

The following table shows the amounts for each State for the various months of the year up to April 1, 1946:

State	Counties	Rate per hundred weight, milk delivered			
		January through April	May and June	July through September	October through March
		Cts.	*Cts.*	*Cts.*	*Cts.*
Alabama	Baldwin, Mobile	90	55	75	90
	All other counties	70	35	55	70
Arizona	All counties	70	35	55	70
Arkansas	do	70	35	55	70

What Is Behind Bretton Woods

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. LEMKE. Mr. Speaker, every mail brings us letters from innocent, propagandized people to vote for this and vote

for that. Too often these people do not even know what they are asking us to vote for. They have been asked to send us these demands. They do not even know the people who are asking them to do this. They do not know that some of these that are propagandizing them represent foreign nations rather than our own.

The time has come for all of us to know what we are doing, and where we are going. All the plans submitted to the American people by high pressure, well financed groups in New York and other large cities, will not bring salvation but destruction.

When this propaganda comes from organizations that think more of other nations than of our own, it is time to read something that originates from people who feel that their first duty is to our own people. It is refreshing to know that there are still a few who have the courage of their conviction and who speak with knowledge and authority on the subject that they discuss. It is for this reason that I submit an article by former Democratic Congressman Charles A. Binderup:

It was President Lincoln who said in substance this: If I should find a piece of wood in Washington neatly carved with curves and notches, and later find another piece in New York City, and again another piece in Bretton Woods, and when placing these together they fit and make a completed something, I have reason to believe back of all was a concerted plan.

So it didn't just happen, as stated in former letter to Congress—(1) That we conscripted all the gold from the people and gave them Federal Reserve notes, not legal tender. (2) And that there was secretly donated to the Federal Reserve banking system, the arm of the international bankers, approximately twenty billions of the conscripted gold. (3) After which they are raising the fiat value of gold certificates 15 percent, again donating to the Federal Reserve banks (strictly private banks) approximately another $4,800,000,000. (4) That sold gold to some 40 nations and taking in return their worthless bonds for free gold in the United States Treasury. (5) So they could qualify and go on the gold standard at Bretton Woods.

Thus was built up and pieced together "the something," the edifice, a throne for the gold standard of the world, the most hideous and hated dictator, money monopoly. A thousand times more cruel and ruthless than any other dictator the world has ever known.

And thus was planned a sneak attack on the children of Uncle Sam—in darkness for 3 years or more, that the people might be kept in ignorance, born in England to be controlled by foreign nations—a plan to steal from our people their representative government and substitute the secret invisible government, the vicious power behind the throne, money monopoly, whose business it is to promote wars and disturb peace. Giving over to the pirates of finance complete control. The same power that has been wrecking us for 170 years with money panics and depressions in the midst of plenty and wars and strife between nations.

On this gold-standard throne, there is to be crowned and decorated with the veil and diadem of the Bretton Woods conspiracy, an international bank with an $8,800,000,000 international monetary fund and a $9,100,000,000 world bank capitalization all in control of foreign nations, and over and around this throne a mighty Frankenstein armed with the weapon we have given it, $20,000,000,000 in pure gold represented by gold certificates and the right to increase this with an added Government fiat of four times its value (25 percent reserve), making the huge sum of $80,000,000,000 outside the bank, a money power almost 10 times stronger than the bank itself.

But that isn't near all. We have added to this by allowing the banking system to issue approximately $75,000,000,000 in check-book money, fountain-pen money, mere ledger entries on the bank's books subject to check.

But we have done much more. We have donated to these international banks approximately $75,000,000,000 in Government bonds. Given these bonds to them, as completely as you ever gave a blind man a penny. While the people paid dollar for dollar to buy their bonds, and, remember, we pay the banking system interest on these gifts.

But we still have done more. We have made everything tax exempt. We have agreed to let labor and the farmer pay, that these might be made tax free.

THE BRETTON WOODS CONSPIRACY

An international bank capitalization	$9,100,000,000
International monetary fund	8,800,000,000
Gold certificates, approximately	20,000,000,000
25-percent reserve	80,000,000,000
Bankers credit money (ledger entries)	93,500,000,000
Government bonds (a donation)	75,000,000,000
All tax free, total (in billions)	286,400,000,000

This financial octopus clothed in absolute power by the Bretton Woods conspiracy will control directly the money of 43 other nations, thereby controlling the money of the world. These international bankers, that have ever been traitors to the peoples' cause, that have usurped the control of our money contrary to the Constitution, that have created no less than 27 money panics, depressions, and recissions in the brief lifetime of our Nation, thereby taking from labor the products of their hands and brains. Friends let me say it religiously: How long, O Lord, how long will the people kiss the hand that wields the whip of economic slavery?

Members of Congress, in whom we have trusted the welfare of our great Government, isn't 170 years enough to prove to you the corruption of these hounds of money monopoly that in the past have ever been traitors to the cause of liberty and justice? Surely there is not one of you who will vote for this Bretton Woods conspiracy. Of course not. There is not a Member of the people's Congress who will thus betray their sacred trust.

Yours truly,

C. G. BINDERUP,
Former Member of Congress from Nebraska.

Reclassifying Salaries in the Postal Service

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. DE LACY. Mr. Speaker, the overwhelming sentiment of Congress, as expressed today upon the floor and by more than 200 Members who appeared or presented statements to the committee, is a great tribute to the men and women of our Postal Service.

It is a long-overdue tribute, Mr. Speaker. Not since 1925 has this Congress taken action to recognize the needs and the service of these men and these women who have served us so well and so tirelessly. Not since 1925 has their basic pay been adjusted.

CORRECTING 20 YEARS' INJUSTICE

So today we are correcting 20 years of injustice. It was injustice which became so manifest when wartime living costs crowded in upon these workers' meager incomes that there was hardly a man alive who could not see it and did not recognize it.

I desire to compliment the committee for its deep understanding and concern and for its earnest efforts in developing H. R. 3035. It was not an easy task they had before them, Mr. Speaker. It is most difficult to adjust all inequities, grown up with the years. It is difficult, too, to attempt to bring the salaries of these employees in line with those paid in private industry, under restrictive regulations set by the National War Labor Board. Certainly I know of no group of privately employed workers which has received no advance in basic wages since 1925.

Yet, within the framework afforded them, the able committee did an excellent and praiseworthy job.

I do not desire to belabor the point. We are doing justice today.

TRUE TIME AND ONE HALF

Yet there is one additional point I do desire to make. This bill provides true time and one-half for overtime. This section is long overdue. It has always seemed strange to me that this Congress, through the Fair Labor Standards Act, established the basic 40-hour week and time and one-half overtime pay above 40 hours for industry, and yet neglected to apply this same rule to our own employees. Somehow it reminds me of an employer I once knew. He owned a newspaper. In the columns of his paper he praised the achievements of labor. He advised workers to organize and protect their rights. He talked of shorter hours and higher wages. But when the employees in his own plant began to organize, he opposed them. What he advocated was good for everyone else but himself.

I am glad to see that today we are extending to those whom we employ some of the benefits we have advocated and enacted into law for employees generally. We are not following the course pursued by the employer I mentioned, who, by the way, has belatedly also seen the wisdom of practising what he preached.

NEED TO MAKE PERMANENT

In this connection I would call attention to the fact that the bill has one defect in my eyes. Section 20 of the legislation provides that during the emergency and 6 months thereafter employes shall be paid overtime for services required on Saturdays. This is not in line with true time and one-half overtime pay.

Overtime pay is compensation for overtime no matter what the cause. Perhaps it is true that after the emergency we will not need to ask these employees to put in longer hours by Sat-

urday work. If not, of course, they will receive no overtime pay. Yet, they are entitled to overtime pay for all the overtime they work. There is no other answer. While I know it is not the intent of this legislation to provide other than true time-and-one-half, the temporary wartime character of this particular section might possibly allow for payment of the first 8 hours of overtime on Saturdays at the old rate during emergencies, such as the Christmas rush.

MUST PASS H. R. 3035

I would like to see this section of the bill made a permanent feature, not just a provision for the duration.

However, because over all this legislation is a great step forward, and because during the course of its consideration by the committee I had ample opportunity to confer with members of the committee and to discuss with them the many difficulties they faced and to see the over-all solution which they developed, I do support H. R. 3035 in its present form and I urge its quick passage by both Houses of Congress. Then later, as the few defects which may remain become clearer, I have every confidence that we will correct them.

Mr. Speaker, it is a rare privilege to support such a measure.

Manganese Producers Association Opposed to Trade Agreement

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the statement of J. Carson Adkerson, president of the American Manganese Producers Association, before the Ways and Means Committee of the House, with reference to the extension of the Reciprocal Trade Agreement Act:

I have been in the manganese industry continuously for more than 30 years. Since the First World War I have constantly worked for the full development of our manganese resources.

Manganese first became strategic mineral No. 1 in 1914 and has always remained at the top of the list of military emergency procurement problems. Manganese is the "starch" in steel. Without manganese, there can be no satisfactory steel product. There is no known substitute for manganese. It stands in a category all its own.

Col. C. T. Harris, Director of the Planning Branch, Office of the Assistant Secretary of War, in testimony before the Military Affairs Committee of the House, February 9, 1937, stated:

"Naturally some of the materials have a higher importance and are more difficult to obtain than others. I place manganese at the top of the list, chromium next, and the minerals more or less at the top of the list. Rubber would have a high priority also. I put manganese and chromium at the top."

* * * * *

"Researches have been made for years and have not been particularly successful in developing materials to supply the shortage. There is no substitute for manganese. Without manganese the steel industry would produce a very inferior quality of steel, and there is no substitute."

The reason for the strategic position of manganese is plain. During the war we consumed over 1,300,000 long tons of high grade manganese ore per year. In prewar years our average consumption was around 800,000 tons. According to the U. S. Bureau of Mines the domestic production of high grade manganese ore containing 35 percent or more manganese in the year 1944, was the largest since 1918, and the second most productive year on record. During 1944, output of high grade manganese ore as measured by shipments from mines is estimated at 243,000 short tons. Domestic shipments of low-grade ore containing 5 to 35 percent manganese in 1944 totaled 1,660,000 short tons. Under normal conditions our major sources of supply of high grade ore are Russia, Africa, India and Brazil, all more than 4,000 miles away.

The tariff covers ore containing 10 percent or more manganese. The main reason for the tariff on manganese, originally granted in 1922, was to stimulate developments in the United States and help remedy this dangerous dependency on foreign ores. Producers have had to face almost unbelievable and at times devastating opposition, both from within and without the United States. The prize being fought for was a major basic industry, including ferromanganese, amounting to approximately $40,000,000 annually in our domestic market, and at the same time making it possible for foreign countries to acquire a stranglehold on the security of this country if we remained wholly dependent on foreign ores. But, in spite of all, the industry is proud to give a good report to this committee today.

The domestic industry produces practically all the low-grade manganese ore needed. Since 1940, with the war in Europe and the beginning of our own stock-piling program, producers in the United States have supplied the war effort 757,432 tons of high-grade manganese ore—35 percent and above manganese—and around 2,000,000 tons of low-grade ore—10 to 35 percent manganese. This ore was produced at a time when the situation was seriously uncertain. This was done during the war years, when the top officials in the war agencies were saying that they were getting not only every ton but every pound of manganese ore available in the world.

Under the treaty of 1902 there is no duty on Cuban ore. The American tariff stimulated developments in Cuba, as well as in the United States.

Since 1940, Cuba produced and shipped into the United States a total of more than 1,000,000 tons of high-grade manganese ore, making a total of more than 1,757,000 tons of high-grade ore from the United States and Cuba combined.

Without this tonnage from United States and Cuban sources during the war years, the situation in manganese would have reached the point of alarming shortage. The greater portion of the production in both the United States and Cuba has come from mine developments, research on processes, and work initiated and carried forward over a period of years, solely through encouragement under the tariff. Without the tariff, the major mine developments in both the United States and Cuba could not have been undertaken during the peacetime years. This alone should serve to emphasize the importance of the tariff on manganese ore to our national security.

It is often said that domestic manganese ores are low grade. During World War No. 1 domestic shipments of high-grade ore contained 40-percent manganese. During peacetime high grade imported ores contained 48 percent manganese. Today, under the stimulation of war demand, United States miners are producing from one plant alone more than 100,000 tons a year of manganese ore running as high as 60 percent metallic manganese, which is higher grade than any ore from any foreign country. This is produced from low-grade ore which as mined runs from 15 to 25 percent manganese, formerly unknown and considered worthless. Some of it is mined at a depth of 2,000 feet below the surface. Additional milling plant facilities have been installed since the start of the war, but such deep-mine developments would never be undertaken after the start of a war. They must be carried forward over a long period of years during peacetime.

It is often stated that we have become a "have-not" nation—that we need to conserve our minerals. This is not true in the case of manganese. We have an abundance of low-grade manganese ore which is now being mined and concentrated into a product higher in grade than foreign ores. Our total known reserves of low-grade manganese ore in 25 States exceeds 200,000,000 tons and further work discloses additional reserves. It simply takes time for development of underground ore bodies.

Assistant Secretary of State W. L. Clayton, testifying before this committee, recently stated:

"Of course, the things that we lacked principally were the metals and minerals, which, of course, we did not have. They were not stored in the earth here and we had to go elsewhere to get them. Principally that is the thing."

Secretary of the Interior Harold Ickes, before the Small Business Committee of the Senate in 1943, stated:

"We still have here, 15 months after Pearl Harbor, an anomalous situation, in which, on the one hand, there is a serious need for raw materials to feed our war plants, and, on the other hand, there are large numbers of small entrepreneurs—owners and operators of small mining and milling properties—begging for an opportunity to produce for war."

* * * * *

"We are furthermore under a moral obligation to sustain small enterprise if we wish to rebuild and retain the America that we have known, with its concepts of individual freedom and opportunity.

* * * * *

"The Bureau of Mines, by examination of 1,600 ore deposits involving 31 different minerals in 25 States and the Territory of Alaska, has found 28,000,000 tons of iron ore, 10,000,000 tons of manganese ore, 8,000,000 tons of bauxite, 6,000,000 tons of low-grade nickel, 4,000,000 tons of chromite ore, 2,000,000 tons of antimony ore, 1,000,000 tons of tungsten ore, and 1,000,000 tons of mercury ore.

* * * * *

"Only a negligible percentage of the total newly discovered mineral resources has so far been brought into production.

* * * * *

"On manganese: We presented a program for domestic manganese production in the fall of 1941. In January 1942 we had developed the program to the point of providing for the domestic production of all needed manganese, with the exception of the importation of 130,000 tons from Cuba. We proposed to eliminate dependence on risky importations from Russia, India, and Africa, all long hauls requiring convoys. We kept pressing for the adoption of the program that we had worked out. And in the summer of 1942 we thought we were getting somewhere when the War Production Board and the Reconstruction Finance Corporation started to take preliminary steps to set up seven or eight projects called for in our program.

"Today most of these projects have fallen into the class of good intentions.

* * * * *

"There has been far too much tendency to resolve all our problems of minerals shortages in favor of importation. This has been

discouraging to our western mining industry, which has properly looked forward to an immediate utilization of the discoveries of the Bureau.

* * * * *

"I see no cause for alarm in any projected rate of depletion of our mineral resources, provided the necessary steps are taken to insure that as a given mineral resource is depleted, other mineral resources are developed which will take its place."

One of the greatest setbacks to the domestic industry was the cut in the duty. The manganese ore tariff was cut 50 percent by the trade agreement with Brazil, a minor supplier. This was done in 1935 without notice or any consideration whatsoever to manganese producers and without regard to national defense.

As a result, the United States has paid a severe penalty. After the cut in the tariff a number of manganese operations in this country were abandoned and the mines allowed to collapse; many new developments which would have proceeded during the years preceding the war were not undertaken; the Government has lost more than $20,000,000 which formerly went into the Treasury through tariffs collected on imported manganese; the Government has spent untold millions in a desperate effort to get manganese throughout the world after the outbreak of war; the large tonnage of manganese now at the bottom of the ocean, the excessive number of manganese ships sunk and the lives of seamen lost in an effort to transport manganese from far-away countries into the United States is a story that will not be told until after the war, but the responsibility, in a large part, rests squarely on the doorstep of the administrators of the Reciprocal Trade Agreements Act.

Proper foresight and wisdom on the part of the State Department in the precious prewar years, 1935 to 1940, would have dictated a 50-percent increase rather than a 50-percent decrease in the duty on manganese ore. This would have announced to producers that the country encouraged rather than discouraged the further development of manganese deposits in the United States. Instead the officials of the Department, while other nations were preparing for war, pursued their single-minded policy of sacrificing our own national defense to what proved to be a Utopian dream of peace and foreign trade.

Mr. Clayton has already specifically mentioned before this committee the manganese duty as being excessive. This is added evidence of the misinformation which still prevails in the State Department. Our natural conclusion is that, if authority to further cut duties is granted, manganese is destined for a further reduction in tariff.

Considerable new investments have been made and plant facilities installed in the industry during the war period. Some of it was Government money, some private funds. It operates today as an essential asset in the war program but most of it will be lost to the Nation unless tariff protection is provided or a satisfactory market assured for domestic ores.

Congress in the prewar years has repeatedly and in no uncertain terms expressed its will and intent to bring forth development of our own manganese resources.

It is generally recognized that the State Department made a mistake in reducing the duty on manganese and we hope some way will be found to rectify it before the cutbacks after the war.

In order to insure the continued development of domestic manganese deposits in the postwar period producers need to have restored to the industry the full measure of protection contemplated by Congress in the Tariff Act of 1930. We further seek assurance that our destinies henceforth shall not be pawns in the hands of persons wholly unfamiliar with the present status of the domestic industry and its future possibilities as a result of abundant new ore reserves and revolutionary new processes for making available in usable form and at reasonable prices the vast resources of low-grade manganese ores now known to exist in the United States.

I submit for the record a table showing domestic production and imports of manganese ore from 1910 to 1944, inclusive. (Table attached.)

I also submit for the record a brief summary of the domestic manganese industry covering the year 1944 as prepared and released by the United States Bureau of Mines under date of January 16, 1945.

The following figures from United States Bureau of Mines publications may be of interest in studying the strategic position of manganese ore:

Domestic shipments of manganese ore, imports of manganese and ferromanganese, and apparent consumption of manganese metal, 1910–44, in long tons

Year	Manganese ore			Imports of ferromanganese (gross weight)	Apparent consumption of manganese metal
	Domestic shipments		Imports		
	10 to 35 percent manganese	35 percent or more manganese			
1910	---------	2,258	242,348	114,228	--------
1911	2,602	2,457	176,852	80,263	--------
1912	2,782	1,664	300,661	99,137	--------
1913	9,650	4,048	345,090	128,070	217,658
1914	60,484	2,635	283,204	82,997	162,112
1915	64,204	9,558	320,778	55,263	179,266
1916	316,600	31,474	576,321	90,928	283,944
1917	576,608	129,351	629,972	41,969	271,770
1918	818,003	305,869	491,303	27,168	297,303
1919	211,632	54,957	333,344	33,022	162,378
1920	357,279	94,420	599,764	59,254	278,952
1921	8,439	13,531	392,606	9,077	96,104
1922	344,674	13,404	425,000	100,725	211,714
1923	319,666	31,500	419,000	113,833	309,254
1924	286,470	56,515	505,000	56,588	230,264
1925	267,252	98,324	615,000	78,713	280,725
1926	364,312	46,258	738,000	59,710	316,308
1927	148,291	44,741	622,067	45,500	291,206
1928	90,581	46,860	427,708	60,055	320,496
1929	78,191	60,379	664,269	71,211	356,079
1930	77,417	67,035	585,568	55,046	280,130
1931	64,062	39,242	502,518	24,664	166,492

Dairy Interests Opposed to Trade Agreement

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Charles W. Holman, representative of the National Cooperative Milk Producers' Federation, before Ways and Means Committee of the House, on reciprocal trade agreements:

My name is Charles W. Holman. My address for purposes of this hearing is 1731 Eye Street, Washington, D. C. I am secretary of the National Cooperative Milk Producers' Federation. This is a Nation-wide organization in which approximately 350,000 farm families residing in 46 States are banded together into 73 voting membership units. All of these units are cooperative dairymen's associations owned and controlled by producers. About half of our members supply fluid milk and cream to urban milksheds. The remainder are mainly interested in supplying manufactured dairy products made in their own plants. These plants number about 800 and vary from cooling stations to the most highly modernized all-purpose dairy plants in the United States. Within our organization every type of dairy product is manufactured with the possible exception of some products prepared for medicinal purposes. I am asking permission to file, as an appendix to my statement, a list of the member associations with their addresses and the names and addresses of our officers and board of directors.

I am appearing in opposition to H. R. 2652. Dairy farmers of the United States whose products enter into commercial channels number more than 2,500,000. About 1,000,000 sell their product as whole milk and the remainder sell farm separated cream.

These producers constitute America's largest group of agricultural producers relying almost entirely upon the domestic market. In normal years relatively small quantities of evaporated milk are constantly shipped abroad. Some specialty shipments of butter are exported but they are mainly to our dependencies in the Pacific, the Caribbean Sea, and to a few South American countries. Our normal demand for imported dairy products is confined almost entirely to certain types of cheeses such as Emmenthaler Swiss, the Holland Edam, and the Italian types. For all other dairy products, we have abundant capacity to produce every need of the American consumers. This applies particularly to cheddar cheese and to casein, the admission of which into this country has been stimulated by trade agreements with Canada and the Argentine.

Our organization in the winter of 1920–21 became aroused to the need of tariff protection, which then was nonexistent because of spectacular imports of butter and other fats into this country. These imports were having a disastrous effect upon our markets. As a result, the Congress passed the Emergency Tariff Act of 1921, which placed a duty of 6 cents a pound on butter and 5 cents a pound on cheese.

During the following year we learned a little about the tariff problem and went before the Congress in connection with the Tariff Act of 1922. Slightly higher rates were then put into effect. These included a rate of 8 cents per pound on butter. Between the passage of that act and the act of 1930, it was found that this rate on butter was insufficient to protect American domestic markets from speculative price fluctuations due both to sporadic and to planned imports. Accordingly, we sought relief through the cost-of-production powers vested in the President and were successful in having started a comparative cost-of-production investigation which was handled by the United States Tariff Commission. The Commission chose Denmark, the one country in the world whose costs would be highest next to ours, and sent to that country a body of investigators. These investigators were to make investigations on the ground, headed by the late Dr. George W. Warren, head of the Department of Agricultural Economics of Cornell, an eminent authority on farm costs.

Similar investigations were made in the United States.

As a result of the report of this body, the Tariff Commission recommended, and the President raised the duty on butter from 8 to 12 cents per pound. However, in our importing months prices of New Zealand butter at London and our 92-score butter at New York continued out of balance, the former often being over 13 cents lower in price.

When the Tariff Act of 1930 was being prepared, our organization laid before the Congress the results of a long investigation and proposed to the Congress the first scientifically coordinated set of duties on dairy products in American history. These duties were based upon the fat relationships in milk and its products, or the skim-milk relationships. With the exception of casein, every recommendation made by us to the Congress was adopted. As to casein, we had recommended 7 cents a pound and succeeded only in obtaining 5½ cents, an inadequate duty in the light of then known costs of production and market practices of Argentine exporters.

With respect to dairy farmers, th Tariff Act of 1930 was a lifesaver. Without it during the depression years we would have been unable to avail ourselves of protection from the outside while we were going through the tortuous conditions of low prices, poor markets and Federal purchases of surpluses to maintain producers and supply some needed nutritious food to those on relief.

We viewed the advent of the trade-agreement program with distrust and we look upon its continuance with trepidation. Dairying is more vulnerable to international competition than are some other agricultural commodities since dairying does not lend itself to any high degree of mechanization. It is true that some 394,000 dairy farmers use milking machines. These machines are generally of the two-cow type, that is to say, two cows can be milked at one time by the same machine. But the milking machine has been with us a long time, and further labor saving through the use of milking machines is likely to be small. Labor and purchased feed continue to be the largest factors in milk-production costs, and dairymen in the United States cannot maintain American standards of living if forced to sell in competition with the surplus products moved to our markets from other countries.

American dairy farmers are faced with constantly rising labor costs, with the prospect in some sections of the country that hired farm help may become unionized and insist upon a 40-hour week. These developments may make themselves quite apparent in the post-war period, and our people are particularly concerned since we do not, especially under Government controls, have the opportunity which manufacturers have to pass our increased costs on to consumers.

Long ago we learned that whatever benefits might flow from tariff are not confined to price stabilization. Domestic market outlet is just as important as price. Often our people can get by with moderate prices on large volume marketing, which they would prefer rather than to being forced into an economy of scarcity which is foreglimpsed in the future operation of the Doughton bill as proposed by the Government authorities.

It should be obvious to all that the new program for trade agreements contemplated by the bill is intended to be one of a four-legged post-war world policy for our Government. The second leg is the world agricultural organization devised by the Hot Springs Conference, to be set up under the United Nations, and which is authorized in the Bloom bill which has passed the House. The third leg is the international financing and currency management arrangement provided for by the Bretton Woods Conference and including legislation enlarging the Export-Import bank. The fourth leg, presumably, will be determined at the San Francisco Conference, and is supposed to provide a means for keeping the world in order—at least for a time.

From testimony offered this committee by proponents of the bill, and from propaganda widespread throughout the country, the credulous and unwary might be led to believe that failure to adopt any part of this four-legged program would result in toppling over the peace table.

We do not believe that a policy of a reasonable economic self-sufficiency for any nation is the cause for war. We do not believe that low tariffs and free trade have ever prevented wars. Despite wishes to the contrary, the Trade Agreement Act of 1934 did not keep us out of war. War results from the pressure of the populations and the struggles for the control of new lands on which to settle bursting populations, or to obtain greater control over raw material resources, or to place imperial mandates over economic and political lives of weaker peoples, and from the clash of ideologies. These are self-evident facts of history. But much of the arguments for this program of low tariffs and free trade have been based upon the psychology that it is "the eye of childhood that fears a painted devil."

OBJECTIONS TO TRADE AGREEMENT ACT OF 1934

1. Section 350 (a) states that the act is "for the purpose of expanding foreign markets for the products of the United States * * * by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production so that foreign markets will be made available to those branches of American production which require and are capable of developing such outlets by affording corresponding market opportunities for foreign products in the United States * * *."

The committee will note that the objective of the bill is to satisfy the "needs" of American producers not only as to exports but as to imports. A strict administrative construction of this mandate would require the President to eliminate from consideration any American-produced commodity which is produced in quantity sufficient to meet American consumption or which can be, with slight stimulation, brought to achieve this position. It would also automatically erase from consideration commodities produced in sufficient quantities to meet American consumption and to export abroad. The language of the act does not contemplate reduction of import duties or the making of other concessions which will cause foreign commodities to enter the United States and displace in volume domestic outlets for domestic producers. The act contemplates concessions which would meet the export needs of producers, but not injure their internal market outlets or prices. The act further contemplates our making tariff concessions only on commodities produced in America on a deficit basis in return for concessions made by other nations on our commodities which are definitely of a surplus production character.

If this construction of the language of the act is correct, the Executive has not carried out the congressional mandate, but has made reductions and other concessions with respect to agricultural products which are directly or indirectly in competition with the products of American farms and which in many instances can only be produced in sufficient quantities to meet American consumption with the help of tariff protection or some other governmental device.

2. We object to the absence of any congressional rule to guide the Executive in determining modifications of the Tariff Act of 1930. Such a broad delegation of power to the judgment of the Executive is particularly odious with respect to revenue, which is distinctly the province of the Congress under article I of the Constitution. In this act only two fundamental limitations are placed upon the power of the Executive. He is forbidden to transfer articles from the free to the dutiable list or from the dutiable to the free list, and he may not increase or decrease import duties by more than 50 percent. On the other hand, the power to bind an article at a given rate of duty or to bind it on the free list is exercised by the Executive in administering the act.

3. The act removes from application to operations under it those provisions of the Tariff Act of 1930 whereby citizens might obtain tariff changes as a result of studies and reports by the Tariff Commission to the Executive on the comparative cost of production and comparative competitive conditions affecting a commodity in this country and the country of principal competition. Abandoning this sound rule to guide the Executive, which, with some modifications had been on the statutes for many years, shuts off any opportunity for an American citizen, producer, or otherwise, to initiate possible changes in existing tariff rates.

4. By specifying that the provisions of section 516 (d) of the Tariff Act of 1930 "shall not apply to any article with respect to the importation of which in the United States a foreign trade agreement has been concluded pursuant to this act or to any provisions of any such agreement," opportunity of American citizens to obtain court review has been denied. This legal device makes the Trade Agreement Act of June 12, 1934, as extended, the most dictatorial law on the Federal statutes. In addition to denying the constitutional rights of citizens, this device affords opportunities for destruction of whole groups of American producers wholly upon the often untested judgment of persons whose knowledge of commerce is small, whose comprehension of the complicated relationships of one industry to another is limited, and who under pressure for advantage by representatives of foreign governments, show little desire to please any but the foreign diplomats.

5. We object to the "triangular" system of making duty reduction and trade concessions applicable to "articles, the growth, produce, and manufacture of all foreign countries, where imported directly or indirectly * * *."

This provision carries with it a generalization to nontrade agreement countries, without commensurate returns of tariff concessions. It provides a field day for brokers and speculators in foreign countries who can purchase products and trans-ship them from one country to another and still obtain the benefits of the act.

For example, the duty on Emmenthaler process Swiss cheese was reduced in a trade agreement with Switzerland. This type of cheese might be purchased in Finland by a London broker, shipped to England and transshiped to New York. Thus, the London broker would garner whatever benefits might come from the reduction of the duty made to Switzerland. In other instances, Cheddar cheese made in New England or Australia, but reaping the benefit of duty reductions made to Canada, could be dropped off at any American port from a cargo en route to London without extra freight rate being paid. Now I ask, what do we get out of either of these two transactions? The so-called triangular system of world benefits, so ingeniously explained to the committee on other occasions by Dr. Sayre, is plausible but I have never been able to believe that it represented anything but a hope or a dream.

The provision in the act for generalizing tariff concessions to all countries of the world not otherwise prescribed, inevitably washes out any possibility of America's maintaining a favorite balance of trade and automatically reduces our bargaining power.

In a later section of this statement I will refer to the admission of Under Secretary of

State Will L. Clayton that the Trade Agreement Act has already gone bankrupt. Apparently few, if any, other nations have anything more to take from us by this method. So Mr. Clay and his colleagues are seeking through the Doughton bill the opportunity for further reduction of our import duties, thus making of the present legislation a strip-tease act. The logical sequence would be for the administration at the end of another 3 years to seek a further 50 percent cut which would just about put us on the basis of free trade on the greater part of our imports.

I suspect that this program has considerable backing from international manufacturers and bankers who desire to locate factories in foreign countries equipped with American machinery but operated by much cheaper labor, and to then bring the products of those factories back into America on the lower levels of import duties. From the testimony given by administration witnesses there seems to be no other interpretation of the objectives of certain groups of big business in this country. We already have an excellent example in the operation of sugar plantations and sugar mills in Cuba by New York-controlled capital. Reduction of the tariff on sugar and forced reduction of beet sugar and sugar-cane acreage in the United States did not preserve this country's self-sufficiency as to that type of food; but it undoubtedly poured millions into the coffers of the American owners of the Cuban centrals.

6. We object to the language of the act which permits trade agreements to be executed without ratification by the Senate of the United States. We are aware that legislation is pending before the Congress to provide for a constitutional amendment whereby treaties may be ratified by a majority vote of both Houses of the Congress. We are not opposed to this amendment and our people see considerable merit in it. However, the path of any proposed amendment to the Constitution is long and tortuous and until the people settle the question, we are adhering to article II of the Constitution which requires all treaties to be ratified by the Senate.

For many years we have maintained that the trade agreements contained considerable material which is of a treaty character. As an illustration of what I mean by "treaty material," I call to the attention of the committee, and ask to be incorporated in the RECORD as an appendix to my testimony a memorandum. This memorandum shows much similarity of thought, and identity of language, between the standard sanitary provisions embodied in trade agreements and the proposed Argentine "Convention" of 1935 which was negotiated by the State Department and offered to the Senate for ratification. Just what may be the distinction between a treaty and a "convention," I cannot say, except that the dividing line could be measured by a hair.

Members of the committee will recall that in the Tariff Act of 1930, Congress imposed an embargo against the shipment of fresh and frozen beef from the Argentine because of widespread prevalence of foot-and-mouth disease. At least one epidemic costing millions of dollars to livestock producers of the United States was traced to Argentine sources. Despite the act that Argentina had done little or nothing to clean up this disease, a "convention" permitting the admission of these products into the United States was framed by the State Department and submitted to the Senate. The Senate Committee on Foreign Relations still has this document in its files.

Members of the committee will note that some of the standardized phrases used in the trade agreements (which now do not have to be approved by any congressional body) are identical with the phrases used in the proposed Argentine "Convention." The question therefore arises: If the State Department recognized that it required Senate ratification to remove the quarantine against the importation of fresh and frozen beef from the Argentine, how can it justify placing in a number of these trade agreements language similar to that "convention"?

To a layman it would appear that a treaty or a "convention" can become a trade agreement at the option of the Secretary of State. The mere existence of these sanitary provisions in the trade agreements has occasioned administrative opposition to any attempts to bring about additional sanitary restrictions on the importation of products from abroad which do not meet sanitary standards required of American producers. This includes failure to apply sanitary restrictions to the importation of such products as unpasteurized butter and unpasteurized cheese in which tubercular germs have been known to live for 6 to 9 months.

This line of reasoning on the part of administration officials is equivalent to saying that any effort on our part to protect the public health is to be interpreted as a "trade barrier." Much evidence exists to show that responsible officials, even in the Department of Agriculture, are prone to interpret even city health ordinances devised by city people to protect their own health, as being "trade barriers."

OBJECTIONS TO PROCEDURE

Chairman Ryder, of the United States Tariff Commission, described to this committee the elaborate mechanism which has been set up for negotiation and effectuation of trade agreements. As an example of coordination, of interdepartmental effort, it leaves nothing to be desired by a foreign country.

Mr. Ryder described how, in most instances, the initiative is taken by the United States. The list of commodities on which we are willing to give concessions and the list on which we are seeking concessions are made public after many conferences with the Government and with representatives of foreign countries. Even the views of American citizens are allowed to be expressed to a portal committee known as the Committee on Reciprocity Information. But few, if any, American citizens have ever succeeded in getting through the "portal." Contrary to the custom of some of the countries with which we have negotiated agreements, few if any American producers of agricultural and industrial products have been called in to advise with regard to policy.

But the machinery of initiating, negotiating, holding hearings, making recommendations, and finally obtaining the signature of the Executive, is in good working condition to accomplish the objectives of those making the policy for the administration of this act. Our experience with a number of agreements in which we had a direct interest has convinced us that the consistent, undeviating policy directing this machine is to use the trade agreement as a mechanism for uniformly and progressively reducing import duties until the closest possible approach to free trade is reached. In furtherance of that program, the present Doughton bill is sought.

This policy naturally percolates downward to each active official in any department connected with the program. It inevitably creates a cast of mind so that, in making a reduction in the duty on any commodity, the bureaucrats shrug away consideration of possible effects on any particular group by saying to themselves "this is but a little matter." Isolated as they are from any real contact with the people who must produce and distribute products, they cannot know the serious effect upon trade practices of their policies.

As to our people, this program disregards trade practices, price interrelations of dairy products, and the consequent effect upon the entire production and price structure of milk. I cannot but recall my own experiences in appearing before the Committee on Reciprocity Information. Never have I testified before a more indifferent, somnolent body of men.

At the beginning of the public hearing procedure, we were not even furnished with a list of the commodities as to which the administration had any intention of reducing duties. Our organization made a Nation-wide campaign against this star-chamber method. Finally, we were furnished lists of commodities. We were also required to furnish written briefs, 8 days in advance, and then were forbidden to present any oral testimony on any matter contained in the brief, a ruling wholly contrary to normal procedure. Once on the witness stand, we found ourselves facing a silent, indifferent body of men. Their only attitude appeared to be "Get rid of this witness as quickly as possible and let us go about our own business of negotiating this agreement." Certainly the public-hearing system as operated in negotiation of trade agreements is a travesty and a farce.

WHY WE OBJECT TO H. R. 2652

1. Even if the act were extended, we object to its extension for more than 1 year under the present condition of world relations. It seems to be unwise for Congress to relinquish, even partially, its control over acts of the Executive with respect to foreign trade when every foreign-trade agreement is now written for a period of 3 years and is subject to automatic renewal unless either of the contracting parties gives 6 months' notice of abrogation.

It has been argued that even then the Congress has the power to denounce these agreements by resolution, but it is hardly likely that the Congress will seek to serve notice of denunciation except in connection with the 6-month advance notice provided for in the agreements. It is also not likely that an executive responsible for negotiating such an agreement would sign such a congressional resolution unless it were so drawn that he would save face.

2. The bill intensifies all of the duty-reduction evils of the original act by empowering the President to go over the list again and reduce any or all duties by another 50 percent of rates in existence on January 1, 1945.

I know of no sadder admission of the futility of the present trade-agreement program and the trend toward total free trade than was made to this committee by Under Secretary of State Will L. Clayton, when he admitted that our authorities have now practically exhausted the resources of the Trade Agreement Act and must begin all over again a program of reducing duties which have already been reduced, in order to obtain any further trade concessions from the countries with whom we have negotiated trade agreements. Mr. Clayton said:

"The authority under the present act to reduce duties by not more than 50 percent of 1934 rates has been fully exhausted with respect to 42 percent of our total dutiable imports from all countries on the basis of the 1939 import values. The authority has been partially exhausted, and in many cases almost fully exhausted, in respect of an additional 20 percent of our total dutiable imports from all countries. Of the authority which has not been used at all, which applies to 37 percent of our dutiable imports from all countries, a considerable part relates to a type of goods formerly supplied by Axis countries, some of which authority may be unusable because to use it would require negotiation of trade agreements with the Axis countries." (Cf., p. 16, pt. 1, hearings on H. R. 2652, April 18, 1945.)

With whom then can we increase our trade? Mr. Clayton said very frankly that the United Kingdom and Canada constituted our two largest customers. I quote again from his testimony on the same page of the hearings:

"In the case of the United Kingdom, rates of duty have been reduced, under the trade agreement program as a whole, on about 90 percent, by value of our total dutiable imports from that country in 1939. In the case of Canada, the figure is about 92 percent. The United Kingdom and Canada are our two largest customers. These two countries accounted for 30 percent of our total export trade in 1939. In the case of France, Sweden, and Mexico, other important peacetime buyers of American exports, rates of duty have been reduced about 70 percent, 60 percent, and 90 percent, respectively, on our total dutiable imports from those countries.

"The conclusion is clear and is particularly unsatisfactory to me as a businessman. Under the act as it stands today we are unable to negotiate to the extent required, new and mutually advantageous business with our best customers. As a public servant, I would consider the failure to remedy such a situation unwise in the extreme. Only by relating the Trade Agreements Act to our present situation can we make it a fully effective device for the expansion of world trade."

POST-WAR DAIRYING UNDER THE DOUGHTON BILL

Let us look at the Doughton bill as it may affect some 2,500,000 dairy farmers who sell milk and separated cream into commercial channels for consumption.

The dairy price structure is very delicate and complicated. Butter, being the residual depository of any surplus milk, for generations has been the basis of pricing most dairy products. For example, the price of Cheddar cheese at Plymouth, Wis., customarily, is about one-half the price of 92-score butter in Chicago.

The price of cream intended either for fluid consumption or for ice cream depends entirely upon the price of sweet cream butter. Likewise, the price of evaporated milk carries a certain differential above the market price of butter.

Products made out of skim milk have a fairly constant relation to each other. When the price of casein shifts it affects the price of nonfat dry milk solids (dry skim milk); for if the casein market should decline dairy manufacturers would, within a week, shift their production into the nonfat dry milk solids. Similarly, changes in the price of nonfat dry milk solids affect the price of casein.

Even when protected by tariff walls temporary shifts in production or demand upon one product have an instantaneous effect on the others.

Prices of domestic dairy products are also affected by world prices. This is particularly true when tariff protection is very low. In normal years about 1,400,000,000 pounds of butter is in transit across the seas from the producing to the consuming nations and the owners of this butter are not particular as to who buys it. It will seek the best market anywhere. In the twenties, on many occasions, the unexpected or even the anticipated arrival of a shipload of New Zealand butter in New York, or the unloading of that butter and placing it in bond, has been known to shake the price of butterfat downward as much as 5 cents per pound in every community of the United States. In the few years preceding the passage of the Tariff Act of 1930 the disparity between the prices of 92-score butter at New York and New Zealand butter in London ranged from about 2 cents a pound to as high as 21 cents a pound in favor of American butter—the price differentials depending upon the season of the year. It will be recalled that the production season in the Southern Hemisphere is the reverse of ours. When our butter is going into storage, they are in the winter season. As our butter begins coming out of storage, their flush season comes on and their exports increase.

During the depression years the price differential between London and New York narrowed; but in 1937 the differential in favor of American butter ranged from 5.2 cents to as high as 15.5 cents per pound. The year closed with American butter selling in December at 13.7 cents per pound more than New Zealand in London. The years 1938 and 1939 were depression years for dairying, and in our surplus months of 1938 our prices ran lower than London prices. In 1939 the price spread was almost indiscernible due to the continuation of tragically low prices in the United States.

During the 7-month period beginning with July 1, 1938, the Commodity Credit Corporation stabilized the price of butter at 75 percent of parity which gave a wholesale price of approximately 26 to 27 cents per pound. The Dairy Products Marketing Association, operating as the agent of the Commodity Credit Corporation during this period, took off the market 114,000,000 pounds of butter. This butter was not permitted to be returned to commercial channels.

But what has happened in the past may happen again. We still need our 1930 integrated tariff-rate schedule for dairy products.

With our entry into the World War we entered a period of controlled economy. The competitive price of butter at Chicago having reached 46½ cents per pound wholesale was rolled back 5 cents per pound and a subsidy inaugurated in its place. This subsidy is being paid by the Reconstruction Finance Corporation. Besides the first roll-back subsidy on butter, other subsidies have been paid amounting to 3¾ cents per pound on cheese and varying amounts on fluid milk. In addition to this, dairy production payments are being made in lieu of fair prices and these payments for the next fiscal year have been authorized by Congress not to exceed $568,000,000.

Dairy farmers are today the most completely subsidized of any group in agriculture. Approximately 14 percent of their total national income is derived from subsidies. In some sections the fluid-milk subsidies will run as high as from 20 to 30 percent. The combined subsidy payments in connection with butter and butterfat for the month of April of this year will total 53 percent of the market value of the fat.

Under the stimulation of Government requests, despite rising costs and lessened manpower, dairy farmers last year produced 119,000,000,000 pounds of milk at the farm, exceeded only in 1942 when feed and manpower were more plentiful. But during the war many of their customary domestic markets have been at least temporarily lost to them because of the set-aside policy to care for our military needs and the lend-lease requirements. The set-asides this month (May) are as follows:

	Percent
Cheese	65
Butter	55
Nonfat dry milk solids (spray process)	75

Fluid milk and fresh cream are being allowed to go into civilian consumption at relatively high levels. Production of casein has declined notably because the pricing policy of the Federal Government was intended to divert skim milk from casein to the driers. In consequence, Argentina has redeveloped a great market for casein in this country, aided by the cut of 50 percent in the import duty in the trade agreement made with her.

Dairy leaders are much perturbed over the post-war outlook. Sudden stoppages of Government purchase may bring disastrous price falls. Reeducating the American public to eat butter, persuading American bakers to use adequate quantities of nonfat dry-milk solids in their bread, getting enough fat back into the ice cream, and reeducating the people to eat good cheese are among our serious, unsolved problems.

A low cushion has been provided by the Congress to help tide over a part of the transition period following cessation of hostilities. This is the inclusion of milk and butterfat among the Steagall commodities which are entitled to a 90-percent-of-parity support price. However, a fall from present dairy income returns to a level of 90 percent of parity would mean a drop in the price returns on fluid milk at the farm of 34 percent and on butterfat of 36 percent. Should there be a general decline in the income level of the Nation, the present parity index will also decline, and price returns to dairy farmers will be even less.

Confronted with this outlook, we must now face the possibility of losing what protection has been afforded by the Tariff Act of 1930.

This prospect is fraught with dire consequences to our domestic markets. It is not even necessary to reduce the tariff on butter below 14 cents for the Doughton bill to affect the price of butter. An amendment to the Canadian trade agreement reducing the price of imported Cheddar cheese to 2 cents per pound would immediately throw out of gear the customary price relationship between cheese and butter in the United States. Larger quantities of Cheddar-type cheese would flow into the United States from Canada and other countries. This would cause diversions from butter to cheese manufacture in foreign countries, thereby raising the world price of butter. As the world price of butter rises, opportunity of coming over our tariff wall increases. With the price of butter adversely affected domestically, prices of all other dairy products containing fat will suffer similar declines.

Under such conditions, American prices for dairy products can only be maintained by continuing indefinitely some form of governmental subsidy. Even then dairy farmers will suffer in competition for per volume outlet, a most important factor in preservation of the dairy industry.

Restoration of the duties embodied in the act of 1930 would make it possible for dairy farmers gradually to recover and enlarge commercial channels of distribution and take care of their own affairs. Should surpluses arise, and they were permitted to export, a mechanism similar to the Dairy Products Marketing Association could easily stabilize prices, remove temporary surpluses from the markets, and place them either into foreign channels of trade or into new uses, with the losses on such an operation sustained by the dairy farmers without cost to the Government.

PROPOSED CHANGES IN THE TRADE AGREEMENT ACT

1. We are opposed to continuation of the act, but if it is the intention of Congress to extend it, it should not be extended beyond June 12, 1946. Changing world conditions within another year will require reappraisal of the trade agreement program.

2. Application of the concessions written into trade agreements should be limited to the nation which is signatory to an agreement. Concessions made by us should be commensurate only with concessions made to us by the other nation. Concessions should be made only to nations which are the principal producers of the commodities covered in any agreement.

3. Trade agreements should be ratified by the Senate of the United States.

4. The right of Court review should be restored.

5. The act should be amended to change the public hearing procedure from a farcical pretension to an important, integral part of the negotiations. The right of witnesses to discuss the subject matter of their briefs should be made statutory. Those actually negotiating trade agreements should be present and conduct the public hearings.

6. A congressional rule to determine modification of import duties and the making of commodity concessions should be inserted into the legislation. We suggest the reincorporation of section 336 of the Tariff Act of 1930, as a sound method of testing the

need of tariff changes on any given commodity.

7. The act should prohibit lowering of any duties when landed costs of an imported article, plus the duties, are less than the American wholesale selling price of the article.

The Road to Serfdom

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. JUDD. Mr. Speaker, it is generally agreed that one of the most stimulating, widely read, and influential books in modern times is the Road to Serfdom, by Friedrich A. Hayek. Equally enlightening is a recent article by the author, in which he warns against using portions of the book's arguments to support certain economic views while ignoring other essential portions of the argument which are not so favorable to those views. Under leave to extend my remarks, I include a condensation of his article as it appeared in the Minneapolis Tribune of May 13, 1945:

RECEPTION GIVEN "ROAD TO SERFDOM" IN UNITED STATES SURPRISES AUTHOR

(Condensed from an article by Friedrich A. Hayek, author of The Road to Serfdom, in the Chicago Sun)

For an author who never intended to write a popular book a reception like that accorded to The Road to Serfdom is a pleasant surprise but also an embarrassment.

The book was intended mainly for a small circle of people actively struggling with the difficult questions which arise in the field where economics and politics meet, and the chief purpose in writing it was to persuade a few leaders in the current movement of opinion that they were on an extremely dangerous path.

I wrote mainly with the British public and the British progressives in mind. My expectations concerning any effect the book might have in the United States were small.

Yet, that a book which has sprung from a very different background and experience should be felt to have so much immediate application to American problems seems to me a quite remarkable confirmation of my main conclusions.

NO PARTY BOOK

I was at first a little puzzled that a book written in no party spirit should have been so exclusively welcomed by one party, and so thoroughly excoriated by the other.

It seems that not only arguments similar to some of mine had for some years been used by the opponents of recent economic policy, but also that some of the more strenuous advocates of reforms have often employed a phraseology disturbingly similar to that which I have learned to fear in Europe. Yet I still feel that the interpretation of my book as a party document is the result of some misapprehension.

In Britain the movement toward some kind of collectivism had gone on so much longer than in the United States and had so much infected all parties that there is now little organized political opposition against it. On the other hand, as consequences of this movement have become more visible, many thoughtful people had begun to question the underlying philosophy.

Thus, while Britain may in one sense appear to have gone much further and the old opposition has become almost silent, there is noticeable a certain disillusionment and a readiness to reexamine cherished beliefs which I do not yet see in the United States.

My book aimed not merely at restating an old philosophy but at redefining it, redrawing boundaries between legitimate and illegitimate government activities, and providing a set of principles which would help to clear away existing confusion. I derived more help from the liberal philosophers of the nineteenth century than the popular conception of laissez faire suggests.

But much remained to be done, and the main task seemed to be to elaborate principles which would help us to decide in particular instances whether government action was dangerous or unobjectionable.

In Britain the book was, on the whole, received in the spirit in which it was written.

TRADITION STILL ALIVE

The different impact on America is probably a necessary result of the different circumstances. The liberal tradition from which my philosophy stems has never admitted defeat, but is very much alive and kicking in the United States. So much so that it has not yet learned that in order to keep alive it has constantly to rethink its principles and to restate them in the light of what we are learning.

If I had to write the book again with the present America more consciously in mind, I should probably stress even more than I have done the necessity of revising and developing the old liberal philosophy on the ground of Government activities which are required to make competition work effectively and beneficially.

And I should take greater care not to be misunderstood as being against all kinds of Government action which are lumped together under the vague word "planning."

There is a good deal about the positive tasks of Government in my book which, because it does not accord with any of the popular political philosophies, has not received the same attention as the rest. There is some tendency to pick and choose from what I regard as unitary philosophy which must be accepted or rejected as a whole.

There is no justification for taking up my argument against certain kinds of Government intervention in internal affairs and leaving out the equally strong case against tariffs based on the same principles; or to stress solely the necessary restrictions of Government activities which I discuss, and leave out the equally strong argument for the Government's taking steps to curb the power of the various moncpolies, both of capital and labor.

APPLIES TO NATIONS

The argument for freedom and the rule of law applies equally to international affairs. Even as great a country as the United States cannot hope long to preserve them in isolation from the rest of the world. Unless the United States leads the way toward free trade and international cooperation, in creating the necessary institutions for an international order, there will be little hope for the future.

Particularly in the field of monetary organization it will be most important that an international understanding should be arrived at as soon as possible.

Although I don't regard the Bretton Woods agreements as a particularly good compromise, they are probably the best that was possible. And now that they have been agreed upon they are probably the only hope of avoiding a development in the direction of extreme economic nationalism. Thus, though I could wish for something better, I regard it now as fundamentally important that these agreements should come into effect.

My main concern is now that I find far too many people talking about what I am represented to have said rather than about the argument that I have actually used. I certainly do not wish to be held responsible for all the interpretations of my views. If those who want to use part of my argument for special pleading are allowed to get away with it, this is not my fault; there is enough in the book to answer and refute them.

If an argument is true, it does not cease to be so by being used in the service of particular interest; this will always happen, and has always happened to the true philosophy of freedom.

Men Without Medals

EXTENSION OF REMARKS

OF

HON. R. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edward T. Leech:

MEN WITHOUT MEDALS—THEY'RE THE MEMBERS OF THE LOCAL DRAFT BOARDS, WHO'VE SHOWN HOW DEMOCRACY WORKS

(By Edward T. Leech)

They've never seen action, and never will—yet the war couldn't be won without these 10 American divisions.

They have served for 4½ years without a furlough or relief. And it has been hard service, trying, tiresome, and frequently sorrowful—performed without pay, without acclaim, without decorations, with almost no public recognition.

These 10 divisions consist of about 150,000 men who comprise the Nation's 6,500 draft boards and their related agents and agencies—appeals boards, appeals agents, legal advisers to registrants, examining physicians, medical advisers and reemployment committeemen.

They are the human element of selective service—the machinery that put the major part of 12,000,000 men into uniform without disrupting the home front.

They've been on the job since late in 1940, when America's first peacetime draft began functioning with the drawing of blue capsules from a gigantic bowl in Washington. Remember when No. 158 came out first? They were working then.

Today, as victory approaches, they are still feeding men into the war; but increasingly, their work now is with men returning from war to seek jobs back home. For selective service has the double duty of putting men into uniform and getting them back into jobs when those uniforms are put aside.

The men who make up selective service are your neighbors. For the basis of selective service is local control. Washington fixes general policies; State headquarters administer them; but the local draft board applies them and determines who shall go and who shall stay. And the local board is a neighborhood group, living with those whom it must judge.

On your board you will find men who are the backbone of your community. Not only the judge, the banker, the merchant, and the teacher, but the man around the corner, that civic-minded citizen who has given up the time in which he used to putter around the house, play with his kids, and who has volunteered, instead, for this important war job at home.

The draft board has more power than any group of unpaid volunteers in our history. Yet, for all its troubles, for all the conflicts and complexities of the manpower question, it has worked with efficiency and freedom from major scandal, accusation, or politics.

There have been faults, of course; but no such scandals as marked Civil War drafting and some World War No. 1 instances.

It was inevitable that in creating a mass citizen army for all-out war there would be confusion of regulations, frequent shifting of policies, border-line interpretations, and all the other uncertainties of constantly changing situations both at the front and at home. Plagued by those conditions and by all the questions they created among registrants and their families, the local draft boards had to carry on the most delicate of assignments.

Working usually in small and uninviting quarters in a schoolhouse or fire station or borough or township hall or some available public room, with a modest assortment of old furniture and makeshift equipment, these groups of neighbors have decided the fate of their home town and home street young men.

Draft headquarters is seldom much to look at. Some patriotic posters, mimeographed notices and newspaper clippings on the wall; a few desks and uncomfortable chairs; groups of boys and their fathers and mothers and employers waiting outside. This is where some little group of men has given many hours daily and several nights a week for over 4 years to unpaid public service. Only the clerical help receives pay.

Often the work has been agonizing. It has involved the lives of the sons of neighbors and friends, the disruption of homes, all the deep domestic dislocations and griefs of war. The draft board members must rule—and then continue to live with the neighbors so vitally affected.

They have been able to go on living among their neighbors because they have done a hard job honestly. They must tell others to fight; they deal in lists, files and folders—the cold stuff of paper and steel cabinets. Yet they also work with flesh and blood, out of which has come an armed force battling without reprieve to finish the war and gain the goal of peace.

After victory, when our aim once again will be happy living, these men—whose only badge is "local board member, Selective Service"—can feel real satisfaction. They have shown the world that democracy can act—quickly and effectively.

VE-Day

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. CANFIELD. Mr. Speaker, I was greatly impressed by the manner in which the people of my congressional district observed VE-day a week ago. The solemnity of the event was appreciated and throughout the area, which has contributed so much to the war effort, there was a grim determination to carry on and go forward until VJ-day.

The Botany Worsted Mills, located in Passaic, N. J., observed the day in a most fitting manner and I am sure that the House will be interested to hear the program of this enterprising mill, now engaged almost 100 percent on Government orders. Production during the day was continued almost without interruption in accordance with plans made by the mill's vice president and general manager, Mr. Charles F. H. Johnson, Jr., several weeks before.

The company has a radio and loudspeaker system that reaches every nook and cranny of the big mill and when the news dispatch of unconditional surrender was received the word "attention" was heard over the radio by the mill's thousands of workers. The voice was that of Mrs. Genevieve Green, Botany's radio announcer. She went on to say to the expectant workers that news had been received of the cessation of hostilities in Europe and she asked all to join reverently in the Lord's Prayer by Malotte, sung by Nelson Eddy, the record having been held in readiness for this occasion.

Tension was relieved immediately and then all were asked to join in singing the Star-Spangled Banner. Mrs. Green followed with a brief announcement to the effect that, now that the European phase of the war was over, it was everybody's duty to bend every effort toward an early victory in the Pacific, in keeping with the wishes of our national leaders and the heroes who the week before had cautioned against any let-down and had called for increased production on VE-day itself. "Let's all help finish the job now!" urged Mrs. Green and as other appropriate and fitting music was played everyone went back to his or her machine.

"It was a wonderful demonstration of Americanism and the splendid spirit of our workers determined to do their part to the last bit to back our boys fighting the battle for freedom," said Col. Charles F. H. Johnson, president of Botany. "It was thrilling and we are certainly proud of our workers' observance of VE-day. It is this kind of sticking to the war job that is going to spell an early finish for our foes in the Pacific."

Botany's own radio also picked up President Truman's speech, the workers receiving the official news quietly and resuming work immediately after the conclusion of the White House program.

The story of Botany's observance of VE-day will be well received by our fighting men everywhere.

Address of Hon. H. Struve Hensel, Assistant Secretary of the Navy

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Assistant Secretary of the Navy H. Struve Hensel at the annual dinner of the Buffalo Chamber of Commerce, Hotel Statler, Buffalo, N. Y., May 9, 1945:

I have chosen for tonight a much-discussed and very important subject. It is the advisability of consolidating the existing War and Navy Departments into a single Department of Armed Services. While I realize that final determination of that proposal must be left to the post-war period, there has already been an unusual amount of public attention given to the problem. Some citizens seem to have reached a decision. A full crystallization of public opinion without complete understanding would, however, be most undesirable. Therefore, I should like to present to you some of the considerations which I believe must be fully appreciated and appraised before a final decision can be made.

The merger or continued separation of the two Departments means nothing to me that it does not mean to every other citizen. My sole desire is that we make no mistake. This country must have the most competent armed service or group of armed services which our ingenuity can provide. On that objective, I am sure we are all agreed. Our future security is so important that it cannot be risked in the slightest. The organization of our armed forces must meet the test of effectiveness in peace and in war.

To meet that test, I believe that this country must remain a strong sea power. I agree with Admiral King that sea power consists of seven essential elements—surface ships, submarines, aircraft, merchant ships, naval bases, trained personnel, and the productive capacity to build, equip, operate and fight them. I am, therefore, opposed to all organizational changes which, intentionally or unintenionally, might weaken our sea power. I hope you start from the same premise.

In approaching this organizational problem, one other fact is basic. Our problem is whether an effective group of fighting forces can be made more effective. We are not discussing armed services which have failed. Our present departments have established themselves in this war as successful, going concerns. We and our allies have won the first phase against what was once a military colossus. We are winning the phase against Japan. The Japanese Navy has been driven from the Pacific. Our ground troops are firmly entrenched on the threshold of the Japanese Empire. Failing organizations could not have achieved those victories. We owe it to posterity to be certain of improvement before we discard a victorious combination.

I wish I could lay before you a reasoned conclusion one way or the other. Unfortunately, I have not arrived at any final decision. I cannot present a plan of consolidation. I cannot bring myself to recommend that no change in that direction be made. I see disadvantages and advantages in the present system. It seems to me that there will be an equal number of disadvantages and advantages in a single department.

My main difficulty is that I have not been able to work out the blueprint of an effective single department. I cannot accept a theoretical "general principle of consolidation" in the abstract and trust that the details will later fall in line. Successful organizational forms exist only in the concrete and depend on careful attention to many details. All mergers are not beneficial. Our national experience with corporate mergers is eloquent in that respect. Some mergers produce compact and efficient units. Others result in loose, diffused, and unprofitable concerns, disappointing to the stockholders and the public alike. None of you would approve a merger of two industrial concerns without having a detailed plan presented and studied. I do not mean that you would want to envision where each clerk would sit. You would, however, insist on preparing a reasonably clear forecast as to the effect of the

merger on the important divisions of both companies. You would probably want to study the experience of any other company which might have tried the same type of merger. It is my suggestion that we follow the identical cautious approach in thinking through this defense problem.

Let us start with a quick glance at history—first at the history of our own country. The United States started on its national career in 1789 with a single department for the armed services. The Department of War was given authority over both the land and naval forces. At that time we had no naval vessels. The depredations of the Barbary pirates in 1794 started our naval growth. In 1798, we drifted into an undeclared sea war with France. Ship construction was further increased. Agitation started for a separate Department of the Navy. On March 22, 1798, the Secretary of War himself, as one alternative, proposed the separation of naval affairs from the War Department. The debates in Congress are worth examining. Some of the opponents of separation feared that it would lead to a great Navy. Those favoring a separate Navy urged that important economies would result through closer supervision of naval matters. It was also said that one department could not so spread itself efficiently to administer the business of both the Army and the Navy. After considerable debate and a close vote, our present separate Navy Department was created on April 30, 1798.

Germany and Russia have each experimented with a single department. The German Navy of World War No. 1 was built under a separate admiralty. After 1918, the German Army and Navy were placed under a single ministry of defense. There was at that time no Germany Navy. It had been scuttled at Scapa Flow. By 1936, the German war organization had been split into three separate departments—the army, the navy, and the air force. In 1938, a single supreme military command, which included fairly complete control over the economic life of the nation, was established. Whether it resembled our Joint Chiefs of Staff or a single department, we do not as yet know.

Russia started her first 5-year plan by placing her armed forces under a single committee. Later this committee, or commissariat as it was called, was replaced by a single minister of defense. On December 7, 1937, when the idea of a strong Russian Navy was revived for the first time since 1918, the navy was transferred to a separate naval commissar. Foreign Commissar Molotov then declared that Soviet Russia was determined to have a fleet equal to her great mission.

It may well be that we should draw no final conclusions from such history. I realize that the vitality of institutions depends greatly on environment. I do not feel that we are clear enough about the effect of environment upon our early combined department. We know much less about the environments of the Russian and German experiments. Even so, the need for caution seems considerably emphasized by the fact that on several occasions on this globe a single department was tried and abandoned.

The arguments in favor of a consolidated department are basically simple and are grounded entirely in dissatisfaction with the present situation. Separate departments are charged with three fundamental defects. It is said that separate departments lead to (1) uncoordinated operations in the field, (2) duplicating services and efforts, and (3) competitive interferences accompanied by a waste of manpower, material, and money. Consolidation is presented as the organizational panacea for such defects.

At this point I suggest an examination. At least two questions can well be asked—can these defects be eliminated without consolidating the departments? Will these defects surely be eliminated by consolidation?

For instance, I think it is clear that coordination of command in the field can be accomplished without merger of the departments. In our Joint Chiefs of Staff I think we have created an instrumentality through which unity of military command can be effected. With some exceptions, I think unity of command has been achieved. In such exceptions, furthermore, the fault, if any there be, does not lie in the organizational form but rather in the decisions made. There is no form of organization possible which will prevent all error of judgment. I would retain permanently the Joint Chiefs of Staff. That will require legislation, but in that respect consolidation of the departments is not essential. As a matter of fact, the different backgrounds of the men comprising our Joint Chiefs of Staff may well have contributed to the vitality of their decisions.

I agree that there is considerable duplication of effort between the services. Some of the most widely publicized, however, are not really duplications. As to others, it seems to me that consolidation would not be a cure. For instance, I do not think there is any duplication in the existence of two hospitals in Washington a few miles from each other. I have in mind the Naval Hospital at Bethesda, Md., and the Army Hospital in the District of Columbia. Both hospitals are full. All operating rooms, X-ray rooms, and laboratories are used to capacity. I am told that both hospitals are about as large as a single hospital should be for efficient operation by a single staff.

An example of a possible duplication which would not be cured by consolidation is the existence of two air stations in Washington—the Anacostia Naval Air Station and the Army's Bolling Field—immediately adjacent to each other. It is said that under a single department those fields could be combined with the saving of one control tower, one operations building, and one operating staff.

That claim was first made early last year. Later in the same year single operation of the two fields was tried. It was unsuccessful. The fields are located on a long narrow strip of land bounded on one side by the Anacostia River and on the other by some low hills. Control of both fields from a single tower resulted in delayed take-offs and landings, general confusion, and inefficiency in operation. The truth is that for modern planes the fields are badly located. Once the present location is accepted as a fact, there is no duplication. Combination of the departments would cure nothing.

In 1943 a point was made of the fact that the Army ordnance plants were not being used to peak capacity and yet the Navy was building additional shell-loading facilities. After the German attack in December 1944 the Army suddenly needed all loading capacity available and would have liked more. Then the additional Navy loading capacity seemed farsightedness indeed.

It must also, I think, be recognized that consolidation is not a certain cure for all duplication and overlapping. Duplication almost always exists in large organizations. It might well be termed a byproduct of enormous size as natural in that situation as the thorn is on the rose bush. Overlapping often exists and persists in spite of unity of command. The Navy, a single department, has unity of command in a single Secretary. All of the top military and civilian executives work as a team and are extremely conscious of the need for team work. Yet one of the most difficult problems we face in the Navy is the elimination of duplications within our walls. After years of close attention, we are continually discovering unsuspected duplications. Some are deliberately created for the sake of what we deem to be efficiency. I fear that it will be some time before we discover the organizational secret which will guarantee the elimination of all inappropriate duplications and overlappings.

Unification will not necessarily remedy all the criticized defects. The resulting single department would be so large that existing duplications might possibly become accentuated and more numerous. As organizations expand, executive control becomes more and more tenuous and weakened. There is limit to the direct executive control which can be exercised by any one man. In almost direct proportion to size and decentralization the obstacles in the way of coordination multiply. In industry, mass production has provided savings which have counterbalanced the inefficiencies of diffused executive direction. What the counter-weight in the armed services might be, I do not know.

The War Department provides an excellent clinical study of the operation of a huge organization. Size has, in my opinion, forced Army management to separate and decentralize much more than the Navy. That is not said in criticism. In an organization of the Army's size, I do not think there was any option. Nevertheless, it is inescapable that considerable duplication exists within the War Department.

I have also watched another phenomenon of evolution in the Army which I attribute to size. At the start of this war the Army voluntarily split into three parts—the Army Ground Forces, the Army Air Forces, and a joint Service of Supply, now known as the Army Service Forces. The Air Forces sought and obtained a high degree of autonomy, even in respect of the General Staff. The Air Forces established their own separate Air Judge Advocate, Air Surgeon, Air Inspector General, Air Chaplains Division, and Civil Affairs Division. The Air Forces' procurement organization is now also quite separate from the Army Service Forces. The trend toward complete separation is continuing. As late as September 27, 1944, there was transferred from the Army Service Forces to the Air Forces independent authority over automotive maintenance, repair of real property, operation of utilities, contracts with commercial laundries, and several other nonspecialized operations with respect to Air Forces installations. Duplication in administration was thus deliberately created. It was probably wise.

Personally, I expect to see a continued trend toward separation in the huge War Department. It may well be that complete autonomy of the Air Forces is inevitable. That may be dictated not only by logic but by the natural limitations with respect to size. No one, I fear, knows how large an organization can become before a separation into parts is essential to maintain effective control.

Many urge a merger of the armed services in the interests of economy. As you undoubtedly noted, the same argument was made in 1798 in favor of separation. I doubt whether anyone knows the path to true economy. War is not economical. It is the apotheosis of waste and destruction. Furthermore, it is as yet impossible in respect of this war to estimate the waste in duplication as compared with the waste through haste, changes in strategic plans, and diffused administration inside the two huge Departments.

And let me add that in war we cannot sacrifice effectiveness to economy. That could be the path to defeat.

Quite apart from my worries about the loss of efficiency in organizations of huge size, I do not think the plan of combining the departments, which was publicly proposed last year, involves unification. It is really a plan of separation. You will recall that such plan envisaged a single department headed by one secretary supported in turn by four subordinates—three separate Under Secretaries, one each for the Army, Navy, and Army Air Forces—and then an independent Direc-

tor of Supply on a level somewhat below that of the Under Secretaries. The only signs of unification in that plan lie in the name of the overall department and in the person of the single Secretary. Unity in an organization of that size will, in my opinion, need many more aids. All criticisms of the existing situation will, I think, apply equally well to that type of organization.

It seems to me that the substance of such plan is the further separation of the Army Air Forces and the Service of Supply. Such thought is supported by the position taken by one of its proponents. On April 26, 1944, before the Select Committee of the House on Post-War Military Policy a high-ranking Army Air Forces officer was asked the following questions and made the following answers:

"Question. Then, you think that unity can be brought about by a merging together of the two armed services in their entirety; the Army and the Navy?

"Answer. No, sir; I do not.

"Question. You think the unity can only be brought about by further division?

"Answer. Yes, sir; I do."

Unification through separation may be practicable, but I think we are entitled to a clear demonstration.

If the real purpose of this proposal is to establish the Army Air Forces on a separate and independent basis, I think it should be discussed from that angle and not presented as unification. That separation may well be an appropriate change. I am not sufficiently advised to comment on the wisdom of a separate Army Air Force. I know, however, that it is an entirely different subject from consolidation of the two present departments.

I realize that tonight I have done nothing more than sketch a shadowy outline of an important national problem. You must fill in the details yourself. A real burden is thus cast upon you. You must become informed and you must make your views known. You cannot let this question go by default. Our national security and power cannot be weakened.

If I have seemed tonight to favor the present situation, such impression was not intended. I am still sincerely on the fence. Although I am satisfied that a change in the present victorious combination should not be hastily made, I am anxious that we think this proposal through. If I seemed to deal too emphatically with the disadvantages of size, it was because I fear such dangers are usually glossed over. I have tried simply to emulate the watchman at a dangerous railroad crossing. My whole appeal was intended to be one of caution—a cry of—"Stop, look, and listen."

Treat Captured Nazis as the Criminals They Are

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. BECKWORTH. Mr. Speaker, I desire to include in the RECORD an editorial which appeared in the Washington Evening Star, May 11, 1945.

The captured Nazi, whatever his rank, should be treated like any criminal is dealt with when apprehended. The American people should not and will not, in my opinion, tolerate the type of leniency which is being shown, according to newspaper reports, some of these criminals. The time to begin to cease such nonsense is now. It should never have been begun.

The article follows.

THE GERMAN GENERAL STAFF

It is interesting to observe how the German admirals and field marshals act these days. They have been humbled, they have surrendered unconditionally, but they still carry themselves suavely, even arrogantly, dressed up in their smartest uniforms and wearing their flashiest medals.

Some make speeches and some grant interviews and some maintain an ostentatiously haughty silence, but it is clear that all of them—Doenitz, Rundstedt, Kesselring, Jodl, Keitel, to name but a few—are of the same frame of mind. Neither by gesture nor word do they give the slightest indication of feeling sorry for having planned and let loose the Second World War. There is not the faintest admission of guilt, no contrition, no regrets, no apparent feeling of responsibility for a holocaust that has wiped out millions of lives.

Possibly these men experience some inward pangs of conscience, but if they do, the fact is hidden from us by their outward manners—by the cold, prideful manners of the Prussian military aristocrat. Let us note this. Let us remember that in these peacock-like characters we see the German general staff parading before us—the once all-powerful architects of death and destruction on a grand scale, the master minds of the blitz on Poland and of all the other blitzes that followed that, the builders of the U-boat fleet, the Luftwaffe and the Wehrmacht, the high and mighty makers of war without whose ardent support Hitler and the Nazis would never have been able to convulse the world.

Let us note this well. Let us note that these beaten but unbowed titans of battle, when they speak at all, still speak respectfully of the Fuehrer's "genius" and show no compunction whatever for having organized and launched the war. The German general staff has been like that ever since Bismarck's day. The membership now is different, but the viewpoint remains the same—the fixed viewpoint of an old conspiratorial military organization in Germany. Long before the First World War, it plotted for that war, and after losing it began almost immediately plotting again, and it will do the same thing once more if it is but given the chance.

The shattering of the Nazi party does not remove the danger. Prussianism must be shattered as well. The cold, bemonocled stare of the Keitels, the hauteur of the Jodls and the smugness of the Kesselrings are fitting symbols of a mentality traditionally crowded with thoughts of how to wage new wars after old ones are lost. As was agreed at Yalta, the German General Staff must be broken up for all time if Germany is to be permanently cured of its liking for aggression.

Bretton Woods Stabilization Fund

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I include the following letter received by Hon. FREDERICK C. SMITH, of Ohio, from Henry R. Hayes, of New York City:

NEW YORK, *April 24, 1945.*

Hon. FREDERICK C. SMITH,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SMITH: With further reference to the Bretton Woods Stabilization Fund (so-called) agreement, I continue to believe, consistently since the summer of 1944, that the most objectionable feature is that proposal about scarce currencies (art. VII).

It would seem to be correct to assume—

(a) That United States dollars are the strongest currency; and

(b) In the post-war years our dollars will be the strongest currency in demand.

ARTICLE VII. SCARCE CURRENCIES

(a) Under this article provision is made for the rationing of a member's currency when such currency is declared to be scarce.

(b) When formally declared scarce, the fund (see sec. 3 (a)) "shall thenceforth apportion its existing and accruing supply of the scarce currency with due regard to the relative needs of members, the general international economic situation, and any other pertinent considerations."

(c) Such a declaration (see sec. 3 (b)) "shall operate as an authorization to any member temporarily to impose limitation on the freedom of exchange operations in the scarce currency."

(d) Here we see, temporarily at least, a restriction in the freedom of exchange operations. That spells instability of exchange—not stabilization.

(e) With the power for borrowing, with no prior stabilization of domestic currencies, and with the United States as a creditor-exporter nation, it is correct to assume that Uncle Sam's dollars would be declared scarce. Then our dollars would be rationed. Thus we would be forced to restrict exchange operations in dollars or lend the fund additional dollars—the limit of amount is indeterminable.

(f) Thus, too, our trade—agricultural, industry, and our services of export and import could readily be seriously affected. Under such conditions the production of wealth would be curtailed. Such an impact on our business and workers could damage our whole domestic economy seriously. The social aspect of such serious conditions need only to be mentioned, I would think.

I cannot conceive of contentment at home with this rationing practice in operation. And so, I believe this authority under this article VII would, if exercised, unduly and adversely influence our economic conditions and our ability to perform for world peace.

We have suffered too much and too often from foreign influences which have adversely affected our domestic economy. The last time was in 1926 when forces outside our borders were set in action to put gold to a premium. Those forces were potent factors, too little known, in bringing about the crash of 1929, at a time when we had a sadly extended credit structure. For detailed studies about that manipulation in the value of gold I refer to the proceedings of the Committee on Coinage, Weights, and Measures for the years 1932, 1933, and 1934.

Stabilization of exchange is a highly desirable objective. Our willingness and our ability to perform in this field must not be weakened and otherwise impaired. Our cooperation must not become ineffective.

If we play our part in world peace we must first put our domestic fiscal and monetary operations in strong condition. Then, I have confidence, we can and will be more enlightened than in the 1920's as to importing goods and exporting capital in the interests of improved world trade.

Also, I am convinced such a course is within our power. If followed we can then best serve the post-war interests of the United Nations.

Incidentally these domestic fiscal and monetary policies are truly bi-partisan.

That is because they cut horizontally across the social and economic interests of all our people.

The economic phases of lasting peace to me are every bit as important as those which are currently emphasized under the Dumbarton Oaks Charter and the need to set up military power to enforce peace.

Going beyond this discussion of scarce currencies there are many other features of the Bretton Woods fund agreement which can be criticized. I shall not attempt a detailed study of them, but will pass along some further observation and views as pertinent to my objection to that agreement.

Currencies in the fund would range from those which are good to those which are weak, and those which are poor, or of unknown value.

Under conditions for borrowing, with no requirements for domestic stabilization of currencies, we find debtor countries which are poor or insolvent, to be in the majority. As I see it, then, the power of management of the fund could be with the countries which do the borrowing. That would put the debtor and not the creditor in the saddle—clearly unsound relationship.

Such a condition in the long run is bound to result in a lack of that kind of confidence which is needed at all times.

I do not see how we can now consider general stabilization of exchanges until we change our fiscal and monetary policies and tackle the difficult problem of British-blocked sterling balances.

Also, I do not see how many of these currencies in the fund could be valued reliably until nationals put their own houses in order.

I sense out of this whole scheme just a continuance of paper currency practices for the same temporary political joy rides we have witnessed by politicians who will not solve fiscal and monetary policies.

For me therefore, as I have orally stated to you, we see in this effort of the administration a continuance of the cockeyed practice of wasteful exhaustion of our people's money and credit and an assured weakening of our ability to do our best in the post-war world.

Thus it is I conclude that the Bretton Woods Stabilization Fund agreement would make for unsettled economic conditions in post-war years and thereby would make for an unstable peace.

It is of prime importance that there be a better public understanding of what is involved in this fund agreement. I hope that the hearings will develop just that.

There are very serious jobs ahead on fiscal and monetary problems since they have been unsound for a long time.

Not only must we consider new ways by which we must attain more stability in our monetary yardstick of value, i. e., money, and make it more difficult for men or government to manipulate the value of that yardstick, but we must teach both political parties and the public the true importance and big role which such stability plays in domestic and world-wide peace.

J. M. Keynes (now Lord Keynes) writing The Economic Consequences of the Peace said:

"Lenin is said to have declared that the best way to destroy the capitalistic system was to debauch the currency. By a continuing process of inflation, governments can confiscate, secretly and unobserved, an important part of the wealth of their citizens. * * *

"Lenin was certainly right. There is no subtler, no surer means of overturning the existing basis of society than to debauch the currency. The process engages all the hidden forces of economic law on the side of destruction, and does it in a manner which not one man in a million is able to diagnose." (Pp. 235, 236, Harcourt, Brace & Howe, Inc., 1920 Ed.)

Sincerely yours,

HENRY R. HAYES.

Opposition to Trade Agreement Extension as Provided in H. R. 2652

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include brief in opposition to H. R. 2652, by Sporting Arms and Ammunition Manufacturers' Institute:

We wish to present, in the name of the Sporting Arms and Ammunition Manufacturers' Institute, the following brief in opposition to H. R. 2652.

The Sporting Arms and Ammunition Manufacturers' Institute is an association of arms and ammunition manufacturers comprising the following companies: E. I. du Pont de Nemours & Co., Inc., Federal Cartridge Corporation; Hercules Powder Co., Inc.; Ithaca Gun Co.; the Marlin Firearms Co.; O. F. Mossberg & Sons, Inc.; Remington Arms Co., Inc.; Savage Arms Corporation; Western Cartridge Co.; Winchester Repeating Arms Co.

While the institute is designated as the Sporting Arms and Ammunition Manufacturers' Institute, it should be noted its membership includes all of the small arms and ammunition manufacturers in the United States, with the exception of the pistol manufacturers.

Our membership includes companies which have furnished the nucleus of the skilled help and management that has made it possible to produce the millions of rifles, carbines, and other small arms, as well as the billions of rounds of small-arms ammunition that has been necessary for our armed forces in the current war. Further, this industry has been called upon to supply not only our own troops, but has had to meet the enormous demands, under lend-lease, of our allies.

The industry can point with pride to the fact that at no time has there been a shortage of either small arms or small arms ammunition.

All of our members have in their files letters of commendation from high-ranking Government officials emphasizing the contribution of our industry to the effective prosecution of the war.

This reference to our part in the war effort is not advanced as a plea for some kind of reward—it is put forward solely to emphasize that the continued existence and well-being of our industry is of the greatest importance to the future defense of our Nation.

As hostilities cease, our industry of necessity will return to peacetime proportions. This means a drastic reduction in operations. But no matter how ardently we hope for peace, we dare not neglect the continuance of the nucleus of skilled personnel which could again b expanded should the emergency arise. This can only be done by keeping the industry in a strong and healthy condition, thus enabling it to preserve the largest possible working force.

The United States Government must recognize this situation and should therefore refrain from any acts which would have a contrary effect.

H. R. 2652 if passed in its present form will very definitely injure the industry and further decrease employment.

Following the reductions in duty on guns made in the trade agreement with Belgium in 1935, importations increased five-fold by 1939.

Your committee knows that wages in the United States have materially increased since 1939 and the indicated trend is still strongly upward. No corresponding wage scales exist in Europe; in fact it is reasonable to expect that for some extended period, food, clothing, and shelter will be far more important considerations than wage and living standards.

In the gun industry, practically 80 percent of the cost is represented by labor. It is therefore readily apparent that differences in wage and living standards play a tremendous role in the cost of our product.

A reduction of tariff on the products of the ammunition industry will have the same injurious effect as that already indicated for guns.

The institute has already protested against the cuts in tariff which are now in effect and which were beginning to seriously affect us when the war started. Obviously the full effects of the present tariff have not as yet been felt so that the industry is concerned about the present low duties and is entirely opposed to any further reductions on its products.

To summarize, it is our sincere view that (a) an ability to turn out substantial amounts of small arms and small arms ammunition, on comparatively short notice, is vital to this country's future defense; (b) such ability cannot be present unless we have in peacetime a sound small arms and ammunition industry to provide the nucleus of specialized know-how and skilled labor upon which expanded wartime production can be built; (c) the existence of such a sound peacetime small arms and ammunition industry is already in jeopardy by reason of the low tariff duties presently in effect; and (d) any further tariff reductions would so weaken this industry as to ruin its ability to play an important part in the country's defense if it should ever again be called upon so to do.

We wish again to registe our strong protest against the passage of this bill, and ask that it be reported unfavorably.

Respectfully submitted.

SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE,
C. STEWART COMEAM, *Secretary.*

Oil in Three Wars

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Dr. Paul H. Giddens, head of the political science department at Allegheny College, Meadville, Pa., and one of the Nation's outstanding authorities on the petroleum industry. This article was published in the Orange Disc for March and April 1945, the magazine of the Gulf companies:

OIL IN THREE WARS

In World War No. 2, with thousands of planes, tanks, jeeps, trucks, tractors, submarines, motor torpedo boats, and other vessels to be fueled and lubricated, we appreciate the way in which oil has revolutionized the conduct of war and is determining the outcome. In thinking of the importance of petroleum in this war, however, we should not overlook the fact that it played a decisive role in two other crises in our history—the Civil War and World War No. 1.

Less familiar to us is the part played by petroleum in our Civil War. In writing about its value to the North, Sir S. Morton

Peto, the English banker, pointed out in 1865 that "it is difficult to find a parallel to such a blessing bestowed upon a nation in the hour of her direst necessity." Of course, it was not used as a fuel or lubricant for mechanized units; it proved to be of utmost importance in other respects. At the Battle of Gettysburg, for example, petroleum was used to treat the wounds of the soldiers. Petroleum's special contribution, however, was the fact that it provided the world with a cheap, safe, and efficient illuminant and lubricant. With the decline of the whaling industry and the inadequacy of lard oil, the shortage of oil became increasingly serious in all parts of the world between 1840 and 1860. At the same time, the invention of new machines, the rapid growth of factories, and the extension of the railroads made heavier demands upon the diminishing supply. Under the circumstances, scientists everywhere made scores of experiments and spent large sums of money trying to find a new lubricant and a new source of artificial light. In 1859 Col. E. L. Drake tapped a vast subterranean deposit of petroleum in the great Oil Creek Basin, demonstrated how petroleum could be secured in abundance, and gave to the world that long-sought-for illuminant and lubricant. This marked the birth of a new industry—the petroleum industry.

Born in the darkest hour in the life of the Union, the petroleum industry was a powerful force in strengthening the economy of the North. At the outset the North was cut off from the turpentine districts of the South, and the small supply on hand, being inadequate for painting and other purposes, brought exorbitant prices. A satisfactory substitute was soon derived, however, from some of the products discovered in refined petroleum. Furthermore, the new industry was a factor in developing the phenomenal wartime prosperity of the North. Thousands of teamsters were employed in hauling oil from Oil Creek to the nearest railroad points. Refineries sprang up all over the oil field.

In Pittsburgh alone there were, in 1865, 58 refineries, valued at $2,533,000, with an annual pay roll of $500,000. Railway lines were hurriedly extended into the oil region and they hauled thousands of passengers and tons of freight; nor was this all. As the petroleum industry developed, it provided a stimulus to all other branches of industry; coopers worked to capacity; the rolling mills found a market for an immense amount of hoop iron; tinners made 5- and 10-gallon cans; chemical laboratories ran to capacity in producing acid and alkali; machinists had more orders for steam engines and boilers than they could handle; and glass manufacturers benefited largely from the trade in manufacturing lamps, globes, and chimneys.

Although in its infancy, the petroleum industry rendered outstanding service in helping to furnish the sinews of war. Under the law of July 1, 1862, and that of June 30, 1864, levying a tax on crude and refined petroleum, the United States collected about $7,000,000. In addition, the Government secured considerable internal revenue from a newly created occupational group—the oilmen—under the income-tax law. The industry assisted in another respect. In 1861 the balance of trade was running strongly against the Union. By 1865 our export trade in petroleum amounted to $15,727,881, and it ranked sixth among our exports. Petroleum, therefore, not only helped to offset the unfavorable balance of trade but it constituted a medium of exchange and enabled us to buy abroad.

These, then, were the ways by which petroleum substantially assisted in the successful prosecution of the Civil War. When President Grant visited the oil region in September 1871, he spoke briefly at a dinner in Franklin, saying that it was a pleasure to visit the oil region—"a pleasure which is enhanced by remembering, not alone how promptly Pennsylvania contributed her war quota during the Rebellion but also the importance of her oil products as an element of national wealth and resource during the same period."

Between the Civil War and 1914 two things occurred to revolutionize the conduct of the war—the introduction of petroleum as a fuel for warships and the development of the internal combustion engine and its application to vehicles for war purposes. Probably no one in naval circles appreciated more the part fuel was destined to play in future naval warfare than Capt. John Fisher, of the British Navy. "You can take it from me," said Fisher in 1882, "that the general adoption of oil instead of coal as fuel for ships would immediately increase the fighting capacity of every fleet by at least 50 percent." His colleagues dismissed the idea as visionary, and, for many years, Fisher was known in the British Navy as the oil maniac. But he continued to pound away at the idea that "oil will absolutely revolutionize naval strategy." In 1912, through the efforts of Winston Churchill, First Lord of the Admiralty, and Fisher, now an admiral, the British Government made a momentous decision—to burn oil fuel in the British Navy. They therefore laid the keel of the *Queen Elizabeth*, the first large warship to burn oil exclusively. Within 2 years the British had partially converted its fleet to burn oil. The same was true of the Central Powers. By the end of World War I more than 48 percent of the British fleet was using oil.

After 1900 the United States Navy made rapid strides toward adopting oil as fuel for its warships. By 1910 all new destroyers and submarines were designed to burn oil exclusively, while battleships like the *Delaware* and *North Dakota* were fitted to carry oil as an auxiliary fuel. After 1912 all battleships were to burn oil exclusively. In the spring of 1916 we launched the dreadnaughts *Nevada, Oklahoma,* and *Pennsylvania,* the first of our battleships to burn oil exclusively.

The demand for petroleum to fuel and lubricate ships in the World War I and to power trucks, tanks, submarines, and airplanes—new weapons of war which made their appearance for the first time—was enormous. The British Army alone consumed on an average 23,000 tons of oil per month and the French Army 35,000 tons, or 700,000 tons a year for these two armies alone. Oil had really gone to war in 1914. It was an absolute essential.

So great was the British dependence upon petroleum that a very serious crisis developed during the spring of 1917. German U-boats had sunk so many tankers that the British oil reserves became perilously low. Instead of a reserve of some 5 or 6 months, it was reduced to one of about 8 weeks. In June Lord Northcliffe, head of the British war mission to the United States, informed our Government that, owing to the shortage of oil, the British Fleet had been partially demobilized and that destroyers on patrol had reduced their speed from 26 knots to 18 in order to conserve fuel. The stocks of motor gasoline and aviation gasoline were at such a dangerously low level that, if the Germans had started a major offensive, the Allied forces would not have had sufficient supplies to pull a retreat. The United States immediately responded to the call for help, and by the end of 1917 the British situation had greatly improved.

France's plight was even more precarious than Britain's. On December 15, 1917, Premier Clemenceau frantically appealed to President Wilson, pointing out that the minimum stock of petroleum for the French armies was 44,000 tons; that the monthly consumption was 25,000 tons; that the stocks had dropped to 23,000 tons; and that they threatened to fall to nothing if immediate relief was not forthcoming. "A failure in the supply of petrol," wrote Clemenceau, "would cause the immediate paralysis of our armies and might compel us to a peace unfavorable to the Allies. * * * The safety of the Allied nations is in the balance." The note had the desired effect. The United States soon had a stream of tankers headed for France.

At the end of the war the Interallied Petroleum Council, which had been created in the fall of 1917, was entertained by the British Government at a dinner on November 21, 1918. Lord Curzon, the British Foreign Secretary, presided and spoke. In pointing out the decisive role petroleum had played in bringing about ultimate victory for the Allies he said: "Without oil how could they have procured the mobility of the fleet, the transport of their troops, or the manufacture of several explosives? All products of oil fuel, gas oil, aviation spirit, motor transport spirit, lubricating oil, etc., played an equally important part in the war. In fact, we might say the Allies floated to victory on a wave of oil." He could have added that the United States had furnished about 80 percent of the oil used by the Allies.

The defeat of the Central Powers was due, in a large measure, to an inadequate supply of oil. Germany possessed no petroleum deposits of any consequence. Austria-Hungary owned wells in Galicia, but these were far from adequate to supply the needs of the Central Powers. The shortage of petroleum, therefore, led the Germans to develop the synthetic process of extracting oil from shale and coal. Benzol, extracted from coal tar, served as one of the chief fuel oils for motor vehicles, submarines, and airplanes. Furthermore, the lack of petroleum forced Germany to direct its military operations toward Galicia, Rumania, and the Caucasus because there were rich oil deposits in those places. Thanks to the thoroughness of the British in wrecking the Rumanian oil field, Germany failed to obtain anything like the quantity upon which it had counted. Nor did the conquest of the Caucasus region in the spring of 1918 bring any relief; pipe lines and drilling towers had been to a large extent destroyed during the internal disturbances through which the country had passed.

The failure to secure adequate petroleum supplies was undoubtedly a prime factor in Germany's defeat. During the winter of 1916–17, according to General Ludendorff, "The shortage of oil at home was serious. The country districts did not obtain sufficient for the winter. The peasants had to pass the longer winter evenings in the dark, which was very bad for their morale. It is characteristic of Germany that little was ever said about this great inconvenience. For a time some of our transport difficulties were due to bad lubricants used in locomotives. They froze very easily. Private cars were practically not used at all in Germany. The whole rolling-stock situation was one of the greatest anxiety and called for incessant attention."

With the outbreak of World War No. 2 in 1939, the character of warfare had been completely changed. It is clearly the day of mechanized war. The internal-combustion engine, whose potentialities were only beginning to be understood in 1918 has been perfected and adapted to all kinds of engines of war. Thousands of them are now being used in the fight around the world, and they consume oceans of oil. Furthermore, petroleum requirements for nonmilitary but essential activities are vast. Never has the fate of so many nations depended upon an adequate supply of petroleum.

In 1939 none of the belligerents was self-sufficient in petroleum. The oil resources of the British Empire were small, amounting to only 2.5 percent of the world's production in 1940, but the output of the fields throughout the world upon which it could draw were very much larger. The entry of Russia into the war with 10.6 percent of the world's supply and the United States with 60.8 percent

built up unlimited resources for the Allied side.

Germany's oil resources since 1914 have not increased materially, yet her war machine has been far more powerful, and, at the same time, more dependent upon petroleum. When Hitler came to power in 1933, Germany was producing about one-fourth of its oil requirements. He sought to make the country self-sufficient through the drilling of new wells, economy in consumption, improving the synthetic process, the annexation of Austria and Czechoslovakia, and, ultimately, the control of foreign fields. Italy's position was far weaker than its Axis partner, and it depended at the outset almost exclusively upon Rumania for its supply. Japan depended upon other countries for about 65 percent of its annual consumption. Because of the Axis shortage of oil resources in World War No. 2, those countries with a large supply have been the object of every Axis diplomatic and military drive—Rumania, the Caucasus, Iraq, Iran, and the Dutch East Indies.

The Allied military strategy in World War No. 2 has been twofold; the Allies have tried, so far as possible, to keep the Axis countries from capturing those areas where oil is produced in large quantities; and to reduce the Axis oil supply through uninterrupted and systematic bombing of their synthetic oil plants, refineries, and storage depots.

The results of 5 years of bombing 81 major oil targets in Germany is now becoming apparent. As this is written, Allied intelligence reports that all of Germany's crude oil refineries are inoperative, and that only 4 of her synthetic oil plants are producing. The Germans are reported as producing only 103,000 tons of gasoline a month compared with 500,000 a month early last year. A steady improvement of bombing weather from now on may render German industry incapable of producing any but the most insignificant amount of gasoline needed to keep the Wehrmacht and the Luftwaffe in action. So once again, as in 1918, the lack of oil is proving to be "the Achilles heel of Germany's motive power." As the war in the Pacific draws closer to Japan and the line of communications between Japan and the rich oil resources in the Dutch East Indies is severed, the lack of oil will also be a prime factor in Japan's inevitable defeat.

It is now clearer than ever before that what the great French industrialist and wartime oil commissioner, Henry Berenger, prophesied in 1919 has come true. He wrote: "He who owns the oil will own the world, for he will rule the sea by means of the heavy oils, the air by means of the ultra refined oils and the land by means of petrol and illuminating oils."

Estimates of Number of People Who Will Earn Livings From Agriculture at War's Conclusion

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. BECKWORTH. Mr. Speaker, I feel it is highly essential to the welfare of our country that there be an abundance of employment when the war ceases. For this to obtain, farms must necessarily employ a good many more people. Particularly do I think that every returning service man or woman should have the opportunity to buy, own, and operate a farm who desires one. I was heartened to learn recently from the Secretary of Agriculture that farms can probably absorb a million and a half additional people in the first 5 years after the conclusion of the war.

I wish to include in the CONGRESSIONAL RECORD letters from Hon. Claude Wickard, Secretary of Agriculture, and Hon. J. C. Capt, Director of the Census. They follow:

DEPARTMENT OF AGRICULTURE,
Washington, May 5, 1945.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: We have fairly satisfactory estimates of the persons and families now living on farms and the number of people employed on farms. According to estimates prepared jointly by the Bureau of the Census and the Bureau of Agricultural Economics for April 1944, there were 25,870,000 people living on farms in the United States and there were 6,490,000 farm families. However, 1,500,000 of these households living on farms did not contain a farm operator, being households with a head engaged in nonfarm work, employed as a farm laborer, or not in the labor force. The number of persons working on farms 2 or more days during the week in April 1944 is estimated to have been 9,080,000.

It is more difficult to answer the question on how many additional people farms will absorb after the war. Although the demand for farms after the war cannot be measured accurately, it very likely will be materially greater than the supply of good farms available. This is a normal situation. The farm population has long produced many more children than needed to replace farm operators and other workers on farms. In 1940 only three out of five young men reaching maturity on farms were needed to replace older men in the farm population who died or retired. In spite of the heavy loss of young men from farms because of the war, in 1944 there were still enough young men aged from 15 to 24 on farms to replace all of the older men who would die or retire during the next 10 years.

In addition to farm youth now on farms and returning veterans, some war workers will wish to return to farms after the war. The number of such will depend to a large extent upon whether or not the country maintains full employment; the higher the level of national employment the smaller the number who will return to farms.

It is estimated that around 800,000 to 900,000 farms will become available for new farm operators during the first 5 years or so after the war through death, retirement, and change in occupation of present operators and through development of new farms. In addition to farm boys reaching maturity and an unknown number of returning war workers it has been estimated, based on an Army survey, that about 900,000 veterans will be seeking farms to operate on a full-time basis and possibly 500,000 will be seeking part-time farms.

In addition to opportunities to become farm operators, there will probably be some half to three fourth of a million nonoperator jobs in agriculture available for returning veterans and others. These work opportunities will arise as women, youths, and even children who have worked on farms during the war return to their normal pursuits. Because the work capacity of these temporary workers is generally less than that of young adult males, the number of such workers replaced will be greater than the number replacing them. In many cases the replacement will be made by a returning son; in many other cases a man will be hired to replace a person only temporarily in the labor force during wartime.

In other words, agriculture may be expected to absorb approximately 1,500,000 persons during the first 5 years after the war, but some of these opportunities will be filled by young people now living on farms.

Sincerely yours,

CLAUDE R. WICKARD,
Secretary.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, May 7, 1945.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: Secretary Wallace has asked me to reply to your letter of April 23, 1945. In answer to your questions, I am sending you our most recent estimates of farm population and agricultural employment which may help you in your analysis of the problem of full employment after the war.

The Bureau of the Census, Department of Commerce and the Bureau of Agricultural Economics, Department of Agriculture, in cooperation have prepared estimates of the farm population for 1940 and 1944. (See Estimates of Farm Population and Farm Households, April 1944 and April 1940, and Farm Population Changes in 1944, enclosed.) Estimates of agricultural employment are issued each month by the Bureau of the Census, based on the results of a sample survey of 30,000 households. (See Monthly Report on the Labor Force, enclosed.)

The latest date for which the three items you specify have been estimated is April 1944. At that time, there were 25,870,000 persons living on farms and 6,490,000 families or private households. In April 1944, an estimated 7,500,000 persons 14 years of age and over were employed in agriculture. The current farm population is probably at about the same level, while agricultural employment is slightly higher because of the early spring in many areas this year.

In estimating the conditions of full employment in the post-war period, most students of the problem assume that we shall need an agricultural labor force not much, if any, larger than that which we have currently. If full employment obtains, there is no reason to expect that any substantial increase in the farm population would occur, since the number of agricultural workers required to meet the total demand for farm products will be approximately the same as at present.

Please let me know if I can be of any further assistance to you.

Sincerely yours,

J. C. CAPT, *Director.*

German Atrocities

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a report from the Minneapolis Tribune of May 13, 1945, of a report by its executive editor, Mr. Gideon Seymour, on what he and other editors saw on their recent trip to Germany. He corroborates the conclu-

sions of our own congressional delegation and makes other observations regarding the nature of the Nazi movement which I believe are most significant:

"NAZI POLITICAL PRISONERS TREATED WORST"—SEYMOUR

Necessity for distinguishing between the three main types of German prison camps to get a valid appraisal of German treatment of prisoners was emphasized heavily Saturday by Gideon Seymour, executive editor of the Minneapolis Star-Journal and Tribune, in a public report at Minneapolis auditorium on his visit to the German camps.

Seymour, 1 of 18 American editors and publishers invited by the War Department to view conditions in the German camps, spoke under sponsorship of the Minneapolis Hospital council and Minneapolis Foreign Policy Association.

"American boys who were prisoners of the Germans will come home and say, yes; they were underfed; yes; they were often kicked and slapped and some were treated worse; but they will say they weren't victims of wholesale atrocities," Seymour explained.

POLITICAL PRISONERS HURT

He warned his audience: "Don't assume from this, then, that the so-called atrocity stories were false. For the wholesale atrocities were those committed against political prisoners in the concentration camps, not the war-prisoner camps.

The three types of camps, Seymour said, are those for prisoners of war, those for political prisoners, and others for the so-called "free laborers" recruited from invaded countries.

"All the prisoners of war were kept in special camps," he said. "We did not find a single American, British, or Russian soldier in the concentration camps we visited who were captured in uniform or on the battlefield.

FOOD CLAUSE IGNORED

"Germany had signed the Geneva Convention on war prisoners, which Britain and the United States had also signed, and it apparently made a pretense of living up to the rules of treatment of war prisoners."

The Germans, however, didn't feed our troops who were captured nearly as well as their own, as required of signers of the convention, Seymour added.

"High American officers told me that among the several thousand American troops liberated the average weight was about 100 pounds. Lots of the Americans told me they were slapped, kicked, and spit upon.

"Persons in the free labor camps received pretty good food and life wasn't too bad for them—probably not as bad in many cases as if they had stayed in their own countries."

These facts, Seymour said, may lead some people to question the veracity of the stories of atrocities, as well documented as those stories may be.

YOUNG BOYS HELD

Contrasting sharply with the two camps described, he continued, were the political prisoner camps, first established when the Nazis rose to power in 1933—for those the Germans called "trouble makers," boys of 8 and 10 years old, clergymen, and others of all types and descriptions.

Sifted from the maze of reports, much of it obviously false, and the unconfirmable reports, and combined with his first observations, Seymour said, are the stories every person must know—that and the basis on which the Nazis were able to perpetrate their crimes against humanity.

At Dachau, Seymour recounted, the group found the execution chamber disguised as a shower bath, where prisoners were told they were to go for baths before being given uniforms and assigned to barracks.

No one still alive in the camp when the Americans came ever had bathed there, he was told.

"Outside the execution chamber was a cheery reception room, done in white, with a stack of towels and small bars of soap in a corner—on a table still remained a vase for flowers.

"We went to the crematorium and looked behind it at the two embankments inside high walls where prisoners of high degree were executed in really formal style—by putting them on their knees, blindfolded, against the embankment, and shooting them in the back of the neck."

"TROUBLESOME" KILLED

In the infamous Buchenwald camp was another crematorium, Seymour continued, where prisoners were ordered for execution because of misbehavior or because they were troublesome.

"On a railroad sidetrack beside the Buchenwald camp were 29 open cars, like our railway coal cars, on the floors of which were scattered the bodies of the starved," he said. "Records show the Germans started moving 4,600 prisoners in the path of the advancing Allies and when the prisoners arrived a week later only 2,719 were alive."

In Buchenwald also Seymour and the others found iron hooks on a wall where prisoners were hanged by ropes tied to the back of their wrists.

Among the prisoners there were some 1,600 Polish clergymen and a smaller group of other nationalities.

Because the clergymen could do no work in most cases, Seymour said, they were used for experiments.

"One priest told me he and 177 others had been infected with malaria. Three died and the others were all left with the disease," Seymour related.

Others were starved deliberately to the point where they developed a disease which results from malnutrition, so the Germans could experiment in finding a cure for the disease.

"They never found the cure," Seymour said.

Hundreds of others, he was told authoritatively, were immersed in salt water at sea temperature to see how long they could remain there after various diets. The German said they were trying to find a cure for lesions which develop from the sustained immersion.

In some of the prison camps the Germans employed the worst criminals from regular penal institutions as cell-block leaders.

On one occasion Seyomur reported, a political prisoner was beaten to death by a cell-block leader for no other reason than that the latter wanted to impress the German guard in control of the section.

For the best evaluation on the degree to which the German people are responsible for nazism and what happened in the political prison camps, Seymour referred to the statement made to him and others in the group by General Eisenhower.

ORIGIN IN ARROGANCE

"At the bottom of it is the arrogance of the German people."

"I do not think for a moment," Seymour declared, "that the average German approved of what was going on in Buchenwald, Dachau, and the others.

"I do not think he knew about it. I think he would have been horrified if he had.

"But I do think the average German brought all over again from Hitler the proposition that Germany was the master race, that the German people had a right to push and trample others if they thought they could get way with it, and that Hitler built nazism on that foundation and could not have built it on any other.

"It was the un-Christian principle that one man is better than another because of the color of his skin or his racial origin. It was the un-American principle that all men are not created equal."

"On the Other Hand"

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GALLAGHER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask to include this article written by the distinguished columnist, Mr. Lowell Mellett, as published in the Washington Star, May 14:

"ON THE OTHER HAND"—IF HOOVER WAS GOOD, WRITER ARGUES, JONES-BOWLES TEAM EXCELLENT, INDEED

(By Lowell Mellett)

There are those now engaged in telling the American people what a terrible time we have had during this war; reminding us of how we have suffered, and seeking to convince us that this is all unnecessary, due solely to bad management. It is an easy line to take. The war period has been filled with irritations and discomforts. But—

For those who have not had the agonized suspense that goes with having children overseas in uniform, the awful shock of the news that loved ones have been killed or maimed, this has been a very easy war in most respects. It has been a period of prosperity. Business houses have done well, farmers have paid off mortgages, workers have received high wages, professional men have collected excellent fees.

We haven't had all the new cars or the gasoline we could have used. We haven't had all the meat we could have eaten. We haven't been able to replace worn-out refrigerators and vacuum cleaners. We've had to save more money than we wanted to save.

All this has been irritating, but it doesn't add up to national suffering. Look at the pictures in the papers and in the newsreels of liberated populations dragging themselves back to their homes—homes they may find leveled to the ground when they arrive. Read the official reports of mass starvation in other lands.

It hasn't happened here.

SHOULD BE THANKFUL

Don't listen to those who magnify our discomforts into real suffering. Be thankful for the vision of the man who elected to fight our enemies overseas rather than wait for their appearance on this side of the ocean, thankful that all our homes are intact as a consequence. Be thankful that he found competent men to handle the thankless problems of production, distribution, pricing, and rationing and so enabled us to have something close to normal living during the years when that was true of no other people on earth.

This prayer to the better instincts of the American people is offered after reading a typical appeal to our latent selfishness. The latter appeal is based on the usual text of bungling bureaucracy. President Truman is admonished to get rid of the "cracked machinery" bequeathed to him by President Roosevelt and is offered this interesting advice:

"If he does not know what to do he might take counsel with the man who concededly knows more about the problem of food production, distribution, pricing, and rationing than any other man—Mr. Herbert Hoover. That would be the sensible thing to do."

Suppose we agree that Mr. Hoover demonstrated this ability in the last war. Instead of making us dissatisfied with what has been done in the present war, it will make us positively proud. For we find that, although

relatively few farmers were drafted by the Army in the last war, food production increased only 5 percent from 1914 to 1919, whereas, despite the drafting of some millions of farmers in this war, food production increased 35 percent between 1939 and 1944. As for distribution, pricing, and rationing—well, we've certainly eaten better than we did during World War No. 1.

OBSCURED BY CLAMOR

The truth may be obscured now by the clamor of special interests, who are doing well, but want to do better—the packers, for example, who succeeded in so confusing Congress that they were granted increased subsidies a few weeks ago despite the fact that their average wartime profits, after paying taxes, have been more than double their profits in the comfortable years immediately preceding the war. The truth may be obscured now, but one day it will be understood that Marvin Jones and the farmers have made a proud record in food production and that Chester Bowles and his tens of thousands of unpaid assistants have made a proud record in distribution.

With the war in Europe at an end the pressure is on to wreck that record. The pressure comes from those who put their own profits ahead of the national interest and from those who seem honestly to believe that uncontrolled inflation would do the country no harm.

President Truman has made it clear that he is prepared to resist this pressure. Most of us have pledged ourselves, silently or outspokenly, to support him in his efforts to see the country through the present national crisis. He needs that support now.

Petroleum Administration for War

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks on Tuesday, March 6, 1945, I included a copy of a letter addressed by a constituent, Mr. Ernest C. Bratt, to the Attorney General of the United States under date of March 2, 1945.

The letter was written on behalf of the small oil companies doing business in wartime and finding themselves in an unfavorable position due to the operation of directive 59 and certain orders issued by the Petroleum Administration for War.

Under further leave to extend my remarks and at the request of those for whom Mr. Bratt speaks, I include at this point copies of a letter addressed to Mr. Bratt by the Assistant Attorney General under date of April 23, 1945, and reply by Mr. Bratt under date of April 28, 1945:

DEPARTMENT OF JUSTICE,
Washington, D. C., April 23, 1945.

Mr. E. C. BRATT,
Sterling Stations, Inc.,
Fitchburg, Mass.

DEAR SIR: Reference is made to your letter of April 17, 1945. Your letter of March 2, 1945, to the Attorney General was brought to the attention of the War Production Board, the Petroleum Administration for War, and the Defense Supplies Corporation.

I understand the position of Defense Supplies Corporation to be that it is required to administer its regulations in a manner consistent with the orders and directives of the Petroleum Administration. The War Production Board desired that your matter be reviewed by the Petroleum Administration for War and this Department. A detailed report has been received from the Petroleum Administration for War on April 11, last, which raises the following points with regard to your complaint.

It appears that during 1941 Sterling received all of its supplies from sources on the east coast, did not import any products from other areas and that its sole marketing activity was the retail sale of gasoline to the public through 26 service stations; that your importations began after the curtailment of supplies due to the shortage of tankers and alternate transportation facilities; that you closed 24 of your stations and became a broker of petroleum products, selling to original suppliers instead of to consumers; and that you would have been able to secure enough gasoline to meet the ration demand of your service stations, had you continued their operation, under the provisions of Petroleum Administrative Order No. 1.

It further appears that of the 12 applications filed by you for permits under PAO 5 between September 1943 and February 1945, seven were granted and five were denied because the areas of destination were adequately supplied; that your importations prior to September 1943 resulted in unscheduled movements of critically needed tank cars which could have been used more efficiently under Directive 59 shipping schedules and had the effect of causing additional supplies to be shipped into areas already equitably supplied; that prior to March 1, 1945, your importations of naphtha and natural gasoline for blending with motor fuel required the use of a considerable number of tank cars which could have been used more efficiently to supply other areas faced with critical shortages; and that PAO 5 was amended to include these blending agents in order to keep a balance of supply and distribution. The report states that you erroneously assume that the recent amendment of PAO 5 will eliminate importations of these blending agents and that permits will be granted in the event P. A. W. finds that your proposed importations meet the tests necessary for the administration of PAO 5. P. A. W. advises that it is unable to consider your applications for permits without your submission of information requested by it and that your application will be reconsidered whenever you supply the requested information.

P. A. W. maintains that its importations and shipping schedules promulgated under Directive 59 and PAO 5 are designed to assure that supplies are available as equitably as possible among all companies in all areas in accordance with current ration demand and so as not to permit a single company to import quantities which will give to it and to the area in which it operates unfair advantages over other companies and other areas.

It will be greatly appreciated if you will advise me further of any facts or information which should be considered in connection with this matter.

Very truly yours,

WENDELL BERGE,
Assistant Attorney General.

APRIL 28, 1945.

DEPARTMENT OF JUSTICE,
Washington, D. C.
(Attention Mr. Wendell Berge.)

DEAR MR. BERGE: We are in receipt of your letter of April 23, 1945, in connection with our complaint as contained in our letter to the Attorney General, dated March 2, 1945.

Frankly, we are greatly disappointed. Our letter was an appeal to the Department of Justice asking for relief from practices which we considered to be discriminatory, monopolistic, and detrimental to the war effort. We believed we had a right to expect from the Department of Justice full consideration of the issues we brought to its attention and for the benefit of all businessmen and companies in our own situation, that it would render a decision as to the validity of our charges, and moreover, take remedial action if such charges were sustained.

It appears, however, that the Department of Justice has simply taken the replies of the Petroleum Administration for War and the Defense Supplies Corporation and passed along to us excerpts therefrom as its reply. In this action we are of the opinion our charges have not been considered on their merits, hence, that your letter is not properly either an opinion as to validity of said charges or a denial that grounds for them exist.

For these reasons, we respectfully urge a reconsideration of the complaint and a thorough investigation of the combined operation of directive 59, Defense Supplies Corporation and the activities of Petroleum Administration for War which we charge have had the effect of changing directive 59 from a voluntary agreement to a compulsory order which is monopolistic in its effect on the whole petroleum industry.

We feel it incumbent upon us to make reply to your references to D. S. C. and P. A. W. answers to your queries. These follow:

D. S. C. states in effect that it is required to administer its regulations in a manner consistent with orders and directives of P. A. W. From its inception, until March 1, 1944, when it issued its amendment No. 5, D. S. C. did not consider such bilateral actions necessary.

Full proof of this is in the fact that claims were paid by D. S. C. on imports in direct violation of P. A. W. orders. Its regulation No. 1 was not written to cover this point

What took place to cause this change of procedure on the part of the responsible directors of D. S. C. and what is the documentary evidence to point out that such action is necessary or even premissible under the law which gave birth to Defense Supplies Corporation?

P. A. W. apparently defends its action in our case by stating we are doing business of a different nature than our normal pre-war business. Is such a statement germane to the issues? We are of contrary opinion. No oil company is doing precisely the same kind of business it did before the war. Our appeals to P. A. W. in New York and Washington (copies were furnished to you under dates of March 28 and April 6) clarify our position on this point.

We take exception to the statement that we "sell to original suppliers instead of to consumers." We sell to consumers and resellers of all kinds including such original suppliers as we can accommodate.

P. A. W. states that our rejected applications for permits to import were "denied because the areas of destination were adequately supplied." If there have been adequate supplies of gasoline and heating oils in the areas in which we operate, how can P. A. W. explain the persistent gasoline and heating oil shortages. These shortages exist while materials and the tank cars to transport it are available to us in district 3 but lack of P. A. W. permits prevent imports.

We cannot agree with the charge that tank cars we use can be "used more efficiently under directive 59 shipping schedules." Actually, it takes no longer for a tank car to reach our destinations than it does to reach terminals of original suppliers.

As to P. A. W. statements relative equitable distribution of supplies to all companies:

We reiterate, it seems that P. A. W. is more interested in protecting relative sales positions of original suppliers than in expediting imports to district 1. There is nothing in P. A. W.'s Petroleum Administrative Order No. 1 that guarantees equal distribution to secondaries. The provisions are so ambiguous that it is difficult to find any two suppliers using the same formula for distribution of either gasoline or heating oils.

We sincerely trust that a complete investigation will be made by the Department of Justice and would appreciate a statement to this effect.

Yours very truly,

STERLING STATIONS, INC.,
E. C. BRATT.

Subsidizing Our Competitors

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, subsidizing seems to be the order of the hour. Subsidizing at home and subsidizing abroad seem to have captured the thinking of some of the leaders in our Government. Many think that subsidizing will ultimately be the downfall of our American system of free enterprise. It is bad enough to subsidize at home. But what about subsidizing our alien and foreign competitors?

Mr. Speaker, I quote the following from an editorial appearing in the Daily Oklahoman, published at Oklahoma City, Okla., a leading Democratic newspaper of the Southwest, under the topic above indicated:

SUBSIDIZING OUR COMPETITORS

Is it the design of our official planners to compel American producers to pay taxes to subsidize foreign competitors to the point where those competitors will be strong enough to put the American producers out of business? Or is the financial help we are extending to foreign production an essential part of all out war and something that will be discontinued just as soon as the war has ended?

Under our foreign loan and rehabilitation program we have financed a steel plant in Brazil to compete effectively with American steel. We have financed the development of Mexican mines, which are outright competitors of our own mining industry. And, by the terms of the Bretton Woods agreement we are pledged to supply several billion dollars for world rehabilitation, a large part of which is intended to be world industrialization.

In the days when the A. A. A. was restricting cotton acreage the production of cotton increased enormously in Brazil. A congressional committee was told recently that cotton can be produced more cheaply in Brazil and Mexico than it can be in the United States. We lost a large part of the world's cotton market by the policies we practiced at home.

Unquestionably, Americans would be deeply disturbed if it should develop that foreign nations were promoting with their own money and resources a program of full industrialization. Of course, the success of such a program would curtail our export trade drastically, cut American employment seriously, and close many an American factory. But, apparently, foreign nations are not going to use their own money. It is to be supplied by the American Government after it has been taken from the American taxpayers. Surely, the Government will not make us pay for the weapons with whic hour alien competitors plan to cut our throats.

This business of helping the world will need a lot of revising as soon as the war has been won.

Old-Age Pensions—Address by Hon. Thomas J. Lane, of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following address delivered by me at a public meeting conducted by the Massachusetts Social Security Association, Inc., Sunday, May 13, 1945, at the Symphony Hall, Boston, Mass., on the subject of old-age pensions:

The Scripture says, "I am my brother's keeper." But too many nations and too many men have closed their minds and hearts against their fellow men and the world is paying a terrible price for that denial.

With the coming of the wealth-producing, labor-saving machine age, we thought that economic security would be guaranteed for all. The very reverse took place. We saw fantastic wealth piling up on one side and mass unemployment and destitution on the other. The false prosperity of the 1920's gave way to the want and despair of the 1930's, and all of us wondered why this should be; why millions should have little or no purchasing power in the richest nation the world has ever seen. Our whole economy was out of balance. The machine age had solved the problem of production, but, in turn, had raised the new and vexing problem of adequate distribution.

Our social thinking was lagging behind the development of machines. The new system was leading to a concentration of economic power, and the men who controlled that power had not learned that with power goes responsibility. Their eyes were dazzled by the pyramiding wealth in their hands. They did not care to see that the machines which were making profits for some were taking jobs away from others.

Greed—the one great danger to our material civilization—had taken the bit in its teeth and all of us were on the run-away ride to destruction. Economic tensions led to civil strife and tyranny in many countries. Greed had broken away from spiritual controls and the world was plunged into war—a war that destroyed human and material resources at a rate that threatened us with the complete ruin of our civilization.

As we look back a few years, it is ironic to note that some men in our own country objected strenuously to the proposal that $2,000,000,000 should be appropriated by the Federal Government for old-age pensions. They cried that it would lead to national bankruptcy. They resisted every effort to help our own people. Yet, when we became involved in war—a war which will cost us close to $300,000,000,000 to fight and win—these same men said not a word. Perhaps they now realize that we must protect in old age the men and women who labored to create our national wealth. Economic security in this country and every other country will serve to eliminate the causes of war. The cost for pensions now seems so trifling as compared with the cost of destructive war that we wonder why there remains any opposition to this investment in national well-being.

This is not a special interest that we favor, because the majority of people in our country, even the infants in the cradle, will reach old age, for the life span is ever lengthening. Age is entitled to freedom from want and worry. It is entitled to dividends from the investment of labor and skill which it has made through the years in the building of our Nation.

Private charity cannot do the job, and it must not try to do the job, for charity is repugnant to the dignity of American manhood. We cannot depend upon sons and daughters to support the aged, because youth has its own life to lead and its own homes to establish. Today we must think in terms of the Nation as a whole and in terms of mutual responsibilities. The aged have finished their life work. They deserve the security and serenity of work well done. It is the moral obligation of the Nation to fulfill its part of the implied contract so that the aged may have personal and economic peace in their declining years. To do less is to default on the men and women who have made this country strong, free, and prosperous.

The days of an expanding America are gone. No longer is it possible for a man to carve a home out of the wilderness and there live a self-sufficient, independent life. Furthermore, none of us would like to return to such a hard and primitive way of life. The machine age has brought us higher standards but at a price that we have not yet learned to pay. The price is cooperation. We are all interdependent. The health and wealth and happiness of any community, of any nation, is tied in with the welfare of its humblest citizens. Today we have learned that, in the economic senses, no nation can prosper half slave and half free.

Strangely enough, the United States was one of the last nations to provide security for the aged. In 1934 there were only three large countries which had failed to enact such protection. Those countries were India, China, and the United States. India and China are undeveloped countries while ours has the highest standard of living in the world. In spite of our vaunted progress, we had actually fallen behind the rest of the world in social and economic adjustments. It took the depression of the 1930's to reveal a dangerous weakness in our way of life.

The problem of old age in security has been created by our modern industrial system of mass production with its efficiency experts who try to make man, with his physical limitations, compete with tireless machines. This relentless competition reached such a stage a few years ago that a man over 40 found it difficult to get a job. He was considered burned out and unable to keep pace with the machine.

In this furious race for production and profits we were creating wealth for some and poverty for others. The Government, acting through the elected representatives of the people stepped in to correct these abuses. At first industry and capital fought against this adjustment with every weapon at their command. The basis for a pension system, inadequate though it was, came into being. Belatedly, the corporations began to see the light.

Already, the ghost of a needy old age has been laid for 2,000,000 American workers by the greatest corporate pension rush in history. In 1940 only about 1,000 corporations had pension plans. At present, over 6,000 such plans have been filed for Treasury approval, with more coming almost every day. Private industry may eventually pay aged workers a billion dollars each year. These annual payments are guaranteed either by

insurance company funds or guaranteed trusts.

The average Government payment to old couples ranges between $50 and $60 a month, enough to provide for the bare necessities of life. Additional contributions by employers spell the difference between comfort and misery.

One of the most unusual social security programs, both in scope and liberality, was started not long ago by Schenley Distillers. Schenley's pension plan, provided without cost to the employee, aims at assuring even $1,500-a-year workers a minimum retirement income of $1,200 after 30 years, with proportionate payments to workers with shorter periods of service. A 65-year-old married employee, for example, who has averaged $1,500 a year for 30 years gets $56.50 monthly from Social Security and $47 from the company, a total of $1,242 annually. Equally important, and contrary to most group life-insurance plans, an additional security measure started by this company, the employee who leaves the company can exchange his insurance for any cash which has been accumulated. He also has the choice of obtaining paid-up insurance or an ordinary life policy, or convert his policy into an annuity.

In connection with this the board chairman of the company has said: "What we've done is to concentrate on the actual needs of the lower-salaried worker. We set aside funds for the depreciation of machinery, why shouldn't we take care of the depreciation of men?" Pensions make it possible for workers to experience the full enjoyment of their later years. Pensioners are pursuing hobbies or operating small businesses which interest them. Worker benefits sponsored by employers demonstrate that American business is rapidly awakening to its responsibility, and its opportunity.

Why this wholesome change in the attitude of American business? I believe it was due to the educational activities of such groups as yours and the successful efforts of your representatives in Government to write social legislation into the law of the land.

American business is now cooperating in establishing a strong economic base for our national life but it cannot possibly do the job alone. Many millions of our citizens are not covered by pension plans, either of Government or of industry. Many more became aged before the country was shocked into the realization that provision must be made for them. Our aim today is to make old-age pensions all-embracing in scope and more liberal in allowance.

We believe this should be done not only as a reward for your life's work, not only to provide you with security, but for sound economic reasons as well. Industry and agriculture cannot thrive unless we have a maximum number of consumers to use the products of our fields and factories. Bare subsistence income is not enough. You must have sufficient purchasing power to stimulate our national economy, for the greater good of all. Inadequate distribution of purchasing power continues to be the bottleneck of our economic traffic jam. Enlarge the area of that purchasing power, increase its velocity, and we shall have the full flow of goods and services needed to promote prosperity.

The principle of old-age pensions or deferred wages, is a dignified and natural demand. Those entitled to it have given valuable service to society during their productive years. The Government spends large sums to subsidize business and agriculture. Surely our human resources have the same or better claim for assistance. The care of the aged must become the major responsibility of the Federal Government even before the war is completely won. The youth of our land are in favor of it. The millions of returning veterans will support it. The national welfare demands it in order to cushion the shock of reconversion to a peacetime economy where jobs will not be as plentiful as they are now.

George Washington said it first. During the Revolution he proposed half pay for life to the officers who served under him. Since that time it has become the fixed policy of our Government to pay pensions to the men who fought in our country's wars. We paid a total of $70,000,000 to the veterans of the Revolution; $46,000,000 after the War of 1812; $61,000,000 after the Mexican War; to the Union soldiers of the Civil War we have given nearly $8,000,000,000. We have spent over double this latter figure on veterans of the Spanish War, and World War No. 1. The figure for World War No. 2 will far exceed all of the foregoing put together. Now no one questions the right of veterans to these pensions even though some of these men saw no action, being in uniform for a mere 2 months at most. The point we do raise, however, is that men and women who have given a lifetime of constructive service to the Nation, helping to make her great and strong, are entitled to the same consideration.

The selfish but powerful few in our Nation cry out against old-age pensions. They would have us believe that the people as a whole could not stand the cost. They conveniently forget that the vast majority of people through social security taxes are paying part of the cost for their future old-age insurance. Our immediate problem concerns the minority who are now old and who never had the chance to come within the provisions of old-age insurance during their working days. For them, a straight and adequate pension is the only answer.

The most serious indictments against our civilization are the failures of our economic order to abolish unemployment and to provide an honorable retirement income for the aged.

Some people may point to other defects in our way of life such as its gross materialism; the flagrant disregard of ethical and religious standards and ideals; the appaling increase of crime and of mental disorders; the exploitation of one man by another; the low level of intellectual, cultural, and esthetic aspirations and, last but not least, the unequal and inequitable distribution of the Nation's wealth and the Nation's income.

And yet, in their gravity, in their immediate responsibility for human unhappiness, none of them are as revolting as our failure to abolish poverty, the proverty from which a substantial proportion of our population suffers always even in times of plenty and more acutely in times of economic depression.

Why is this so? There are a number of reasons. First, the lengthening span of life causes more old age; second, the earning period of life has been shortened relatively; third, children are less able to take care of their parents today; fourth, the passing of agriculture causes more dependence; fifth, the growing age of many firms calls attention to their aged employees.

It is estimated that in the sixteenth and seventeenth centuries the expectancy of life at birth in some parts of Europe was not more than from 21 to 26 years. In Massachusetts in 1789 the estimated expectancy was 35 years. No farther back than 1855 the average life span in the United States was about 40 years. By 1924 it had increased to 58 years, or a gain of nearly one-half in 70 years. In 1870, the persons in the United States aged 40 and over numbered 19.9 percent and in 1920 these numbered 26.8 percent of the total population. Thus there is the fact that our population is gradually aging.

This phenomenal increase in the average length of life has not been matched by a proportionate lengthening of the working period; in fact, the working period has been cut off at both ends. The spread of education and the decline of child labor are sending workers into industry at higher ages than in the past. On the other hand, the man over 50 having still a life expectancy of about 23 years, finds it increasingly difficult to make permanent peacetime connections again if he loses his job or to get a satisfactory job at all at decent wages. The modern, more exacting nature of many factory processes places a high premium on endurance and the agility of youth. Higher standards of efficiency established by managers, ever more watchful of costs and competitive advantages, have similar results. Standardization of production inevitably demands a swifter pace which produces greater nervous strain tending to wear out workmen more rapidly. Many friends of labor have recently urged that trade-union organizers stress this phase of the modern setting in order to induce unionization.

Standardization destroys the former premium on experience and skill. Each new invention and the introduction of each new machine diminishes the value of the old mechanic's experience and frequently renders it worthless. Henry Ford, in his autobiography, frequently discounts experience and even goes so far as to say that when a man becomes an expert he is fired and that the Ford car is made with unskilled labor. Of course this does not hold true for foundry work in the same degree. The fact remains that the great majority of jobs at Ford's can be learned in a few hours or a few days. This applies to all other great industries as well. During this war we have seen men and women by the millions go into war plants and shipyards, leaving offices and homes to do mechanical work they had never touched before.

Children are less able to give support today due to the late marriage of their parents compared with the older custom, and the resultant smaller families. These children, marrying late in their turn, may be expected to be in the midst of rearing their own families just at the time when their parents are in need of aid. Furthermore, family ties having largely broken down and many of our city dwellers being forced to live in small and confined apartments or flats, the aged wage earner is no longer a welcome burden even to his own children.

Due to the change from agriculture to urban industrialism, larger numbers of the population are wage earners and renters, while a smaller percentage are farmers, small shopkeepers, and home owners. In the agricultural period the aging farmer was likely to find both a home and a livelihood on the farm which he had acquired and improved. The industrial era has crowded men into the cities where housing problems are acute and the cost of real estate makes home ownership difficult for the average workman. The percentage of those engaged in agricultural pursuits declined from 44.4 percent of the total population gainfully employed in 1880 to 26.3 percent in 1920.

The growing tendency toward celibacy, including the great increase in divorces is leaving an increasing number of people without support in old age.

That society has a duty to care for its needy aged is being less and less questioned. Mr. Epstein, after a careful study of the problem, concludes that "the underlying causes of old-age dependency today lie outside the control of the individual." The true causes he finds to be "industrial superannuation, waning earning power, sickness, industrial accidents, unemployment, inadequate wages, industrial disputes, and business and banking failures." Thus old-age dependency is caused by our social and economic order, and the society which has created that order must protect the aged from its unfortunate consequences.

There are now in existence in the United States two main types of Government old-age pensions—the "privilege" type and the "charity" type. The privilege type is represented by the pensions of certain public em-

ployees—teachers, firemen, policemen; in some States judges; Federal judges, postal clerks, Army officers, veterans and their widows, widows of former Presidents. There is no stigma attached to receipt of these pensions. The larger they are the more honorable they are.

The general old-age pension laws of the States for other than public employees are of the charity type. Timid and sensitive persons who most need aid are prone to suffer privation and hardship rather than ask for it. The system is expensive to administer, requiring a large force to check on applicants and their children.

The appearance of both the privileged and the charity type of pension is a mockery in a democratic nation. The granting of full pay to our high-salaried Federal judges on their retirement after 10 years of service at the age of 70 smacks of the special favors of the disappearing monarchies of Europe. The patronizing gesture of providing a pittance to the proved poor intensifies the general impression of class legislation and class distinctions. It is absurd to assume that the ordinary citizens of the Nation are capable of providing for their old age in comparison with the luxurious old-age pensions provided for these well-paid public servants.

Our real need is not merely a pension for the absolute poor; it is for a minimum of security for all, rich and poor. It is for the cheapest possible old-age insurance, not only for the person who has not a cent saved, or who has lost every penny he had, but also for the person who has a little home and wants to spend the rest of his life in it; yes, even for the person who has today a comfortable income.

To send a monthly check to all over a certain age is much simpler than to investigate need. It is certainly much more democratic, and takes the curse of charity off the gift to those who are in actual need of it.

In the establishment of an old-age security service for all, regardless of present wealth or poverty, we have a precedent in the service which has been set up for youth security. There was a time when schools were private and only those with means could obtain schooling. Then we established a public-school system, primarily for the benefit of those who otherwise could not attend school. But we did not shut the rich out of the public schools. We did not say to them, "If you have as much as $3,000 worth of property you must pay for your child's schooling. To get your child into the public schools, you must give proof of poverty."

There are still private schools for the rich who want to patronize them. But with all these advantages, the rich are not deprived of the opportunity to enjoy with the poor the minimum standards of training provided by the public school which is supported out of public funds.

Accident compensation for workmen is another illustration of equal treatment for rich and poor. An injured employee may be a well-to-do man; he may own a good home. That makes no difference under the workman's compensation laws.

If it is reasonable to establish educational security for all youth, and to establish accident compensation for all workers, in both cases disregarding the financial status of the insured, it is certainly not unreasonable to advocate a system of pensions which will safeguard the old age of every citizen, regardless of his financial status.

The old-age insurance provided by Government should, however, be the same for all. Democratic government should concern itself, not with providing special privileges for the few but with guaranteeing minimum safety and comfort for all.

At the present time we are sending billions of dollars' worth of food, clothing, and the necessities of life to help people all over the world, but we have done little or nothing to broaden the base and increase the payments of pensions to our aged at home.

It strikes me that if the United States is to play her proper role in world affairs she must make certain that she is strong at home before she goes forth to help strangers. Of course, we have a responsibility to the world, but common sense says that our first duty is to our own people. Only if our own social and economic system is strong can we hope to help others.

Many people say that after the war we shall extend the Social Security Act to embrace every person in this country, but I say the time to overhaul our makeshift old-age pension system is now. As soon as the war with Japan is over we shall be faced with a host of domestic problems, and in the ensuing legislative tangle and the clamors for priority the cause of old-age pensions might suffer.

With the coming of peace this Nation will have to start all over again. Youth coming up from the schools will want to find a place in life. Millions of veterans will come back to compete for jobs in the labor market. War workers will have to make adjustments. What is to become of the aged unless we retire them now, and honorably, on a pension that brings security and dignity for the rest of their years.

Out of all the groups on the home front during the agony of this war, the aged have suffered most severely. Their income, small at best, has been further shrinkened by the increase in the cost of living. The price index has gone up 26 percent, while pension rates have remained fixed. Each dollar of pension money can now buy only 74 cents worth of goods and services. The truth of the matter is your pensions have decreased.

I mention this fact to stir you to greater efforts. At this moment we have no guarantee that prices may not go even higher. No pension plan is fair or just that fails to compensate for the increase in the cost of necessities.

This, then, is all the more reason why we must have more generous pensions and without delay—for your right to security and as a cornerstone for economic stability as our Nation goes forward to solve the problems of peace and recovery.

Mr. Vandenberg's Role

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun, Baltimore, Md., Tuesday, May 15, 1945:

MR. VANDENBERG'S ROLE

Mr. Roosevelt's decision to make Senator VANDENBERG a member of the United States delegation to the San Francisco Conference and Senator VANDENBERG's decision to accept the appointment have already yielded and are continuing to yield large returns to the people of this country.

There were, of course, good political reasons for the selection of the Michigan Senator. Leaving out of account the question of his ability, it was clearly important to have an outstanding Republican Senator on the delegation. On him would fall a large part of the responsibility of winning the necessary Republican votes for an undertaking for which, in the nature of things, a Democratic President could claim a large share of the credit. There was no secret about this aspect of the Vandenberg appointment.

As matters have transpired, Senator VANDENBERG has come to be recognized as one of the strongest and most influential men at the Conference. He has been more than a Republican willing to go along. He has been a positive force in the resolution of the almost innumerable difficulties which the conferees have faced. It is not too much to say that, in addition to raising almost single-handed the moral level of the present undertaking, he has contributed much of the necessary firmness and decision to the American delegation.

His first achievement along this line is well known. He called for and secured the inclusion in the charter's list of objectives the concepts of justice and international law. It is true that these are vague terms, or, if not vague, that they involve varying definitions. What is justice to an American may not be justice to a Russian. But the fact remains that the common effort to define these terms must now be made. Out of this common effort a common principle must finally emerge. The commitment to agree on such a principle has been given.

But Senator VANDENBERG'S effort has gone beyond this insistence upon including guiding principles in the charter. He has displayed remarkable gifts as a tough and resilient negotiator. The most recent example of his skill in this wearing business came to light over the week end in the matter of fitting regional agreements such as the act of Chapultepec into the world-wide organization. There were profound differences of opinion between the British and American delegations and a certain natural suspicion among the representatives of the Latin-American countries. The latter naturally regard the act as their chief bulwark against aggression from within and without and they hesitate to make its application subject to the sanction of an untried and perhaps overburdened council.

The debate raged for days and on more than one occasion tempers were in evidence. The American advisers, especially Mr. John Foster Dulles, finally worked out a formula which seemed to meet the issue. But the negotiators were tired and worn out, and there was a certain tendency to yield where yielding was perhaps not necessary.

It was in this juncture that the toughness and resiliency of Senator VANDENBERG displayed itself. It was he who carried the burden of the argument, he who stood firm when firmness was essential. His attitude gave lift and spirit to all the negotiators, and before the long meeting was over the essence of the proposal as described in the news columns had been generally accepted.

Such achievements as this cannot, naturally, command headlines. The man responsible for them is prevented, by the nature of the undertaking, from boasting about what he has done. Mr. Hull, as Secretary of State, was a master of this kind of negotiation, but because so few had seen the accomplishment or understood the manner in which victory was achieved, it was often impossible to portray to the people of the country precisely what had happened. So it has been with Mr. VANDENBERG in the present instance. Only time and the work of the historians can finally make a fair estimate of his contribution.

But we can now see deeply enough to know that a rugged and determined character lies beneath the jolly affability of this American politician, and that his stature has now increased to the point where the word statesman is not too large for him.

Foreign Trade and Shipping Report

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith an article How Trade Can Expand, by Merlo Pusey, on the Sixth Report of the Special House Committee on Post-War Economic Policy and Planning, which appeared in the Washington Post of May 15, 1945:

COLMER REPORT

Hope for development of a healthy foreign trade in the decade ahead of us has reached a new peak with the issuance of the Colmer committee's report on post-war foreign economic policy. The report is unanimous. That in itself suggests the approach of the millennium. For this Committee on Post-War Economic Policy and Planning is composed of 10 Democrats and 8 Republicans. It is the first time within my memory that such a forward-looking report on this subject has emerged from Congress with bipartisan support.

Can it be that a new common ground for a progressive foreign economic policy has been found? Certainly our efforts at San Francisco to create a new center of world power calls for a worldwide approach to economic problems. The Nation is now thoroughly committed to the one-world idea. Peace and world order have become the responsibility of all nations acting together. Only one economic policy is consistent with this undertaking and that is a policy of expanding international commerce. We cannot move politically in one direction and economically in another without tangling our objectives and inviting chaos.

The Colmer report is not blunt enough to say so, but it clearly shows that we have not had a sound foreign trade policy since World War No. 1. In the twenties we made foreign loans on a large scale and sharply raised our own tariffs. In the thirties we lowered our tariffs, while withholding foreign loans and making it otherwise difficult for commerce to flourish. Both policies were products of isolationist thinking.

Judged by the results obtained, the policy of the twenties was much more successful than that of the thirties. Take, for example, the 4-year periods at the end of the two decades. Exports from 1926 to 1930 were much greater than from 1936 to 1940 and imports were not far from being twice as great in the earlier period. The clear implication is that the trade agreements in effect in the pre-war years did not offset the other impediments that had gotten in the way of foreign trade.

"The disturbing aspect of our foreign lending," says the Colmer report, "was not so much its magnitude during the twenties as its sudden cessation in 1930." We continued to be a creditor nation. Yet we shipped more goods abroad than we bought abroad. We took capital from other countries at the rate of $500,000,000 a year. We drained away their gold and thus contributed to the world's monetary chaos. "Our record in the thirties," says the committee, "can hardly be described as reflecting anything but a temporary, and in some respects harmful, expedient."

At the same time, we artificially raised agricultural prices, thus making it more difficult to trade with other countries. Superimposed upon our isolationist recovery efforts of the thirties, the reciprocal trade agreements were necessarily disappointing in results. There is as little to be gained from dividing static markets with foreign competitors as there is from dividing existing wealth among citizens. The chief hope of advancing prosperity lies in creation of new markets and new wealth.

This is the approach which the Colmer committee now suggests. It wants to see more foreign lending for the development of industries in other countries. New industries in Brazil, China, Mexico, and India will lift the purchasing power of their people and make them better customers. There may be some lingering fears that industrialization of nations that are backward in this respect may cut off exports from this country. But that is a narrow and discredited theory surviving from the era of exploitation in foreign trade.

That theory is disproved by our own experience. Great Britain fought industrialization of the United States because she could see in it only competition for her own industries. Actually, industrialization here brought the British markets they had never previously dreamed of, because that industrialization made our people prosperous. In the years ahead industrialization can do for the world what it has done for the United States.

We have a great interest in promoting this policy because world prosperity will mean prosperity for us. "As the incomes of other countries are increased by development programs," the Colmer committee says, "our exports to those countries will likewise increase." And that will be true in spite of the tariffs which many countries will find necessary to impose to protect their infant industries.

It is true that foreign lending came to be regarded in the thirties as a way of throwing money away. Some Americans had lost their shirts. But this was largely because many foolish loans had been made for wholly unproductive purposes. As a whole our foreign lending between the two wars appears to have been quite profitable. Indeed, the Department of Commerce estimates the amount Americans invested in other countries during that period at $13,400,000,000 and the amount of income received from those investments at $12,300,000,000. To this latter figure must be added the value of foreign investments in 1940, estimated at nine and eight-tenths billions. In short, we put into foreign investments thirteen and four-tenths billions and got out twenty-two and one-tenth in spite of defaults and depression.

If we intend to go forward with the one-world idea, lending for industrial advancement in other countries will have to be stepped up after the war. We shall have to seek an expanding economy on a world basis. Fit into that picture, the reduction of tariffs becomes a constructive aid to prosperity and not merely a matter of horse trading over increasingly restrictive markets.

Wisconsin's Milk Production

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following table is official evidence of Wisconsin's contribution to the national milk production and the dairy war-food program:

Total milk production

WISCONSIN

[Million pounds]

	1935	1936	1937	1938	1939	1940	1941	1942	1943	1944
January	681	732	780	768	803	849	921	1,027	1,002	1,009
February	666	735	778	773	798	881	903	1,031	1,010	1,070
March	798	909	957	954	989	1,046	1,101	1,263	1,250	1,256
April	908	997	1,027	1,060	1,053	1,144	1,227	1,357	1,336	1,358
May	1,193	1,277	1,280	1,354	1,352	1,364	1,560	1,671	1,613	1,662
June	1,367	1,436	1,433	1,416	1,461	1,485	1,544	1,620	1,719	1,667
July	1,236	1,167	1,225	1,253	1,242	1,310	1,366	1,412	1,486	1,481
August	1,080	965	989	1,102	1,053	1,124	1,198	1,239	1,239	1,253
September	911	957	814	916	906	970	1,033	1,006	1,059	1,050
October	781	964	763	859	831	900	991	929	909	983
November	629	741	641	694	715	758	854	800	803	870
December	671	718	691	713	770	834	927	884	908	973
Total	10,921	11,598	11,378	11,862	11,973	12,665	13,625	14,239	14,334	14,635
United States production	101,205	102,410	101,908	105,807	106,792	109,510	115,498	119,240	118,140	118,952

Wisconsin produces nearly one-eighth of the milk of the Nation. Wisconsin's milk is war milk since a large percentage of its milk is diverted into manufactured dairy products used in the war dairy-food program, and a comparatively small amount of its annual production is consumed as fluid milk. Wisconsin produces over one-half the cheese, nearly one-third of the evaporated milk, and over one-third of the powdered whole milk of the Nation. These are all war foods.

Wisconsin has increased its milk production every year, even when the production in other dairy States was being reduced, and when the national production was being reduced. You will note that of the increase in national milk production of 1944 over 1943 that Wisconsin alone accounted for over one-third of the increase in the Nation.

This miracle of milk production has been performed in spite of all the senseless persecutions and prosecutions by the O. P. A., and in spite of attitudes on the part of the War Food Administration that have harmed the dairy program.

If the dairymen of the United States had increased their milk production the same as Wisconsin dairymen have increased their production, the national milk goal of 120,000,000,000 pounds would have been attained. Wisconsin's milk production would have been further increased in amount by an additional 10 to 20 percent if it had not been for the unwise persecutions, prosecutions, and machinations of the O. P. A. and the silly, senseless rulings of the political W. F. A. At this late hour $1,300,000 is included in the present agriculture bill to hire a few hundred more bureaucrats

to promote the rationing of cream and milk. The products made from milk are war products and have the O. P. A. for master, while the milk and cream boys with a home market have dodged the O. P. A., and at this late hour have come under the wing of the W. F. A. for at least gentle consideration.

Having bureaucrats call our constituents to put pressure on us to keep us from following our honest convictions is not in keeping with constructive legislative processes and should be discontinued.

McIntire Knew Better

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, there has been considerable talk recently among Members of Congress and others concerning the advisability of requiring candidates for the high office of President of the United States to submit to a rigid physical examination. The views of those with whom I have discussed the subject vary considerably. But there is somewhat of a prevailing opinion that since the President of the United States is ex officio Commander in Chief of the Army and Navy, and since all Army and Navy personnel are required to undergo examinations periodically, the head of the armed forces should likewise be required to pass satisfactorily some such physical tests. Some argue that the passing of such physical examinations should be a prerequisite qualification for each candidate for President.

As further evidence of the thinking of the people on this subject, I am pleased to quote the following editorial from the Tulsa Daily Tribune of April 30, 1945:

Mr. George Sokolsky is a reporter whose opinions are always respected because he is reliable. Recently he made a very pertinent suggestion that a joint committee of the Congress of the United States and the American Medical Association establish a fixed rule for the official physician attending every President.

In support of this move he suggested that the illness of our late President, Mr. Roosevelt, be studied.

It is a common practice for corporations to require their officers to undergo periodic medical inspection, just as the Army and Navy require regular medical and physical examinations of our officers. We don't want a sick officer to get in the front of battle.

Precisely so with the President of the United States. The people have a right to know the true condition of their President. Above all, they have a right to know the truth, and not be misled by falsehoods, when a President is asking the people to retain him in office.

There never was a political convention in American history like the Democratic Convention in Chicago last summer. The whole concern of that convention was who shall be Vice President? In selecting the Vice President every delegate knew he was selecting the next President.

Although our late President's official physician, Vice Admiral McIntire, assured the delegates and the American people that Mr. Roosevelt was in fine physical condition and fully able to carry the burdens of his high office for another 4-year term, the delegates suspected that Dr. McIntire was not telling the truth. Dr. McIntire was not telling the truth, and now it is completely established that Dr. McIntire knew he was not telling the truth. Dr. McIntire lied to the American people. Not a becoming performance.

Dr. McIntire was a servant of the American people. He was paid by the American people, having taken his oath to be true to the people. Had he been true to his trust, he would have told the people the truth. He knew in midsummer, and in October he knew absolutely, the President could not live more than a matter of weeks after his inauguration.

The American people have a right to know the physical condition of the candidates they are asked to vote for. The suggestion is altogether proper. Congress should provide that a soldier in uniform, acting as the President's physician, must tell the people the truth about the President when he asks the people for another 4 years in office.

McGregor Favors Increase for Postal Employees Under H. R. 3035

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. McGREGOR. Mr. Speaker, I certainly favor H. R. 3035, a new bill to replace the original measure, H. R. 2071. This legislation grants a permanent increase in pay for postal carriers and clerks and has been long overdue. There is no branch of our Federal Government which has worked harder than this group and additional compensation should be given them by this Congress.

This legislation, in a small way, merely provides tardy recognition for the fine, efficient service rendered by these faithful workers.

I sincerely hope this bill, H. R. 3035, will be speedily enacted into a law.

Food Muddle—How It Grew

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

NOTHING CAN BE MORE IMPORTANT TO AMERICA AND TO THE WORLD THAN FOOD—A FEW MONTHS AGO WASHINGTON WAS PROMISING US STUPENDOUS SURPLUSES TO BE—TODAY THE HOUSEWIFE FINDS THE GROCER'S SHELVES ALMOST EMPTY—HERE ARE SOME REASONS

Mr. GRANT of Indiana. Mr. Speaker, there is no more important problem confronting the American people today than the befuddled food situation. We have seen an example of the old adage that "too many cooks spoil the broth." A myriad of governmental agencies, working at cross-purposes and often with more than the usual amount of red tape, have carried us to today's predicament.

The Nation's Business for May carried a very thorough analysis of this situation by that well-known writer, Lawrence Sullivan. His article follows:

FOOD MUDDLE—HOW IT GREW

(By Lawrence Sullivan)

For millions of Americans, 1945 will be a year of belt tightening.

If the weather is favorable, we may have a bumper food crop—the seventh in a row—but even so, there will be barely enough food for our domestic needs, military needs, and relief commitments. Should a severe drought hit the country, a disastrous food shortage could result.

Many basic foods will be short. The supply of most secondary items will be spotty. People will have to take what they can get, and hope their victory gardens will help see them through. Until October we are going to have to accentuate the broccoli.

The consumer recalls that only last summer many foods were taken off the ration list, and point values were reduced on others. Washington anticipated at the time that the war in Europe would be over before Christmas. The air waves crackled with alarms of stupendous food surplusess to be. Congress was asked to set up a price-support revolving fund of $2,000,000,000 to prevent a collapse of farm prices.

That was last summer. The war, of course, did not end before Christmas. This miscalculation is one root of today's food difficulties. O P. A. reports:

"Civilian supplies of meats, sugar, butter, canned fruits and vegetables are at the lowest point since the war began."

As Congress proceeds with its food-shortage inquiry, the consumer finds himself confused by apparently conflicting official figures. So he wants to know, "Is there a food shortage, a food muddle—or a food scandal?" And no wonder.

The Department of Agriculture calculates our food supply for the year as adequate, but does so by a strange statistical device. A missing pound of butter or beef, the Department offsets with a pound of cabbage—and makes the grand totals look encouraging.

"But," the Department's forecasters hasten to point out, "supplies of some of the most popular foods will continue smaller than the average consumption in the pre-war years 1935–39 on a per capita basis."

Those were the lamentable years, Congress notes, when advocates of "the more abundant life" were telling the Nation that one-third of the population was "ill fed, ill clothed, and ill housed."

TONS OF POOR NUTRITION

In tonnage (not in nutritional value, understand) the Department's figures show that we will produce 35 percent more food this year than the average for the years 1935-39. Included in this predicted tonnage are tremendous increases in cabbage, kale, carrots, peanuts, and soybeans. This increase in total farm production as compared with the pre-war years thus vindicates, as it were, the Government's various price-support programs. But the same official report tells us:

"Supplies of all meats, chicken, butter, lard, potatoes, sweetpotatoes, dry beans, some fresh vegetables, deciduous fruits, and sugar probably will be reduced from the 1944 levels."

In butter, for example, civilians will get an estimated 10.5 pounds per capita compared with 16.7 pounds per year in the 5 pre-war years.

Civilian supplies of beef are estimated at 52 pounds per capita this year against a prewar average of 54.8 pounds; total milk, 770 pounds against 801; total fats and oils, including butter, 41.9 pounds against 48; sugar, 78 pounds against 96.5.

The Department of Agriculture knows you cannot substitute peanuts and spinach for beefsteak and butter. So, in its official outlook report, it warns:

"When the quantities of food expected to be available to civilians in 1945 are translated in nutritive value, the number of calories appears to be down about 4 percent from 1944."

Here is one small instance of how guessing wrong about the war's end affected the food situation: In the spring of '44—on the expectation that the fighting in Europe would be over that year—the War Food Administration signaled United States farmers to curtail hog production 20 percent. When the figures were in, it turned out that the reduction was actually about 34 percent, leaving us with plenty of hog feed but not enough hogs.

This illustrates, incidentally, what can happen when price is eliminated as the controller of supply. The parity technicians in Washington may hit the supply-demand squarely on the nose, but cannot persuade the farmers or the hogs to go by slide-rule calculations.

The principal factor in muddling our food problem, however, was not the wrong guess about when the European war would end, but was—and still is—short-sighted management and lack of coordination on the part of the various Federal agencies which are supposed to be responsible for the production and distribution of the Nation's food.

Take a look at the War Food Administration, by way of example. Because of its tremendous inventories, W. F. A. sometimes holds great stores of food until it is unfit for human consumption. In January of this year, Food Administrator Marvin Jones announced the release of 20,000,000 pounds of off-condition prime steam lard. The entire consignment went to soap manufacturers.

This release of spoiled lard was announced January 17. Next day, O. P. A. ordered the resumption of lard rationing at retail, effective January 22. Lard had been removed from the ration list as of March 3, 1944. It was returned to the ration list due to increased military and export commitments. Since January the Government has been virtually commandeering about 60 percent of all lard production, leaving only about 40 percent for civilian needs.

Congress has found it difficult to get at the official truth concerning food stock piles and spoilage. W. F. A. reported, February 25, 1944, that it had on hand only 380,873 pounds of food in storage since 1941, or earlier. But an on-the-spot survey by the Warehouse Inspection Division between January and April 1944 "discovered a total of 28,619,710 pounds of various food products that were packed or entered in storage in 1941"—more than 75 times as much as W. F. A. reported in February.

"This situation," the Mead committee informed the Senate, "indicates, first, that records on food stocks were incomplete and inaccurate; second, that sufficient care was not taken to use older stocks first; third, that more food had been purchased than was needed."

INVENTORIES SLIGHTLY REDUCED

Following this sharp criticism from the Senate, W. F. A. revised its inventory system, reducing total stocks from $852,000,000 in April 1943 to $477,000,000 on December 1, 1944. Of this latter figure, however, the committee found "35 percent, or $168,000,000, represents shell, dried and frozen eggs." This inventory of 504,000,000 dozen was equal to about 48 eggs for every person in the country.

Most of these eggs were acquired in the Government's price-support program. In powdered eggs alone, as of December 1944 the Mead committee reported a supply on hand "sufficient for about 18 months for the Army and for all our allies."

By overpricing eggs in relation to other farm products, the Government is calling out millions of dozens more eggs every month than it can dispose of under lend-lease. At the same time, chickens are underpriced in relation to eggs, and W. F. A. now has commandeered all chicken meat offered, both fresh and canned, to supply basic military requisitions.

Another example: February 17, W. F. A. increased the Goverment set-aside on canned orange juice from 30 percent to 56 percent; but, March 12, another section of W. F. A. offered for sale 11,566 cases of 1943 pack orange juice, "the balance of a larger amount previously offered for sale."

This is a specific instance of Government clearance of 2-year-old surplus food items, to make way for even larger requisitions on the new pack. It shows how faulty management perpetuates food shortages—by carrying them over from year to year as W. F. A. inventory.

Other surplus food items offered for sale by W. F. A. in February and March this year included: 728,850 cases of canned peas from the '42 and '43 packs; 100,000 cases of evaporated milk packed in '42; 46,139 cases of pork and beans from the '42 pack; 10,000,000 pounds of frozen eggs; 400,000 cases of green beans packed in '42; 2,778 cases of fancy-grade tomato juice from the '42 pack; 15,600 cases of canned tomatoes from the '41, '42, and '43 packs; 1,523,797 pounds of shortening.

When Congress demanded an itemized inventory of W. F. A. stocks, it learned that as of December 12, 1944, Government storehouses still held 12,858,339 pounds of canned and dried foods from the '41 crop. The items had been continuously in Government storage for 3 years.

As of the same date, combined Government holdings of '42 packs were 57,000,000 pounds, plus 325,000,000 pounds still on hand from the '43 pack—when the '44 pack already had been completed. The report also disclosed 400,000 cases of evaporated milk purchased in 1941 and still in Government storage, "unfit for human consumption."

On the floor of the House on March 21, Representative CHARLES A. PLUMLEY, of Vermont, pointed out:

"W. F. A. has been trying since last December to dispose of 9,600,000 No. 2 cans of string beans of the '42 and '43 packs. Meanwhile, a No. 2 can of string beans is still rationed at 10 blue points a can. * * * There are some things about this food situation which smell worse than spoiled tomatoes, rancid lard, and carloads of rotten potatoes."

March 12, W. F. A. offered for sale 217,360 pounds of dried whole milk "stored in Philadelphia." The next day, W. F. A. increased the set-aside on spray process dried milk from 50 to 75 percent of production for April and May. Here's surplus milk in Government storage at Philadelphia and a simultaneous shortage in Washington.

Without going further, it is apparent that W. F. A. has made mistakes. Under pressure of wartime, that could happen in any Government agency, and is to be expected.

The trouble is, however, that in the food field we have no real program. There has never been in Washington anyone with authority to map such a program and see it through.

Instead of having one responsible agency with a definite aim—making occasional mistakes as it goes along, and being in a position to correct its mistakes, always keeping in mind the ultimate goal—we have nine agencies working at cross purposes in an attempt to guide our production and distribution of food:

1. The Department of Agriculture still administers basic production aids, through county agents and local crop-adjustment committees.

2. The War Food Administration allocates all basic foods between civilian, military, and lend-lease claims.

3. The Commodity Credit Corporation finances all Government price-support programs, stores surplus holdings, estimates annual requirements.

4. The Defense Supplies Corporation administers distribution subsidies on butter, flour, meats, sugar, and several lesser commodities.

5. The Foreign Economic Administration handles all lend-lease transactions.

LEND-LEASE GROCERY BASKET

In January our lend-lease shipments of food were equivalent to a month's supply at American standards for 6,500,000 persons. January's lend-lease shipments were 597,600,000 pounds compared with 391,000,000 pounds in December 1944.

Some of the major items in the lend-lease food total for January:

	Pounds
Butter and milk products	65,103,955
Meats	185,539,241
Fats and oils	36,577,906
Fruits and vegetables	65,243,350
Grain products	157,601,186
Sugar	55,795,508
Food specialties	24,467,973
Cigarettes	731,124

In addition to lend-lease shipments we also consigned foods abroad through U. N. R. R. A., the American Red Cross, and other relief organizations. Other consignments from W. F. A. stocks went to Alaska, the Coordinator of Inter-American Affairs, the British Colony Mission in Washington, the Netherlands Purchasing Commission, Greek War Relief, and the Rubber Reserve Corporation. None of these items is included in the published lend-lease totals.

6. The Office of Price Administration fixes wholesale and retail ceilings but is without authority to hold basic farm prices within its retail ceilings.

7. The War Production Board allocates fertilizers and basic materials for farm machinery, trucks, and equipment, but has no control over the type of production which may be called for with the machinery made available.

8. The War Manpower Commission and Selective Service have full authority over farm manpower, the crux of the production problem.

9. Finally, Rural Resettlement Administration and Rural Electrification Authority are fussing around the fringes of every farm-production problem.

In addition, through special treaty arrangements, the State Department has a voice in fixing our annual supply of sugar and coffee.

When the war came a demand arose for a centralized food administration to bring together all aspects of national food management. A War Food Administration was created by Presidential executive order early in 1942, but that agency has been through reorganization upheavals four times in 3 years.

Never has there been a central agency to say—

"Next year we will need so much food. We shall get it by this production, plus these imports; with this much fertilizer, so much farm machinery, so many trucks, and this much manpower."

In 1944, the Department of Agriculture estimates, 21 percent of our food production was diverted from normal civilian channels. In round numbers, 90 percent of our population got about 79 percent of the food supply. Our military forces got 14 percent, and the remaining 7 percent went to lend-lease and other exports.

This year, military needs are considerably larger, first because we are feeding about 1,000,000 more prisoners of war; second, because food shipments are increasing weekly to provide subsistence diets in the liberated areas; third, because we are building up food stock piles for expanded operations in the Pacific.

In the face of these increasing overseas demands, our food production is smaller this year than last, limited sharply by manpower, farm machinery, and fertilizers. Distribution is restricted by transportation difficulties, a shortage of farm trucks, and maladjustments in O. P. A. ceiling prices.

Facing the most critical planting season of the entire war, United States farmers began 1945 with less labor than at any time since the Department of Agriculture began keeping these records, 21 years ago. Total farm employment in March was reported at 8,400,000, including all family workers—many of them older men and women—about 150,000 fewer than a year earlier, and about 2,000,000 below the pre-war average.

REPAIR PARTS SCARCE AT HOME

Next to manpower, machinery, and fertilizers, trucks are the farmer's biggest headache. Because repair parts are hard to get, a disabled truck may be out of service 4 to 6 weeks. W. P. B. reports that, since auto rationing began, March 9, 1942, only 375,401 trucks have been released for civilian allocation here at home. Farmers, of course, got only a few of these. In the same 3 years, 1942–44, Foreign Economic Administration reported lend-lease shipments of 355,059 trucks to Russia alone. Several hundred thousand additional trucks went to Great Britain, France, Australia, India, China, and Africa.

Moving from the fields of primary production, we encounter a new set of Government-made bottlenecks in food distribution, principally because of artificial price dislocations flowing from conflicting Federal orders.

As compared with August 1939, average food prices to city consumers had advanced 46 percent by February this year. Government price-support programs have hiked all farm prices, while O. P. A. ceilings have sought to hold the 1942 line at the retail outlet. Between these two policies, food processors and distributors have been caught in a vise of steadily diminishing operating margins.

Dairy industry net earnings dropped from 3.5 percent of sales in 1939 to 2.2 percent in 1943. So it went with meat packers, flour millers, canners, bakers, confectioners, coffee roasters, and sugar refiners.

These are the principal reasons the Department of Labor finds basic foods increasingly scarce in the grocery stores and butcher shops. Housewives now must spend hours trudging from store to store to find the particular item needed.

The Labor Department checks once a month on the availability of 24 food staples in 56 cities. As of January 16, it found 34 percent of the stores without beefsteaks and roasts, against 24 percent in December; 56 percent had no veal, compared with 33 percent in December; 36 percent were out of shortening, against 13 percent in December.

For the country as a whole, 18 percent of the stores had no sugar, but in New York 33 percent were without this item. In San Francisco, 83 percent were without bacon, 81 percent without veal, and 65 percent without shortening.

For all cities, 35 percent of the stores were out of butter, but in New York the "no butter today" sign was displayed by 53 percent of the stores, and in Boston by 52 percent.

If you can't find beef, remember all packers now are required to set aside for Government account 70 percent of their utility-grade beef for canning. Prior to February the set-aside requirement on this item was 50 percent.

All beef graded "choice" or "good" must be held by the packing plant until Government buyers make their purchases. The Government serves notice it may buy up to 60 percent of the slaughter in these preferred grades. But in no event may the packer offer such beef for sale until Government procurement agencies have made their bids. This regulation has the effect of withdrawing from the market the entire production of choice and good beef, although 40 percent later may be released to civilian channels.

AMPLE SUPPLY—A SCARCITY

Potatoes went under Government control January 31. War Food Order 120 prohibits shipments of potatoes from the principal production areas except "under permits issued by W. F. A." Only those cars the Government rejects are released to civilians.

By all previous experience, our potato supply was ample. But growing shortages of other food threw an extraordinary demand on the potato market, and this unanticipated consumption was tending "to divert seed potatoes away from planting areas."

Fruit canners now must set aside about 60 percent of their total pack for Government account, and vegetable canners must hold 48 percent for W. F. A. orders. Regulations cover 13 major fruits and 15 major vegetable packs.

In other words, about half the new-pack canned goods is to be withdrawn from the market before the 125,000,000 civilian population gets even a chance to "cash" its ration coupons.

The butter set-aside for April was 40 percent, and for May is 55 percent of total production, against 20 for February and 25 for March.

March 10 W. F. A. increased the set-aside on rice from 60 percent to 100 for the balance of the present crop year.

March 15 an Associated Press dispatch reported Moscow looking forward to the "best spring and summer season of the war."

"The best news in many months," this report continued, "is a second reduction in prices in Russia's commercial food stores, where you can buy unrationed quantities of everything from filet mignon to day-old eggs.

"The finest cut of beef have been reduced by 15 percent, pork 18 percent, mutton 16 percent, and salt pork 14 percent. Bacon and chicken remain the same, but turkey is down 11 percent and goose 9 percent.

"Butter has been reduced 25 percent, cheese is cheaper by about 10 percent, and chocolate—which Russians love so well—is down 18 percent."

Will Congress find out why United States rationed food items are becoming cheaper in Moscow, while still going up at home—when they are to be had at all?

A pinch in food was bound to develop as the war dragged on, but lack of coordination and hit-or-miss controls have made our situation immeasurably worse.

So far as one may judge the present temper of Capitol Hill, the time has come to do something about it.

An Unpaid Account

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Rev. Charles J. Chwalek, delivered over Station WTHT, Hartford, Conn., as a feature of the Knights of Columbus hour, Hartford council, on April 17, 1945:

Fellow Americans, the Polish question is not, as many people imagine, a closed chapter in European history, nor is it a mere subject for sentimental attention of idealists. It happens to be a substantial actuality from which our eyes would hardly be averted if it significance were understood.

It is my intention this evening to lead our listeners to the half-closed casket of murdered Poland, and there in silence meditate over the remains of the innocent victim, who this time was sacrificed by her friends. There as we stand we cannot help bu hear that pitiful, smothered voice calling from amongst the dying, for Poland is not dead, it's only that the mighty of the day are trying to bury her alive. Her land is divided, the starving and suffering children dispersed over the entire universe, but her spirit lives on, much to everybody's surprise, as it was once said, I quote: "It is impossible to kill a people that has the will to live."—Unquote.

COMPLETE DESTRUCTION OF POLAND

Poland today is a cemetery. Look, here's a mound of corpses half covered, the torn limbs protruding are those of innocent Polish women and children. Over there is a cemetery containing the 10,000 bodies of Polish officers murdered in cold blood by the one who today calls himself a friend of the Polish people. From the east to west, west to east, war's bloody scythe mowed and mowed again. Finally today 20,000,000 Polish workmen, women, and children gnaw roots and the bark of trees. They shiver in caves, swamps, and thickets, because the so-called liberator absolutely forbade the Allies to send relief into Poland. To this very day not a single ounce of food, not a stitch of clothing is allowed into Russo-occupied Poland from the abundant resources of the United Nations Relief storehouse, because Russia, the so-called friend of Poland, does not desire it. That is a fact admitted by the United Nations Relief authorities in Washington.

Down on her knees, suppliant Poland raises her voice in the words of the prophet, I quote: "Hear, I pray you, all ye people, and see my sorrow; my virgins and my young men are gone into captivity. I called for my friends but they deceived me." (Lamentations I: 18–19.)

VOICE OF THE DYING

Why is it, she pleads, that the sad pages of my history repeat themselves and only the aggressors change their roles? Asia and Germany, as in the past, play with me the selfsame game. Seven hundred years ago Mongolian Asia marched against me—I was abandoned on the battlefields of Lignica—and then Germany merely stood by to watch my agony. Today, while I bled against Germany, Asiatic Russia stood by and abandoned my brave warriors on the streets of Warsaw. Now I starve, and she refuses to give me a helping hand. Yet before I breathe my last I shall plant my banner deep into the ground and tell the entire world it matter not that I perish, let my banner at least wave victoriously. That banner emblazoned with the unstained feathers of the White Eagle above which dominates the Holy Cross, is fittingly the emblem of Christ the King, and remains unstained except with the blood of my brave children.

From the immense tomb that is my land, the hand of my defenders stretches forth in an oath, "Unto death, for the rights for the temple, for the city, for the nation, and its citizens." (II Mach. XIII:14.) I have fought for Christian principles without ostentation because they are engraved deeply in the hearts of all my children from earliest childhood.

But now the powers that guide the destinies of humanity in this age have scrapped

those principles at the last conference in the Crimea; to them these principles are nonexistent—so now I present another bill, a debt to be paid, a compensation owed to my humanity.

This is what I contributed to the Allied war effort—who is going to repay me? This bill as prepared by the Polish underground reads as follows: First to fight, Poland as a nation has, on the basis of population figures, suffered more terrible losses than any other of the United Nations.

More than 28 percent of the population of Poland, some 10,000,000 persons in a country whose pre-war census showed 35,000,000, have been killed, deported, or have fallen on the field of battle.

Military losses total 1,045,000 casualties. During the September 1939 campaign in Poland, the Polish armed forces suffered 831,000 casualties, including 220,000 killed and wounded, 420,000 prisoners taken to camps in the Reich, 181,000 prisoners taken by the Russians, and the remainder interned in several countries at that time neutral.

Since then, in the Norwegian and French campaigns of 1940, the Libyan campaign of 1941–42, the Italian campaign of 1944, and on the western front, up to December 31, 1944, the Polish Army has lost more than 32,000 men killed, wounded, or missing.

HOME ARMY LOSSES

Casualties of the Polish Home Army that has been recognized by the United States and Great Britain as an integral part of the Polish armed forces with full belligerent status, total more than 180,000 killed, wounded, or missing. This figure includes losses suffered by the Home Army during the 63-day battle of Warsaw in 1944. In that insurrection alone more than 250,000 troops and civilians were casualties.

CIVILIAN CASUALTIES

Of the 9,000,000 civilian casualties suffered by Poland, 5,000,000, that is, 14 percent of the population, were killed, starved, or perished in concentration camps. Approximately 3,000,000 of this number were Jews, exterminated in the notorious German lethal and torture chambers and death camps. The German practice of taking first 5, later 100, Polish hostages for every German victim of the Polish underground accounts in part for these high figures. The 2,000,000 Poles—men, women, and children—met death in mass round-ups or were executed as hostages in concentration camps or prisons, or merely starved to death. Many, too, paid with their lives for participating in the underground or by resisting the Germans in some way or another.

Still others were killed in punitive expeditions staged by the enemy in the guise of retaliatory measures. Such expeditions were carried out against 800 Polish villages, of which 300 had been totally destroyed and all of their occupants murdered.

More than 3,000,000 Poles have been deported to Germany since Poland was occupied in 1939, including able-bodied men, women, and children taken for slave labor, or men forcibly drafted into the Wehrmacht.

Poles deported to Russia total about 1,250,000, of whom some 150,000 men, women, and children have been evacuated after the Polish-Russian pact of July 1941. About 150,000 men were drafted into the Red Army. Some 270,000 perished in the Soviet Union, while another 662,000 Poles taken to Russia are still unaccounted for.

ECONOMIC LOSSES

Polish economic losses have been equally tragic. In order to make room for German colonists and to incorporate various territories into the Reich, the Germans had deported some 1,500,000 Poles from the western provinces into the former Government General, while an additional 200,000 Poles were deported from the vicinities of Lublin and Zamose.

The actual deportation was carried out in the most brutal manner possible. The Poles were not given time to prepare nor were they allowed to take anything with them save a few valueless personal articles.

Besides this, the population of the Government General itself was constantly being shifted about. Almost one-third of the Polish population had to leave their homes at some time or another during this war. In their place the Germans imported some 1,000,000 German colonists.

The basis of German economic policy in Poland from the very moment of occupation was that both Polish state and private property, as well as the entire Polish economy and means of production and manufacture, were at the disposal of the Herrenvolk. The total economic loss suffered by Poland as a result of German occupation is inestimable, running into billions of dollars.

Thus has Poland suffered in contributing her full measure to the Allied war effort. It is imperative that the world realize this so that the greatest sacrifice in her history will not have been made in vain by Poland.

VE-Day Address

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. CANNON of Missouri. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an address delivered on VE-day by our former colleague, Hon. William L. Nelson, of Missouri, for two decades a Member of Congress and, at the time of his service in the House, a member of the powerful Committee on Rules. This stirring address was delivered on VE-day before the Kiwanis Club of Columbia, Mo.:

We have made the first hurdle on the highway that leads from a Hitler hell to a happier haven. For this we thank the Father in Heaven.

The observance of VE-day is not a time for dancing in the street. Nor is it a time for minimizing the matchless work of our fighting forces. It is a time for dedication, not dissipation; for gladness, not gaiety; happiness, not hilarity.

As we give thanks to the Commander in Chief of all armies and all navies that fight for right, we must not fail to ask His help in the days that lie ahead. The whole war has not been won. There must be no letdown until the last Jap has been rendered impotent, whether this means alive or dead. For Japan, as for Germany, there must be an uncompromising, unconditional end. The last of the gangsters must go.

Only a few years ago—but to some it seems as centuries—Siamese Satans, in Europe, entered upon careers of conquest. The people were taken up on high mountains and shown lands to loot. Coerced or convinced, they became as putty in the hands of the potter. It mattered not that the plan meant mountains of human skulls, oceans of blood, and rivers of tears.

Of course, the people should have known better. It was written in the Book, "Pride goeth before destruction," and "They that take the sword shall perish with the sword." But the Book they banned or burned.

Today the whole world knows that nations which specialize in waging wars can no longer win wars. Wars are won by men who hate war, but who dare die so that their loved ones may live.

The house that Hitler built became a house of carnage. Mussolini lay dead in the dust. Joined together in sin and shame and in the untold suffering that they inflicted, these twins of terror—if actually both are dead—may together now be crawling upward, as crawl they must from the depths to which they had descended, to enter the pit of eternal punishment.

Almost on the same date that the fighters for freedom met in the heart of what had been Germany, the swaggering, breast-beating Mussolini met his deserved death. The Allied troops had traveled far and long, traveled a total of 2,300 miles, the Russians from the foothills of the Caucasus, from which they started in 1942, and the Americans and British, journeying since last June, from the flooded beaches of Normandy.

Then came May Day and the report that Hitler, proclaimed by his successor as "one of the greatest heroes of German history," was dead. How appropriate was the date. On every May Day since the beginning of his dictatorship this man, who in his craving for might became a mass murderer, each year had harangued his hordes. On Tempelhof airfield bordering Berlin he each year ordered a million or more of his subjects to assemble and cheer his speeches. It was on this field, with its "faceless sea of faces," that there was born the German mass man, and there the individual died.

Largely as a result of his philosophy Hitler lived to see Germany insolvent, lived to prove that the business of aggression leads to national bankruptcy, leads to the loss of all that is best. In the end he willed more than a Wagnerian holocaust. He saw Germany, "a fabric woven through the centuries and knit together under Bismarck," torn to shreds. Now, for world safety, we know that there must be no return of the ravelings.

Let the man who says "there have always been wars and there will always be wars" learn his lesson from Germany as she came to be under the heel of Hitler.

There was a Germany of great capital wealth, of stalwart men and women, of learning and culture. Great once was the glory of Germany. Today, weak and wrecked in a war of her own making, nobody fears her military might. She invested all in war and lost all. "In every asset that makes for civilization she is insolvent." She gave all not for a mess of pottage but for a post of personal power.

If Germany, once so strong in most that makes for national strength, was able to do no more than prove the futility of waging aggressive wars, surely there is a lesson worthy to be learned by the whole world.

I repeat that today we do not fear the military might of Germany. Complete and crushing has been her defeat.

The Nazi war machine is wrecked, but from the land that Hitler ruled and ruined there comes a threat greater than that of physical force. I refer to what has been described as "the power of an idea conceived in hell and gestated with fiendish genius." It was such a power that caused this most destructive war in all history.

Hitler may be dead. It matters little. His teachings, his philosophy, still live in the minds of millions of misguided German youth whose lives have been shaped in the Hitler mold.

I might compare the Germany of today and our own beloved America, but for purposes of comparison there must be two objects. There

is an America. There was a Germany. So I suggest that we contrast the lives of two Germans, one a musician, the other a busy nobody.

Beethoven lived in Bonn until he was 21. He then went to Vienna. At the same age, but 150 years later, a paper hanger and unsuccessful art student left Vienna in disgust to make a start in Munich. His name was Hitler. History tells that there were bitter movements and angry moments in Beethoven's life, but these were, as a priceless gift to the world, translated into the Ninth Symphony. In the other case there followed, from the nightmare of a madman, not a symphony, but suffering and shame.

All wars are terrible. This one has been especially tough. More tough fighting must come before the Jap serpent that struck at Pearl Harbor has been beheaded. There should follow a tough peace.

If any sympathy is to be shown, let it be not for those who started this war, but for those who are stopping it. This is no time for sniveling softness for the foe; no time for condoning the cruelty suffered by men, women, and children in Nazi prison camps; no time for suggesting that the awful atrocities, the fiendish, brutal, and inhuman treatment as reported and now known to be true represents the exception rather than the rule. Let the truth, the whole truth, be told.

I would be derelict of duty if I did not refer to a class, not "F. F. V.'s," once the proud title of "first families of Virginia," but "F. F.'s," short for faultfinders. We had them after World War No. 1. We will have them after World War No. 2. Even now, with but one part of the war won and with the peace problem yet to be solved, fault is found. After total victory, after there is safety and security—as with the convalescent patient, when the doctor is no longer needed—there will follow a more pronounced peevish period. Criticism of those who risked most and gave most will increase. It will be said of the returning veteran that he expects too much, that he demands more than his just deserts. When you hear an F. F. making such charges ask him what his charge would have been to take the veteran's place in battle. Ask him just that and don't be mealy-mouthed about it.

We owe to the men and women of this war, to them and their loved ones, more than we can ever pay. Mere money for veterans is not enough.

In the present war, as in no other, mine sweepers have played a necessary part in making the seas safe. In the post-war period there will be need, even greater need, for mind sweepers. These the Government cannot supply. So you and I must. With these mind sweepers there must be swept out terrible impressions such as war puts in—the cries and moans of wounded and anguished men, the sight and smell of unburied bodies, the memories of cruel hand-to-hand combat, the indescribable loneliness of a night vigil in some far-away place amid strange surroundings.

Yes; there is a call for mind sweepers right now as we think on VE-day. Some of the men—boys no longer—are coming home. To delay in providing all help, including guidance (they do not want sympathy, in the usual sense) will mean "too little and too late."

On an old sundial near Johns Hopkins Hospital in Baltimore I have paused to read and reflect on these words:

"One hour alone is in thy hands,
The hour on which the shadow stands."

And in the Bible we read, "Lift up now thine eyes from the place where thou art. Lift up now thine eyes." When called, the men in service did not delay. We should not.

In this connection, I digress to congratulate Columbia and Boone County on the commendable movement to provide a veterans' information and service center in our city.

With but one war won—and there are two—many of our best youth have died, and their dreams—dreams of homes of their own, of returning to their loved ones, of living in a better world which they had helped to make—died with them.

Mothers and fathers, particularly those whose sons sleep overseas or whose bodies are buried in the waters of the deep, know much of the cost of war. Their sons walked with death, fought and fell in far strange places that we and their loved ones might live.

"They lived with us, who rest so far from home, and in the dawning they will be close to us."

As we keep the spirit of VE-day we realize that while we may reach the peaks of national joy we cannot plumb the depths of individual sorrow. The great tragedies are not world calamities, but happenings in our own homes. We want wars to end, want to see all battle flags furled in a "parliament of man, a federation of the world," so that our children and our children's children may be safe.

It is with this hope that we look to the Conference now convened in California, on the shores of the Pacific, a name for peace. This Conference has been referred to as "the loom of peace." Of it there has been written, "Here on the loom of God's will and understanding there may be woven a wonderful new world." With this hope in our hearts there is cause for encouragement, but throughout there must be greatness and the presence of God.

Since World War No. 1, we as a people have suffered much and learned much. We know that isolation is dead, gone as is distance. Whether we like it or not, we are neighbors to the whole world. Your address, as is mine, is no longer Main Street, U. S. A. We live at the crossroads of the continents.

We have learned in the school of bitter experience that any effective program calling for enduring peace must be predicated upon both justice and power. As Pascal put it, "Power without justice is tyranny. Justice without power is meaningless."

It is well that the conference in California, called at the time and place suggested by one who gave his life for peace, should be held while the forge of war is hot enough to weld the nations. With the stress and strain of war still on, despite this VE-day, the unity of the purpose of the power of the people has not been lost.

As we thank God for victory in Europe, as we work for victory in the far Pacific, and pray for peace the wide world over, we remember the men and women in uniform. We shall be grateful to them so long as men plow and plant, so long as the passing years blossom roselike from the thorny stem of time, so long as church spires point to the common heaven of the Christian's God, so long as heroism is honored and courage commended, so long as childhood brings cheer and motherhood has meaning, so long as unfailing forces hold the waters of the sea to the shore.

As we, members of the Columbia Kiwanis Club, a body of builders, consider the meaning of VE-day, we firmly resolve that a way must be found to prevent war, all wars. Proudly and with thanksgiving, but with some grief, we read the more than 5,000 names on our Boone County service board, some of them studded with stars and inscribed on the scroll eternal. Then, looking to the Prince of Peace, we pray that there may be built, on the sacrifices of America's sons and daughters, a monument in the form of enduring peace, strong enough to equal their valor.

Such is the meaning of VE-day to you and to me.

The San Francisco Conference

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered from San Francisco on May 9 by the senior Senator from Texas [Mr. CONNALLY], the chairman of the Committee on Foreign Relations, dealing with the work of the San Francisco Conference.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am speaking to you tonight from the United Nations Conference on International Organization at San Francisco. Why are we here? We, the representatives of the United Nations, are gathered here in response to anguished cries from every stricken land, from every home from which a gallant son has poured out a hero's blood, from the heart of every mother who has suffered for her loved ones—anguished cries that war shall be banished and security shall be established.

VE-day is here. The wicked power of Nazi Germany has been broken. Victory has rewarded the heroic struggle of the United Nations. The success of the Conference has become even more imperative than before. Our valiant soldiers have purchased with their blood the right to live in a peaceful world. This time we must not fail.

The United Nations are assembled here with high hope and determination to erect an international organization which will be strong enough to outlaw war and to help bring about those conditions in the world necessary for a just and durable peace.

The Atlantic Charter, the United Nations Declaration, the Moscow Declaration in which Secretary Hull participated, and the results of the Conference at Cairo, Tehran, and the Crimea together constitute a magnificent background for the charter we propose to draft here. They express the hopes and aspirations of the United Nations. They reflect the noble purposes and high objectives which we have in mind.

The international organization which is envisaged will include a General Assembly in which the smallest and weakest state will have equal representation with the mightiest and strongest. The Assembly will serve as a democratic world forum and center for the discussion of matters whatever their origin, that may relate to international peace and security.

The Security Council will be endowed with wide authority in the settlement of international disputes. It may employ sanctions, both of an economic and military character, if such action becomes necessary for the maintenance of world peace. However, this is a peace organization and before sanctions can be employed, recommendations shall be made to the parties to settle their differences by negotiation, diplomacy, conciliation, or arbitration; to maintain the processes of peace and not to employ the arbitrary measures of armed force until all other remedies have failed.

Here, in a nutshell, is the essential difference between the old League of Nations and the new organization. At San Francisco we propose to combine might and right by

creating an international organization strong enough to keep the peace. The League of Nations could not go that far. It could recommend, it could propose, it could suggest, but it was not able to take effective action to stamp out aggression.

The organization will also establish a number of commissions which will aid in the solution of international social, economic, cultural, and humanitarian problems and will promote regard for human rights and fundamental freedoms. This work is second in importance only to the task of keeping the peace. For no matter how carefully we build the machinery for the settlement of disputes, that machinery will fail unless the nations of the world also take steps to root out the basic causes of war.

Ample provision will be made for amending the charter or, if the need should arise, for calling a special conference of the signatory powers for a reconsideration of the entire document. Clearly, the charter must be flexible enough to enable the new organization to function smoothly in a rapidly changing world.

The Conference has now been in session 2 weeks. All things considered, a splendid beginning has been made. As a member of the United States delegation, I am glad to advise the people of our country that the Conference has been effectively organized and has already made great progress toward the successful conclusion of its work under the leadership of Secretary of State Stettinius. We are seeking to carry on the policies of President Roosevelt, President Truman, and Secretary Hull. Secretary Stettinius has served with distinction as chairman of the delegation, co-president of the Conference, and chairman of the important steering and executive committees.

The Conference has now reached the point where the commissions and committees have begun their work on the amendments which have been offered to the Dumbarton Oaks proposals. We face a tremendous task in considering the hundreds of amendments that have already been proposed. They must receive detailed consideration, first in the committees, then in the commissions, and finally in the plenary sessions.

Members of the United States delegation have been assigned to membership on all four important commissions and on the respective committees of the commissions. It will thus be possible for the delegation to keep in close touch with all developments and to have a voice in the discussion of all proposals advanced at the Conference.

You have probably read in your newspapers reports of disagreements and so-called controversies at San Francisco.

The nations are not yet wholly united on the question of trusteeships; certain points remain to be settled. The vote on the seating of Argentina was not unanimous, but the decision was reached by the democratic method of discussion and a vote which cleared the way for the real work of the Conference. That, to my mind, was what counted most in this matter.

Of course, there have been divergencies of view. That, however, is not a sign of weakness but rather an evidence of strength and of wholehearted effort by the frank exchange of views to reach final agreement upon important questions. When the Constitution of the United States was drafted, there were many disagreements and many different interests that had to be harmonized. Yet there was final agreement upon the great document which has served us so long and so well.

Here at San Francisco the disagreements which have occurred have been far less important and far less numerous than the agreements which have already been reached. From the point of view of the success of the Conference and the long-range security of the United States and unanimous agreement of the four sponsoring powers upon their amendments to the Dumbarton Oaks proposals is infinitely more important than all the minor disagreements put together. These amendments go to the heart of a successful world organization and the fact that we could reach agreement upon them in the short space of 2½ days of intensive discussion offers great promise for the success of the Conference.

This concerted action on the part of the sponsoring powers by no means excludes other nations from offering their amendments. Indeed, many such amendments have already been offered, and they will be given equal consideration with those of the sponsoring governments.

One of the most important matters still to be settled is the vital subject of international trusteeship for certain territories. The proposals of our delegation have already been made public and are well known to you.

Suffice it to say, I believe the system proposed by our delegation holds great promise for the development and progress of the peoples of dependent areas. Furthermore, it would afford full protection for American rights and make adequate provision for American security. It must be emphasized, however, that we are here dealing only with the machinery for trusteeship. No consideration will be given at this Conference to specific territories which are to be placed under the system. That will be left for future arrangements. We have already made considerable progress in our discussions with other delegations on this subject.

Let me repeat that the United States delegation is acting as a unit and in complete harmony. This does not mean that there is any suppression within the delegation of individual opinions or of points of view. Questions arising are thoroughly and fully discussed and when the delegation comes to a decision with respect to a particular problem it acts as a unit on it.

We must bear in mind that the Conference is composed of almost 50 nations—nations which speak different languages and have different historical backgrounds. It cannot be expected that instantaneously they would all be of the same mind upon fundamental questions. This Conference is a great assembly. It is among the greatest that has ever assembled on the planet. Its possibilities for good are immeasurable. Its failure would be tragic to the welfare of the world. Here on the anvil of discussion must be hammered out of the final questions which we must decide. Here must be kept in clear perspective the sublime objectives which we have in mind. We must not allow individual preferences or jealousies or any similar considerations to divert us from reaching agreement upon the basic and fundamental things which we seek to achieve.

We must keep in mind the experience of the League of Nations. We recall the tragic failure of the great and lamented Woodrow Wilson to attain his dream of world order through collective security. Though the League in some respects failed, its experience helps to lighten the pathway toward a greater and stronger world organization. Wherever its weaknesses appear we have a warning signal. Wherever its successes are seen we find encouragement. The very fact that it may have failed can only increase our determination to build a world organization that will not fail.

The charter which will be adopted at San Francisco, in order to secure vitality, must be ratified by a two-thirds vote of the United States Senate. Our late beloved President, Franklin D. Roosevelt, realized that senatorial approval was an important constitutional obligation which could not be ignored. He placed upon the United States delegation Members of the Senate and of the House without partisan discrimination or political advantage. This is not a domestic political problem. It is an American problem affecting every citizen under our flag. Every farm, every factory, every business, every home in the land is affected. Its success is more important than that of any political party. It rises above the political fortunes of any individual. It lifts its head among the sublime things that affect human lives and human happiness by bringing peace and security and goodwill.

The necessity to secure Senate ratification is one of the chief concerns of the United States Delegation. The resolution of the Senate adopted in 1943 favoring participation in an international organization for peace was an important step in this direction. We are exerting every effort to reach agreement on a world organization which will meet with Senate approval. As chairman of the Committee on Foreign Relations of the Senate, I am deeply desirous and highly hopeful that the Delegation may be successful in its purpose. Senator VANDENBERG and I shall have a heavy responsibility in carrying back to the Senate an instrument which we can endorse and which we can submit to the Senate with a feeling that it will be approved.

I have endeavored to give you a brief account of the work of the Conference and the activities of the United States delegation. It is devoting earnest and laborious effort to represent the best interests of the United States. It never loses sight of the sublime objective of world peace and security. In approaching that goal it does not neglect our own national rights and interests. It feels that the United States has been singularly blessed by a generous providence. Rich in material resources and possessing tremendous military and naval power, she stands foremost among the nations of the earth. With such a noble heritage we feel that the United States has a great destiny. We feel keenly that our tremendous national power should be employed in the cause of peace rather than in the cause of war. We feel that the United States has a particular duty to civilization to do all within her power to curb aggressors and to crush and overwhelm cruel and savage attacks upon peaceful peoples. Only in peace can nations attain their highest cultural and moral levels. The United States is responding to a clear and urgent call to meet this challenge. We shall answer that challenge for the United States. Rising to her high destiny, the United States will strive to make its contribution to a mighty edifice of peace and security. Let us be the architects of a structure more marvelous than one built of granite and steel. Let us create a temple of law and reason and justice at which the nations of the earth may submit their disputes for peaceful settlement.

We have reached the crossroads. One dark and sinister sign points the way to the old order. Another, bright and shining, directs the traveler to international peace. There is no question which road we must take.

Our Future in the Pacific

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a radio speech on the subject Our Future in the Pacific, which I delivered over the Columbia Broadcasting System on May 15, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen of the radio audience. I want to thank the Columbia Broadcasting System for this opportunity to think with you for a few minutes on a subject of vital importance to you and to me—and to our children and our grandchildren.

That subject is the disposition of the islands which our finest young men are purchasing with their blood in the far reaches of the Pacific. Even as we think on this subject, some American marine, or soldier, or sailor, is dying in battle tonight for islands of which we had never heard before the war.

The subject of our discussion is as close as your son who has gone forth to keep America free; it is as important as his future and the future of millions of other men like him; it is as urgent, in some respects, as the battle he is now fighting.

It is urgent because tonight, in San Francisco, the representatives of our Nation are meeting with the representatives of other nations. Our representatives are helping to determine the future world policy in regard to the islands. We can and should help them to make this policy because they represent us. We can let them know, through letters, through Congress, through editorials, through speeches, that we are supporting them every step of the way, particularly in regard to American possession of these islands.

There is little doubt about what should be our attitude in regard to these islands, I think, although there may be some who wonder whether or not we should keep them. Certainly there is no doubt in the minds of the men who are capturing the islands. They have made it clear that our Nation should keep the islands, if for no other reason than to make sure that other Americans will never die in again attacking the Pacific beachheads which are stained with American blood.

Our future world position, our most immediate concern must be with the control of suitable bases both in the Atlantic Ocean and in the Pacific Ocean. But because our position is more secure in the Atlantic and because the average citizen is more or less familiar with the Atlantic and our needs there, I want to discuss the Pacific area tonight.

We as a nation have suffered much because we had insufficient bases in the Pacific. We have now been fighting for more than 3 years and have not yet reached the mainland of Japan. Had we possessed adequate bases, we would have been able to attack the Japanese on their own mainland long ago—just as we were able to attack Germany using the land of one of our allies as a base.

This war has taught us that the nation with bases is in a powerful position to control the tradeways, the lines of communication, the water routes, and the air routes which course through or about the bases. We have seen that a ring of bases can make an outlying bastion that prevents, or makes costly, the approach of the enemy to the homeland.

These bases are important now, as they will be immediately after the war is over. But in the decades to come they will be far more important, for we are entering the air age. By air Montreal is 300 miles nearer to Liverpool, England, than is New York City. The airplane saves 4,000 miles between Chungking and Washington, D. C. Air travel cuts down distances far beyond what most people think. The enemy may always be near.

Our air lines, which will encircle the globe in peace as in war, will need a strip of land—an atoll, an island, or a coral reef—where they can seek refuge from the storms, repair a broken part, or replenish their depleted fuel.

We need such ports of call everywhere—and especially in the far reaches of the Pacific. More especially do we need them for possible aerial warfare of tomorrow. What we have seen in this war of the work of the deadly bomber is a mild display of military mischief compared to the devastating ruin which may be heaped upon populations in any future war.

If mankind were to be so stupid as to engage in another World War, there would be gigantic bombers that could aim their demolition charges with deadly accuracy to wipe out all the means of a nation's life. Even more terrifying than the battleships of the air may be developments in aerial warfare as characterized by robots and rockets. Robot planes undoubtedly will be developed that can be maneuvered by remote control and be able to strike their target with remarkable precision. Rockets will be so perfected that their power for destruction will be devastating.

The bases to which I am referring, if they were in the hands of an enemy, could be used for giant robot and rocket launching installations to carry demolition charges against us—or any other nation they wish to destroy. We must remember that on these islands could be constructed vast warehouses for supplies, great machine shops for repairs, and extensive military installations of every kind. The nearer these bases are to the country which is to be attacked, the better it is for the attacking power. Therefore, it is essential for us to establish real control over every island territory near our shores.

We usually think of what can be done to our seaboard cities if an enemy with bases nearby should attack us. But now cities do not have to be on the coast to be destroyed. The enemy could point his weapon just as well on inland cities, to our crowded centers and industrial areas. The whole of this continent would be a part of the battle line in any future war.

We have an unwritten pledge to fulfill to those who have suffered and died far from their native land to gain these strategic bits of soil. Shall we forget the 2,000 marines who suffered and bled for Kwajalein? Shall we forget the 3,000 marines who either fell dead or were wounded taking Tarawa? Will we forget the 7,000 Americans who offered their blood for Peleliu? Can we overlook the great sacrifices made for Iwo Jima and Saipan and Okinawa, where the flower of our American youth bled and died that you and I might be free?

All of these islands must be ours. Without any further negotiation except that of the recognition by the other powers, we should become the outright possessors of the Marshalls, the Carolinas, the Palaus, the Marianas, the Bonins and the Ryukyus.

There are those who label such demands as "imperialism." They would have you believe that we are going to keep these islands to exploit the poor natives. Such a thing is not in my mind, as I know it is not in yours. We would not keep these islands because we wish to exploit them. We would not stay there with a whip or a club, but with the honest desire to protect our children's future and to lift the natives to higher standards of life in this rapidly developing world.

Our possession of the Philippines serves as an example of what we would do in all the other islands. We went to the Philippines unwelcomed by the natives and with great misgivings in America. We passed through years of careful administration devoted to the best interests of the peoples of the islands. We suffered indignities, but finally, when we were understood, the great mass of the Philippine population made common cause with us in their own development.

The islands have prospered under our administration. The natives no longer consider themselves subjects of America, as do colonials of other great powers. We have raised them to the dignity of free men—and it was as free men that they fought and died with our soldiers in the long dark years when they were under the heel of the Jap.

Today, there is talk of a trusteeship for the islands we are discussing. What would anyone call our administration of the Philippines? Could any trusteeship have given more to the credit of the trustee than that of the Philippines to its American administration? Yet, we owned the Philippines lock, stock, and barrel. By all the concepts of international law, we had complete title to them and annexed them. They were ours. And yet, there is nothing in colonial history which matches our unselfish stewardship of the interests of the native population.

The cultural, political, and economic advance of the Philippines is what would take place in any territory consigned to our charge. We know it. Every nation knows it.

We have not gone into the Pacific seeking plunder. We have never waged war there as aggressors. We were not animated by love of conquest when we took Guadalcanal and Tarawa and Iwo Jima and Saipan. Our soldiers took those islands as the defenders of humanity. They fought to keep our country on the map of the world and our flag flying.

And we are not seeking to keep the islands to oppress the natives. We are seeking to keep them so that no future aggressor can shackle us and so that we can remain sovereign and free as a nation not for one or two decades, but for all the long years to come. We want to put the shining band of friendship around the globe, so that when our soldiers come back this time, they will know that their comrades did not die in vain.

As momentous as is the present great struggle, just as momentous are the decisions which we must make in the interests of our continued security. I believe we shall not be found wanting in the wisdom which our position and mission in the world demands. Great men in the past secured the heritage we enjoy today. Long ago, we purchased the Louisiana Territory for our southwestern defense. We bought Alaska for the same purpose. We bought the Virgin Islands from Denmark to bolster our defense of the Panama Canal.

We do not envisage conflict with any great people in the Pacific. Our stake in the coming peace is as great as that of any nation. We want to construct a substantial peace organization, but we must protect our own interest in whatever may be the structure of any post-war concert of nations. Our own future demands it.

As the most powerful nation in the world, recognized everywhere as the very central bastion and light of the peace to come, we are entrusted by those who have sacrificed so much, with the inescapable responsibility of safeguarding the future peace by perfecting our strategic position. We have fought for this line of defense and spilled the blood of our best men to secure it. If we abandon it after victory, all history will condemn us as having been unequal to the glorious task of world leadership that is ours today.

Let us think tonight of the men who died for these islands—of those who sleep in unknown graves, whose names are only in the heart of those they loved. And let us resolve that their sacrifice shall not have been in vain.

Milestones on the Road to Peace

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Milestones on the Road to Peace," which I delivered on Sunday, May 13, 1945, before the Schley Street Jewish Congregation, of Newark, N. J.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Rabbi Kahan and honored guests, I feel it a very special honor to be your guest speaker here this evening, and I was particularly happy to accept your invitation for two important reasons.

First, I welcome the opportunity for Mrs. Smith and myself to become better acquainted with you all personally. We are happy to meet here with you on this important occasion when you are celebrating the thirtieth anniversary of the founding of your synagogue in Newark.

My second reason for wanting to be here is to express to you in person the profound feeling of gratitude I have myself, and I feel all the civilized peoples of the world should have, to the Jewish people who as a race "cradled" the fine spiritual heritage of the world today. At a time when the Roman Empire dominated the world and was teaching the false doctrine of polytheism, your ancestors discovered the profound truth that there was one God—your Jehovah—the same Jehovah who is now the God of all mankind. You gave to the world Moses and the Ten Commandments, but beyond that, you gave to the Christian world the founder of the Christian faith and the Sermon on the Mount.

And now we are all working together here in America as citizens of one great country, demonstrating that government of, by, and for all the people, without regard to race, creed, or color, is able to unite our people, and by that united effort to prevail against the forces of evil which only recently have threatened the destruction of our civilization.

I am profoundly interested—and I know you are—in the post-war world that will emerge after all these present struggles have been brought to a conclusion. I rejoice—as I know you do—in feeling that our great country is going to take its share of responsibility in the organization of the world for the preservation of the future peace.

During the last few years we have seen in the United States the evolution of a national conviction. We have moved from hesitation and doubt as to the wisdom and safety of our cooperation in some form of world program for the preservation of the peace to a deep national conviction that this is very definitely the way ahead for us.

In 1942 I had the privilege of attending the April and December meetings of the Republican National Committee which went on record committing our party to the principle of international cooperation. In September of 1943 there assembled at Mackinac Island, in Michigan, a group of Republican leaders, which included Senators, Members of the House, all of our Republican governors, and certain members of the national committee, of which I had the privilege of being one, which group formally issued the Mackinac declaration.

Here were three steps in the history of our party looking toward a national policy, and shortly afterward there followed the Fulbright resolution in the House of Representatives, and the Connally resolution in the Senate, both passed by overwhelming bipartisan votes.

Almost simultaneously Secretary Hull participated for the United States in the Moscow agreement, which declared the same principle. At both the Republican and Democratic Conventions of 1944 the policy was reaffirmed.

In the fall of 1944 and following the Conventions, the Dumbarton Oaks conferences were held under the leadership of the present Secretary of State, and thereafter followed, as is now well known, the Yalta conference, the Mexican conference at Chapultepec, and now the United Nations Conference in San Francisco.

This succession of events must be looked upon as milestones on the road to peace. If we look upon them as milestones on a road that we are traveling, and bear in mind that no one of these milestones is a final destination, we can get the right perspective of the entire movement. This perspective will make us realize that what we are seeking is not final perfection this early in our gropings for a new world, but rather progress. Yalta was a very distinct milestone in this progress with all its limitations and with all its subsequent misunderstandings. There are real difficulties at San Francisco and there will be more, but I predict without fear of contradiction that San Francisco will be another and significant milestone and will take us far along the road. Let us not expect perfection from San Francisco, but let us expect progress and let us rejoice when that progress is made.

In all these discussions I am particularly interested in the way in which the powerful nations of the world will look at the problem of the right relationship of the small, weaker nations to the whole world organization. And within all of the states, both strong and weak, which the organization will seek to protect, it will be vitally important to determine the right approach to the rights of minorities and the ways in which those minorities can be most effectively incorporated in the life of the peoples with whom they live.

We cannot find the answer to this problem of the weak states and the minorities all at once, but we must realize that this problem is also one of evolution—a problem of milestones of progress along the road.

There has been much talk of an international bill of rights being incorporated in the San Francisco agreements. I hope sincerely that there can be a start made in this direction, but here again we must realize that we are dealing with peoples who have been widely separated geographically, by language, by racial traditions, and prejudices and, above all, by diverse ideologies and religions. The minds of western Europe and the Americas function differently from the minds of central Europe, the Near East, central Asia, and the Far East. Because we Anglo-Saxons think that certain standards of conduct are right, it does not necessarily follow that these other minds will have the same conception of right, and it certainly would not be right for us to try and impose our definitions on others.

It does seem to me, however, that we can find a universal common ground if we can think of freedom in its largest sense as the absence of physical control of an individual or group of individuals over the destinies of other individuals or groups; if we can think of the right of those who are governed to select those who are to govern them; and probably above all and underlying all, if we can think of the principle of equality of opportunity as a fundamental right of both individuals and nations.

These simple conceptions of freedom and equality of opportunity seem to give us a new vision of what we mean when we oppose discriminaitons because of race, creed, or color; when we fight all prejudices or persecutions because of race, creed, or color; what we mean when we look forward eagerly to the flowering of an ultimate human brotherhood of understanding and tolerance.

With the bringing to a successful conclusion of the war in Europe, Americans everywhere are doing some new and hard thinking—thinking of each other, thinking of the real causes of the war, thinking of our prospects of avoiding a future war—which, if it does come, may well destroy the civilized world. This problem is yours and mine. It is every American's problem to study with the utmost care the tremendous and magnificent results achieved in this present war by the cooperation between the workers and management in industry, the farmer, Government and business, between all groups regardless of race, creed, or color. When the heart of America was threatened from enemies without, the ramparts were guarded by a spirit of national unity never before achieved in this country. The results of American production that has brought about the destruction of the international gangster, dictator nations and their evil leaders, were achieved because the forces of this country united together in the bond of a common purpose.

It is of that unity that we are talking tonight, because if we lose that unity through carelessness or lack of desire, then the things for which many of our sons have died, are lost to us forever. The grave problems facing us in this post-war period cannot be solved if the American people divide into hostile groups, sections, or classes. Racial and religious hatreds have no place in building the freedom which we hold so dear in America. If they are allowed to come into existence and flourish, then we too in this country will be threatened with the same danger that has destroyed the continent of Europe.

We must not close our eyes to the fact that these hatreds are being constantly nourished from evil sources. To claim that they do not exist is but a way of closing our eyes to their existence. This is not the true American way to treat diseases of this nature. We must recognize these whispering campaigns not only against Jews, but against Catholics and Negroes also. It is our duty to counteract the constant stream of propaganda that would destroy the national unity that placed this Nation in the forefront of the nations of the world.

If the day ever comes in this country when tolerance gives way to internal enmities, persecutions, and discrimination, the end of this glorious Nation will be in sight. It is well to remember right now that the dangers of intolerance must be faced by the Government. If intolerance succeeds, then free government, as we know it in this country, is at an end.

I have noted with keen interest the introduction in certain of our States of legislation such as the F. E. P. C., which is designed to combat intolerance and prejudice. This legislation is a step in the right direction, and a law such as this, properly administered, will be of tremendous aid in bringing enlightenment to our people. We have before us in the Congress at the present time a Federal measure for the creation of a Fair Employment Practice Committee. While I am not one who believes that we can legislate right human relationships, certainly a measure which has for its purpose the elimination of the accumulation of cen-

turies of hatred will be another milestone on the road to peace.

There are many, and I place myself among them, who believe that what we have achieved during the last 5 years in this country in national unity, may be possible of accomplishment on an international scale. We cannot, of course, solve a problem of this size overnight, but just as we are gathered here tonight to give thanks to Almighty God for His aid in this great conflict for the survival of free men, so do we ask His divine guidance in the Conference now being held at San Francisco. From all parts of the world, men of practically all nations have gathered in a sincere endeavor to create some sort of organization that may bring into existence an international unity so that our civilization may survive. In San Francisco today these delegates are gathered to discuss ways and means of solving problems that have caused our unrest and that have resulted in chaos and destruction in so many countries of the world.

And this brings me to a consideration of the situation which I know is very close to the hearts of everyone here. I refer to the tragic plight of the Jewish people brought about by the devastating and shameless persecutions of the Hitler regime in Germany and the Nazi control of the countries of Central Europe. These horrors have shocked the hearts of all of us, and I look upon the problem of the pitiful remnant of the Jewish people who formerly lived in central Europe as the first responsibility of the United Nations after the world organization now being formed in San Francisco is set up.

With the liberation of Europe we all hope and pray that many of these now homeless Jews may be able to return to their former homes in Europe, where they may take their places in the new civilization being brought to life. Where that cannot be done, homes must be found for them, and it is certainly to be hoped that the traditional home of the Jews in Palestine which so many of them ardently hope to return to, may be opened to their further immigration and settlement under the guiding protection of a soundly conceived United Nations trusteeship. This would seem to me to be the immediate approach to the Palestine problem.

In discussion with officials of the War Department recently, I learned of the large number of men of the Jewish faith who are serving in the various branches of our armed forces. Official figures show that approximately 500,000 men are serving at this time and that more than 8,200 have received citations for valor and merit—many of them posthumously. The splendid record also includes over 226 rabbis who are serving as chaplains and 3 have already given their lives that boys of all faiths might have the spiritual strength to carry on.

You may be justly proud of this magnificent contribution to the forces of freedom. It is only natural in reviewing this great contribution of your people that names of Jewish men who have made the supreme sacrifice come quickly to mind—such as General Rose, Lieutenant Berman, of Paterson; Pvt. Bernard Goldberg, of Atlantic City, and your own Pvt. (1st cl.) Louis Schiffler, of Newark, one of the very first to give his life so that we might all gather here tonight as free men. The names of the heroes are endless—all of your faith—how proud you are of these men and justly so. How proud I feel tonight that in this great land of ours, men of all faiths have joined in heart and mind to guard the ramparts so that the cradle of liberty may forever remain the beacon light of freedom to all people everywhere.

We are soberly rejoicing over the news of the victory in Europe. This victory has been achieved by the blood, sweat, and toil of millions of people of all races, religions, and creeds. Our United States, composed of people whose ancestors came from every corner of the earth know now that it can no longer live alone and should no longer live alone. We will emerge from this war the most powerful and influential Nation in the world, but it is vitally important for us to accept that position with humility and consecration. We cannot, if we would, ignore the resposibilities of leadership that will be ours, and I am convinced that we will accept our share of that responsibility.

Let us look forward courageously and with faith to the victory of human freedom throughout the world and to the setting up of a world organization to preserve that freedom. Freedom, the unity of people, and equality of opportunity for all mankind, are the ultimate conditions of lasting peace.

Arthur Weichel Wins National Farm Honor

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news item from the Clinton Daily News, of Clinton, Okla., honoring Arthur Weichel of Custer County, Okla., on his winning a national farm honor:

ALL STAFFORD INVITED AS NEIGHBOR WEICHEL WINS NATIONAL FARM HONOR

Unless it rains and the roads mire up, about two-thirds of Stafford community will be in attendance next Saturday morning at a breakfast honoring Arthur Weichel, Custer County farmer chosen for Skelly Oil Co.'s agricultural achievement award for next week.

A good-sized segment of the Stafford population will be there, because when Weichel was informed of the honor and asked to invite his neighbors to the breakfast, he inquired. "All of them?" In Stafford, he explained, one's neighbors are everybody who lives in the school district.

The Weichel well-wishers, with the Weichel family and relatives, will meet at 6:30 a. m. at Harry's Cafe to eat breakfast as guests of Skelly Oil Co., then they will listen to the N. B. C. radio program at 7 that will spotlight Arthur Weichel as top agricultural news.

The way Arthur Weichel makes news, in the opinion of Lloyd Burlingham, Skelly's farm reporter, is by his agricultural production record of the past year, combined with a bit of history for the past 6 or 7 years.

EIGHT HUNDRED ACRES IN 7 YEARS

Weichel began farming in Custer County 11 years ago. With a minimum of livestock and second-hand equipment, he rented a farm, but in 1938, he had scraped together a small down payment and bought three-fourths of a section. In 2 years that 480 acres was paid for. By 1940, by hard work and saving, the Weichels had their present 800 acres paid for, had built a well-furnished new home and new barns, and had accumulated a fine layout of machinery and a Hereford herd of 65 head.

Last year the Weichel farm produced 6,500 bushels of wheat, 300 of oats, 130 tons of grain sorghum, 300 bushels of corn, 5,600 pounds of sweetclover seed, 12,000 pounds of pork, 30,640 pounds of beef, and 1,900 dozen eggs.

This year the Weichel prospects include 300 acres of wheat, 100 acres of oats, 150 cattle, and 100 acres of sweetclover.

Weichel has signed an agreement with the upper Washita soil-conservation district to put into effect a complete soil and moisture conservation program on his 800 acres.

"COMMUNITY MAN"

His farm work is heavy, but Weichel still finds time for community work. He is a member of the Stafford Board of Education, secretary and treasurer of the rural electrification administration board, a triple-A committeeman, a member of the Kiawasha R. E. A. cooperative and active in Red Cross and Lutheran Church work.

These are the factors that the agricultural achievement award committee considered in naming Weichel for next year's honor.

The Weichel family will receive a $100 War bond, an achievement pennant, and a scroll in recognition of their achievement. On hand for the presentation will be Mrs. Weichel and the three children, Oleta, 13; Clifford, 7; and Eloise, 2.

Presidential Succession

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Savannah Evening Press for Thursday, May 10, 1945, commenting upon the suggestion advanced by the Honorable James A. Farley, former chairman of the Democratic National Committee and Postmaster General, regarding presidential succession.

There being no objection, the editorial was ordered to be reported in the RECORD, as follows:

PRESIDENTIAL SUCCESSION

A very timely and important suggestion has come from James A. Farley, former Democratic national chairman and Postmaster General, and now chairman of the board of the Coca-Cola Export Corporation. Speaking in Hazleton, Pa., Mr. Farley has directed attention to the Presidential succession and the possibility of grave complications arising under the laws as they now stand.

After presenting statistics showing that seven times in our short history the Vice President has succeeded to the highest office because of the death of the man the people had selected as President and that at eight other times the country has been without a Vice President because seven Vice Presidents had died in office and one, John C. Calhoun, resigned, Mr. Farley thinks it is high time that serious attention be given to the laws governing the succession beyond the Vice Presidency. He also directs attention to the complications that might arise between the election of a President and Vice President and the inauguration should death remove the principals.

With constitutional and congressional authority, it is now provided that should a Vice President who had become President die in the latter office, members of the Cabinet, based on seniority and beginning with the Secretary of State, would succeed to the

Presidency. "But," Mr. Farley points out," this raises a question. Under our present method, a Vice President who succeeds to the Presidency is in the unique position of being able to choose his own successor without reference to the electorate. In his case, a vacancy caused by his death, resignation, or removal is filled, as I have stated, by the Secretary of State, whom he appoints, subject only to Senate confirmation. This possible short-circuiting of the electorate is a gap in our democratic procedure that we have not yet solved."

There are other aspects to the problem of succession that Mr. Farley sees as possible sources of confusion. "If," he points out, "the President-elect and the Vice-President-elect should both die before January 20, there is now no provision either in the Constitution or in the Federal statutes which would provide for a successor to the highest office in the land. Presumably, the House-elect meeting on January 3 could pass some kind of law of succession to meet the emergency, but here once more another real possibility arises. If the House-elect should be closely divided in its membership, so closely divided that a deadlock might result, then conceivably the date of January 20 might arrive and pass while the House fought over the question of control."

It is Mr. Farley's idea that a commission should be set up to study the whole problem of the succession to the Presidency, reporting for consideration such legislation as may be necessary. As usual, Mr. Farley's suggestion appears to be sound.

Discharge Petition for Anti-Poll-Tax Bill

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. BENDER. Mr. Speaker, I have been asking my colleagues to sign a discharge petition, to bring the anti-poll-tax bill onto the floor of the House of Representatives so that it can be voted on. The House Judiciary Committee, it is obvious, will never report this bill out. The House Judiciary Committee is well aware that the House Members approve of this bill. It has had thorough discussion both in committee and in debate before this body. Two similar bills have had overwhelming approval of the House membership.

During the years fewer and fewer people have actively defended the poll tax. Some have been persuaded that it is not consonant with a republic; some, needing its protection, have simply changed their tactics. They no longer defend the indefensible poll tax as a precondition to voting. They claim violation of States' rights; they claim that the educational system of poll-tax States would suffer for lack of this ill-gotten tax.

This year they have chosen another argument under which to operate. They are trying to discredit the method of discharging a committee by petition. Let us examine the boldness of this attempt. The right of petition is an ancient and honorable one, embedded in the Bill of Rights. Petition by majority combines two old American principles—the right of petition and majority rule. When a bill is brought to the floor of the House by the discharge-petition route over half of our Members have signified either their belief in the virtue of the cause or their belief in the wisdom of the majority.

And is this discharge-petition method some new and insidious innovation? No. Our founding fathers thought through and around the problem of how to get good bills before the House for consideration. They thought of two methods: One is consideration by a legislative committee after hearings; the other is that a majority of the Members can ask for the right to vote on a bill by discharge petition. One is as old as the other. The second method was used frequently in the House and Senate in early days. Standing Rules of Senate, section 2, rule XXVI. The use of the motion was discontinued from the Forty-first Congress, 1869 to 1871, through the Forty-seventh Congress. But a real need for such an alternate route to the floor of the House caused it to be reestablished in the Forty-eighth Congress, 1883 to 1885. In 1910, in the Sixty-first Congress, the Committee on Rules reported a rule which was adopted without amendment as section 4 of rule XXVIII. Some changes have been made in the rule since then. It has been considered an essential tool which needed sharpening occasionally. But it is very clear that from 1910 on the discharge petition has been an established legislative procedure. It is not only respectable and correct, it is necessary to keep circulation in the House system. We must not let our arteries harden. We must guard the flexibility of our procedure just as carefully as we guard the purity of majority rule.

If you, my colleagues, are annoyed at having to sign discharge petitions, I can see you being annoyed next at having to vote on bills in subcommittee and in committee—eventually you can become just too annoyed at having to vote at all. Government by decree, without the possibility of popular opinion acting as a pressure, would be so much simpler, would it not?

Imports Subject to Duty, but Admitted Free by Executive Action

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Imports subject to duty but admitted free of duty by Executive action

[Free entry of "War Materials purchased abroad," under Executive Order 9177 of May 30, 1942, and free entry of "merchandise as an act of international courtesy"]

Commodity	Imports free of duty, 1942			Loss of duty or revenue
	Unit	Quantity	Value	
Foodstuffs and beverages:				
Canned beef, including corned beef	Pounds	14,800,633	$1,818,460	$444,019
Tallow, beef and mutton (edible)	Pounds	2,087,401	133,235	36,530
Tomatoes, canned	Pounds	5,963,330	252,437	63,109
Sunflower oil (edible)	Pounds	15,571,773	1,381,644	488,518
Molasses (blackstrap)	Gallons	45,602,394	8,176,928	42,394
Malt liquors (beer)	Gallons	1,081,961	576,828	540,980
Animal and vegetable products (nonfood):				
Tallow, beef and mutton (inedible)	Pounds	7,958,000	413,787	139,265
Bristles, sorted or prepared	Pounds	62,637	187,796	1,879
Feathers for beds	Pounds	41,337	126,400	25,280
Rubber, crepe sole	Pounds	564,525	137,292	27,458
Rubber tires and tubes for automobiles	Number	10,636	418,046	48,656
Coconut oil	Pounds	13,391,783	793,531	267,836
Rapeseed oil (not denatured)	Gallons	1,462,688	433,869	591,373
	Pounds	11,191,383		
Sunflower oil (denatured)	Pounds	3,789,911	334,452	85,273
Linseed oil	Pounds	14,009,414	1,155,588	630,424
Expressed oil, n. s. p. f.	Pounds	2,258,260	406,198	81,240
Textiles:				
Cotton fabrics with fast edges and cotton articles, n. s. p. f.			485,559	178,484
Jute burlaps and other woven fabrics, not bleached	Pounds	835,164	172,236	8,351
Silk goods, miscellaneous			161,165	104,757
Wool, finer than 56s, worsted type (apparel wool):				
Clean content	Pounds	258,565,609	140,655,258	88,530,932
Actual weight	Pounds	484,540,112		
Wool, carbonized:				
Clean content	Pounds	5,888,847	2,787,288	2,527,284
Actual weight	Pounds	6,533,435		
Wool wearing apparel and manufactures, n. s. p. f.			639,179	362,408
Minerals, nonmetallic:				
Petroleum products:				
Aviation gasoline (100-octane and over)	Barrels	62,302	378,504	65,417
Gas oil and fuel oils	Barrels	3,905,061	3,485,559	410,031
Glass for optical instruments	Pounds	20,688	110,554	55,277
Mica (various grades)	Pounds	7,260,458	4,771,254	1,506,044
Magnesite, dead-burned	Pounds	14,605,931	288,851	73,030
Graphite crystalline	Pounds	14,218,914	514,960	138,826
Metals and manufactures:				
Steel rails	Pounds	12,884,610	205,044	12,884
Tanks or vessels, for holding gas, liquids, etc	Number	660,990	2,130,084	532,521
Iron and steel manufactures, n. s. p. f.			1,694,114	762,351
Brass manufactures, n. s. p. f.			267,510	120,379
Manganese ores (except battery grade) m. c.)	Pounds	394,264,825	7,173,615	1,971,324
Tungsten ore and concentrates (t. c.)	Pounds	13,119,692	15,274,852	6,559,546
Molybdenum ore or concentrates (m. c.)	Pounds	754,868	553,507	264,204
Aluminum:				
Metal and alloys, crude	Pounds	201,218,707	31,309,167	6,033,561
Plates, sheets, bars, rods, etc	Pounds	11,547,909	2,139,122	692,875
Manufactures, n. s. p. f.			1,598,271	719,222
Copper (ore, concentrates, regulus, unrefined, and refined in ingots, plates, or bars) (c. c.)	Short tons	635,877	137,685,595	50,870,207

Imports subject to duty but admitted free of duty by Executive action—Continued

Commodity	Imports free of duty, 1942			Loss of duty or revenue
	Unit	Quantity	Value	
Metals and manufacturers—Continued.				
Copper wires and cables, covered with materials	Pounds	1,582,503	$456,244	$222,985
Lead:				
Ores, flue dust, and mattes (l. c.)	Pounds	98,300,484	2,932,855	147,451
Bullion or base bullion, pigs and bars (l. c.)	Pounds	850,371,582	35,797,159	17,069,396
Zinc:				
Ores (z. c.)	Pounds	454,773,406	8,712,336	5,457,281
Blocks, pigs, or slabs	Pounds	41,024,712	1,686,081	564,090
Quicksilver or mercury	Pounds	2,778,879	6,303,627	694,719
Metal manufactures, n. s. p. f.			682,880	307,296
Machinery and vehicles:				
Radio apparatus and parts			13,578,030	3,399,458
Telegraph and telephone apparatus and parts			1,097,060	325,642
Electrical goods and parts, n. e. s.			3,587,971	896,995
Electrical machinery, such as locomotives, etc.			169,785	42,446
Steam engines, reciprocating			699,021	69,902
Internal-combustion engines	Number	40	775,628	135,735
Metal-working machinery, power driven, and parts			5,232,477	1,569,743
Machinery and parts, n. e. s. (except agricultural)			3,951,991	1,086,798
Automobile trucks, valued $1,000 or more each	Number	20	191,489	47,872
Airplanes and parts:				
Airplanes	Number	5	135,000	40,500
Engines	Number	31	251,657	75,497
Other parts			7,746,240	2,323,872
Carriages and other vehicles (metal chief value)			163,790	73,706
Chemicals and related products:				
Coal-tar products:				
Acetanilide, etc. (not medicinal)	Pounds	112,000	151,049	68,260
Explosives (except smokeless powder)	Pounds	924,100	445,538	265,179
Ethyl alcohol	Gallons	982,291	342,839	147,344
Ammonium nitrate	Pounds	107,345,236	3,292,061	1,073,452
Liquid anhydrous ammonia	Pounds	28,063,950	982,019	701,599
Lime, chlorinated (bleaching powder)	Pounds	13,079,500	243,471	39,239
Aluminum, hydroxide (refined bauxite)	Pounds	43,002,403	1,414,847	215,012
Phosphorus	Pounds	286,075	102,987	22,886
Chemical elements, salts, etc. (no alcohol)			420,790	105,197
Explosives and ammunition:				
Smokeless powder	Pounds	538,000	193,705	116,223
Cartridges and shells, empty			9,389,002	2,816,701
All other, n. e. s.			15,237,664	3,047,533
Miscellaneous war materials:				
Scientific instruments, etc. (optical goods, etc.)			370,515	148,203
Rifles, breech-loading, valued over $50 each	Number	514	106,600	34,645
Guns, parts and accessories			7,250,166	1,570,034
Military equipment and supplies, miscellaneous			4,543,035	908,607
Tapers, fuses, night lights, and chemical signals			117,044	46,818
Equipment and supplies for repairing and outfitting vessels			9,374,841	1,874,96
All commodities, less than $100,000 in value			3,877,119	775,424
Total under Executive Order 9177			414,761,520	164,142,813
Total under international courtesy			109,522,582	50,343,057
Grand total			524,284,102	214,485,870

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a tribute to the memory of our late President, Franklin Delano Roosevelt, delivered about 2 hours after his death, in Los Angeles, over radio station KFWB by Judge J. F. T. O'Connor. All of the radio stations in Los Angeles County, upon announcement of the death of our great President, immediately canceled all of their programs and devoted their time to expressions of regret and eulogies of our fallen leader. Judge O'Connor was an intimate friend of the late President, having served as Comptroller of the Currency of the United States from 1933 to 1938; was also a member of the Board of the Federal Reserve, ex officio and vice chairman of the F. D. I. C. Immediately after passage of the F. D. I. C. bill by Congress he organized the Corporation which commenced its activities upon the appointment by the President of the two other members of the board. In 1940 he was appointed by President Roosevelt as United States district judge for the southern district of California.

Judge O'Connor's tribute follows:

The sudden passing of President Roosevelt a few hours ago has shocked the entire world.

We met in Madison Square Garden 21 years ago on opposing sides of a great political controversy. He nominated Alfred Smith for the Presidency, while I seconded the nomination of William G. McAdoo for the same office. Returning from the platform to my seat in my delegation, Roosevelt put his hand out and greeted me, commending my address. The friendship that began at that moment has continued up to the present time. It has been a warm friendship down through the years.

From 1933 to 1938 I served under this great leader as Comptroller of the Currency of the United States, and in this capacity and also as Vice President of the F. D. I. C. and ex officio member of the Federal Reserve in Washington, D. C., I had the opportunity to discuss official matter frequently. During the first year when we were rebuilding the banking structure of the Nation these conferences were rather numerous.

It is difficult to speak of the passing of a great friend when one is still stunned by the blow of his passing. The emotion one experiences retards the process of reasoning—yet I could not forego the invitation to pay tribute to the memory of my departed friend.

While I have many personal memories of the President, time did not permit a search of memory nor an examination of my records to disclose some of the more important incidents while I was in Washington. Let me mention just one or two.

I sat at President Roosevelt's desk one afternoon during the latter part of his second term. I told him the country would demand that he run for a third term. He thought for a moment, lighted his cigarette, and said, with a trace of sadness in his face, "No, Jefty; I want to go to Hyde Park. My library is about finished; I am tired; I want to do some writing and make an occasional speech." President Roosevelt meant that; and if it had been left for him alone to decide, he never would have been a candidate for a third term, and never a candidate for a fourth term.

On another occasion I was discussing with the President plans for celebration of his birthday. I happened to be chairman of one of the committees in Washington, D. C. He was extremely happy over the way the country had been celebrating his birthdays and the relief that had come to crippled children through the contributions made. He said, "I hope if the people find it convenient to remember me on my birthday after I have gone that it will be used for some humanitarian purpose."

It is my opinion that his birthday will always be remembered; and when we have won the battle against the disease of infantile paralysis, then we should continue to stamp out other diseases, such as cancer and tuberculosis, and make this work the greatest monument to his memory. It should be a living, breathing monument, rather than one cast in bronze or cold stone.

Some called him Chief; some called him Skipper; his secretarial staff called him Boss. I recall hearing a speech he made honoring the memory of Woodrow Wilson, under whom he had served as Assistant Secretary of the Navy, when he said, "Woodrow Wilson will always be my Chief."

The skipper has gone to sea—his last voyage. I am sure if he could have selected a place to say farewell to the world, it would have been Warm Springs, Ga.—a quiet, peaceful spot, far from the political storms which broke above his head during his long and distinguished career. Warm Springs, a modest place far from official life, among the crippled children whom he loved and helped. "Suffer little children to come unto me" is a message that has come down through the ages—he lived that gospel—not with empty words, but in actual deeds. Amid these quiet surroundings with no officials of the Government near him, the greatest man living in the world silently set sail on his voyage to the distant port from whence no traveler has ever returned. The turbulent seas upon which he has sailed for so many years—at

times through hurricanes which have broken other craft, became instantly calm, and the skipper was at last at peace.

President Harry S. Truman will carry on the work of our great fallen leader. Harry S. Truman is a strong man of wide experience, a fearless man, a man who came out of the very soil of the Middle West. His outstanding work as chairman of the important committee which saved the Government many hundreds of millions of dollars in wasteful war spending, is only one criterion of the work of this great public servant. I count him a warm friend of many years. He needs the help of every citizen to carry this tremendous burden that has fallen upon his shoulders. You will not fail him. If you do you have failed our great leader.

I fully realize how futile, how inadequate, these few extemporaneous remarks are in paying tribute to our late President. Probably at some future time when recovery from the shock affords clearer thinking and emotions are less dominant, a worthier expression on this tragic event will be possible.

For Franklin Delano Roosevelt the troubled years have passed. The critics are silent. The lovers of liberty over the world bow their heads in prayer. The boys in battle witness their Commander in Chief stricken on the very threshold of victory—an irreparable loss. The ages claim him. Honored with his friendship, I can still hear his voice and see the light in his kindly eyes; an inspiration for the years ahead.

Only one comforting thought—God knows best.

Air Power Doomed Reich

REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. HINSHAW. Mr. Speaker, the concluding phases of the war in Europe have turned up many new and terrifyingly convincing demonstrations of the role of air power in modern warfare. Among these, however, is one that especially should be pondered by Americans because it was the carefully assayed opinion of the Nazi's highest land general, the strategist who engineered the break-throughs in 1939–40, Marshal von Rundstedt. Receiving Allied correspondents immediately following his capture, von Rundstedt told them that air power was the most decisive factor in the defeat of Germany. One newspaper headlined this story, "Air power won war for Allies, says von Rundstedt." Another, "Air power doomed Reich."

Therefore, I have asked unanimous consent that the first paragraphs of the news story of May 4 on the von Rundstedt interview be printed in the Appendix of the RECORD, where they may be studied by the country and preserved as a testament to this terribly potent weapon which in the future shall help keep the peace it has so importantly helped to win.

In view of this most convincing testimony to the efficacy of air power, it also seems appropriate to include a newspaper column by Marquis Childs that appeared a few days later—May 7—paying tribute to our own Gen. H. H. Arnold, commanding general, Army Air Forces. I also ask unanimous consent that this tribute follow the quotation of Marshal von Rundstedt.

[From the Washington Evening Star of May 4, 1945]

AIR POWER OF ALLIES SEALED REICH'S FATE, VON RUNDSTEDT SAYS—BELIEVES HITLER DEAD BUT NOT BY SUICIDE, CORRESPONDENT TOLD

(By Louis P. Lochner)

WITH UNITED STATES SEVENTH ARMY, May 4.—Field Marshal Karl Gerd von Rundstedt, admitting complete German defeat, said today he regarded air power as the most decisive factor in the Reich's military failure.

Wearing his marshal's uniform with the Knights Cross of the Iron Cross and other decorations, the former German commander in the west received correspondents in a chateau where he is held prisoner.

Marshal von Rundstedt said these were the other factors in Germany's defeat, in order:

1. Lack of fuel, both oil and gasoline.

2. Destruction of the railway system.

3. Germany's loss of raw materials areas such as Romania.

4. Smashing of the home industrial sections such as Silesia and Saxony by air attacks.

Bowing stiffly to the correspondents, Marshal von Rundstedt seated himself on a big sofa and replied to every question put.

He said in his opinion Hitler is dead, but not by suicide. He expressed belief the Fuehrer died in Berlin.

ALLIED GENERALS PRAISED

Nervously puffing at an unlighted cigarette and in crisp Prussian tones, he then said:

1. American generals are surprisingly good, as is Marshal Montgomery of the British Army. They have learned much since the World War.

2. The D-day invasion came as a surprise, both regarding the exact time and locality, although the locality had figured among German calculations.

3. The western Allied armies made as successful a war of movement on Germany as the Reich made on France in 1940.

4. The so-called von Rundstedt counter-offensive in the Ardennes last December was ordered by Hitler with the field marshal the scapegoat. It was Germany's last and only chance to avert disaster. It would have succeeded if supplies and reserves could have been brought up as quickly as General Patton could move up from the south.

5. Germany fights on solely because all utterances, both in the east and west, indicate that it is a fight for existence.

6. Germany would have won in 1940 except for British certainty that the United States would help.

TAKEN PRISONER

After answering the first question regarding Hitler, von Rundstedt commented: "Before I say anything else I must begin with a personal remark. I'm not a prisoner by choice. I was taken by force of arms from a military hospital. I should never have yielded myself up voluntarily. That would have been the most despicable thing an officer could do. I would have resisted, weapon in hand."

Regarding Hitler's death, he said he had not heard the radio for days since the electric current had been cut off at his hospital, but:

"I feel satisfied, however, that the Fuehrer is dead. Either he was wounded and died as a result of these wounds and possibly even fell fighting, or he died under the impact of the pressure of events upon his soul. Never, never will I believe he put an end to his own life. That was not in accordance with his nature."

[From the New York Post of May 7, 1945]

BLASTING OF REICH BY AIR A TESTIMONIAL TO ARNOLD

(By Marquis W. Childs)

WASHINGTON.—In most newspapers, if it got in at all, it was a small item buried on the inside by the sensational news of mass surrender in Europe. Yet it marked the homeward progress of one of the very great heroes of this war—one of the authors of the victory.

The one-paragraph item reported that Gen. H. H. Arnold, Chief of the Army Air Forces, had stopped in Rio de Janeiro for a visit on his way back from an inspection tour of European air units. In Rio, President Vargas had given him a top Brazilian decoration.

During the past week, German field marshals and industrialists have testified that it was our air power which blasted away their hope of victory before Allied forces invaded the continent. Those of us who have traveled through shattered Europe did not need that testimony. We saw something—inevitably a small fraction—of the destruction wrought from the air.

The author of that destruction was General Arnold. He had the courage to go all out on a program of fighter and bomber construction that, in its inception, seemed fantastic. He bullied that program through. He risked everything on its success.

On Arnold's judgment, billions upon billions of dollars were thrown into the construction of B–17s and fighter bombers. If they had failed, then the blame would have fallen on Arnold. It would have come down on him like a ton of brick.

General Arnold has been perfectly well aware of that. It was one reason why he sometimes seemed to be boastful and brash. That was a defensive reaction.

BATTLED SKEPTICISM

Then, too, he was constantly battling the skepticism and doubt of the ordinary individual, who simply could not take in the meaning of this new weapon. Intelligence reports showed what was happening, but there were few who could credit those reports. Sometimes when we met with him in off-the-record sessions, General Arnold blustered at us.

I can understand that bluster now. We were still back in the preair age. We couldn't believe what this big man with the bellicose look was telling us.

There were times when he himself found it hard to credit the secret reports out of Germany. It didn't seem possible. It was hard to believe that any people could stand up under so much punishment.

Field Marshal von Rundstedt told how his armies lost their mobility. The bridges and rail lines of France were destroyed. That was von Rundstedt's explanation for the German failure to drive the Allies out of Normandy.

The Ardennes offensive succeeded during the first stages, said the old field marshal, with a little show of pride. But massive attacks from the air made it almost impossible for the Germans to move up reserves.

Contribution of Motion Picture Industry to the War Effort

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. PATTERSON. Mr. Speaker, I would like to say a few words on the ma-

jor contribution to the war effort that the motion-picture industry has made.

Our boys overseas have received a valuable form of entertainment and relaxation in this, America's favorite indoor sport. It has brought home closer to these fighting men, and given them a few hours of escape from the necessary hardships they are undergoing.

On the home front, civilian workers, and families of service people have been brought to understand the nature of this total war and the enemy we fight, through the medium of the screen.

These two points, I believe make up the greatest part of the job done by the motion-picture industry, in the name of the war effort. The other factors it has contributed are many. The members of the acting profession have given of their time most generously; to entertain our troops, to develop pitched enthusiasm on the bond drives and for Army and Navy relief. The other professions represented in this vast industry have also given in whatever manner they could do best. The technicians have left their positions and entered into services where they are most needed; writing, directing, filming, and producing training films for the armed forces.

The motion-picture industry has worked in the proverbial manner of the theatrical world. They have carried on the show for our country in its need.

We owe our thanks to the men and women of this group for proving that it, too, can go all out for war, when called upon to do so. We may certainly be proud of our motion-picture industry.

Salaries of Federal Judges

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the resolutions passed by the State bar of California, the Los Angeles Bar Association, and the Lawyers' Club of Los Angeles urging the passage of H. R. 2181, to increase the salaries of all Federal judges. The bill was introduced by Congressman HOBBS, and I understand is receiving considerable support.

It seems that the time is opportune to make a real examination of the salaries of Federal judges, as well as of other officers of the Federal Government. There appears to be an extremely wide range in judicial salaries. Judges of the highest court in New York are each paid $25,000 a year, and the Chief Justice $25,500. The Intermediate Appellate courts are paid from $17,000 to $27,000 with larger salaries to the presiding judges, while the trial courts' salaries range from $15,000 to $25,000. There is a wide range of salaries in other parts of the country for State judges. In my own State, California, the legislature is considering bills increasing the salaries of members of the Supreme Court from $13,000 to $15,000; the Chief Justice from $14,000 to $16,000 and the appellate courts from $12,000 to $14,000; and increases are being considered by Connecticut, Delaware, Maine, and Florida and other States.

The voters are taking a deep interest in this matter. In a recent municipal election in the city of Los Angeles, which is my home city, the voters increased the salary of the mayor by a large majority—from $10,000 to $18,000, and other municipal officers, including members of the city council.

The supervisors of Los Angeles County have endorsed by resolution the increase in salaries of State judges.

Those of us who are members of the legal profession appreciate the need for increased salaries for the Federal Judiciary if we are to attract men of wide experience to these positions. A very careful study and argument for the passage of H. R. 2181 has been prepared by Judge Harold Stephens, of the United States District Court in Washington, D. C. I wish to direct the members' attention to this carefully prepared argument which is on file with the committee considering the matter.

The resolutions referred to follow:

RESOLUTION OF LOS ANGELES BAR ASSOCIATION

Whereas it has come to the attention of the board of trustees of the Los Angeles Bar Association that a measure has been introduced in Congress, H. R. 2181, which is designed to increase the salaries of all Federal judges by $5,000 a year; and

Whereas there has been no increase in the salaries of the Federal judiciary since 1926; and

Whereas the Supreme Court of the United States in 1939 upheld a statute enacted by Congress in 1932 imposing income taxes on the salaries of all judge appointed after the enactment of such statute; and

Whereas recently in the Public Salary Tax Act of 1939 Congress has provided that the salaries of judges who took office before the passage of the Revenue Act of 1932 should be included in gross income for Federal income-tax purposes; and

Whereas the cost of living has risen very substantially in the last 20 years; and

Whereas the increase in the salaries of all Federal judges by $5,000 a year will only have the effect of approximately restoring to the Federal judges' income the amount taken therefrom by income taxes and the increased cost of living: Now, therefore, be it

Resolved, That this association favors the increase in the salaries of the Federal judges in the amounts provided for in said measure, H. R. 2181, and recommends that said increase be put into effect immediately; and be it further

Resolved, That a copy of this resolution be sent to the Senators from the State of California and to each Congressman from districts within Los Angeles County.

RESOLUTION OF THE STATE BAR OF CALIFORNIA

Resolved, That the State bar approves the increase in salaries of United States judges provided for in H. R. 2181, but favors such increases being put into effect immediately, and not being delayed as in said bill provided; and it was further

Resolved, That copies of this resolution be sent to the California Senators and Representatives in the Congress of the United States and to such other persons as may be interested.

RESOLUTION OF THE LAWYERS' CLUB OF LOS ANGELES

"Whereas there is now pending in the House of Representatives bill H. R. 2181, to fix the salaries of certain judges of the United States; and

"Whereas said bill, if passed, would increase the salaries of the officers therein named; and

"Whereas bill H. R. 2181 appears to provide for more fair and adequate compensation for Federal judges than is now allowed: Now, therefore, be it

"*Resolved by the Lawyers' Club of Los Angeles*, That the aims and objects of bill H. R. 2181 appear to be in the best public interest, and we therefore approve said bill. We recommend that it be made effective immediately."

The above resolution was passed by the members of the board of governors of the Lawyers' Club of Los Angeles at its meeting held on Tuesday, April 10, 1945, and was passed by a vote of the members at a meeting of the members on Wednesday, April 18, 1945.

IRVING E. READ,
President.

Which Road Shall We Follow in Our Postwar Era?

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. PITTENGER. Mr. Speaker, when the President of the United States officially proclaimed VE-day Tuesday, May 8, he announced an event which the American people have long desired. This date also marks the beginning of a multitude of developments which will claim the attention of the American people. Unless these new situations are solved, then the serious matter of preserving our form of government and our American way of life challenges attention.

When the historian chronicles the story of the present age he will relate how the Nation's Capitol was transformed on December 7, 1941, into a place where the eyes of the world were centered and where domestic and foreign policies were shaped, the effect of which directly concerned all peoples of all parts of the world. That was the date when the Japanese made their attack on Pearl Harbor and which was immediately followed by declarations of war by the United States of America against Axis Nations.

In the march of events from that day until Sunday, May 6, 1945, when Germany signed an unconditional surrender document in favor of the Allied Nations, the Government of the United States occupied a position which it had never before taken throughout its history. It had to undertake preparations for a world war and at the same time change over from a domestic peacetime economy to a wartime economy. In all of

these developments the Congress of the United States was placed in a position of world-wide importance.

Public pronouncement has been made following VE-day that the job is only half done and that there must be no let-down in our war effort until Japan surrenders. We are all in accord with this sentiment expressed by the President of the United States. As your Representative in Congress during these history-making days I have supported the war effort in every way possible. I shall continue to do so.

When World War developments made necessary the building of an Army and a Navy and an Air Force in this country we must not forget that the industrial East was ready and willing to grab all orders for war goods and leave the Midwest stranded with its unemployment problems and other imprints of the depression. Men were out of work. They were leaving home and going elsewhere to seek employment. Members of Congress from the Midwest found it necessary to battle the selfish interests of the eastern seaboard and demanded that the Government and the administration place orders for war contracts and materials in the Midwest and opposed the policy of giving all contracts to the industries located in the East. I joined with my colleagues in this program, and we were eventually successful. As a result of these efforts, industries were developed in Minnesota. At the head of the Lakes shipyards were constructed and boats were built for the United States Government in its war effort, and in this industry employment was furnished to large numbers of men. In one of these shipyards alone, if I remember correctly, a well-informed man told me that $80,000,000 had been paid out during the war period in wages. I call attention to this fact because we will want to keep the record straight.

We are now faced, with the surrender of Germany, with the problem of reconverting from a wartime economy to a domestic economy. Our task of the future will no longer be the manufacture of weapons of destruction. It will be a problem of producing goods and materials needed by a nation at peace with the rest of the world. This means that factories, for example, which have been busy with orders for war materials and war goods will face the necessity of filling orders for manufactured goods which are to be used, not only by the American people but in other countries, if full employment is to be given to American citizens who are working in these factories. Small business and small war plants are vitally concerned in these immediate plans of the future.

In this connection there are already signs that the industrial East, with its factories, its mills, and its other resources, will attempt to keep its industries going, regardless of what happens to the industries of the Midwest. We face the same battle in the Midwest that occupied the attention of the Members of Congress when the country was transformed from a domestic economy to a war economy, and the industrial East was trying to get all the business and let the Midwest suffer and be forgotten. We propose to carry on activities which will give small business and small war plants in our section of the country their share of orders for the manufacture of goods for domestic purposes. This problem is of direct interest to everyone in the Eighth District and I shall welcome your suggestions.

While VE–day brought its full share of rejoicing, it is well to give attention to some of the problems and difficulties that are immediately ahead of us. Before the war is over we may have a national debt of $300,000,000,000. This is a figure so enormous that it staggers the imagination to think about it. Let us hope the amount will be a lot less. In this connection, the Government will be faced with interest payments of probably $7,000,000,000 annually on the public debt; probably $5,000,000,000 annually for veterans' benefits, hospitals, disability payments, and so forth; and probably another $5,000,000,000 for the Army and the Navy and the proposed plan to have the United States police the world; and add to this another five to ten billion dollars which the do-gooders will want for the purpose of reconstructing the rest of the world. Well, do you not think you have something to talk about and to think about? Governments either meet their obligations or they blow up and turn communistic, and this is followed by a dictator, and the people become virtually slaves. You know what happened in Europe in past years where just exactly such procedure took place. We do not want it to happen here.

Hand in hand with this problem of public debt and income with which to pay the expenses of Government goes the subject of taxes. This subject can be interesting, uninteresting, intricate, clear-cut, painless or painful, depending on how you look at it. The Government has to have revenue, despite the philosophy of the pink parlor socialists and counterfeits who have never given concern to the subject of a balanced budget or Government revenue or any other matters which have to have attention if we are going to continue to operate under our constitutional form of government, where freedom exists for the individual. A budget, for example, deals with the question of how much money is required for a given purpose and then with the question of how the revenue is going to be raised. Some of our self-styled economists never have gotten past the stage where a budget has to do with anything except spending yourself into prosperity, which, of course, means bankruptcy and ruin.

Just remember that the enormous war income is very shortly going to be a thing of the past. We are going to have to look to other income, and this means keeping up production on the farm and in our factories so that people have earnings. If they do not have an income, they will not have money to pay taxes. If they do not pay taxes, the Government will not pay interest on the war debt, and if that time ever comes, our life insurance companies and other institutions which have invested in Government bonds will fail to get interest on the bonds and, in plain language, they will all go broke. This, of course, is just what the Communists, and the fellow travelers, and those who preach class hatred and so forth would like to have take place in this country. If they could develop a crisis that would lead, of necessity, to a one-man Government in the interest of the masses. Historically, this would soon be a dictatorship and that is why a recent article in the Reader's Digest calling attention to The Road to Serfdom, has attracted so much attention. Most of us have known for the past 12 years that a lot of people believe in a planned economy, where the Government does everything for you, and winds up by putting you in jail if you do not do everything the Goverment tells you to do.

With this brief background, let me say that I am convinced that our entire tax structure is bad, and needs overhauling. We put up with it under the guise of a war emergency.

Taxes of every kind have been levied and increased to the point where the American citizens do not have the incentive to carry on productive work or business for a profit, because such earnings beyond a small margin are simply taken away by the Government in the form of taxes. The theory is beautiful, but it is not working out. For example, under the present tax structure it is easy and convenient, if you feel like it, to make substantial contributions to various purposes and these amounts are deducted from the tax bill instead of being paid to Uncle Sam. There are numberless examples. There are many other illustrations and reasons for a change in our tax structure.

Of course, our pinks and counterfeit economists who always yell "soak the rich" will give forth weird vocal lamentations at any suggestion that our tax system be changed to again encourage people in productive enterprises, to keep on producing or go back into business, because they can make a profit. This motive, by the way, is characteristic of the American way of life, and has always worked successfully.

With a proper program, people will want to produce things, not only on the farm, but they will want to manufacture articles and they will want to go into business. This sort of development means that there will be jobs in numberless places and numberless ways for the man or woman who wants to work. We are not going to have jobs unless you have your business institutions and your factories operating. You have to make it worth while for them to do this and if you don't make it worth while, you face the possibility of bread lines and unemployment. These people who are opposed to this sort of Government philosophy are going to make a lot of noise when Congress is called on to readjust tax problems and make other concessions to agriculture and industry in order to help these groups meet the reconversion problems and in that way avoid a large-scale unemployment condition. So will there be loud outcries when plans are made to adjust our tax structure so as to encourage individuals to engage in business for a profit. But these things are going to have to be done. When the demagog talks about "big business" and fans the flames of

class hatred, he overlooks the fact that most business organizations are owned by stockholders and that stocks and bonds are recognized as legitimate ways in which to invest money. The Library of Congress told me the other day that figures dealing with some of the principal railroads show approximately 500,000 stockholders, and this is an incomplete list of stockholders. Stockholders of the American Telephone & Telegraph Co. number over 650,000 people, and those owning stock in General Motors alone number over 400,000 people. I cannot here add to the list. Now, as a matter of fact, every stockholder is a part owner in the business. He is definitely interested in the tax structure. If the factory is idle, he gets no dividends. Likewise, if the factory is idle the wage earner gets no pay check.

Which road shall we follow? One is the highway of progress and encourages our productive agencies to give us food, to operate factories, and make possible for employees to earn wages. At the same time, those who devote time and energy to this end, are encouraged to do so because they will earn a profit.

The other road is the planned-economy highway, and those who travel it adopt the philosophy that the Government must plan for its individuals; that private enterprise is harmful because it recognizes the profit method, and that this partakes of the element of criminality; that Government alone can give us a grand utopia where each shares in the other people's property and earnings. This is what will happen if the pinks and fellow travelers have their way. It can only be avoided by an alert and serious-minded American public which will study these postwar problems and support such plans and measures that will keep the torch of liberty lighted in this Republic of ours.

How Come?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following editorial indicates the position of a part of the press of the Nation. The Wisconsin Rapids Daily Tribune is located in a city of about 15,000. The city is strongly organized by labor. One of its large industries is the paper-and-pulp business. Paper from these mills is used in some of our leading magazines.

Large groups of labor have had their wages frozen and cannot be expected to support legislation that provides any additional incomes to public officials. This newspaper is an independent paper and expresses its views as it sees them. The representative of the Seventh District of Wisconsin appeared before the Rules Committee and protested the waiving of all points-of-order rule and voted against the rule. He was subjected to plenty of criticism by those who wanted to get the "dough."

The bill was passed without the inconvenience of a roll call.

The editorial is as follows:

HOW COME?

The House last week voted a tax-free $2,500 "expense account" for Congressmen. This is tantamount to a salary increase of 25 percent. It can also be considered as offsetting a Congressman's share of the Federal income tax. But no matter how one looks at it, the action is in direct contradiction to the "hold the line" and "no raise" policies which Washington would have John Q. Citizen observe. Maybe Congressmen can't live on a measly $10,000 a year. We wouldn't know. But, in the face of gigantic war expenditures and strict controls over the public pocketbook, we think the legislators have acted in poor taste and sincerely hope that the Senate will kill the effort until such time as a legitimate raise can be put through on merit and without subterfuge. Otherwise, throughout the country, the cry will be heard, "We want an expense account, too."

It is hoped that this legislation will be killed; otherwise the O. P. A. might as well fold up and the W. L. B. might as well quit.

The new legislative technique operating at this time here in the House appears to let the Appropriations Committee take over, and continually place legislation in the appropriation bills. The evident objective of the leaders is to put additional thousands on the Federal pay roll. Use your own judgment why these thousands are added to the Federal pay roll at this time. When the war came along many of these peacetime departments made every effort to show where they had a place in the war program, and make the war agencies now appear to be anxious to keep their agencies alive in peacetime.

If Congressmen can be sweetened up with a $2,500 expense account, no doubt he could be expected to be more amenable in providing more and more jobs for more and more unnecessary employees.

If any governmental official, regardless as to his position, says that present taxes should be maintained, he must, to be fair, insist that unnecessary Federal expenditures be immediately curtailed. In other words, an appropriate way to reduce taxes is to curtail unnecessary Federal expenditures and remove a portion of the need for higher taxes.

No one can expect to see taxes reduced as long as appropriations for unnecessary expenditures is constantly continued.

Victory of the Ideal of Democracy

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Force of an Ideal Proves Stronger Than the Ideal of Force," published in the Raleigh (N. C.) News and Observer of May 9, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FORCE OF AN IDEAL PROVES STRONGER THAN THE IDEAL OF FORCE

The day of victory spells the day of democracy, of government by the consent of the governed, and the doom of totalitarianism.

This was not only a war waged for conquest and inspired by greed. It was a war begun to destroy the principles of the Magna Carta, the Bill of Rights, the Declaration of Independence, and the government of the people and for the people throughout the universe. Nazism in Germany, fascism in Italy, shintoism in Japan formed the trinity of creeds which the Axis Powers conspired to put in the place of Christianity, democracy, and self-government. Nothing was sacred to them if it stood in the way of the resolve of the sawdust Caesars bestride the earth and destroy all the advances toward democracy during centuries since Christ incarnated the doctrine of the dignity of the individual, the brotherhood of man, and the right of people everywhere to think, speak, write, worship, and vote in accordance with the dictates of their conscience and their love of liberty, and as the Atlantic Charter promised, "the right of all people to choose the form of government under which they will live."

In every country controlled by the Axis the totalitarian creed was put into practice. The first things the Axis rulers did were to destroy free speech, free press, free worship, and free government—boons won by freemen by long battles and costly sacrifice. If the victory had gone to the Axis Powers, these inherent blessings enjoyed by the many would have perished from the earth.

The war was a conflict between the two ideas, each contending for the mastery. The emperor worship of Shintoism was not different from the enforced adulation of the Fuehrer and the abasement of Italians to the sawdust Caesar. All three nations believed, or acted on that belief, that some men are born booted and spurred to ride on the backs of others and that force was above human rights. And they practiced it in their domain and forced its acceptance in every land they conquered. To be sure, the conquerors invoked rapine and murder and the appropriation of the goods of all peoples who could not stand up against the weight of their military machine. But it was belief that the ideal of force could destroy the force of an ideal that endangered the world, and, as they understood that the fate of all free people today and tomorrow was at stake, that summoned those who preferred death to slavery to unite to destroy, not peoples, but the creed of force and to prevent the destruction of democracy.

If the Axis Powers had won, there would have fallen upon the earth another era of the Dark Ages, the light of learning would have been extinguished, and the glory of Christianity submerged into the worship of military power. And at one time it seemed that this throw-back to the Dark Ages might succeed. Fear sat in every free government chancery, on every schoolhouse door, on the threshold of every Christian institution. However, in the darkest hour, even in the zero route at Dunkerque and in the robot blasting of London, in the day of infamy at Pearl Harbor—there was high resolve to do and dare and die to preserve the rights of man, the equality and dignity of the common man, and never to yield to the engines that had long been fashioned for the destruction of democracy.

The valor of freemen, guided by providence, has demonstrated that the power of an ideal is greater than the ideal of force.

That is the significance of the day of yesterday's world-wide celebration.

We have won a second time the war to make the world safe for democracy. There are two more victories that will call for both courage and wisdom—to write the victory by soldiers into a lasting covenant of peace and make democracy safe for the world.

Having won the first battle, there is call for full consecration to crown the victory with a pact that will insure a warless world, and guarantee to every individual in the world the right of self-government and the enjoyment of the "four freedoms."

Let us say with Joshua of old: "We are able."

The "Lost Delegation"

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Mirror of May 7, 1945:

THE "LOST DELEGATION"

Red Russia has given the spider-and-the-fly treatment to a delegation of Polish patriots, and Secretary of State Stettinius and Foreign Secretary Eden, on behalf of their respective governments, are not only diplomatically but openly shocked.

The story of the "lost delegation," which it now develops was never lost at all, but thrown into prison in Moscow, is briefly as follows:

The Yalta agreements, announced in a special Big Three communique, February 11, 1945, provided for the the reorganization of the Lublin (Communist) Government of Poland "on a broader democratic basis, with the inclusion of democratic leaders from Poland itself and from Poles abroad."

So 16 "democratic leaders from Poland itself" were induced by the British Government and the Polish (London) Government-in-exile to reveal themselves to the Russians so that—they believed—they could participate in the formation of a truly representative Polish Government.

They had been fighting underground since the start of the war, September 1, 1939 at which time Stalin was the virtual ally of Hitler.

On March 27 and 28, of this year, the 16 Polish resistance leaders, assured by both their own and the British Governments, appeared at Pruszkow, on the invitation of Col. Gen. Ivanov of the Red Army, acting for Marshal Zhukov.

Then they dropped from sight.

For more than a month, both the United States and British Governments have been asking Russia for information about the missing Poles. All requests were ignored until Saturday, when Stettinius and Eden announced in San Francisco that they had been officially informed by Foreign Commissar Molotov that the 16 had been arrested for "diversionary activities against the Red army."

Subsequently, the Moscow radio elaborated by saying: "All these persons, or some of them, as investigations may warrant, will be committed for trial."

Red duplicity in this instance is comparable to inviting a friend to one's home, then bashing him with a window-weight as he sits at dinner.

But the imprisonment of the Polish delegation in itself is less an indication of Soviet morality than the concealment of that imprisonment from the other signatories of Yalta—Britain and the United States.

It must be remembered that during the concealment, Mr. Molotov was sitting in Moscow with W. Averell Harriman, American Ambassador, and Sir Archibald Clark Kerr, British Ambassador, to reorganize the Polish Government in accordance with t' ' decisions of Yalta.

It must also be remembered that when this three-man commission literally got nowhere, the Soviets seized upon the failure as an excuse to press their own demand that the Lublin (Communist) government should, alone, represent Poland at San Francisco.

Molotov, only, was aware, even as the commission met to broaden the democratic base of the Polish Government, that the first delegation of democratic Polish leaders had been clapped into prison on apparently trumped-up charges.

Sincere friends of Russia—not Communists, but Americans and Englishmen who earnestly hoped for amity and cooperation between the world's three foremost powers—begin to wonder.

Is Russia determined to give no moral ground upon which she can meet the other nations, but only the shifty sands of violated pledges and diplomacy by dictatorship?

The Meat Shortage and Black Markets

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. HARNESS of Indiana. Mr. Speaker, the case against the bunglers in the Office of Price Administration and the War Food Administration who have driven this Nation into a food crisis has already been overwhelmingly documented. But even though more evidence is unnecessary, I hold in my hand a statement which I wish to call to the attention of the Members of the House, and which I wish to file with our special committee investigating the food situation.

Here is a simple accounting of the purchase of a single beef animal by an independent packer, and of the sale of the carcass and byproducts. Note that the packer paid $96 for this live animal as it came across his scales, a price strictly in compliance with schedules established by the O. P. A. Now notice that the packer received a total return of $93.30 when his whole transaction on this animal was closed. That includes the proceeds from the sale of every pound of edible meat. It includes the returns from all the byproducts, such as hide, bones, and tallow. It even includes an item of $12.48 paid by the Government as a subsidy.

In short, the packer actually received $2.70 less for the finished animal than he paid for it on the hoof. This statement, understand, does not attempt to show the packer's normal operating cost in processing this particular animal. What he paid for labor, plant facilities, and general overhead in this case is all total loss, and must be added to the $2.70 loss shown on this statement.

This statement is submitted under oath by two responsible citizens of my home community who are in no way connected with this Standard Packing Co., which processed this animal. One of the signers is Hon. Charles V. Orr, the mayor of my home city. The other, A. H. Schwartz, is a prominent and respected businessman there.

If any further explanation were needed to show why honest independent meat packers are going out of business, and the black market gangsters are handling most of America's meat supply, this sort of report ought to supply the answer:

STANDARD PACKING CO.,
Kokomo, Ind., March 30, 1945.

To Whom It May Concern:

This is to certify that the beef herein described as 1 roan heifer, was weighed on standard scales, and the actual live weight was 640 pounds, at 15 cents, $96 (O. P. A. price on grade A beef, top, $15.70; bottom price, $14.20.)

A. H. SCHWARTZ, *Witness.*

Cost	$96.00
1 Roan heifer, 354 pounds, at 20 cents	70.80
1 Tongue, 1½ pounds, at 24 cents	.36
1 Liver, 7 pounds, at 25 cents	1.75
1 Heart, 2½ pounds, at 15 cents	.38
1 Ox tail	.08
Headmeat, 6 pounds, at 9 cents	.54
Subsidy, 640 pounds, at 1.95 cents	12.48
1 Hide—green hide, 49 pounds, at 12¼ cents	6.00
Bones, 15 pounds, at 1½ cents	.23
Tallow, 15 pounds, at 4½ cents	.63
Total	$93.30
Loss	2.70

We, the undersigned, do hereby certify that the data herein set out is correct to the best of our knowledge and belief.

A. H. SCHWARTZ,
CHAS. V. ORR, *Mayor.*

County of Howard,
State of Indiana, ss:

Subscribed and sworn to before me this 9th day of April 1945.

PANSY O'LEARY,
Notary Public.

My commission expires January 11, 1948.

The Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the Missouri Valley Authority delivered by the junior Senator from Montana [Mr. MURRAY] before the first conference of the friends of the Missouri Valley Au-

thority on May 11, 1945, in Jefferson City, Mo.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, friends of the Missouri Valley, I am indeed glad to be with you on the occasion of the first conference of the friends and sponsors of the Missouri Valley Authority.

Conferences have been held on many occasions in the past dealing with problems of the Missouri River. None, however, have been imbued with the spirit of idealism or concern for the welfare of the people of the Missouri Valley than the conference now in session.

Past conferences have failed because their basic approach and proposals were generally influenced by selfish motives and interests.

The people of the valley and the country at large have become aware of this. Due to the tireless and effective efforts of such leading newspapers as the St. Louis Post-Dispatch, the Star-Times of St. Louis, and other newspapers in the Valley, the people of the valley have now become awakened. The people of the valley are demanding new leadership in this cause, and I am confident that from this conference will come the requisite leadership and guidance for the support and final establishment of a truly constructive program.

We must search beneath the hidden motives of the opponents of the Missouri Valley Authority to find the true explanation of their bitter opposition. They, too, claim that they want flood control, irrigation, navigation and power and all the other benefits which can be derived from successful exploitations of the resources of the valley.

Our opponents have had a free hand for decades to bring about a solution of these problems. They have been given hundreds of millions of dollars with which to accomplish results. But what have they to show for such expenditures and efforts? Despite the labors of competent engineers and planners and contractors to do the job the old way, the unruly river is still a liability and a menace.

The floods still rage on from season to season. Droughts continue to parch the earth and ruin our farms. Our natural resources still lie undeveloped. Population continues to dwindle. Industries fail to multiply. Increased opportunities for the youth of the valley fail to materialize.

And while this great empire—the Missouri Valley—continues neglected, the need for new frontiers and new opportunities is growing rapidly. A new frontier in Alaska is now suggested—this is the usual recommendation of dreamers who fail to see the opportunities at hand. They would seek new opportunities beyond the horizon rather than take advantage of the boundless opportunities before their eyes.

My friends, the future of our country in the post-war period as, in fact, the future of the whole world, depends upon the effective resource development and expansion of industry in America. To have world prosperity, we must have a prosperous America. Such expansion and prosperity can be achieved only by going out to the great undeveloped regions of our country. Since coming to the Senate more than 10 years ago, I have had an excellent opportunity to observe the economic trends of the Nation. In recent years, there has been much criticism leveled against the Government because of the centralization of American industry. The regional authority for the development of river valleys is a step in the direction of decentralization and future growth.

If the outstanding and unquestioned accomplishments of the T. V. A. fail to convince our opponents in and out of Congress that the unified grassroots method is better than the antiquated piecemeal method, then there is little that you or I can do to make them change their mind. Their opposition is either due to a deep-rooted prejudice against change—any change, no matter how worthy—or it is the result of motives which resist conviction. Of course, there can be no excuse for anyone to remain ignorant on this subject. For example, only a few weeks ago, the legislature of this great State of Missouri created a commission to study the T. V. A. on the spot. This is the wise way. Instead of listening to the harangues of men sponsored by well-known lobbies which are nothing more than fronts for various vested, monopolistic interests, and then adopting stereotyped resolutions against the M. V. A. plan, it would have been far better if the legislatures of our States had followed the example of Missouri by dispatching commissions to learn at first hand what the T. V. A. has actually done.

The people who live in the lower Missouri Valley, where floods are frequent, and in the valleys of its lower tributaries, also subject to destructive overflows, are much concerned about the proposals of the Army engineers for dams and reservoirs in this State. The Missouri Farmers Association, which has endorsed an M. V. A., has questioned the plans of the Army engineers for large reservoirs on the lower stretches of the Osage, Gasconade, and Grande Rivers. They know that their reservoirs will submerge permanently thousands of fertile acres.

They want flood protection, of course, but they want to know if there isn't a better way to achieve it. They think an M. V. A. will be more likely to find that better way, and M. V. A. will look upstream to the headwaters and more actively promote storage of the rainfall in the land. They believe that an M. V. A. will understand better how to cooperate with the Federal Soil Conservation Service and Missouri's own excellent agencies for conservation and development of the State's wonderful resources in farm lands, forests, rivers, and minerals.

They think that through an M. V. A. will come a better balance in the conservation of these resources. They are right in thinking that the control of the floodwaters, the utilization of stored waters for navigation and electric power production and the coordination of these lower valley facilities will promote the fullest utilization of the upstream waters for irrigation.

Down here in the lower Missouri Valley the people have wisely shown a keen appreciation of the rights of others and the importance of a unified plan for development of the river for the welfare of the people of the entire valley.

My friends, even if the T. V. A. lessons were not available to us, we should feel impelled by past failures to try a new method. Instead of that, we are being pressed by well-staffed lobbyists parading under high-sounding names to continue with the discredited, obsolete methods which have robbed the Nation of hundreds of millions of dollars and produced next to nothing in return.

Of course, there is plenty of pork in the old pork barrel—the piecemeal method. That is why these opposing propaganda associations, which are mere fronts for seekers of special privileges, are giving out loud wails to be heard from one end of the country to the other in opposition to a Missouri Valley Authority. Just as the introduction of my bill on August 18, 1944, brought about a shotgun marriage between two formerly irreconcilable Government bureaus—the Reclamation Bureau and the Army engineers—so it has likewise brought about shotgun marriages among the squabbling lobbyists. For example, only a few months ago, the Mississippi Valley Association and the powerful National Reclamation Association were stubbornly fighting each other over the question of division of the waters of the Missouri River system. Each was accusing the other of trying to arbitrarily usurp the available water for selfish purposes.

Naturally, they have been driven to surrender their claims and unite their forces because of the growing demand on the part of the people—the plain people—for a workable and just solution of these perplexing problems—the T. V. A. way. Only a few days before the Senate Commerce Subcommittee sat down to take testimony, the St. Louis Chamber of Commerce announced the results of the referendum taken among its members. The majority of that chamber voted for a Missouri Valley Authority. Will the opponents have the courage to charge that the leading businessmen of St. Louis who voted for the M. V. A. are advocating socialism, totalitarianism and similar nonsense?

If a similar referendum were held in other cities throughout the valley, and if the people were honestly informed of the issues involved, I am sure that the results would be the same.

The representatives of labor and agriculture spoke in unmistakable terms for an M. V. A. in their testimony before the Commerce subcommittee. They voiced the sentiments of millions of people, the same people who bear the brunt of the floods and the droughts, whose sons and daughters must migrate to other sections of the country in search of economic opportunities denied them in their native States. They want, and we want, the entire river and its related problems considered as one problem, one river, one problem. They want, and we want, the traditional policy of divided jurisdiction and remote control, with all the inefficiency and waste it entails, ended now and forever.

All of us want a unified regional agency, responsible to the Congress of the United States, and to the President, to do the regional job in cooperation with the people of the valley whom it is designed to serve.

This, my friends, is the voice of the people we are hearing, the very people who have elected the Members of the Congress to pass upon such legislation. We in the Congress must not ignore their wishes. We must not betray their confidence.

Incidentally, I might say that the opposition have resorted to the well-known Hitler method in their endeavor to discredit the Missouri Valley Authority bill. Hitler believed, as he so frankly admitted in his book, Mein Kampf, and carried it out in practice, that the bigger the lie and the more often repeated, the more readily will people believe it.

In a letter asking for contributions, sent out April 13, 1945, the so-called Missouri Valley Development Association informed its would-be victims that the proponents of my bill (I quote) "are unusually well financed." Of course, they offered no proof. At the same time, they attached a membership card for their own organization, bearing in italics the following line: "Larger contributions very acceptable." In other words, they were willing to do you a great favor by accepting larger contributions, to help carry on their nefarious work against a Missouri Valley Authority.

It might also interest you to know that of the 10 directors of the so-called Missouri Valley Development Association, 4 are bank presidents; the chairman and treasurer are presidents of banks in Sioux City, Iowa, and Lincoln, Nebr., respectively.

The National Rivers and Harbors Congress, another one of the opposing groups, under date of April 13, 1945, informed its friends that my bill is backed by (I quote) "powerful interests." That charge, of course, I do concede. The supporters of my measure are powerful, because they represent the will of the majority of the farmers, laborers, small businessmen, and professionals within the valley and throughout the Nation. They seek to overcome our strength by the free use of money and false propaganda.

However, our numbers alone will not be sufficient if we remain unheard. We are well familiar with the technique which the minorities usually employ in order to outshout the majority. Before leaving Washington, I was reliably informed that a New York advertising agency has recruited nine propagandists to be dispatched to the nine Missouri Valley States, where they are to organize a campaign of misrepresentation against the M. V A. bill. Another leading advertising agency in Chicago—note that they are all outside the valley—was engaged some months ago to work for the vested interests against the creation of an M. V. A.

The adverse report of the Senate Commerce Committee should bring no discouragement to the friends of the Missouri Valley Authority project. Upon the introduction of my bill, I protested its reference to the Commerce Committee, because I knew it was opposed to this legislation.

My friends, the millions of people in the Missouri Valley must make themselves heard on this issue. When the opponents of the M. V. A. come to them with unfounded arguments, the people must uncover the motives behind these propagandists; they must make it their business to ascertain the sources of the financial backing of the press agents and advertising agencies. The public-spirited citizens of the Missouri Valley must realize that the improvements which they must have and can have will not come by merely wishing and hoping for them.

Between August 18, 1944, when I first introduced the M. V. A. bill and February 15, 1945, when I introduced S. 555, our great late President Roosevelt voiced on several occasions his support of the creation of a Missouri Valley Authority.

President Truman, too, has given the project unqualified support. In addressing the most rabid enemies of a regional authority in the Missouri watershed, the Mississippi Valley Association, President Truman said, on October 12, 1944:

"There are many projects of merit which have been given the attention of your Federal Government in recent months. Of these, none exceeds in importance the proposed Missouri Valley Authority. * * *"

President Truman called the M. V. A. project the American way of solving the serious Missouri Valley problems.

He warned:

"Selfish interests must be submerged to the common good."

He justified his endorsement of the M. V. A. in the following statement:

"There is ample evidence in the Tennessee Valley—if the opposition will take the trouble to inquire about it—that free enterprise is still very much alive and, yes, it is thriving and healthy. In fact, both big business and little business in the valley are booming. * * *"

President Truman's renomination of the able chairman of T. V. A. for another 9-year term is conclusive evidence that he stands wholeheartedly with the people and for the regional authority method of administration.

The people of the valley, therefore, should not be discouraged in the least by the unjustified conclusions of the Commerce Committee of the Senate. I am confident my bill will receive fair and friendly treatment when it comes before the other committees having jurisdiction over this legislation, and when it comes before the United States Senate and is freely and fully debated.

The cause in which we are all interested is not the first to be misrepresented and discredited by the enemies of progress. Every step of human achievement is beset with obstacles placed in its way by the kind of people who are today trying to obstruct the creation of a Missouri Valley Authority. But if the masses of farmers, workers, businessmen, and professionals will be fully aroused, there is no doubt in my mind that the obstructionists will be defeated.

It is within your reach to provide the leadership which will see the Missouri Valley Authority project translated into reality. The numerous groupings of the people in the valley—the progressive and aggressive organizations of business, labor, agriculture, religion, education, and professionals—will rally to your call and do their full duty to bring opportunity and prosperity to the great Missouri watershed.

Out of Great Tribulation—Triumph

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a significant and inspiring editorial entitled "Out of Great Tribulation—Triumph," by Editor James E. Craig, published in the New York Sun of May 8, 1945, and dealing with VE-day.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUT OF GREAT TRIBULATION—TRIUMPH

"Mine eyes have seen the glory of the coming of the Lord."

It is victory at last in Europe—victory complete and conclusive. After the long dark, dawn. After despair, disaster, and disillusionment, an inevitable decision. First by German radio, then by informal word from Allied headquarters, and today formally and officially from Washington, London, and Moscow, came the electrifying news that the civilized world had come up out of great tribulation into the full light of day.

First of all we give thanks to Him, the great Jehovah, who throughout the ordeal has upheld our hearts and the hearts of our brave allies. We give thanks to indomitable Britain, which for so long held the bridge alone. We give thanks to our kinsmen of Australia, Canada, New Zealand, and South Africa, who helped sustain the burden. We give thanks to gallant Russia, which first dammed the flood of German conquest, then sent it rolling back until Germany itself was submerged. We give thanks to the faithful French, who first lost then found themselves. We give thanks to the Norwegians, Danes, Netherlanders, Poles, Belgians, Czechs, Yugoslavs, Greeks, Maltese, North Africans, and others who fought underground when they could no longer fight in the open. We give thanks for the support of our loyal friends in Latin America. We give thanks for brave China.

We give thanks for the valor of our American boys from city, farm, and factory, who after a few short months of training met in combat the proudest and best disciplined armies in the world and proved themselves masters. We give thanks to our American girls, who in sacrificial service matched the courage of their brothers. We give thanks to Annapolis and West Point for supplying the nucleus of as capable a personnel of commissioned officers as the world has ever known. We give thanks for our military and naval leadership. We give thanks to American industry and American workers for supplying in unprecedented and unbelievable sufficiency all the essential tools of victory and all the necessary means of subsistence. We give thanks for our merchant seamen, who turned the seven seas into open highways for the transportation of men, supplies, and equipment. We give thanks for the matchless skill of those who fought on land, in the air, on the sea, and under the sea. We give thanks for the steadfastness of our people at home, who in the mass were firm as a rock at the front behind the front. We give thanks for the moral and spiritual qualities handed down to us by our God-fearing, freedom-loving ancestors. But for these—but for any of these—defeat instead of victory might today have been our portion.

"He is trampling out the vintage where the grapes of wrath are stored."

But the day of victory must also be a day of judgment. The soft of heart among us will say that now is a time for generosity, not for vindictiveness. Generosity to whom? To the Judases who sold civilization for less than thirty pieces of silver? To those who tore down the Cross of Christ and erected in its place the blood-drenched swastika? To the Gestapo, its chambers of torture and its black death of systematic espionage and cruelty? To the butchers in a thousand charnel houses? To the murderers of Lublin and Lidice? To the builders of barracoons into which non-German men were herded for slavery and non-German women were herded for an even more sinister fate, the uncomely to be made into drudges, the loveliest and most virtuous to be forced into prostitution?

Shall we be generous to those who tortured and murdered millions of Jews and sought to give practical effect to the Nietzschean doctrine that Christian morality is slave morality? To those who in the twentieth century have bowed down before a deity of expediency more dreadful than the bloodthirsty Huitzilopochtli of ancient Mexico? Shall we now be tender with men who consider tenderness the vice of weaklings—who have gloried in their breaking of every pledge, their violation of every code of moral law, their perversion of every decent principle which 2,000 years of civilization had developed in the human breast?

No. The day of victory is not a day for generosity, but neither is it a day for vindictiveness. It is most emphatically a day for the firm, cold, and impartial administration of justice. To us of the United States this war has cost more lives than we have lost in any other war in our history. The voice of the blood of our sons crieth out unto us from the ground. We owe it to their memory that we make sure, insofar as lies in our power, that this thing shall not happen to our people again.

"He hath loosed the fateful lightning of His terrible swift sword!"

As one awaking at daybreak who still trembles from a nightmare, we, too, tremble when we reflect upon the narrowness of our escape. Three years ago the enemy's cause was approaching floodtide. In the Far East the pride of our Pacific Fleet lay broken or drowned at Pearl Harbor. Hongkong, Malaya, Singapore, the Netherlands Indies, the Philippines were in Japanese hands and Australia was in terrible danger. The continent of Europe, from Leningrad and Moscow west to the Pyrenees, from the North Cape south to the Aegean, lay prostrate before the legions of the Axis. In north Africa the Axis was knocking imperiously at the doors of Alexandria and Cairo. But in the east at Stalingrad, and in the south at El Alamein, the tide began to ebb. Foot by foot, then mile by mile, then league by league the enemy fell back before the terrible swift sword which a righteous cause had forged for Allied hands. The enemy lost Africa, he lost Sicily, he lost southern Italy, he lost France and Belgium, he lost the Crimea, he lost the Ukraine, he lost Poland, and finally he was driven to bay within his own Festung Germania. Now even this has been breached. Now also we may ask: "Where be your tongues that late mocked at heaven and hell and fate?" Most

of them are mocking no longer but are crying "kamerad!"

"His truth is marching on!"

"We hold these truths to be self-evident, that all men are created equal, that they are endowed, by their Creator, with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

The unpardonable sin which totalitarianism has committed has been its repudiation of this basic doctrine upon which self-government alone bases its validity, from which self-discipline derives its only dynamic. The authors of totalitarianism in Europe have not only ravaged their continent; they have also debased the hearts and minds of their own peoples. Nazi authoritarians have taught hatred to young Germans and hardened the hearts of old Germans. By lies they have raised a fantastic and demoniac racism into a national cult. By lies they have instilled in the German mind an almost ineradicable suspicion and distrust of everything, however noble, that is non-German. They have transformed into ravening wolves a people normally exhibiting many kind and affectionate traits. Generations must pass away before these foul roots of dogma can be wholly extirpated. Meanwhile the rest of the world must protect itself against any recrudescence of a heresy so diabolical and destructive.

Germany has fallen. On to the Orient. The war is by no means over. There must be no slackening of effort until Japanese militarism has also gone crashing down to irretrievable ruin.

Price Control

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the New York Times on Thursday, May 3, 1945, entitled "What Price Control Has Done."

Mr. Speaker, for all the criticism of the Office of Price Administration, one of the most magnificent jobs done during the war has been accomplished by the O. P. A. The O. P. A. has saved us billions of dollars, both on the home front and in the actual cost of the war. The O. P. A. in holding the price line has insured the value of all the bonds that the American people have invested in to prosecute this war. The O. P. A. by holding the price line has protected the livelihood of the families of our servicemen and all those who work for a fixed salary.

It is easy to criticize, but we had better be sure that in the unjust criticism too often leveled at the O. P. A. we do not destroy the very foundation of our economic future.

The O. P. A. was set up as a protection of the people. It has been just that. The O. P. A. and the Emergency Price Control Act has acted as a great dike which has held back the floodwaters of inflation.

WHAT PRICE CONTROL HAS DONE

President Truman has called upon Congress to extend the Emergency Price Control Act for another year beyond its expiration date of June 30, 1945. In his statement the President emphasized that "our price-control and stabilization program has been one of the most remarkable achievements of this war." The amazing over-all record of economic stabilization is often overlooked in the frequent criticisms directed at many of O. P. A.'s price and rationing actions. During the last war wholesale prices doubled and the cost of living rose 64 percent. In this war wholesale prices have risen less than 40 percent and the cost of living has gone up about 30 percent.

The difference in the magnitude of the increases does not reflect fully the outstanding record achieved during this war. The pressures for price increases have been enormously greater this time, no matter what basis is used for measuring them. We are diverting almost half of our national income to the war effort, as compared with about one-quarter in the last war. Our total war costs to date have aggregated about $275,000,000,000, as compared with only $32,000,000,000 the last time. At our current rate of costs we spend more in 5 months than we did in all of the last war. In 1918 the public had a spendable income of $56,000,000,000; in 1944 the spendable income after taxes has been estimated at $137,500,000,000. In the other war the amount of money in circulation increased by $1,800,000,000; in this war the increase has been 10 times as great. Checking accounts in banks increased by $5,000,000,000 last time and by $25,000,000,000 this time.

Many of the monetary totals which have been attained in this war stagger the imagination. In the absence of control a tremendous inflationary price rise would have taken place. Moreover, this relative price stability has been achieved in the face of actions by Congress to raise farm prices and of the inadequacies of our fiscal and wage programs. O. P. A. cannot be held responsible for the pressures created by these developments. The conclusion is inescapable that, despite many mistakes, a highly creditable job of economic stabilization has been done.

Economic stabilization will be required until the end of hostilities in Japan. It seems clear, therefore, that the Emergency Price Control Act should be extended for another year, as requested by Mr. Truman.

Shall We Sell America Short?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Industrial and Engineering Chemistry Journal for May 1945:

SHALL WE SELL AMERICA SHORT SCIENTIFICALLY?

The present complacency of the American public while Selective Service officials continue "to fiddle while Rome burns" is difficult to comprehend. We have already lost one generation of future scientists because we have denuded our colleges and universities of qualified students enrolled in scientific courses in order to supply a few divisions to the armed forces, and we are well on the way toward losing a second generation unless prompt and favorable action is taken by Congress on the McDonough bill, H. R. 2827.

In strange contrast to our unwillingness to defer bona fide students in our institutions of higher learning is the current enrollment of foreign students in this country. One of our largest and best-known institutions, which was particularly popular with foreigners prior to World War No. 2, experienced this year an increase in enrollment of 100 percent in foreign students over the average attendance in the period 1920–39, and has on hand applications representing an increase of over 400 percent above the 1920–39 period. It is common knowledge that India is sending to this country in September 250 individuals holding masters degrees, and that France is establishing national fellowships in this country.

Recently released data from the Clearing House on Student Interchange of the Institute of International Education shows that there is a minimum of 3,256 students from other American republics enrolled in United States colleges and universities. Of this rather surprising number 58 are in chemistry courses and 68 are enrolled in chemical engineering. Scholarship or fellowship aid for this group comes from several different sources, including the United States Government. We applaud this growth in enrollment of young men and women from Latin-American countries in our colleges and universities and quote the figures merely to indicate the present contrasting policies as regards foreign students and American students.

Among the lay public lend-lease is supposed to provide an exchange of goods and services for the sole purpose of winning the war. Yet American manufacturers of equipment, scientific apparatus, and other highly technical commodities are deluged with orders under lend-lease which any 10-year-old child would recognize are to be employed in post-war for equipping plants and research laboratories in countries with which we are now allied in a common war effort.

If American citizens desire partly to finance the post-war research of our present allies through large shipments of equipment and scientific apparatus, and if they wish to educate large groups of foreign students in our universities and colleges to staff research institutions in these countries, while at the same time those who would be the future American scientists automatically are inducted into the armed forces, it is their sovereign right to do so. But we doubt that the American public has any knowledge of what is actually being permitted under the guise of lend-lease and the so-called good-neighbor policy.

Certainly we must have in Congress enough public-spirited men and women and those imbued with a fundamental love for America and concern for its future welfare to demand that the true facts be brought to light in order that their constituents may know what their Government is doing with funds raised through heavy taxation.

We bow to no man in our intense desire for better and long-continued improved international relationships. No one is more desirous than we that America assist the rest of the world to a higher standard of living. We do insist, however, that at least we make adequate provision for the future scientific and technological advancement of America. We deplore the shipment of equipment and scientific apparatus to an extent which is certain to cripple seriously American research and development. We protest the education of large numbers of foreign students when, at the same time, we refuse to defer even a limited number of qualified

young Americans so that they can continue in scientific courses in the colleges and universities of this country.

With reckless abandon, our Government is selling America technologically short. Unless an aroused public demands an immediate investigation and appropriate action, our country is headed for a second- and third-rate role in the post-war period. God help us if we become engaged in a Third World War in the next 25 years.

The time for congressional action is now!

Address of Admiral Russell R. Waesche, Commandant, United States Coast Guard

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. BLAND. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address by Admiral Russell R. Waesche, Commandant, United States Coast Guard, delivered at the annual dinner meeting of the Maritime Law Association on May 4, 1945, at New York, N. Y., dealing with various matters pertaining to safety at sea and other problems under the administration of the Coast Guard and pertaining to the American merchant marine:

At the outset I want you to know that when the president of your association, Mr. Betts, invited me to address this annual dinner meeting I felt highly complimented; also, that I accepted with eagerness because it seemed to me that this would be an excellent opportunity to discuss with you some matters of common interest and to attempt to bring about a meeting of the minds on some subjects of mutual concern. I hope that you have not expected me to devote my time this evening to relating war stories and anecdotes illustrative of Coast Guard combat activities, because I do not intend to do so. I shall take it for granted that you are aware that coast guardsmen are doing their duty in the combat theaters, and I shall address myself to a few Coast Guard problems that concern you in your professional relations with the maritime industry.

First, however, I want to outline briefly the nature of the Coast Guard and to mention something of its history. The Coast Guard stems from the old Revenue Cutter Service, which was conceived by Alexander Hamilton and established by act of Congress in 1790. Its functions, as outlined by the creating statute, were to enforce the collection of customs duties and tonnage taxes; the law provided that officers of the Service should be deemed officers of the customs. Accordingly, the Service logically belonged in the United States Department of the Treasury. There it was put, and there it has remained ever since. It became apparent soon after the Service began functioning that an agency organized to enforce the customs laws was fitted for related police duties. With the enactment of our country's first navigation laws, the Revenue Cutter Service became the enforcement agency for such laws also. Thus the association between the Coast Guard and the merchant marine dates back almost to the founding of the Republic.

From these beginnings, the Revenue Cutter Service, now the Coast Guard, evolved into the agency of the United States responsible for enforcing all laws of the United States on the high seas, and on territorial and inland waters. This enforcement background of the Coast Guard is significant because it answers the question: Why was the Service organized along military lines? The duties of enforcement agencies, particularly those operating over large areas and using arms, have traditionally called for military organization, notwithstanding that the duties are civil. The Canadian Royal Mounted Police is an example. It was certainly not the intention of Congress in the founding statute to establish the organization as one for the waging of war. Indeed, Hamilton, in his request to the Congress for the establishment of the Revenue Cutter Service, recommended that the officers of the Service be commissioned as officers of the Navy. Congress refused to follow his recommendation in this regard.

In the 1830's the Revenue Cutter Service began to assume its first duties relating to safety of life and property at sea. First, cutters were sent on cruisers along the coast to assist vessels in distress and to administer to the needs of shipwrecked crews. From this origin, the Revenue Cutter Service developed into the Nation's safety at sea and rescue agency offshore. Then, in 1872 there was established, under the Treasury Department, shore facilities for the same purposes. This was the inception of the United States Lifesaving Service. While officers of the Revenue Cutter Service were assigned to the Lifesaving Service from time to time for various purposes, the two establishments remained separate until 1915, when they were consolidated as the United States Coast Guard. In 1939 the Lighthouse Service was consolidated with the Coast Guard. Thus, at the beginning of the present war, the Coast Guard had become the principal maritime safety and rescue agency of the United States. It was only logical, therefore, that the safety functions of the Bureau of Marine Inspection and Navigation should be transferred to the Coast Guard so as to establish, in the interests of efficiency and effectiveness of operation, a single agency in which all the Government activities related to safety at sea would be concentrated. After a 2-year study by the Bureau of the Budget, this was done in 1942 by Executive Order No. 9083.

Now, while the Coast Guard operates under the Treasury Department in time of peace, in time of war it operates as part of the Navy subject to the directions of the Secretary of the Navy. Congress had two excellent reasons for so providing. First, the training which coast guardsmen receive in carrying out our various civil activities and the equipment that is developed in that connection are of great value to the Navy in combat activities and are immediately available for those purposes. Thus, for example, our surfmen were perhaps the most competent small-boat operators in the world, and I need not remind you of the remarkable performances that they have given in amphibious landings in the Pacific and in Europe. Likewise, the ice patrol in northern waters gave us training and equipment that has paid great dividends in the Greenland patrol during this war.

The second reason for the operation of the Coast Guard as part of the Navy during time of hostilities derives from the wartime importance to the military of the various civil functions of the Coast Guard. These functions, being all intimately connected with maritime activities, must be subject to military or naval control during war. The Congress, therefore, determined that it was desirable that the agency charged with those functions should, in wartime, become part of the Navy and should, at all times, be prepared for that eventuality.

Since the Coast Guard must, in time of peace, be prepared to assume its place in the naval system in time of war and to integrate its officers and men into the naval scheme, it is obvious that the service had to be organized on military lines so that the wartime transfer could always be effected with the minimum of friction.

From this brief outline you can see that the Coast Guard is unique among the armed forces of the United States, for, although it is military in organization, its functions and duties are primarily civil, not military. Its normal place is in the civil establishment, not the military branch of the Government. Should the Coast Guard be absorbed by the military, it is clear that the civil branches would have to establish additional facilities to carry out those civil functions now vested in the Coast Guard.

In view of the consolidation in the Coast Guard of all safety at sea functions, it was natural that last summer, when the suggestion was made for a new International Conference on Safety of Life at Sea, the Navy Department and the State Department should fix upon the Coast Guard as the agency to prepare the groundwork for the new conference.

It is now 16 years since the last International Safety Conference was held, and, in the meantime, notable advances have been made in the scientific fields affecting safe navigation. The present war with its emphasis on electronics and its other developments has given added impetus to progress in the field of marine safety. If much of this progress is not to be lost through economic pressure in the post-war period, it behooves us to take steps now that will insure that the merchant fleets of the world may take advantage of new safety measures and still compete on an equal basis. In so doing, we shall be giving effect to the policy expressed in article 61 of the 1929 International Convention for Safety of Life at Sea, wherein the contracting nations agreed to hold conferences from time to time to revise and bring up to date the international treaty. There is another factor that makes modernization of the treaty desirable. There have been remarkable technical advances resulting in the reduction of both the time required for ocean voyages and the importance of distance as a factor therein. Accordingly, some of the requirements which were modern and desirable 16 years ago are today unnecessary and obsolete. It is time that the whole problem was reexamined and the dead wood cleared away.

Accordingly, we have set to work sifting suggestions and seeking to formulate proposals that the United States will be able to present to the other maritime powers at the proposed conference. There has been set up a framework of committees "to carry the ball" on this matter. There is one over-all general committee made up of representatives of the various agencies of government having an interest in the subject matter and of representatives of industry and the maritime fraternity. The purpose of this general committee is to serve as a sort of liaison between industry and Government agencies on the one hand, and the actual working committees on the other. It is not expected that this general committee will do much of the actual spade work. That will be the job of the various technical committees, but the general committee will serve rather as a board of overseers to pass on matters of broad general policy and to guide the programs developed by the working technical committees. There are 14 of these working technical committees divided into three groups: 1, construction; 2, lifesaving procedures, and 3, rescue procedures. Each group is headed by what is termed a group committee, made up in most instances of the chairman and vice chairman of the various working technical committees com-

prising the group. It is the purpose of these group committees to correlate the activities of the working committees, to prevent them from overlapping or working at cross purposes, and to bring about unified coherent proposals. Both industry and government are represented on the group committees and on the technical committees. In this connection, I am particularly pleased to note that 13 members of this association are serving on the various committees.

This evening I can report significant progress by the various committees. The general committee has met, all 3 group committees have met, and 11 of the 14 subcommittees have convened. Several have met more than once. An examination of the minutes of the proceedings of these committees has convinced me that we may anticipate a well-considered program as a result of their work. As you know, it is too often the case in committee activities, where the members have other pressing duties, that the study of roposals is perfunctory. The minutes of these committees reveal nothing of that kind. On the contrary, they indicate that the members are literally going over the matters assigned to them with "a fine tooth comb." I am sure that the American proposals will be as well studied as those of any other maritime power.

This evening I thought that I might mention a few suggestions that have been made relative to the proposed international convention. You will understand that they are only suggestions, and that I am calling them to your attention so that you may think them over and give the committees the benefit of your judgment.

One of the suggestions concerns a permanent secretariat of safety of life at sea. It is hardly necessary to remind you gentlemen that international conferences, with their diplomatic etiquette and protocol, their stiff formality, and the difficulty and inconvenience inherent in getting them under way, are a most cumbersome means of bringing about continued cooperation and agreement in any particular field of endeavor. To try internationally to regulate maritime safety by diplomatic conferences every 15 years is like trying to run interstate commerce among the 48 States by holding constitutional conventions every decade or so. In a growing and dynamic field, such as the one in which we are interested, it is necessary that some organization be instituted to provide continuity, to receive and explore new proposals, to make studies on how the requirements established by the high contracting powers are being met and how they are working out in practice. These would be some of the functions of the secretariat. It would also provide an establishment for giving various services to maritime nations such as hydrographic, meteorological, and navigational information.

I am convinced that by providing some continuing organization for keeping the field constantly under review and for receiving proposals and circulating them among the contracting powers the proposed international convention can make significant contribution to the maritime world.

There has been no thought of placing in the proposed Secretariat any power to amend the convention. Neither is it anticipated that the convention provisions will be amended by less than the unanimous consent of the high contracting powers. There are certainly grave constitutional questions, so far as the United States is concerned, that such procedures could be adopted, even were they deemed desirable.

Most important, from my point of view, is that some independent organization be established to receive and circulate proposed amendments to all the signatory powers, which proposals could be adopted by all of such powers. I wish to emphasize that there is nothing particularly new in this suggestion. Article 61 of the 1929 convention now provides that modifications may be proposed by any contracting power to the United Kingdom, which shall communicate them to the other contracting powers. If the modifications are adopted by all the contracting governments, the convention is deemed amended accordingly. I do feel, however, that there is merit in the proposal to take the responsibility for circulation out of the hands of any one of the contracting powers and to vest it in an international establishment.

I have been asked several times what connection, if any, is envisaged between the proposed Secretariat and any world organization that may eventually result from the San Francisco meeting. That is a question that can be answered, of course, only when the pattern adopted at San Francisco becomes more clear, but I believe we can all agree that a service bureau such as we have been discussing might fit in very well with a world organization which would probably contain several similar offices in different and related fields.

Before leaving this subject of the International Conference for Safety of Life at Sea, I wish to call your attention to the question of amending and clarifying the international rules of the road. Those rules were adopted in 1889 and have remained without amendment for well over half a century. Parts of them are obsolete, and some definitely need clarification. The technical committee in charge of rules of the road has prepared a questionnaire in which several proposed changes or clarifications are listed. This questionnaire has been sent out to various admiralty lawyers, ship masters, pilots, operators, and naval and Coast Guard officers. It has been sent to all of your membership. You have been asked for your comments and for any additional proposals that you may have with respect to amending or clarifying the international rules. If any of you present here tonight has not received such a questionnaire, and you are interested in the matter, I hope you will not hesitate to write me. I am anxious that any proposals we make at the international conference have the fullest and best consideration from the maritime legal profession and from the maritime industry. I hope it is clearly understood that in these proposals we are doing nothing that would in any way make changes in the inland, Great Lakes, or western river rules.

The second matter which I should like to discuss with you tonight concerns the future of the Bureau of Marine Inspection and Navigation functions transferred to the Coast Guard by Executive Order No. 9083 of February 28, 1942. As you are all aware, that Executive order stems from the reorganization authority granted to the President in title I of the First War Powers Act, 1941. That legislation expressly provides that title I shall remain in force only during the continuance of the present war and for 6 months after the termination thereof, unless the Congress by concurrent resolution, or the President, shall designate an earlier time. The First War Powers Act was approved on December 18, 1941. As of that date, a formal declaration of a state of war existed between the United States and Japan, the United States and Italy, and the United States and Germany. I take it, therefore, that notwithstanding the developments heretofore in Italy and those that may be anticipated shortly in Germany, the authority upon which Executive Order No. 9083 depends will not lapse until after the end of the Japanese war.

How long the Japanese War will last I do not know, and I doubt whether anyone is in a position to predict V-day in the Pacific with great accuracy. I am sure in my own mind that a tough, hard struggle lies ahead of us against a well-armed and stubborn enemy whose ethical standards have little in common with those of the western world.

At all events, we have already had over 8 years of experience in administering these merchant marine inspection functions, and from that experience, I am convinced that the time has come when we must give serious thought and study to the future status of the organization and personnel of the Bureau of Marine Inspection and Navigation. The uncertainty inherent in the present situation does not make for good administration. I think that as practical men you can visualize the difficulty that arises, under those circumstances, in any attempt properly to integrate the marine inspection activities with the rest of the Coast Guard.

The Congress has been conscious of this difficulty and of the unsatisfactory results that spring therefrom. Only recently, the House Committee on Appropriations in its report on the Navy Department appropriation bill included a statement that I feel I should read to you:

"With respect to the Coast Guard, it is the sense of the committee that there is considerable room for improvement in the organization and administrative procedures of the Merchant Marine Inspection Service, which temporarily has become a part of the Coast Guard under the direction of the Executive. The committee's complaint no doubt results from the temporary nature of Coast Guard jurisdiction, because if such organization, the committee feels certain, had permanent supervision, there early would have been applied the efficient methods and procedures which long have been Coast Guard virtues. If the Merchant Marine Inspection Service is to remain permanently under the Coast Guard, there should be early legislation for effecting the transfer, because inefficiency very likely will continue under a temporary arrangement."

In the light of that statement, it is manifest that we in the Coast Guard would be remiss in our duty if we did not now commence to study and prepare proposals and plans for fixing the permanent place of the marine-inspection functions in the governmental establishments and for taking action in that regard at the proper time.

Frankly, gentlemen, the Coast Guard is desirous of retaining the B. M. I. N. functions. I sincerely believe in the wisdom of vesting in one agency all safety-at-sea functions, and I suggest, too, that it is desirable that regulatory safety-at-sea functions should be in the hands of an agency, one of whose functions is the enforcement of the laws of the United States on the high seas and Territorial waters.

Having stated the Coast Guard's position in this matter, I feel that it is only appropriate to outline to you as lawyers the attitude that the Coast Guard takes with respect to regulatory functions in general, with particular reference to those of the B. M. I. N.

The marine-inspection field is one of many in which the Congress has found it necessary to vest in an administrative agency both rule-making powers and decision-making powers—that is, both kinds of authority ordinarily exercised by agencies making and enforcing administrative law. It has been suggested to me, from time to time, that a military organization is not properly geared to carry out administrative law functions. This attitude seems to stem from a suspicion of what is often called the military attitude and of the ideas of rank and military command. My answer has always been that the Coast Guard is an organization that for generations has been carrying on civil functions and which, in time of peace, operates not under the military branches of the Government but under a civil branch, the Department of the Treasury. All its primary functions are civil in nature, and it is organized on military

lines because it is an enforcement agency and because in time of war it must fit into the naval organization in order to carry out its civil functions under naval supervision and control. If military organization in itself is an obstacle to efficient and proper administration of civil functions, then the whole theory of a Coast Guard is wrong and has been wrong for over a hundred and fifty years.

One of the fundamentals of administrative law to which we have sought to adhere in the Coast Guard is that in the making of rules and the rendering of decisions, care should be taken that the rule or decision squares with the intent of Congress. Under the American system of government, legislative power as such is vested in the Congress, and it is elementary that that power cannot be delegated. Only the power to fill in details or to carry out in concrete application a general standard established by the Congress can be granted to an administrative body. It follows necessarily, therefore, that when such a body seeks to go beyond the standard established by Congress and to make rules or decisions that do not square with the congressional intent, that agency is guilty of sheer usurpation of a function which it does not have, which it cannot have, and which, under the oath which every executive officer takes, he must avoid.

We are all aware that the great growth of modern economic and social machinery, with its accompanying augmentation of complexities, has created a demand on governments for a type of control that is flexible and based on specialized information. The democratic nations of the world have answered that demand with specialized administrative agencies operating under a standard established by the democratic legislature. No one can question the value or desirability of this system when the procedures and processes followed by the agencies are in keeping with fair play.

In rule-making activities, fair play requires that there be provision for consultation with affected members of the industry and opportunity for full discussion. The powers of administrative agencies over private enterprise are immense, and sound reason dictates that before subjecting persons to requirements that may have great economic repercussions the affected parties should be heard, not only to protect their own interests, but in order that the administrative body may function as it is intended, that is, with special knowledge of the circumstances. Anyone with government experience in the last 2 decades knows how often untold damage and embarrassment can result from ill-advised or ill-considered administrative action. It was largely for the purpose of providing a forum for consultation and discussion that we created the Coast Guard Merchant Marine Council. This body is made up of the chief officers of the Coast Guard charged with responsibility in connection with merchant-marine activities. It meets weekly and sometimes more often. Prior to the issuance of important new rules and regulations, affecting the industry, it is the policy to provide for notice and open hearing before the council. In this way, parties in interest can present their views to the Coast Guard officers most concerned with their problems. At any time, any person in the maritime industry can petition for, and secure, a hearing with regard to his particular problems as affected by the existing rules and may request modification and amendments of the rules.

The council is also charged with keeping itself advised at all times of developments, trends, and viewpoints of the industry. It is, in effect, the ear of the Coast Guard by which information can pass from the industry to the commandant. In this manner we seek to acquire and keep that specialized knowledge, which is one of the foundations on which the administrative agency device is based.

In the field of administrative adjudication, the right to notice and hearing, the right to counsel, and the right to call and cross-examine witnesses are, of course, fundamental. But almost equally important are the separation of the duties of prosecutor and judge, the right to have the decision of the case made by the man hearing the evidence, and the right to an impartial review of the actions of the deciding authority based on a full review of the record. If these principles are followed and any tendency toward star chamber activity is carefully avoided, I believe that substantial justice will be done and the confidence of the public in the administrative process will be retained.

Finally, any administrative body has a duty out of a decent respect for the opinion of the public with which it is concerned to explain unhesitatingly the basis for its decisions. Parties are entitled to know the basis of rulings and decisions so that they may govern themselves accordingly, or seek redress in some other forum. I know of few things that make for more dissatisfaction or which more often evoke the cry of bureaucracy that the administrative official who, after hearing a carefully presented argument, merely shakes his head, says no, refusing to give his reasons. Explanation of the basis of action is one of the best means of keeping one's own house in order as well as giving members of the public a guide to future conduct. It is a mainstay to consistent action and forestalls arbitrary or capricious measures.

It is my considered opinion that unless an administrative agency accommodates its procedures to the principles which I have outlined, it will find that Congress has either put it out of business or has forced it to apply the practices that we have been discussing. Any agency in the latter category is in the unenviable position of having aroused antagonism and suspicion which may permanently hamper its successful discharge of its duties. So far as the Coast Guard is concerned, I assure you that it is my aim and purpose to avoid any course of action which might result in the Congress passing a little Walter-Logan bill for the Coast Guard's benefit. I do not care to have the Congress of the United States publicly indicate that it feels my service does not apply principles of good administrative law.

In connection with administrative adjudication I want to call your attention to the system for disciplinary action against seamen which the Coast Guard established after the transfer of the B. M. I. N. functions in 1942. The framework of the system is to be found in the temporary wartime rules governing investigations of accidents and casualties, published in the Federal Register. In 1942, the great increase of shipping had created a strong demand for more efficient disciplinary action against seamen. Many men who had never been to sea before were signing articles, and voyages were often very long. Furthermore, men were living aboard ship under a severe strain resulting from the war dangers to merchant shipping which had not obtained in peacetime. All these factors were rapidly creating a situation which, had it continued, might have resulted in drastic action.

Accordingly, we entered upon a study of the disciplinary system that, pursuant to section 4450 of the Revised Statutes, had been established in the Department of Commerce, Bureau of Marine Inspection and Navigation. Under the old system, disciplinary cases were heard by a board of three merchant marine inspectors who performed the functions of investigator, prosecutor, and adjudicator. Perhaps it is not quite fair to say that they performed duties as adjudicators, because while the board made recommendations with its report, decision was made by the Director of the Bureau of Marine Inspection and Navigation who never heard the evidence. Usually a board was not convened until after a complaint had been filed with the inspectors, then several days elapsed before the board began its investigation. In days of quick turn-around, it is obvious that that procedure meant that vessels had departed and witnesses had become scattered when action commenced.

As you can see, the system was cumbersome and not adapted to the intensified disciplinary problem. How inadequate it was can be understood when it is realized that while over a hundred thousand men were going to sea in the last year of its operation, disciplinary action was taken in only 207 cases.

Inasmuch as Executive Order 9083, in transferring the B. M. I. N. functions to the Coast Guard, centralized in the Commandant the authority of the various boards and officers concerned with disciplinary activities, it was concluded that the Commandant could exercise that authority under a streamlined procedure.

Here was a situation that called for the most careful application of good principles of administrative law, for we were dealing with the right of a seaman to a livelihood in their profession or calling. The sanction in disciplinary action pursuant to section 4450 is suspension or revocation of the license or certificate of the seaman, and without such license or certificate a seaman cannot sail on American vessels.

In our exploratory study we carefully reviewed the criticism of B. M. I. N. procedures contained in the report of the Attorney General's Committee on Administrative Procedure in 1940, Senate Document No. 8. We examined the general recommendations of that committee on administrative procedure and also reviewed the recommendations made by the American Bar Association in its study which led to the Walter-Logan bill. We made comparisons with the systems set up by statute for other agencies. The present disciplinary system is the result of our studies.

In rough outline the present procedure is as follows:

1. Every vessel arriving in port is boarded before she docks by a Coast Guard officer who, after first reporting to the master, makes inquiry whether there has been trouble on the voyage. This is done by talking to the master, officers, crew members, and checking the log. In this preliminary investigation, Coast Guard officers have been enjoined to conduct themselves so as to avoid in any way undermining the authority of the master. If it appears that there has been trouble calling for disciplinary action, the Coast Guard examining officer is called.

2. The examining officer considers all the information available and permits the persons involved to state their side of the case. If the examining officer feels that there are extenuating circumstances or that the offense is of minor importance, he issues an admonition to the offender instead of commencing action against him. This eliminates many first offenses and reduces the number of hearings required. No action is taken against a seaman who is admonished, but the admonition is made a matter of record and may be considered in fixing punishment in case of a subsequent offense.

3. If the examining officer feels that the offense is a serious one he prepares written charges and specifications and serves them on the person accused. He fixes a time for hearing and issues subpenas for necessary witnesses.

4. At the hearing, the examining officer acts as prosecutor and an independent Coast Guard officer who has heard nothing of the case sits as hearing officer. These hearing officers sit every day and have the position of quasi-judges. At the trial, the attributes of a fair hearing are observed. The person charged has right to counsel and the right to cross-examine and call witnesses.

5. At the close of the hearing, the hearing officer makes his decision of "charge proved" or "charge not proved." In case the decision is "charge not proved," no further action is taken. If the decision is "charge proved," a suspension, revocation, or probation is imposed against the seaman's license or certificate.

6. The person charged has 30 days to appeal to the district Coast Guard officer from a finding of "charge proved," and if he has been "beached," that is, if there is revocation or suspension, an appeal lies to the commandant from the district Coast Guard officer.

From this brief outline of the new system, you can see that we have separated the functions of investigator, prosecutor, and judge. The man who hears the evidence makes the decision and imposes sentences. There is provision for reasonable notice, safeguards for a fair hearing, and the right to appeal. Furthermore, the boarding technique enables us to hear the case when the witnesses are present and without interfering with the ship's turn-around.

We have now had over 2 years' experience with the system, and we have made minor changes here and there, but, all in all, we believe that discipline has definitely improved and that both operators and labor organizations have generally been pleased with the results of the system.

Finally, I want to deal with a matter that several persons have raised with me from time to time. It has to do with possible conflicting interests of the Coast Guard in the exercise of the investigatory powers under section 4450 of the Revised Statutes, as amended, in cases where a Coast Guard vessel may be involved in a collision or other marine casualty. Collisions between Coast Guard vessels and private ships in peacetime are so rare that I doubt that this is any real problem, but should such collisions occur, I wish to make it abundantly clear that I shall do everything in my power to insure that the Coast Guard will never use those governmental powers to secure any advantage as against private parties. To me it is beneath the dignity of the Government and smacks of downright chicanery for an agency of the United States to use the subpena power and the great investigatory weapons which Congress has granted for use in behalf of the public welfare for the purpose of gaining a pecuniary advantage or to escape the consequences of culpable action. I assure you that I will have no part of it.

Closely connected with this matter is the question of making available to all parties in interest the records of formal marine casualty investigations undertaken pursuant to section 4450 of the Revised Statutes. We all realize that military security sometimes demands that such records be treated confidentially. We are all aware and desirous that the winning of the war should come first. Furthermore, we can agree that often, while security reasons do not dictate that the whole record be treated as confidential, parts of it must be so treated. To make the records generally available with those parts deleted might in many cases present an unfair and untruthful picture. We can also set aside as inappropriate for public examination informal memoranda and reports made by examining officers as a preliminary step. Such documents reflect only the personal views of the officer involved, are often based on ex parte and unsworn information, and are intended usually as only a basis on which other officers may determine whether a formal investigation should be made. I doubt that there is any compelling reason or demand for making such interoffice communications open to examination by parties in interest. Aside from such classes of records, I am of the opinion that the Coast Guard policy should be to make casualty report records available without partiality to all parties in interest. That this is in keeping with the sense of Congress is evidenced by the express direction in the first subsection of section 4450 that all reports on casualties involving loss of life shall be public records open to inspection at reasonable times by all persons.

I do not believe that it is consonant with the standard of ethics which the American people have a right to expect from their Government to make available information to one party and not to the other, particularly when the parties are involved in litigation concerning the subject matter of the report. It seems to me that this is particularly true where one of the parties is an agency of the United States. The Coast Guard is attempting at this time to work out arrangements under which this policy can be more effectively pursued. We should always keep in mind, however, that the basic purpose of the investigative authority granted in section 4450 is to determine the cause of casualties so that they can be prevented in the future, not to serve as a detective agency to ascertain the facts making for pecuniary liability on the part of the interests concerned.

In closing I should like to express my appreciation for the opportunity to talk to you this evening and also for the understanding cooperation which the Coast Guard has always received from this association. The fine professional attitude displayed by the American bar is one of the factors that has made the democratic experiment in America a successful one. Let us now dedicate ourselves to the task of proving that under the rule of law a democratic nation can prosecute a great war to a final victorious conclusion and can then build a lasting and just peace.

Polish Problems

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a petition to the President of the United States, the Honorable Harry S. Truman, by the Polish Roman Catholic Union of America, of Chicago, Ill. It is a very timely and righteous plea for the Polish cause:

POLISH ROMAN CATHOLIC UNION OF AMERICA,
Chicago, Ill., May 10, 1945.

Hon. HARRY S. TRUMAN,
President of the United States of America,
White House, Washington, D. C.

MR. PRESIDENT: The executive council of the Polish Roman Catholic Union of America, assembled at its regular monthly meeting on May 8, 1945, at its headquarters in Chicago, Ill., considered the present situation of our ally, Poland, who has been freed from German occupation.

This meeting fell on VE-day, the day of the official ending of the war in Europe—a day of rejoicing and thanksgiving. Nevertheless, our joy is tempered by anguish and fear because the Polish nation, which was the first to take up arms against the aggressors who now have capitulated before the armed forces of the United Nations, principally the forces of America, cannot be found among the other free nations at the Conference at San Francisco and cannot express her views. This situation is all the more appalling when we note how the Soviet regime is arresting, liquidating by deportations or executions, Polish patriots, who for over 5½ years have been fighting heroically with great sacrifices against our common enemy.

Soviet Russia is supposed to be an ally of the Allied Powers but she deals with Poland, one of the staunchest members of the United Nations, whom the immortal President Roosevelt called "the inspiration of nations," as one of her and our worse enemies. Soviet Russia imposing on Poland a communistic government which has nothing in common with the spirit of the Polish nation, renders more difficult the formation of a representative government in Poland; forms new communistic organizations; allows not freedom of religion, and acts toward Poland as a dictator.

Deporting 16 leaders of the Polish underground to Russia under false pretenses establishes new proof that the Soviet regime is not dealing honestly with the Polish nation but by all possible means is trying to destroy Poland's vital strength and to subjugate her to slavery.

The executive council of the Polish Roman Catholic Union of America hereby fervently appeals to you, Mr. President, as the executive head of this country and the Commander in Chief of our armed forces, in which serve thousands of members of our organization, to demand from Soviet Russia, our ally:

1. That she give the Polish nation freedom in selecting her own government;

2. That she discontinue mass arrests in Poland and the deportation of its inhabitants and promptly release the 16 arrested Polish patriots;

3. That she allow American relief organizations entrance to Poland.

Moreover, we also request:

1. That Members of Congress and the press be sent into Poland and the territory taken away from Poland east of the so-called Curzon line to investigate the existing conditions there;

2. That the delegates of the legal Polish Government in London be invited to the conference in San Francisco.

Above all, Mr. President, the executive council of the Polish Roman Cathoic Union of America resolves unanimously to continue strongly and loyally to support all the war efforts of our Government in the victorious fight against Japan for the establishment of a lasting and just peace on earth. We believe unshakingly that you, Mr. President, as a champion of freedom, security, and the rights of nations will not allow harm to befall Poland, and will not permit that enslavement be the reward of this brave and trustworthy ally of the United States. Therefore, we place the fate of Poland in your able hands and your august judgment.

For the executive council of the Polish Roman Catholic Union of America,

JOHN J. OLEJNICZAK,
President.
STEPHEN S. GRABOWSKI,
Secretary General.

Congress Faces a Great Issue

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for today:

CONGRESS FACES A GREAT ISSUE

The House Ways and Means Committee approved yesterday the proposed extension and expansion of the Reciprocal Trade Agreements Act. Thus the first step has been taken toward enactment of one of the most necessary of all measures for post-war international economic cooperation. Yet committee approval came by the rather narrow majority of 14 to 11. One Democrat and all 10 Republicans on the committee voted against the bill. Such a line up indicates that the vote on this measure in the full Congress may be on traditional party lines, with a few Democrats wavering because of special interests which ask for tariff protection in their districts. A vote of this type, wholly apart from its danger to the extension of the act, would be an outstanding example, particularly from the Republican side, of the triumph of historic party tradition over common sense and present logical consistency.

Traditionally the Republican Party has been the party of strong central government. It has been the party of the tariff. These two aims were voiced by Alexander Hamilton, and to a large extent they went logically together. The Democratic Party, on the other hand, following the intellectual leadership of Thomas Jefferson, has been traditionally the party of restricted central government, the party of States' rights, and the party of free trade—or at least of a tariff "for revenue only." These aims also went logically and consistently together.

But in the long period in which the Democrats have recently been in power, the two parties have in some fundamental respects changed their historic position. Under Franklin D. Roosevelt and the New Deal, the Democrats extended the power of the central Government in many directions. It was then the Republicans who began to talk most of restricting the central Government, of restoring States' rights, of abolishing a multitude of governmental controls, of protecting the freedom of the individual. But with respect to the tariff, both parties kept their traditional positions. President Roosevelt and the Democratic majority supported the reciprocal trade program of Cordell Hull. The Republicans in both Houses, on the other hand, opposed that program in 1934 by an adverse vote of 127 to 7, in 1937 by an adverse vote of 95 to 3, and in 1940 by an adverse vote of 166 to 5; though they fortunately broke this record in the war-time year of 1943 by voting in favor of extension by 163 to 66.

In recent years, indeed, insistence of Republicans on high tariff barriers has led them into obvious self-contradictions. They protest against "Government interference with business" while asking for the greatest interference with business in the tariff field. They demand the economic freedom of the individual at the same time that they try to prevent the individual, by prohibitive tariff barriers, from buying foreign goods. High tariffs distort the whole structure of production in America. They build up artificial industries and force the American consumer either to take a poorer product or to pay more for the same product than he would have to do without the tariff. By thus artificially restricting what we can buy from abroad, the tariff in the long run restricts by an equal amount what we can sell abroad, and so shrinks our export industries by at least as much as it expands the protected industries. The result, in other words, is to protect our comparatively inefficient industries at the cost of hobbling our most efficient industries. World tariff barriers mean a shrinkage of the total wealth that the world can produce and consume.

By an inconsistency similar to that of the Republicans, some of our extreme national planners have declared themselves in favor of freedom of world trade, not recognizing that such freedom would ruin their neat national plans. A few who have recognized this fact have continued to give lip support to free world trade while trying to introduce protection through the back door by an insistence that the wage scales paid by foreign concerns selling to us must be as high as our own. This would impose even more impassable trade barriers than high tariffs, and would do so under the false guise of humanitarianism.

It is time for the Republicans, and in particular those who sincerely wish to preserve free enterprise, to re-examine their first principles. They would come to see that high tariffs and other barriers to international trade are not consistent with free enterprise but are, notwithstanding their age, forms of Government planning which force production out of its natural channels. Freedom of international trade goes with freedom of domestic trade, while restrictions on the one beget restrictions on the other.

Victory in Europe!

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 17 (legislative day of Monday, April 16), 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Victory in Europe!" published in the Birmingham (Ala.) News of May 7.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORY IN EUROPE!

It is faith again, after deep doubt.

It is hope again, after long and desperate struggles against despair.

It is belief in man, in life, in God—renewed or restored. It is the difference between a world making sense and a world gone mad. It is a lift and a light to men who have been dwelling in the depths of darkness.

Great realities produce this epochal renascence.

Intolerable evil has been decisively brought low. The moral law of the universe has been vindicated.

The awful slaughter and destruction—at least in Europe—have been ended.

We have won another chance to achieve a world in which men and nations can find satisfaction and joy in themselves and in each other.

Profound as are gratification and gratitude for the end of the fighting in Europe, there can be no frivolous, irresponsible rejoicing.

Our first thoughts, even now, must be for those who have died in this cause and for those who grieve for them.

Even now, we cannot forget the grave prospect still confronting all the world.

Millions of men, including tens of thousands of our own, have died for a world of justice, decency, and peace. The duty they leave with the rest of us cannot be forgotten—not even in this moment.

It is a terrific responsibility still imposed upon us. Surely no one can believe that we can now simply return to old, easy-going ways. We face a world still stricken with horror, still subject to intense hatreds, in many places fighting hopelessness—and hunger, everywhere facing complex problems.

We must not suffer the delusion that all is now well. We must not break faith with those who have made possible this new opportunity. This is a time for solemn rededication. So far we are victorious. But awful dangers remain. If we fail to fight on against them, all that we have won can still be lost.

Not yet has the world been wholly delivered from war. Far from it. A terrible struggle continues in the Pacific. Even now the news is emphasizing the awful costliness of that conflict. But the end there, too, is assured. Its coming will be accelerated by the utter downfall of Germany—perhaps greatly accelerated.

Every American's critical duty now is to do nothing to retard the coming defeat of Japan, to do everything possible to hasten it.

It is a fearful, unprecedented responsibility which comes with the victory in Europe. We Americans share that responsibility. The Continent is in a state of acute catastrophe.

Immediate urgencies in meeting human need and establishing order now confront us.

Beyond is the vastly complex and dangerously difficult business of reconstructing a world. It is a business in many ways more difficult and demanding than the making of war. If there is to be abiding hope that the great new opportunity now won will not be dissipated and lost, supreme qualities and heroic sacrifices will continue to be demanded.

The fate of Europe, and of the world, is in the making of the victors.

What is going to be done about it?

It took sacrifices to the death, infinite courage, absolute devotion, to win the war.

It will take the same spirit, the same fidelity, to achieve genuine peace.

But we had to fight to save the Nation, and the world. Yes, and we still have to fight in another way, we still have to go on giving out uttermost, if the Nation and the world are to continue safe, if victory is to be consolidated and completed.

The hardest tests still lie before us.

In Europe the destructive duties have been done.

Now the creative tasks must be assumed. Unless those challenges are met adequately, our victory will start slipping away from us before we realize it. There will be no victory.

Onward the battle must go, now to creative and final victory.

New York Foreign-Trade Zone Vital in War and Peace

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Thomas E. Lyons, executive secretary, Foreign-Trade Zones Board, Department of Commerce, before the Lions Club, of Quebec, Canada, at the Chateau Frontenac, May 16, 1945:

Now that the paramount task of defeating the Axis is well on its way to completion, both the Dominion of Canada and the United States are faced with the responsibility of readjusting their giant industrial machines to meet peacetime needs and what is even more important, to providing new jobs for war workers and former service men and women. The immensity of this task must not be understated.

Secretary of Commerce Wallace says that 60,000,000 jobs must be provided in the United States and that this pay roll would translate into an annual national income of from one hundred and forty to one hundred and seventy billion dollars. The Department of Commerce believes that a substantial increase in foreign trade, both imports and exports, is essential to the achievement of these goals.

Consquently, every device capable of accelerating our trade relations with other nations will be utilized fully in attaining this important post-war objective.

In searching for ways and means of this character, we in the Department of Commerce and the Foreign-Trade Zones Board were again impressed by the possibilities of foreign-trade zones, known in some countries as free ports.

A foreign-trade zone is a sort of hospitable fenced-off vestibule in or adjoining the customs port, where products from abroad may be deposited and stored indefinitely, rehandled, assorted, relabeled, reclassified, processed, repackaged, manipulated, and transshipped to foreign climes—without passing through the customs gates or barriers. While the goods remain in the foreign-trade zone they may be regarded as still in foreign territory and not subject to duty or customs requirements. Vessels entering the zone may discharge foreign cargo without delay incident to customs entry.

One of the little known but highly significant acts in the field of foreign trade was the establishment of a foreign trade zone on Staten Island in 1937. Congressman EMANUEL CELLER who sponsored the 1934 legislation which made this development possible, had hoped that in addition to New York, other zones would be established on the several coastal regions of the United States. Unfortunately, the war intervened before other zones could be developed and even the Staten Island zone had to be removed to temporary locations in the New York harbor to make way for war needs.

In spite of these set-backs, preparations are now being completed for the opening of a foreign-trade zone at New Orleans, La., and a similar facility will be established in one of the leading California ports as soon as war conditions permit.

It should be understood that the Celler Act is merely permissive legislation. Under the law, corporations—both public and private—may apply to the Federal Board for a license to operate a foreign-trade zone. Private corporations first must be authorized by the State legislature before making application for a license.

Ports of the United States are controlled by the States or municipalities rather than by the National Government, as in the case of the harbor here in Quebec and certain other Canadian ports. Therefore, the Federal Government can do little to develop these foreign-trade zones except encourage our major port officials to provide such facilities in the interest of international trade. When a zone has been authorized and established, the Foreign Trade Zones Board, created under the Celler Act, and of which the Secretary of Commerce is chairman, supervises the operation as a public utility. The other members of the Board are the Secretaries of War and Treasury.

In my capacity as executive secretary of this Board I have had ample opportunity to observe first hand the operations of the New York foreign-trade zone since it was established on the municipally owned piers on Staten Island early in 1937. Built shortly after the First World War, these facilities had seldom been used during the intervening years.

Like any other commercial activity undertaken during a major business depression, the zone was slow to get under way. Because there was little cargo attracted during the first days or weeks of its existence, skeptics quickly pointed out that the zone idea was without merit. They refused to recognize the obvious—that the zone's prospective customers and merchandise were located in distant foreign countries and that time and energy would be required to acquaint foreign businessmen with the advantages and purposes of the zone. Later on when an effective zone operation had been created, business began to clamor for admission to the foreign-trade zone. Even before war clouds began to hover over Europe, 152 different commodities from 50 foreign countries had already been handled successfully in the New York foreign-trade zone.

That this zone has successfully performed its function of fostering and promoting foreign commerce is clearly reflected in the cumulative summary of activities for the first 5 years that it was in operation on Staten Island. During this period, 11,790 lots of merchandise, weighing 451,000 tons and valued at $205,000,000, have passed through the zone. Duties collected on that part which entered the United States amounted to $6,688,745. The gross operating income of the 5-year period totaled more than $1,500,000.

During 1 year (1940) 70,000 tons of foreign merchandise, valued at more than $13,000,000 or 50 percent of all foreign goods handled that year was transshipped to 60 foreign countries.

Alongside its transshipment trade, the New York foreign-trade zone has built up an important consignment market for imports. This market has proven a bonanza for small importers who heretofore have been dependent on larger buyers to import and parcel out their raw-material requirements. At the foreign-trade zone an importer, however small, deals direct with the foreign owner. In a number of instances this practice has already proved a distinct advantage to both foreign suppliers and to small American manufacturers.

Canadian farmers have been materially benefited by the New York foreign-trade zone. In former years substantial quantities of potatoes were shipped direct from the ports of the maritime provinces to the Caribbean region and to South America. War needs necessitated the suspension of this service. As an emergency measure, thousands of bushels of potatoes were shipped by rail to the New York foreign-trade zone where as a protective measure they were repacked in baskets and loaded aboard steamers for forwarding to final destinations.

Following are a number of other important activities which have been carried on in the New York foreign-trade zone: Critical ores, including tungsten and antimony from China and South America, are classified, sampled, refined, mixed, and repacked in drums of domestic manufacture. Prior to the outbreak of the war we depended on Germany for refining and processing these vital ores.

Tobacco from the Netherlands East Indies is matured, reconditioned, sampled, weighed, repacked, and auctioned according to the age-long custom of the Dutch.

Diamonds from South America are examined, graded, and repackaged for industrial purposes.

Brazil nuts are ripened, ventilated, sorted, cleaned, bagged, weighed, and repacked.

Drugs, grains, and seeds are cleaned and graded.

Cotton and woolen piece goods from the United Kingdom are examined, cut, sampled, and various lots are combined for reexport.

Spirits, brandy, rum, wine, and whisky are stored to age, containers are examined for leakage, barrels recoopered and reconditioned.

An exporter of scotch whisky at Glasgow may ship hogheads of that now-precious liquid to New York's foreign-trade zone, where they can be emptied into bottles, cased, and shipped into customs territory, to State dispensary and bottle stores for sale to the consuming public. That canny Scot exporter could save the cost of excess sea freight on bottles and cases and avoid damage resulting from glass and case breakage.

South American canned meats are inspected, labeled, keys are affixed to cans and cans repacked in cartons for domestic markets or reexport.

Manipulations may change the customs classification of a commodity. For example, Peruvian and Chilean peas processed and split at the zone enjoy an especial advantage since duty on split peas is less than on whole ones.

Importers find it advantageous to use the zone when the tariff classification of merchandise is undetermined or subject to dispute. The formalities of adjustment between the amount of duty assessed on entry and that finally determined to be correct are elminated.

Fish-liver oils are a case in point. Several weeks are required for the Federal Government to conduct tests to gage the vitamin potency of these medicinal products. Only then is it known whether the oil is dutiable or nondutiable.

Imported merchandise affected by consumption quotas, pure food and drug regulations or other laws can be kept at the zone until such regulations are complied with. For example, while the restriction quota is in effect the goods may still come into the zone to await the lifting of said quota.

Despite the handicaps of the war, here is an excellent illustration of how the zone operates. During the year 1943, 5,000,000 pounds of plain, ordinary cotton thread was shipped from the United Kingdom to the New York foreign-trade zone where it was redistributed to 26 foreign countries, including all of Latin and South American countries as well as Soviet Russia and British West Africa. This one shipment was valued at nearly $6,000,000.

Here is another illustration which should appeal to the ingenuity of every foreign trader. Prior to the outbreak of the war, Japan had taken over the market for cheap cotton textiles worn by the natives of the Belgian Congo and east and west Africa. These articles of clothing, shirts, and so-called singlets had, in times past, been supplied by British mills. When the Jap supply was cut off, orders again reverted to Great Britain which was unable to manufacture them. New sources of supply were sought to no avail in the United States and finally the United States prevailed upon Mexico to manufacture these particular cotton articles. This business, estimated at approximately $15,000,000 a year, has been carried on to a considerable extent through the New York foreign-trade zone. During the past year, over 15,000 cases of these goods, destined for the natives of Africa and valued at $1,500,000, have been shipped to the zone for repacking and transshipment. As Mexico has no direct services with Africa, obviously if this business is to be continued after the war, it will have to be transshipped from New York or some other foreign-trade zone on our east or Gulf coast.

A distinct advantage of the foreign-trade zone is that it brings a new competitive facility into the field of foreign trade. In years past, the Congress of the United States has recognized the need for segregating that part of our foreign trade known as transshipments and reexports as far as possible free from the application of our customs laws. To accomplish this purpose, bonded warehouse and drawback laws were early enacted. I will not get into a technical description of those measures for I understand that similar provisions have been made in Canadian tariff laws.

Shortly after the close of the First World War considerable agitation arose in the United States to authorize foreign trade zones. Bills were introduced to this effect but Congress compromised or temporized by authorizing bonded warehouses to permit manipulation of foreign merchandise under

customs supervision (sec. 562 of the Tariff Act, 1922). Despite the granting of the privilege to manipulate in customs bonded warehouses, few importers took advantage of this provision. As in the case of the drawback laws, many importers considered there were too many formalities involved. Warehousemen generally had little desire to encourage importers to utilize this newly authorized privilege until the foreign trade zone came into operation on Staten Island.

Records show that few customs bonded warehouses offered manipulating facilities until the foreign-trade zone announced this service to the shipping public. A comparison of 1937, the year the zone opened, with 1944 bonded warehouse listings in the Customs House Guide, published in New York City for the past 75 years, will serve to illustrate this situation. Although the 1937 Guide does not have a single listing of a class 8 manipulating warehouse in the port of New York—note this, the 1944 Guide lists 39 warehouses in the port of New York offering this service.

This belated additional service to shippers was not restricted to New York for bonded warehouses in other ports obtained customs manipulating privileges to minimize arguments advanced by local foreign-trade zone proponents. For instance, according to the Guide, Boston did not have a single warehouse authorized to permit merchandise manipulations in 1937 but in 1944 this class of service was offered by 18 bonded warehouses. Philadelphia had only 3 manipulating warehouses in 1937, but by 1944 22 warehouses had obtained authority to manipulate. For the country as a whole, the number rose from 38 in 1937 to 140 in 1944, an increase of 270 percent. Prior to the enactment of the Foreign-Trade Zones Act, warehousemen in only one United States port (New Orleans) attached importance to the manipulating privilege of the Tariff Act. In 1937 New Orleans had 21 manipulating warehouses, although strangely enough, by 1944, this number had been reduced to 18.

The advantage of manipulating imported merchandise in the New York foreign-trade zone is mainly because of the fact that the importer has free access to his merchandise at all times. If he desires, he may carry on manipulations and any other activity short of manufacturing on a 24-hour basis. If the occasion arises, he may erect his own building to meet his peculiar requirements. Bonded warehouse regulations limit manipulations and examinations of goods to regular working hours.

Merchants who have established operations in the New York foreign-trade zone state that it is akin to the satisfaction of owning your own home. On many occasions, upward of 500 people have been engaged in the various zone manipulations at the same time. Some operations have been conducted on a 24-hour basis.

You may ask—Why encourage us to establish facilities which may adversely affect the New York foreign-trade zone or other trade zones which may be planned in the United States? I frankly admit that a few years ago a selfish desire to retain zone benefits exclusively for our own ports would have made this assignment quite unattractive to me. Today, however, I have a somewhat different viewpoint and I am happy to be here to counsel with you, at your request, on the possibilities which the foreign-trade zone offers in the postwar period.

Should Quebec decide to go ahead with such plans, I entertain no fears that they would injure our own ports. On the other hand, I think the results would serve to stimulate them. If foreign-trade zones or free ports are authorized in Canadian harbors, our own gateway ports will of necessity be put on their toes to meet the requirements of modern commerce. Furthermore, if a foreign-trade zone or free port is established in Canada, there is every reason to believe it would substantially contribute to increasing trade between the two countries, a trade which is already greater than the total commerce between any other two countries on the face of the earth.

If Canada and the United States are to maintain national incomes on the scale needed to sustain employment and the standard of living to which both countries have attained, then their existing interchange of commerce must not only be maintained but substantially increased. While foreign trade is important to the economy of the United States, it is even more vital to Canada. A recent bulletin of the Royal Bank of Canada pointed out that in the years between the two World Wars, Canada's exports represented an average 30 to 35 percent of her national income, while less than 10 percent of the United States national income accrued from export business.

My records include considerable data regarding efforts which have been made to authorize foreign-trade zones in Canada. An examination of this material shows that most of the arguments advanced against the foreign-trade zone program in Canada were strangely similar to those employed in the United States when the legislation was before the Congress. Here is a typical example:

The geographical position of Canada is not analogous to European nations, being removed from other countries to which imported merchandise might be reexported.

Whoever developed this theory surely overlooked the United States which is right at Canada's front door and where nearly 140,000,000 people comprise the greatest market in the world. One enterprising United States firm appreciated this opportunity 20 years ago as official Canadian documents show that in 1927 a New York concern offered to expend $30,000,000 to build foreign-trade zone facilities on the St. Lawrence.

Improved surface and air transportation will also bring other areas into Canada's trading orbit, all of which will serve to aid in overcoming this so-called geographical disadvantage.

Another argument which we have all heard before is that foreign-trade zones would encourage smuggling and add to the cost of administering the customs laws. The United States Treasury Department has stated that the foreign-trade zone is the safest area in the New York Harbor as far as smuggling is concerned. In the United States the cost of customs policing the zone is borne by the operator. This is somewhat similar to the present practice wherein United States bonded warehousemen must reimburse the Government for storekeepers' salaries.

Another argument advanced in opposition to the zone is that local merchants and importers are satisfied with existing privately owned bonded warehouse facilities. Well, maybe they are, but the traders who will utilize the foreign-trade zone or free port are usually located abroad and as far as a proposed Canadian zone is concerned, some may be United States importers. I hope we can feel the same about Canadian importers in respect to the use of our own foreign-trade zones.

Since colonial days, the St. Lawrence River has served as a broad highway to the heart of North America. I am sure that its usefulness to industry and commerce will become more important as time goes on. When it was agreed that I would make this trip, I eagerly reviewed some of Canada's early history. In Donald Grant Creighton's recent book, Dominion of the North, the exploits of Jacques Cartier, the Breton from St. Malo, were vividly recalled. Cartier first explored the St. Lawrence Estuary in 1534 and immediately recognized the tremendous trading possibilities which this area offered. Seven years later he returned to the St. Lawrence region to develop this trade, but hurriedly sailed for France because he feared the hostility of the Indians. Those who are interested in introducing this new principle into the field of foreign trade may also encounter hostile Indians in the guise of selfish interests. Unless the sponsors have the courage to meet and overcome such opposition, it would be better to abandon the idea altogether.

In conclusion, let me say that it has not been my purpose to come here to sell you on the foreign-trade zone plan, or to influence any possible legislation in your country. Rather, my intention has been to try to clear up the misunderstandings which have been associated with this facility. If you good people of Canada decide to go ahead with such plans, you may rest assured that you will have our full cooperation.

Care of Veterans at Wakeman General Hospital, Camp Atterbury, Ind.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Eli E. Stone on the fine medical care and treatment given to our disabled and sick veterans of this war by the officers—doctors and nurses—and enlisted personnel of the United States Army, Wakeman General Hospital, located at Camp Atterbury, Ind.:

MARCH 27, 1945.

Congressman JOHN W. McCORMICK,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: It was my privilege to visit the United States Army Wakeman General Hospital at Camp Atterbury, Ind., on March 10, 1945, and to have been afforded an opportunity to tour the installation. As I understand it, it is one of the largest combined hospital and convalescent facilities in the country.

It has accomplished much under the inspiring leadership and untiring effort of its commanding officer, Col. Haskett L. Conner, of the Army Medical Corps, and his superior professional staff. The institution has been established less than a year, yet in a period of 8 months 2,896 major surgical procedures have been performed. Nineteen thousand, eight hundred and twenty-five patients have been admitted for hospital care up to the present time. Almost a thousand patients are being prepared for plastic surgical correction of deformities; 700 of these require dental and head and neck surgery. Three hundred are being prepared for the painstaking neurosurgical procedures necessary for recovery of function of severed nerves. Many of the excellent staff are physicians who were formerly faculty members of some of the leading medical institutions in the country.

It leaves one with a feeling of tremendous comfort and pride to witness the high spirit and morale of our young men who have disfiguring facial scars and deformed extremities. The observation of a bedside neighbor who has shown a dramatic restoration to a normal appearance and function gives a dynamic spirited assurance to the new arrival from the theater of operations. The most effective uplift of hope and confidence in full recovery is the chance for a soldier

to observe a buddy in the process of being restored to normal by modern scientific surgery. It is apparent that there is no other circumstance where the doctor-patient relationship is more harmonious than this; the sick or wounded soldier witnesses an Army surgeon laboriously throwing himself into restoring the health of his comrades with the same intense industry and anxious effort that the field soldier demonstrates in the performance of his duty at the battle front.

Colonel Conner has a deep conviction that he has in his command some of the finest medical and surgical talent available in this Nation and he has shown unwearying effort to place every available instrument of modern science in the hands of his medical officers for the restoration of the battle-injured youth of this country. The convalescent patient program unit attached to this hospital has been in operation for 8 months and is conducting an active program for its 4,700 patients, returning officers and enlisted men to duty in excellent condition, and conducting classes in crafts, trades, and academic subjects for those who are to be returned to civilian pursuits.

Last summer the hospital had an interesting twofold function. In addition to general hospital care, the entire One Hundred and Sixth Division, which as you know has been publicly lauded by the Secretary of War, received its medical care at this hospital in preparation for its valorous performance on the western battle front.

Commendation from surrounding medical groups in the State of Indiana for the excellence of its scientific caliber has been expressed by invitations for the professional staff to speak before several scientific and lay assemblies on the latest developments in the treatment of the war injured. Numerous scientific meetings have been conducted at the hospital for the visiting military and civilian physicians. Such achievement is all the more praiseworthy because it is one of the newest Army general hospitals in the country, having been in operation for less than 1 year. It is centrally located in the Midwest and enables convalescent patients to visit their homes in the adjacent States of Illinois, Ohio, Kentucky, and West Virginia.

The medical program is quite diversified and includes the Medical Technicians School of the Women's Army Corps program which has been fruitful in developing technical talents which result in well skilled and schooled effective personnel for the various medical departments and laboratories of the Army general hospitals throughout the country. There are 800 students enrolled in this technical educational program at the present time who will be distributed to the various Army hospitals as they request technicians. The self-effacing industry of the civilian nurses aides from the surrounding towns has been extremely helpful in lightening the burden of excessive demands placed upon the Army nurses. No verbal commendation can describe the toil and endeavor that the nurses at this hospital are administering in the care and comfort of the sick.

The facilities are constantly expanding to meet the increased need of beds for the casualties from both hemispheres. The recent appropriation of $1,500,000 to the convalescent and reconditioning program at this institution will effect progress and development of the program in which we may take just pride. A visit to a hospital installation of this type will prove to all citizens of this Nation that they can rest assured that devoted and painstaking scientific care is being given to the men and women in the service in the best American tradition. The entire staff has been fully conscious of the responsibility which a grateful nation seeks in the care of its heroic sick and wounded.

Very truly yours,

ELI E. STONE.

Case of Bootlicking

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Mirror of May 14, 1945:

CASE OF BOOTLICKING

The one-way friendship between the United States and Soviet Russia was never better illustrated than in the story from Washington dated May 6 in the New York Herald Tribune.

It reveals as nothing else can the distrust of the Russian Government for the United States and makes a mockery of all the glib promises of the charming Mr. Molotov at the San Francisco Conference and his treacherous boss in the Kremlin.

The Office of War Information is about to send 20,000 copies of a monthly illustrated magazine to Russia to explain America's government and people to the Russians.

The reciprocal nature of our friendship for Russia comes to light in this paragraph of the story:

"This Russian-language O. W. I. magazine is the first magazine carrying American material to circulate freely in the Soviet Union since 1917."

On the other hand, not only has every kind of Russian (Communist) magazine circulated freely in the United States of America since 1917 but dozens of magazines and newspapers have circulated freely here which have not only directly advocated the overthrow of our form of government but a Moscow financed and directed political party was set up here to carry out that revolution.

Could anything better illustrate the fraudulent nature of the Russian democracy?

And, we may add, could anything better illustrate the infantile trustfulness of our own democracy?

Here is the way the O. W. I. in its publication is compelled to lick the boots of the Soviet Government. We quote:

"The material for each issue is dispatched to Moscow for review by the O. W. I. there and by the Soviet foreign office and then returned to New York, where it is set in type and printed."

This word "review" is a polite Elmer Davisism for censorship.

In other words, an American publication is subject to the censorship of the Soviet Foreign Office.

Meanwhile, Messrs. Molotov and Stalin and their Red "heels" in America drip honey from their lips about free democratic Russia.

No Communist publication in America is subject to censorship by our Government.

But we must smirk and crawl before the censors of Moscow.

Again:

"No frivolous aspects of American life are treated. Instead, subjects akin to Russian interests are treated."

Why Rusian interests?

Why not American interests?—seeing that the taxpayers of America are paying the O. W. I. something like $54,000,000 a year for their services.

Does not this sort of fawning before the Russian slave state on the part of the country—the United States of America—which has, according to Stalin, won her war for Russia against Germany, make all real Americans gag?

One section of the magazine is devoted to a study of the American form of government.

This is the form of government that Russia has been plotting to destroy since the founding of the commintern by Lenin in 1918.

So cold and impudently open was the continuous attempt of the Soviet Government to destroy our form of government that President Roosevelt in 1935 protested to Russia against activities on the part of Moscow involving interference in the internal affairs of the United States of America.

On August 27 of that year Russia declined to accept the protest. (Events Leading Up to World War No. 2. Government Printing Office.)

Is it not, then, almost comic that at this late day we should print a magazine for the Russians explaining our form of government?

The Red Russians know the form of our Government too well. They hate it. They have tried to destroy it for 27 years.

And will the Soviet Foreign Office censor our Bill of Rights as printed in the Elmer Davis magazine or will all 20,000 copies stealthily disappear—as did the recent delegation from Poland to Moscow and Messrs. Ehrlich and Alter, the Jewish Polish Socialists who were secretly executed by the Russian Government?

For the Future

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Portland Oregonian of April 26, 1945:

FOR THE FUTURE

Oregon has reason to be proud that when the great emergency came her sons were ready. The percentage of rejections by Selective Service for physical reasons was lower in Oregon than in any other State. The Oregon rate was 24.4 percent, the national average 39.2 percent. But Oregon has no cause for complacency.

Many factors contributed to the good health of Oregon's youth—climate, attraction, and availability of outdoor life, medical care, and health programs for parents and children, sports and fitness programs in the schools—and it would be impossible to give to each its relative value.

Educators and health officers have known for years, however, that the health and physical training courses in elementary and high schools of the State, and particularly in some rural districts, have not always achieved the standards which are desirable. The range has been from virtual neglect to excellent, depending upon the affluence of the school district or the ability and interest of instructors.

To remedy these defects and to enforce a uniform and carefully planned program of physical and health education in all schools, the Oregon State Joint Committee for Health and Physical Fitness brought to the legislature a bill approved by medical, physical education, and military authorities of this State and the Nation. The assembly approved the bill and Governor Snell signed it into law.

The State superintendent of public instruction is directed by this act to employ field workers, under an appropriation of $26,000, to see that the school district boards carry out its provisions, which are to establish well-defined programs of physical fitness, health education, and health examinations in all elementary and high schools.

The superintendent will rate the schools on the basis of their records, and will set up the standards.

The assembly was well advised in defeating a bill for compulsory military training of all high-school students and passing the law to bring the health and physical standards of Oregon's boys and girls to the highest possible point.

Big Three Meeting

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Star of May 15, 1945:

MEETING OF BIG THREE DOUBTED AT PARLEY—TRUMAN WOULD DO WELL TO SPIKE SUCH PROPOSALS, SAYS OBSERVER

(By David Lawrence)

SAN FRANCISCO, May 15.—The persistent predictions that a meeting of the Big Three is soon to be held in Europe find little credence here. The idea is occasionally referred to also in Paris dispatches, where suggestions are made that General de Gaulle should be included in any such meetings.

As a matter of fact, President Truman would make the biggest kind of a hit with the American people if he squelched all the plans and proposals and suggestions looking toward personal diplomacy and if he returned intercourse with foreign nations to their normal channels.

Provision was made at the Yalta Conference for frequent meetings of the Secretaries of State. This is a very good formula and does not involve any embarrassments for the heads of governments.

President Truman did not come to the San Francisco Conference because, he said, the United States had a good delegation which had his complete confidence. He added that he would stay at his desk where he felt he belonged.

Marshall Stalin never leaves Russia, but requires the heads of other states to come to him. He always pleads pressure of business. The American people can hardly relish the idea of sending their President on roving missions to other distant parts of the globe to conduct their foreign affairs.

YALTA HANDICAPS KNOWN

The handicaps imposed by the Yalta Conference are well known. Some of the persons who attended that meeting say privately that it was a mistake for the late President Roosevelt to stake everything on personal conversations with the other heads of state without even keeping a stenographic record of what was said. Also the haste with which the Yalta agreement was written is today proof of the ill-advised nature of the whole conference.

Thus, the Russians are claiming that even the Polish question was not to be submitted to interallied consultations unless "in the opinion of the governments concerned" it was deemed desirable to do so. If this phraseology had been carefully examined or if there had been time for the text to be transmitted to Washington to be reviewed by the State Department, it is quite probable that the ambiguity would have been removed. Today Russia stands on that ambiguity and insists that the question of what to do about the new Polish Government is, strictly speaking, not yet ready, in her opinion, for interallied handling.

The using of a roving ambassador, as President Wilson employed Colonel House and as Mr. Roosevelt used Harry Hopkins, is not improper or unwise because a special envoy sometimes has to go to more than one post and an ambassador accredited to a single country cannot be effective in a variety of places.

COULD SEND BYRNES

It may be that President Truman will decide to send James F. Byrnes to Europe to talk with the heads of governments there on current matters. Mr. Byrnes was present at the Yalta Conference and has the necessary background. But for Mr. Truman to leave the United States and try to be his own ambassador or Secretary of State is to retain an element in American foreign affairs which cannot but bring more misunderstandings than before.

Mr. Truman has indicated that he is the kind of Chief Executive who likes to pick a good man and give him full authority and responsibility. In no field is this more important than in foreign affairs. Because Secretary of State Stettinius is tied up with the management of the United Nations Conference and will be for several weeks, it is natural for a special ambassador to be appointed to go to Europe in behalf of the President and the Secretary of State.

If it be insisted that heads of State must hold conferences to settle these thorny problems of the hour, then the next meeting should be held in Washington or London. If it is held abroad, then the United States should send a complete delegation with many officials and advisers very much as the British did at Yalta. But it is to be hoped that the President will find it desirable to act only through an intermediary and that he will not rely on secret personal conferences to deal with current problems of foreign relations.

O. P. A. Continues Mistaken Policies

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the editor of the Stuart (Nebr.) Advocate in the issue of May 10, 1945, points out a serious mistake that O. P. A. has been making in disregarding the recommendations of men experienced in the meat industry, for solving the problems of the production and distribution of meat. Instead its whole program is based on the policy of subsidies which tend to make people dependent on Government. He further tells what is bound to happen under the latest policy O. P. A. announces. The importance of this editorial is that it is written by a man in the meat producing section and reflects the opinion of people in the farming areas. It reads:

THE EDITOR'S COLUMN

(By Glenn E. Bunnell)

With more cattle on the range than ever, meat supplies are becoming shorter and shorter. O. P. A., it seems, fails to take the advice given it, and they seem no nearer a solution to the problem than they were several months ago.

A new O. P. A. regulation made with the intent of forcing more meat into packer channels, has limited small local slaughterers to 75 percent of the beef and 50 percent of the pork they killed a year ago. Will this help the situation? It is doubtful, but it will force a lot of small butcher slaughterers into the black market.

They will not be able to keep tab on all the smaller butchers, locker plants, and the like. These men can buy cattle and hogs direct from the farmer and kill them, reporting only the amount of their quota. Since they can show only 75 percent of the red points they collected last year they can sell a certain amount of meat without points. Not all the butchers will do this, but there will be enough of them who do, to make it tough on the honest man. The over-all result will be to increase the black market without increasing the meat supply in the centers of population.

The big, federally inspected packer, into whose hands O. P. A. is trying to force more meat, receives a subsidy payment of 2.9 cents per pound on beef or $29.90 on a 1,000-pound critter. This money from the Government must come from the people in taxes, and yet O. P. A. thinks to cut down the high cost of living by keeping down ceiling prices and paying the packer a subsidy. Why not increase the ceiling by 2.9 cents per pound and let the user of the meat pay the cost direct, rather than adding it to the tax bill?

It must be remembered, too, that every pound of meat diverted from small slaughterers to the large packers will cost the Government 2.9 cents per pound. This is added to our tax bill and provides a bonanza for the big packers.

The real reason for the shortage of meat is Government regulations. These change so often that feeders are afraid to feed cattle on a very large scale for fear some new bureaucratic whim might change the market and lose them money. They have always been willing to take a chance and back their own judgment on the open market controlled by the law of supply and demand, but they are afraid of O. P. A. meddling in the market.

Give the feeder some kind of assurance that he can make a fair profit, and put the ceilings at a level that will permit a fair profit to producer and processor and it will not be very long until the meat shortage is considerably relieved. The pork situation will take longer to mend, since many hog raisers sold their sows to the packer after running into trouble with the O. P. A. controlled market a year ago in December.

Congressional investigating committees have been very sharp in their criticism of the manner in which the meat situation has been handled. It appears that O. P. A.'s trouble has not been the lack of good advice, but rather, their failure to follow it. It seems that the bureaus in charge of foods have taken the stand that some form of subsidy is a panacea for food shortages, and they are not willing to give ear to any other advice.

Price control is all right, and so is rationing, but they must be wisely administered or chaos will result. I think that most of us will agree that the meat situation, at least, is chaotic.

Congress as a whole has been slow to realize the true state of affairs, but the constant urging of farm district Congressmen, and the shortage of meat on their own tables is starting to get results. It is to be hoped that Congress will soon curb the O. P. A.'s meddling and that the food situation will be put under the management of one bureau instead of three, as at present.

To get back to the small private slaughterer, who kills for sale in his own shop. Curbing them will not force more meat into federally inspected outlets. People in ths area where the beef cattle are produced are

going to have their meat. Living in a small midwestern town has its drawbacks, but one of the advantages is plenty of good meat. Many folks in this area are not willing to give up that advantage, and they will get the meat they want in spite of O. P. A. rules and bungling.

Many small slaughterers feed out the cattle they butcher, and they will not feed them for the city market.

Almost any man in this area knows more about the real facts in the meat situation than the high powered, alleged specialists of O. P. A. Recently an O. P. A. man met with the small slaughterers of this area to explain the new regulations. He read several pages of regulations from a bulletin and then said, "are there any questions?" There were but he could answer but a very few of the many questions asked. Many of these men drove 50 to 60 miles, on thin tires and scarce gas to have a man read them a few pages from a book, which he could not explain after he read it. That is a sample of O. P. A. regulation. It is one of the keys to O. P. A.'s failure to clear up the meat shortage.

Wounded Salisburian Gets His Stripes Back After Army Probe

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news item from the Salisbury Times.

Sgt. Kenneth B. Dashiell, of Salisbury, Md., in the engineering branch of the service was wounded on D-day and spent 3 months in a hospital in England recovering from his injuries. Upon being discharged from the hospital, he was demoted to the rank of private.

I requested the War Department to investigate this situation, and I am pleased to advise that Sergeant Dashiell has been restored to his rank, and the War Department has rescinded the provisions of the Army regulations which permitted this demotion.

The article follows:

WOUNDED SALISBURIAN GETS HIS STRIPES BACK AFTER ARMY PROBE

An Army investigation of the unwarranted reduction in rank of a wounded Salisbury soldier has brought revision of Army regulations to prevent such action, Representative DUDLEY G. ROE reported today.

Sgt. Kenneth B. Dashiell, technician fourth grade, was wounded in Europe and, after hospitalization, returned to service. Assigned to a new unit, he was reduced in rank to private because there was no authorized vacancy as T-4 in the new organization to which he was assigned.

On the basis that Private Dashiell and many other wounded soldiers were receiving unfair treatment; a protest was made by the Times to Representative ROE. The War Department, conducting an investigation lasting several months, rejected one report from the European theater of operations as unsatisfactory and conducting a part of the investigation overseas.

REPORT TO ROE

Reporting to Representative ROE on the conclusion of the investigation and the receipt of a report from overseas, the War Department, through its general counsel, said:

"This report from the overseas command substantially confirmed the facts as set forth in the attached correspondence. Consequently, the headquarters of the European theater of operations has directed Private Dashiell's unit commander to restore him to his former grade of technician fourth grade, provided the soldier's conduct subsequent to the date of his reduction has been such as not to preclude this action.

"You will, no doubt, be interested to know that during the period that this case was under investigation, the War Department has rescinded the specific provision of Army regulations under which this enlisted man's reduction was accomplished."

Elmer B. Dashiell, Salisbury, father of Sergeant Dashiell, received a letter from him today stating that his stripes had been restored.

Polish Quibble

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs, from the Washington Post of May 15, 1945:

WASHINGTON CALLING

(By Marquis Childs)

POLISH QUIBBLE

If any case history were needed to illustrate the obstacles in the way of a true understanding between the western Allies, on the one hand, and Russia on the other, it was furnished by the note that Marshal Stalin sent to Prime Minister Churchill last Wednesday. Somehow news of the note leaked out and a small but noisy section of the press in this country spread sensational reports that Stalin had declared any further effort to work with Britain and America was hopeless. This is the section of the press that is deliberately trying to sabotage any international cooperation, apparently with the objective of making World War No. 3 inevitable.

The Stalin note was concerned solely with Poland. In effect, it served notice on Britain and America that the Soviet Union would accept in Poland only a security government; that is to say, the Lublin government dominated by Moscow. In other words, the note closed the door on any further discussion of Poland in accord with the Yalta agreement. Thus, while it went a long way, it did not justify the sensationalized accounts that in turn served to increase Russian suspicions and, consequently, was merely another step in the tragic circle in which this whole matter has been moving.

Since Yalta almost everything that has happened with respect to Poland has pointed to this final declaration by the master of the Kremlin. It may be useful to set forth here some facts that have not been generally known.

After the Yalta Conference, Britain and the United States submitted to Moscow a list of 30 names of Poles who were considered to have popular following and support from democratic groups within Poland. From this list, it was hoped, responsible men would be chosen who would join with responsible members of the Lublin Polish Government to form a new administration.

That was the hope. Moscow insisted that Lublin should have the right of veto over the selection of any men to go in the new government. Plainly, from the start, this made any new coalition government all but impossible, since one of the parties to the coalition was handed the veto power.

The result was as expected. After weeks of discussion only 1 name on the list of 30 was approved, and that was the name of an elderly professor whose inclusion in the Lublin government would have made no essential difference in its character.

That was the impasse when the news of the detention of the 16 missing Polish leaders was officially verified by Foreign Commissar Molotov at San Francisco. Out of this came a new impasse.

The Russians insisted on talking about 1 of the 16, Maj. Gen. Leopold Okulicki, whom they invariably refer to as a "Fascist saboteur." Neither the western Allies nor such Poles in exile as Stanislas Mikolajczyk, leader of the present party, are anxious to make a stand over General Okulicki. It is quite possible, they concede, that his reputation has been clouded by some form of collaboration.

What deeply concerns America and Britain is the fate of 14 of the 16—men of integrity and position who have proved themselves Polish patriots in the best sense. The Russians have little or nothing to say about these men. They talk about Okulicki.

Those who know Russia best would be completely pessimistic about the future were it not for one thing. There is no objective reason why the Soviet Union should take this unyielding stand. The Russians have everything to gain by making a few concessions and nothing, in their present position of world power, to lose. Therefore, say those who continue to cling to hope, common sense must sooner or later prevail.

But there is not likely to be any change until the facts, as seen from London and Washington, are put frankly before Stalin himself. Only Churchill and Truman can do that.

By making concessions, by keeping the Yalta agreement, by bringing a few men such as Mikolajczyk into the Lublin government, Russia would win over world opinion overwhelmingly. Credits and technical assistance from America would undoubtedly be forthcoming. Russia could make an inestimable contribution to at least 50 years of peace.

Following the present course, the Soviets are likely to bring on what apparently they fear most—a new hostile coalition that will mean a new war. They cannot bring themselves, it seems, to overcome old suspicions and old fears.

The difference between the two paths is so slight. It can happen, but not without a change of attitude at the top.

Seventh War Loan Drive

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. BEALL. Mr. Speaker, as we all know the Seventh War Loan drive is now in progress and I think everyone will be interested to know that we have one Congressman who has been devoting his efforts to the sale of these bonds. I refer to Congressman GORDON CANFIELD, of New Jersey, who last night appeared before

the Silver Spring, Md., Board of Trade and through his efforts the membership purchased more than a quarter of a million dollars worth of bonds. I want to take this opportunity to thank Representative CANFIELD for his efforts in helping to make the Seventh War Loan a success in western Maryland.

Rechristen Flying Fortress "Smiling Jack"

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a tribute to Lt. Jack J. Wangelin, son of Herman G. Wangelin, postmaster at Belleville, Ill., who was killed in action in World War No. 2, which appeared in the Illinois Postmasters News.

Jack Wangelin died a hero's death fighting for the perpetuation of our American way of life. He was one of the many young men of German ancestry from my congressional district who have given their life in this cause.

The tribute follows:

TRAGEDY

This war has left its cruel imprint upon the lives of many of our Nation's best. It has brought grief and suffering to hundreds of thousands of American homes through the sacrifice of loved ones upon the altar of freedoom.

When tragedy such as this deals its crushing blow, it is the thoughtfulness of friends that helps to heal a broken heart. It is through tributes such as the following, that a bereaved father gives his friends a glimpse into the character of the son he has lost. This appeared in Postal News, a publication issued monthly by the Belleville Service Relations Council, and was written by money-order clerk, Joe Reis its editor.

FIRST LT. JACK J. WANGELIN

I never knew the lad. I know his father. He thought the world and all of the lad. His picture stands on his desk. A determined looking chap.

I never knew the lad. I met a young man who had been with him in grade school. He tells me the lad was a good kid—never too formal or bold—not a bully—yet in for good clean fun—a real boy. In high school, a classmate tells me, he was a true sport—a square shooter—he co-captained his football team—he was a real leader—an outstanding student—he was given the citizenship award.

I never knew the lad, but his Army record is hard to beat. Various camps enjoyed his happy-go-lucky smile while in training. He worked hard and was commissioned a second lieutenant and got his wings at Stewart Field, N. Y.

I never knew the lad, but he was a pilot of a Flying Fortress and his plane was "wing" for the formation. He was training for squadron leader and he would have made it, they say, had not enemy flak cut him short—stopped him in the one determination of his indomitable will—the will to carry on, to fulfill the mission.

I never knew the lad, but one of his crew said: "There was an airman and a man," and they rechristened the Flying Fortress and called it *Smiling Jack* in his memory. A wonderful tribute to a wonderful pilot. It's like a diamond wreath to his previous awards of the Purple Heart and the Air Medal with Cluster.

I never knew the lad, but I know his friends, true friends, and I know his father, the Postmaster a fine man. Jack must have been a fine lad.

Ex-Soldiers Wallow in Red Tape

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1945

Mr. ROGERS of Florida. Mr. Speaker, guaranties in the G. I. bill of rights failed to eliminate and cut out red tape, thereby preventing the full enjoyment of all rights that should be enjoyed by the ex-soldier. This old red tape is so wound around the necks of ex-soldiers or ex-servicemen that they could choke before they could get relief. It is my opinion that Congress should do a constructive piece of work by cutting out such red tape as is revealed in the following article taken from the Miami (Fla.) Herald of March 28, 1945, and written by Jack Kofoed:

EX-SOLDIERS WALLOW IN RED TAPE

(By Jack Kofoed)

Hundreds upon hundreds of soldiers are being released from the armed forces every day. They have been told what the G. I. bill of rights guarantees them. Huh! Guarantee! All right, if they don't get what they expect, let them go ahead and sue.

The strong and the fit are not being released. A good many of those returned to civilian life have been battered about until they no longer fit into the military pattern. The crippled men suffering from battle fatigue, malaria, and other ills, are coming back to us.

So far the number is only a trickle compared with the flood that will come later. Yet apparently red tape prevents handling some cases as they should be handled.

Just the other day the Miami Herald carried a story about a man who suffered nerve shock and malaria in New Guinea. He had been released from the Army 3 weeks before, this 22-year-old youngster, who had gone into the service long before he could vote.

Malaria struck him again. He was a sick boy, and needed attention. His aunt, with whom he is staying, took him to Jackson Memorial Hospital. Nothing doing. The Jackson people wouldn't handle him. He was an Army case. Let the Army take care of its own.

All right. The aunt called the Biltmore and Pancoast Hospitals. She got a brushoff. See the Veterans' Administration. There must be a doctor's certification. Bay Pines had to be notified. Bay Pines would contact the administration office in Montgomery, Ala. Montgomery would in its own good time, contact Bay Pines, and the result would be forwarded to Miami.

Meanwhile the kid could be sick as he pleased. He was on his time, wasn't he?

The G. I. bill of rights didn't say anything about that, did it? Oh, no. Nothing would be too good for the boys when they came marching home. Nothing should be too good for those who came marching home in advance of the big parade. If this is a sample of what to expect it won't cheer up those who are still fighting, when they hear about it.

What is wrong with the machinery? If it creaks, with comparatively little burden placed on it, what will happen when this case is duplicated thousands of times?

In other wars a man was a hero as long as he wore the uniform. When he took it off, he became another bothersome problem, unless he was able to handle his affairs himself. Many a fellow who won medals in battle during the last war sold apples on street corners and ran into the strangling grip of red tape when he sought hospitalization, and was clubbed on the Anacostia Flats. The pawn shops were full of medals. They became a glut, and even the Medal of Honor wasn't worth more than half a dollar to the pawnbrokers.

The G. I. bill of rights was going to take care of that. The old story would never be repeated. This time everything would move smoothly.

That's the story. But, don't tell it to the kid with malaria. He might not believe it.

This red-tape procedure is vitally affecting the full and complete administration of the constructive acts of Congress. It appears that the various bureaus and some of the departments of the Government are so full of red tape that relief is difficult to obtain by our citizens.

Red tape might be compared with the tapeworm or hookworm that saps the vitality out of human beings—they suck the very lifeblood, and so it is that red tape removes the vitalizing force of not only the guaranties of the G. I. bill of rights for our ex-soldiers, but for giving relief to many of our citizens who have to deal with certain bureaus passing rules, regulations, and directives in compliance with which the relief afforded is hardly worth the price or burden of complying with such red tape.

Let us hope that Congress will destroy the hookworm of red tape so that our people can get relief from the laws passed by this body.

Russia Doesn't Understand

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal, of May 9, 1945:

RUSSIA DOESN'T UNDERSTAND

Maybe America does not understand Russia, but neither does Russia understand America. This is of concern to all Americans and all Russians who believe that the true interests of both nations, and of all other nations, are alike. Those who do not believe an international organization for peace can succeed are happy at every symptom of disagreement. They exaggerate and misrepresent every point of conflict. To combat the doubters, misunderstandings should be weighed calmly.

The present difficulty is the arrest by the Soviet Government of 16 leaders of Polish

democrats who had been invited by the Russian Government to come to Moscow and discuss Polish affairs. This has so shocked American and British minds that it has caused a serious interruption in at least one phase of the work of the United Nations Conference. We have not expected perfection from that Conference. We have known that no one would be satisfied wholly. But it was Commissar Molotov himself who, in his opening speech, emphasized the need of trust. There must be a degree of mutual understanding.

Secretary Stettinius' statement made it clear that the other allies understood the discussions with the Polish leaders, who were invited in, were part of the process of broadening the Polish Provisional Government set up by the Soviet Government at Warsaw. To this Premier Stalin had agreed at Yalta. Nothing was accomplished, but the Russian Government twice asked that its Warsaw puppet government be invited to the San Francisco Conference, just as if it had kept its promise. Even after President Roosevelt and President Truman had both refused the request, Mr. Molotov still tried at San Francisco to have the Warsaw government asked to the Conference.

This is too one-sided a course for Americans to understand. We know there is a difference in background between the two nations. We have always been used to our Government's explaining its course, even of giving an accounting to other nations. It has been very different in Russia, where public information is limited to what the government wants the public to know. But any government must understand that it cannot treat other nations in this fashion. Mr. Stettinius did only his duty, only what American opinion required of him, when he insisted on an explanation of the arrest of these Polish guests of Moscow.

American and British aid to Russia was vital 4 years ago when Russia's national existence was at stake. We were cooperating to defeat the Axis. Our true interests are still the same, and will be in this narrowing world. But there must be understanding. There are too many groups, too many persons in this country, who for various reasons do not want America to join with Russia in assuring the peace of the world for the Soviet Government to leave unexplained an incident which invites distrust.

Secretary Stettinius and President Truman are both handicapped when such distrust grows. There must be at least a minimum of understanding. It is what we should ask of Britain or any other country in any similar case. A government must show some responsibility to the opinion of mankind, or it is not mature enough for collaboration with others.

It is time for Russia to show such maturity, if she does not want to find herself isolated again because of distrust. It seems to be beyond Russian understanding that in this country public opinion rules; and public opinion does not like the spectacle of men being invited to sit in a conference and then finding themselves clapped in jail.

An Open Letter

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks in the RECORD I take pleasure in including an open letter from the Liberal Party in New York to the delegates at the San Francisco Conference. Although a stanch Democrat I appreciate the broad and progressive views of the Liberal Party as expressed in this letter, which follows:

AN OPEN LETTER TO THE PEOPLE'S DELEGATES AT THE SAN FRANCISCO CONFERENCE FROM THE LIBERAL PARTY

We are confident that you share our conviction that the deep moral commitments made by the United Nations in the darkest hours of the war must not be forgotten now that the immediate military crisis has begun to pass.

In the death of President Roosevelt the peace forces of our country, and of the world, have lost their greatest leader. His untimely death deepens the responsibility of those who represent the plain people at the United Nations Conference to see that the millions who have suffered the agony of this war shall not have suffered and died in vain.

As President Roosevelt clearly discerned, if the United Nations effort to organize a lasting peace is to succeed, it must avoid two pitfalls. On the one hand, it must not permit perfectionist demands to destroy the possibility of attaining a working agreement of the United Nations. An imperfect organization for the maintenance of security and peace will be better than no organization at all. On the other hand, it must not permit considerations of expediency to lead to compromises so unjust that they destroy the moral authority of the world organization. Unless the organization which results from San Francisco wins the approval of the conscience of mankind it will not endure.

We offer the following seven basic tests of the work of the Conference:

1. The rights of the great powers must be compatible with independence and security of the smaller and weaker countries. Realities in international affairs require that the major powers be given a leadership commensurate with their responsibilities. These special rights, as now provided in the Dumbarton Oaks plan for the Security Council, will not, however, make for security if they become in practice means by which the great states dominate their weaker and smaller neighbors. To guard against this the powers and functions of the assembly should be strengthened, and all nations—great and small—should be under the authority of a common international law.

2. Colonial countries and peoples, irrespective of race or color, should be assured their right to political and economic self-determination within the framework of the general international organization. No mutual security system can or should last which seeks to perpetuate the dominance of the white over the colored peoples of the world.

3. The post-war international structure must have economic and cultural, as well as political and military, foundations. Only as the international organization utilizes the resources of science and technology for the improvement of the standards of living of everybody, everywhere, can peace be maintained. The organization of the Economic and Social Council is a subject of supreme importance.

4. A statement of the basic liberties and rights of all men, groups, and nations should be included in the charter of the world organization.

5. The world organization should be founded on definite plans for progressive disarmament. Unless a program of general disarmament is followed by the major powers we shall not have succeeded in creating conditions essential to lasting peace. Increasingly reliance must be placed upon international policing.

6. The international organization should not seek to freeze for all time the territorial and political arrangements established at the end of this war. Senator VANDENBERG is wholly right in his insistence that only peace which is concerned with justice for all can be maintained. Because we recognize that no perfect world settlement can come at the end of this war, his seventh amendment to the Dumbarton Oaks proposals should be vigorously supported. This amendment declares that "If the Security Council finds that any situation which it shall investigate involves injustice to peoples concerned it shall recommend appropriate measures of adjustment which may include revision of treaties and of prior international decisions."

7. Finally the delegates of the people should recognize that the task of developing machinery for keeping the peace cannot in any ultimate sense be divorced from the task of making the peace. Hence the aim should be to extend the work of the San Francisco Conference so that real account may be taken of the present dangerous tendency of the Big Three to seek security primarily by unilateral, rather than by cooperative, means. Indeed, if the present tendencies toward power politics, special spheres of influence, and imperialistic domination are not arrested, these great powers cannot serve as trustees of the world community.

Aid for India

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mrs. LUCE. Mr. Speaker, in calling attention to the needs of Europe, I am not forgetting our allies in the Orient, and particularly India. It sometimes seems as though India were the forgotten nation.

Her people have suffered tremendously from this war. Her famine and the aftermath were the results of war. Yet she is not eligible to receive help from U. N. R. R. A., since her territory was not occupied by the enemy.

A year ago, in large measure as a result of agitation by the India Famine Relief Committee of which I was a member, American aid was extended to India through the channel of the American Friends Service Committee. The National War Fund provided the funds, but then withdrew its support in order to concentrate on "liberated areas." Although general funds from the National War Fund were withheld, the two national labor organizations—the National C. I. O. War Relief Committee and the A. F. L. Labor League for Human Rights—succeeded in having some of their contributions allocated to continue the work for a time. Together, they have supplied more than half of all American funds for this purpose.

I feel that it would be an injustice to this great neighbor of ours in the Far East to withhold further help in medical supplies which can be given, I am informed, without even curtailing domestic uses. A group of outstanding Americans have organized under the name of American Relief for India to raise funds to continue this work.

The new organization is registered by the President's War Relief Control

Board. Its work is described admirably in a memorandum issued by the board of American Relief for India.

AMERICAN RELIEF FOR INDIA, INC.,
NEW YORK, N. Y.

1. INDIA, VICTIM OF BOTH FAMINE AND THE WAR

India, which holds more than one-sixth of the world's population, is the forgotten nation of the world. Her impoverished millions, who even in normal times were able to eke out only a bare existence, have suffered pitifully during the past 3 years, ravaged by a combination of famine and war.

The great famine that raged through Bengal and other provinces from the middle of 1943 to February 1944, caused at least 1,000,000 deaths and left a tragic legacy. For every person who died from starvation a dozen survived. Undernourished and lacking the food to restore their health they are easy prey to diseases which daily claim victims. Malaria, amoebic and bacillary dysentery, cholera, skin diseases, night blindness, pneumonia, and bronchial infections are the foes which old and young, their bodies wasted by hunger, are ill-prepared to fight.

Those who suffer most are the women and children. In Bengal alone the famine left 100,000 orphans and tens of thousands of women in the ravaged areas were left destitute. They subsist principally on rice or a native variety of sweetpotato. Fish, meat, eggs, fresh vegetables, and fruit, vital to rebuilding undernourished bodies, is beyond the reach of the meager funds of these people. Many thousands of the men in rural populations, due to the war's dislocations, are without means of earning a livelihood.

India's tragic plight, moreover, has been greatly accentuated by the war. The Government, through fear of an invasion by the Japanese, put 2,000,000 natives into uniform. In addition, India was a base for concentration of tens of thousands of American and British troops. On top of all this the war cut off much rice-growing territory, upset an already frail tansportation system, paralyzed the fishing industry in the mouths of the Ganges, and created countless other hardships.

Other highlights of this war-created situation are: The country's transportation system, always inadequate, is virtually monopolized by the military. Deteriorated rolling stock, depleted by shipments to the Middle East to meet the Axis threat there, moves troops and military supplies. The same is true of India's roads. Normally bad, there now is no labor, materials or money to keep them in repair. There are too few trucks for civilian supplies. The inevitable result of this situation on railroads and highways is that movement of desperately needed food and medical supplies to stricken areas is curtailed and sometimes stymied. In one area, East Bengal, where the network of the Ganges River makes life virtually amphibious, the people are without boats because the government requisitioned them early in the war when a Japanese invasion seemed imminent. Today the vast majority of those boats have been lost, destroyed, or else have rotted into disuse. Thus there is both a complete break-down of transportation in this area and the people are deprived of the fish which formerly provided them with much of their food.

Food prices, stimulated by vast purchases by the military, have skyrocketed from three to seven times pre-war levels. Wages have lagged and an Indian laborer who earns from 8 to 20 cents a day, can afford only rice or other foods deficient in vitamins. Meat, fish, fruit, and vegetables are beyond his purse. The Japanese occupation of Burma cut off one of the principal sources of India's rice supply and shipments from other countries for civilian needs have been drastically reduced as a military necessity. Thousands of war refugees who fled from Burma and other countries settled in Bengal and neighboring areas, bringing new diseases and imposing an additional strain on meager food supplies. The British and Indian Governments, in the face of the war and political tension, have found it impossible to cope effectively with the situation. India lies almost prostrate, half starving and wracked by disease.

2. AMERICANS RESPONDED TO INDIA'S S O S

The cry of the dying and starving in India was answered in 1944. On January 13, 1944, the President's War Relief Control Board was informed by the American mission in New Delhi (diplomatic representation of the United States of America in India):

1. That the relief needs of the civilian population are abnormal due to the famine.

2. That there is extreme distress in the areas where great numbers of American forces are concentrated.

3. That it is important to demonstrate to the Indian people that America is not indifferent.

4. That supplies should be sent rather than money.

5. That the American Red Cross or the American Friends Service Committee (Quakers) should, with the aid of some American personnel, organize distribution of relief supplies in India.

The President's Board asked the American Friends Service Committee to organize a relief effort in Bengal and other distressed Indian areas. The Quakers accepted this call to service with the full approval of the American Government, the Viceroy of India, the Governor of Bengal, and Indian leaders of every group.

The National War Fund promised financial support and contributed more than $540,000 up to September 1944, through the British Relief Society. When its support ceased financial aid from two other sources enabled the Quakers to carry on. The A. F. L. and C. I. O. earmarked $200,000 of their contributions to the War Fund for India relief. Governor Casey of Bengal, one time Australian minister to the United States, gave the Quakers a substantial sum from the Bengal civil relief fund.

American Relief for India, Inc., is a citizens' committee organized late in 1944 to mobilize the necessary support to assure the continuation of the American relief program in India.

Its board of directors comprises: Rufus M. Jones, honorary chairman; Henry F. Grady, chairman; J. Edgar Rhoads, president; William Phillips, vice president; Guy Emerson, treasurer; Frank Aydelotte, William Green, David Hinshaw, John Haynes Holmes, M. Albert Linton, Henry R. Luce, George Medalie, Philip Murray, Victor F. Ridder, and Sumner Welles.

3. WHAT AMERICANS HAVE DONE FOR INDIA

When the Quakers reached India to begin work they found that the famine had been halted by vigorous action in which the British Government, the Government of India, and the provincial governments had collaborated. Grain, shipped from Canada and Australia, had been distributed; food rationing and price control had been instituted; canteens and medical stations established; and a campaign undertaken to cultivate an additional 12,000,000 acres. The British and Indian businessmen had rallied with financial support. Essential medical supplies were lacking and were available only in the United States.

At the start the American relief workers established an organizational blueprint and principles that contributed immeasurably to the success of their work. Few in number, even when augmented by British Quakers, the Friends Service Committee workers devoted themselves to showing the people of India how they could help themselves. Local agencies were used to distribute supplies and these outlets included such diverse groups as only India offers—Hindu, Moslem, Baptist, Red Cross—200 agencies in all maintaining 4,500 different centers. Included were 88 Christian missions, Protestant and Catholic. It was decided that supplies would be distributed without distinction as to religion, caste, or politics. The people were told that the aid had come from Americans.

American aid, administered by Americans, has brought to India's suffering humanity the food to build wasted bodies, drugs to fight disease, and funds and counsel to aid in their rehabilitation. Milk, vitamins, and sulfa drugs share with the relief workers the credit for the success so far attained. More than 150,000 daily attend canteens set up in many villages, for children and mothers, nursing and expectant. Evaporated milk sent from the United States, and some from other countries, too, is distributed by the India Red Cross under Quaker supervision.

Multi-vitamin tablets—30,000,000 of them from the United States—have been distributed by local committees through a distribution that is systematic and controlled. The reputation of the little black pills previously unknown to the natives has spread. To them it is magic as it builds vitality to fight disease that menaces them and combats night blindness and skin afflictions from which many suffer.

Two million sulfa tablets have served as a spectacular aid to the medical men's battle to combat streptococcal infections, dysentery, cholera, sores, and venereal disease. Other basic medicines, such as atabrine to fight malaria, have been supplied from America to supplement the Government's meager supplies.

Rehabilitation has been aided through establishment of training centers where weaving, cane making, pottery, sewing, and embroidery are taught. Widows and children eagerly attend. With small loans destitute fishermen, cane workers, carpenters, and weavers are aided to buy nets, boats, cane, tools, and thread to again become self-supporting.

4. FUNDS ARE VITAL TO SUSTAIN RELIEF PROGRAM

Approximately $100,000 monthly is needed to enable the Quakers to carry on this practical and effective humanitarian work of mercy in the name of America.

American Relief for India is making a direct appeal to the American people to contribute $1,200,000 to sustain the relief work during 1945.

This direct appeal is made necessary by the decision of the National War Fund which rejected the request of American Relief for India to allocate a share of the money contributed by American citizens for this work. The War Fund expressed the hope that "your important program may be financed adequately in some other way" but that the War Fund "must of necessity concentrate its resources on liberated areas."

The President's War Relief Control Board recognized the relief work in India as a war relief measure in Authorizing American Relief for India to undertake an independent appeal for financial support. The Board itself recommended the relief program to the Community Chests of the Nation in an unprecedented endorsement. It set forth the following reasons for approving the independent appeal:

1. The program proposed by American relief for India must be construed as a war relief measure.

2. Increasing importance of military operations in the China-Burma-India theater and continued presence of American forces in India make it desirable to express American interest in conditions in the areas where the American soldiers are stationed.

3. The program serves a significant humanitarian objective in addition to being important to the war effort.

4. The British and Indian authorities have expressed their approval and the American Minister in New Delhi vigorously urges continuation of the relief program.

In addition, the American Relief for India Committee's program has the endorsement of the United States State Department, the President's War Relief Control Board, the British Ambassador in the United States of America, the Indian Agent General in the United States of America, the Labor League for Human Rights (A. F. of L.), the National C. I. O. War Relief Committee, the Foreign Missions Conference, and the Field Department of the Federal Council of the Churches of Christ in America.

The committee, responding to these requests, and in recognition of the tragic need, will make a direct appeal for funds to the American people and Community Chests to support this work.

Prices Will Go Wild if Food Ceilings Fall

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me to extend my remarks in the RECORD, I desire to include the fourth of a series of six articles written by Malcolm Logan and which appeared in the New York Post of April 12, 1945.

I believe this article is particularly appropriate for the reason that not only New York City, but the entire country, is facing the worst meat shortage of the century. It is evident that increasing the price to the meat packers will not solve the problem—the demand for meat is too great. Such increase would only increase the price to the housewife. The Navy has held down the prices of uniforms for its officer and petty officer personnel by a licensing program that has kept down the price of uniforms, has prevented the mulcting of its personnel by unscrupulous dealers and has been generally effective. Why not apply the licensing system to meats and keep the ceilings on food firm?

Malcolm Logan has the answer to the question "What will happen if the ceilings on food collapse?" in the following article:

PRICES'LL GO WILD IF FOOD CEILINGS FALL

(By Malcolm Logan)

At this moment, while we are entering the first stage of the worst food shortage of the war, a powerful drive to smash O. P. A. food price ceilings is under way in Washington.

The Senate Agriculture Committee has begun an investigation to find why we are short of meats, fats and oils, sugar, dairy products, and other foods most urgently needed here and in liberated Europe.

During the first week this inquiry was turned into an all-out attack upon the O. P. A. The meat packers spearheaded this offensive against price control by charging that O. P. A. ceilings were bankrupting them.

If meat subsidies are increased, or meat prices raised, or both, they told the committee, the meat shortage and the black market will automatically disappear.

IT WOULD SKYROCKET PRICES

Should Congress accept that theory, housewives may soon be paying 80 cents or a dollar a pound for hamburger.

But that, in the opinion of many Government officials, will be only the beginning of a wild rise in prices which will end in uncontrolled inflation. If the packers get more, the other food processors will want more, too; labor will demand wage rises, and everyone who employs labor will want higher prices.

AS THE CHAIRMAN SEES IT

The Senate committee's hearings will go on most of this month. Yet after the first week of hearings the committee chairman, Senator ELMER THOMAS, Democrat, of Oklahoma, told this reporter:

"Packers are losing money at present prices. O. P. A. policies are restricting meat for the Army, lend-lease, civilians, and Europe, and are building up the black market. If the O. P. A. doesn't get results, Congress will step in and get results."

As to the argument that a price rise would end the meat shortage, Agriculture Secretary Wickard told the committee:

"There is one cold, hard fact that must be faced: that is, black marketing cannot be controlled by price ceiling manipulations, since the demand for meat is far in excess of available supplies."

HOGS, SHEEP, CATTLE DWINDLE

These are the basic facts about our meat situation:

The supply of hogs, which furnish most of our meat, has fallen almost 30 percent in the past year because of the record-breaking slaughter of 1943–44 brought about by War Food Administration policies. And no large increase is possible before next spring.

The number of sheep on United States farms on January 1 was 51,769, compared with 55,775 a year earlier and an average of 52,777 during 1934–43.

The number of cattle, excluding milk cows, was 53,965 on January 1—very slightly under the all-time record of 54,708 a year earlier. But because of a break-down in our system of meat distribution this plentiful supply of beef is going largely into the black market or into small country towns.

As the meat shortage grows, less and less of the available livestock supplies are being sold to the large, federally inspected packing houses. More and more of the dwindling animal supply is being killed on farms and in nonfederally inspected slaughterhouses.

NOT NEARLY ENOUGH LEFT

"The diversion problem is serious," Deputy O. P. A. Administrator Brownlee testified. "Federally inspected slaughter is the sole source of supply for government purchase and no other meat can move across State lines.

"Consequently, when meat is diverted from these slaughterers, and military needs are met from the diminished volume, what is left is far too little to satisfy the requirements of the large cities and other low-production, high-consumption areas. The resulting shortages in turn stimulate the black market."

That is why New York is getting less meat, while even today there is an abundance in rural communities and in small country towns which have nonfederally inspected slaughterhouses. Many of these small slaughterers are supplying the black market and are outbidding the big federally inspected houses and paying prices far over ceilings for livestock.

WE'D ALL PAY MORE

If ceilings were raised the black-market slaughterers would simply raise their prices, and diversion of meat from the armed forces, the large cities, and Europe would continue. The only difference would be that everyone would pay more.

So far, despite talk of stern enforcement, the O. P. A. has failed to make any effective attack upon the black market. But two radical methods of dealing with it were proposed on July 31, 1943, in a report of a Government food advisory committee.

This committee pointed out that people with plenty of money could easily evade rationing by dining in hotels and restaurants.

The food advisory committee recommended that if diners-out had to give up ration stamps for their meals serious inequality could be to some extent corrected.

THE GOVERNMENT AGENT PLAN

The committee proposed another remedy: "Whenever a serious black market develops in rationed food, despite aggressive enforcement attempts, consideration should be given to a plan whereby the rationed food in question would be purchased by licensed dealers in the trade, acting as agents of the Government and buying for Government account."

Applied to the meat industry, this would mean that every slaughterer, large and small, would be made a Government agent. Anyone who bought or sold above ceiling prices could be prosecuted for misappropriation of Federal funds, carrying penalties more severe than those imposed for violating O. P. A. regulations.

United States Army Forces, Pacific Ocean Areas

EXTENSION OF REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Frazier Hunt, distinguished World War No. 1 and No. 2 correspondent, recently returned to the United States from the Pacific, from the March 24, 1945, Army and Navy Journal.

With Germany now defeated, the attention of the Nation is turning with full intensity to the Pacific, and one of the first places on which it will focus will be the command known as the United States Army forces, Pacific Ocean areas, according to Mr. Hunt's article. Important as the command of the Pacific Ocean areas has been since the war began, it will have far greater importance from now on because of its intimate relationship to the war against Japan. Through that area will pass the bulk of the troops diverted from Europe and the United States, and in it they must be trained for the special kind of battle action required against the fanatical Japanese. The responsibility for the discipline, training and efficiency of the troops will rest upon the shoulders of Lt. Gen. Robert C. Richardson, Jr.

The article follows:

With its headquarters in the Hawaiian Islands, that command stretches across some 20,000,000 square miles of island-dotted ocean, stops only when it touches the China coast, and—of extreme interest to the enemy—it is the command which includes the Japanese mainland. It is the jump-off point for units going into combat. It is the area into which thousands of men and thousands of tons of material pour each month to be fused together and sent out as a finished task force against the enemy. It is

the place where the trained infantryman receives further training that will make him more than a match for his tricky and dangerous enemy—the Japanese soldier. It is the point where standard weapons are adapted into more deadly instruments for the specialized requirements of amphibious warfare. Its mission is offensive and defensive at the same time. It must train and plan and provide everything needed by the Army to carry the assault against Japan, and it must train, plan, and provide forces to protect what it takes.

Atop the sprawling command is Lt. Gen. Robert C. Richardson, Jr., commanding general, known by his short title as "Comgenpoa." A cavalry officer with 41 straight years of military experience behind him, General Richardson runs his command with regulation meticulousness, insisting on what he terms "command attention" to the details of his vast organization. He exercises personal command attention partly by traveling. It may be a short trip in the area of his headquarters where he suddenly appears to question the enlisted men. Or it may be an 8,000 miles or more flight from island to island through his area.

To manage an area so widespread, General Richardson has broken it down into two subordinate, but almost autonomous commands, and soon will establish a third. The first one he created was the Central Pacific Base Command, which encompassed the Hawaiian Islands, Canton, and Christmas Islands. The second, with its headquarters in Noumea, is known as the South Pacific Base Command.

Above the base commands, directing the entire area, is the Pacific Ocean Areas. General Richardson has established it as a planning and giant logistical operating command. Its general and special staffs are housed in a single building which General Richardson had built especially for it. Their work begins when the War Department presents them with a mission and directs them to obtain the necessary men and material and prepare the force for the assault. Because of the speed with which American forces have driven across the Pacific, it means an unending job with no time out to relax when a task force is embarked and moving toward its target. For there remains the garrison forces to be established, and behind each new invasion there are the islands we have captured which must be maintained and supplied.

The P. O. A. staff is operated independently but the results it accomplishes are meshed into the plans of the Commander in Chief, Pacific Ocean areas, Admiral Chester W. Nimitz, and other commanders in the Pacific. It is to them that the assault forces are finally delivered for the attack. With the naval leaders General Richardson maintains close and harmonious relations, which insure team work that brings victory.

Its training task is largely specialized. An example of the training necessary for Pacific fighting was a command which would incorporate all the knowledge necessary to live and fight in the jungle-like areas and tropical climates of the Pacific. The result was the establishment of the unit jungle training center which recently graduated its fifty-thousandth Jap-wise and jungle-wise fighter. Infantrymen first were put through the program. They learned to fight with their bare hands, to fight with knives. They learned to live on fruits and vegetables which they had never heard of before. They learned to shoot from the hip with everything from carbines to .30-caliber machine guns, to stalk and to detect cleverly hidden Japanese snipers. As the reputation of the jungle training center grew, more and more commanders asked to send the men of all their branches to it, and today it is a common sight to see the company cook carefully picking his way across a swaying rope bridge with explosives blasting around him, just in front of a soldier from the Quartermaster Corps. In fighting the Japanese it was found that rear area units frequently had to drop their work and start shooting at infiltrating Japs.

General Richardson, foreseeing that the day of island fighting is ending, converted his jungle training center into a combat training command to prepare his troops for large-scale land battles comparable with those now raging in Europe.

Also high on the list of specialized training came amphibious warfare. Beaches were selected in the Hawaiian Islands most nearly approximating those which would be encountered in future operations. Loading and unloading was practiced, landings were made until they became as familiar to the men as their G. I. shoes. Various type of matting were tried to enable vehicles to cross the sandy beaches of the Pacific, and the innovations which resulted are now SOP in amphibious attacks.

Two of the most effective weapons developed by the P. O. A. are the flame-throwing tank, and the mortar boat. The tank, which has been used with great success by both marine and Army forces, grew from the need for a more effective method of cleaning out Japanese pill boxes, and at the same time cutting down the casualties which our forces suffered in attacking the well-built, well-camouflaged strong points of the enemy. The first few tested in combat worked so well that work was soon completed on hundreds of the modified vehicles.

The mortar boat is a newer development, designed by P. O. A. to increase the fire power against beaches and to maintain that fire power until the last minute when the men of the first waves hit the shore. The boats are small and have a shallow draft. They mount 4.5 chemical mortars, and move in with the assault waves to pound any Jap installations visible on the beach and defensive works behind the beaches.

The record of the P. O. A. in the Pacific is a record of successful assaults that began with the offensive in the Gilberts. For each operation in which the Pacific Ocean area headquarters has participated, General Richardson has prepared a complete report showing what the command contributed. These reports make a rich source of historical information, but the purpose behind them is more than historical; they are keenly analytical critiques of the duties and responsibilities which were assigned to the command, and the manner in which they were carried out. In these reports the general lets the chips fall where they may, and this objectivity gives them their greatest value. On the basis of each report, succeeding operations are steadily improved.

One of the best examples is the report on the planning that led to the capture of Makin Island, one of the Gilbert group. It was the first offensive operation in the Central Pacific and had few precedents to follow. Several months in advance of the attack, a dispatch came to General Richardson from the Joint Chiefs of Staff giving him the mission, the concept of operations, available forces, target data, and instructions to formulate his plans. His staff went to work. The Twenty-seventh Infantry Division was designated as the unit to make the attack, and special training was instituted for the elements of the division to be used. The assault units were brought up to full strength. Troops were gathered from other units and a garrison force formed to take over and defend the island after it was captured. Intelligence training programs and schools were established and lectures were arranged for general and special staff officers covering such subjects as geography, topography, climatic conditions, and enemy installations. Objective folders were prepared, interpreter teams were assigned to the division, and began to train with it. Complete plans for Army land and air forces were drawn up along with a training program in three phases: intensive training and land operations, preshipboard amphibious training, and final ship-to-shore exercises. The supply task was, in many respects, unlike any previously faced by a unit of the United States Army. A show-down inspection was held to determine equipment condition and shortages. A detailed study of the objective led to the development of many special requirements, including additional bulldozers, water distillation units, pack howitzers, extra radios, flame throwers and chemical mortars. Special staff sections such as the engineer, chaplain, surgeon and ordnance officer, presented their plans and went to work.

When the troops were finally loaded onto their transports and ready to depart for their target they had everything which advance planning could give them. Along with them were observers from General Richardson's staff, officers who had done the planning and who were charged with the duty of criticizing their own work as the results showed themselves in battle.

Next on the list was Kwajalein, where the P. O. A.'s well-known Seventh Infantry Division went into action for the second time in the war. The stepping-stone drive across the Pacific brought battle experience to two other divisions—the Seventy-seventh at Peleliu, the Eighty-first at Anguar. The Twenty-seventh went into battle for the third time when it joined the marines in capturing Saipan. The largest single action of any of the P. O. A. divisions was on Leyte, where General Richardson provided General MacArthur with the Twenty-fourth Corps, completely equipped and ready to attack. It was used throughout the campaign, and its performance there brought a radio from General MacArthur to General Richardson which said: "The splendid efficiency of your Twenty-fourth Corps reflects the careful training it has received under your able command. The corps has performed most gallantly." Other units, such as the Twenty-fifth Division, veterans of the Solomons and now Luzon, have been trained under General Richardson's command and sent out of his area to fight in the Pacific.

One of the best illustrations of the work of the Pacific Ocean Areas Command is the portrayal of the job done by the Eighty-first Infantry Division at Anguar in the motion picture, Eighty-first Division at Anguar, which is being released to the Nation by the Treasury Department as part of the Seventh War Loan drive.

One of the little-publicized and undramatic tasks performed by the Pacific Ocean Areas Command is the cleaning up of back areas which the war has swept over and left. The islands are swiftly built up and protected, and as they recede further from the fighting front, they are slowly closed up. Equipment is inventoried, packed, and shipped to areas where it is needed. It is in marked contrast to some of the World War I areas where tons of equipment could not be reclaimed. Hopeful natives who eye American jeeps, food, and clothing are disappointed when they suddenly find the island cleaned up and bare. Outstanding examples of this can be found in the South Pacific Base Command, where Maj. Gen. Frederick Gilbreath is in command. General Gilbreath is busy rehabilitating soldiers returning from the front lines wounded or sick, and is doing an outstanding job with the same care in reclaiming and salvaging American property, thus carrying out the great economic policy for which General Richardson is so well known.

As the P. O. A. divisions learned, so did the staff, and today it is an experienced command, battle tested and proved, and it knows that the jobs it faces in the future will dwarf those which it has solved in the past. Already it is deeply involved in those solutions.

For the veteran troops who will come over to the Pacific from the European theater,

General Richardson is planning a training course which will implement their fighting knowledge with the experience already gained by Pacific veterans in 3 years of combat against the Japanese.

New Jersey's Need for a General Medical Hospital for Veterans

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. HART. Mr. Speaker, under leave to extend my remarks, I include herein an editorial from the Hudson Dispatch, Union City, N. J., of May 9, on the need for the establishment in New Jersey of a general medical hospital for veterans of all our wars:

NEW JERSEY'S WOUNDED NEED HOSPITAL IN OWN STATE

In the midst of celebration over victory in Europe, and heightened confidence that the might of the Allies can bring Japan to a condition of unconditional surrender even sooner than experts predicted, a war-created problem is developing with great urgency.

It is the problem not only of proper care, but of sufficient hospital room, for the wounded. These are the men who gave arms or legs or lungs or eyes so that the victory in Europe might be accomplished. There will be, and in time of jubilation we cannot hide the fact, many more before the conquest of Japan.

New Jersey has sent a large proportion of its manhood into the armed services, as it has in every war in which this country has participated. And New Jersey's wounded are coming home, week by week, from many foreign fronts.

Where can they go for treatment? To the United States hospital at Lyons? That is being used almost exclusively now for psycopathic cases.

Then where? A New Jersey delegation of American Legionnaires, meeting with the State's congressional representatives, said that New Jersey veterans, including thousands from previous wars, have to go to Philadelphia Naval Hospital and veterans' hospital in the Bronx. Both these institutions already are overcrowded.

There is no hospital available for veterans in New Jersey now. That was why the Legion delegation went to Washington to plead for construction of a Federal hospital in this State for New Jersey's men returning from this war in need of medical aid. The delegation said that, from its survey, a 750-bed hospital is needed immediately, and that by 1952 1,000 beds will be required.

United States Senator ALBERT W. HAWKES is cooperating with the delegation, having convened the delegation at the Legion's request "to discuss this vitally important subject of a hospital for all veterans of all wars, regardless of what organization they belong to." He said no site has been recommended as yet, and that the matter of a site is up to the Veterans' Administration.

Veterans' hospitalization is a matter of national importance now. Four investigations of veterans' hospitals are currently in progress, two by congressional groups and two by the Veterans' Administration. Dr. Charles M. Griffith, medical director of that Administration, replying to critics, upholds the surgical record and high caliber of operating surgeons of its facilities. The Administration admits, answering an attack in the House, "that some of our hospitals are overcrowded, but not to the point where the health of the patient is endangered."

But how long, at the present rate of return of the wounded and with an all-out Pacific war still to be waged, before the hospitals are overcrowded "to the point where the health of the patient is endangered"? Must we wait until that point is reached?

Build a hospital in New Jersey now. Our veterans deserve better than to be forced to go to the Bronx or Philadelphia for treatment of wounds suffered in their country's service. Build a hospital in New Jersey before Philadelphia and Bronx become too crowded to accommodate New Jersey's wounded.

Before a serious situation becomes critical, the Veterans' Administration should give thought and action to New Jersey's problem. If the Veterans' Administration needs prodding, then New Jersey's delegation in House and Senate should prod, hard and firmly and persistently. There can be no excuses; no answer except, "Yes, now!"

Mr. Speaker, the entire New Jersey congressional delegation has met together on several occasions and has made strong representations to Brig. Gen. Frank T. Hines of the dire and imperative need for such an institution. This need is well described in the above editorial.

At its last meeting, which was presided over by Hon ALBERT W. HAWKES, the congressional delegation was delighted to be advised by Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, that he was of the opinion that a general medical hospital for New Jersey veterans should be established in that State. Senator HAWKES having been authorized to do so by the congressional delegation, issued a statement regarding the meeting with General Hines, as follows:

The entire New Jersey congressional delegation met this afternoon with Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, and presented to him facts and figures to prove the need for immediate action for a general medical hospital in New Jersey for the medical care of all veterans.

General Hines has authorized the New Jersey delegation to say to the people of New Jersey that he will recommend such a new hospital with at least 1,000 beds to the Federal board within 30 to 60 days.

He thoroughly understands and appreciates the veterans' needs for this hospital at the earliest moment it can be completed.

The New Jersey delegation is happy to be able to report this progress to the New Jersey citizens.

Every member of the New Jersey congressional delegation is intensely interested in obtaining for that State such a hospital as has been described. They have good reason to hope that hospital accommodations which New Jersey veterans are entitled to will be provided.

VE-Day Prayer

EXTENSION OF REMARKS
OF
HON. EDGAR A. SHARP
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. SHARP. Mr. Speaker, under leave to extend my remarks, it is my great privilege to incorporate in the RECORD the VE-day prayer delivered by Rev. Charles Fredericks, of St. Paul's Lutheran Church, East Northport, Long Island, N. Y., on the occasion of the VE-day services held by this church on May 9.

This prayer by Reverend Fredericks, I think, typifies, in a most salutary way, our hopes and our faith in these critical days. The prayer follows:

O Almighty God, Supreme Ruler and Governor of all things, who art a strong tower of defense to them that fear Thee, and whose power no creature is able to resist: Unto Thee do we give thanks on this day, which marks the end of hostilities in Europe. We acknowledge this to be a blessing which came down from Thy hand, for Thou art the only giver of all peace. Make us truly appreciative of this great gift, that we may not misuse it, but cherish it and do what we can henceforth to promote peace among men. Look in mercy upon the wounded, and upon those who have been exposed to peril, sickness, and death; comfort those who in our national hospitals are bearing the marks of conflict, and give them that consolation which is brought through the ministry of Thy word. If it be Thy will, cause also the conflict in the Pacific to come to a speedy end. Unite the hearts of the mighty ones on earth and establish peace and concord among them. Remove offenses, hatred, and ill will. Preserve to us and to our children the precious liberties which we as a Nation have enjoyed to the present time. Let Thy word be the power unto salvation to everyone that believeth. Grant us true peace of heart and soul which the world can neither give nor take away; and finally give us the victory of faith, even the life to come. Through Jesus Christ, our Lord. Amen.

Those German Generals

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very timely and constructive editorial which appeared in the Christian Science Monitor, Tuesday, May 15, 1945, entitled "Those German Generals":

THOSE GERMAN GENERALS

German generals should be speechless. We can and should dispense alike with their subtle praises of Allied generalship, their sinister attempts to make the Nazis the scapegoats of defeat, and their sickening efforts to treat the war as simply a game lost. The ban on press interviews should be extended to all public utterances, particularly to German generals' radio speeches.

General Eisenhower's warning about treating German officers as "friendly enemies" is welcome. The pattern of the German purpose is plain. This is General Guderian (we omit his titles):

"A soldier after battle soon feels at home with other soldiers. It's like a football match when you shake hands and wish each other luck."

And here is General Falkenhorst, commander in Norway, who is allowed to tell the German people by radio that the Allies have liberated the German Army and people from the Nazi yoke. And we have General Busch, reported broadcasting to Germans that he

is in charge of northwestern Germany with the consent of the Allies.

Military necessity may still dictate to Allied commanders. They have 6,000,000 prisoners on their hands. They may have to rely on the German military organization to transmit and carry out their orders until civil government can take over. But if the German generals have to keep their voices, let mufflers be put on public speeches.

The Allies have been spared the last-ditch, guerrilla fighting that was feared a month ago. But insofar as organized surrender leaves any chance for the German General Staff to play the hero role as final rallying point and protector of the German people, it will not be an unmixed blessing. For it begins to look as if de-Nazifying Germany would be less difficult than demilitarizing it. It is already almost impossible to find a Nazi, but there are still plenty of worshipers of the generals.

We trust General Eisenhower is moving as rapidly as possible to leave the generals unemployed. We trust no false sense of military courtesy will delay their early transfer to a clear prisoner-of-war status. Many of them deserve arraignment as war criminals. In any case, it is going to be necessary to disgrace them completely and finally. If these men, who either used Hitlerism or were used by it to produce this holocaust ("football match," indeed), are received with respect or allowed to talk and act like leaders of the German people, disgracing them will be that much harder.

Let us not forget that at Yalta, Britain, Russia, and the United States declared their "inflexible purpose":

"To break up for all time the German General Staff that has repeatedly contrived the resurgence of German militarism."

When do we begin?

H. R. 1270, if It Becomes a Law, Might Cost the Taxpayers Over $16,000,000

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. COCHRAN. Mr. Speaker, I notice where the Rules Committee has reported a rule providing for the consideration of H. R. 1270, which is a private bill authorizing an appeal to the Supreme Court of the United States from the decision of the Court of Claims in a suit instituted by George A. Carden and Anderson T. Herd. This is the second time the Rules Committee has provided for special consideration of this claim. On the first occasion several years ago the House defeated the bill. I want to warn the Members of this House that it is their duty as representatives of the taxpayers to carefully consider this legislation before it is called up, because there are many millions of dollars involved.

It is an old claim growing out of the transfer of some ships to the Government at the outset of World War No. 1. The report of the committee does not tell the entire story.

In view of this let me say the bill would authorize Carden and Herd to appeal as a matter of right to the Supreme Court from the judgment of the Court of Claims in the suit heretofore brought by them against the United States and which was decided against them by the Court of Claims. Ordinarily the right to secure a review by the Supreme Court of a judgment of the Court of Claims is obtained by an application to the Supreme Court for a writ of certiorari, which is granted in the discretion of the Supreme Court. Carden and Herd had this privilege.

The claimants seek to recover the sum of $7,161,000 with interest from May 3, 1917, or a total of about $16,000,000, as just compensation for ships owned by them and taken over by the Government during the World War. At the time that the ships were taken over by the Government, Carden and Herd were paid the sum of $6,778,000 for the ships. Subsequently they received an additional award of $550,000, thereby making the total amount received by them from the Government $7,328,000. They have been prosecuting their claim to secure still further compensation.

The report of the committee concerning the present bill—House Report 258, Seventy-ninth Congress—refers to the fact that the findings made by the Commissioner of the Court of Claims support the contentions of the claimants. The Commissioner's findings, however, were unanimously overruled by the Court of Claims after a full hearing, and the final findings made by that court were favorable to the Government, *Carden and Herd* v. *United States* (87 C. Cls. 189). Justice Green of that court, an eminent jurist who had been an outstanding Member of the House prior to his appointment to the bench, wrote the opinion. The following extracts from his opinion tersely summarize the facts of the claim and the reasons for the unfavorable conclusion reached by the Court of Claims in respect to it:

It appears from the evidence that on April 5, 1917, the plaintiffs acquired by purchase seven Austrian ships which had taken refuge in American harbors. About April 7, 1917, the plaintiffs sold these ships to a New York syndicate. The defendant wanted these ships, and negotiations were commenced for their purchase by the Government through Bernard M. Baruch under the direction of President Wilson. On ascertaining that the ships had been sold to the syndicate, Baruch requested the plaintiffs to get the sale to the syndicate rescinded, having previously informed plaintiffs that the President had expressed a desire to obtain the ships at the original cost price. Plaintiffs complied with the request made by Baruch and obtained a rescission of the sale to the syndicate. Thereafter the negotiations were resumed between Baruch and the plaintiffs and Baruch told them to go to William Denman, Chairman of the Shipping Board, who would close the transaction. Accordingly plaintiffs met Denman and after some preliminary conversations the plaintiffs executed a bill of sale to the defendant for each of the ships and signed a receipt reciting that they had received $6,778,003.70 in payment for the seven ships and had executed and delivered to the United States bills of sale therefor, the receipt being executed without prejudice to the further payment of $20 per ton for the transfer of the vessels free of restrictions in the trade. At the time of the execution of the bills of sale, there was also executed by Denman, the plaintiffs, and Phelps Bros. & Co., agents, an instrument denominated "Memorandum of closing" which recited that the price to be paid for the ships was the sum stated above and that there was a further balance of $20 per ton to be paid by the Government for the removal of restrictions on the ships and certain minor details of the transactions relating to the closing of the registers of the ships, including what was to be done with stores and supplies, repairs, and a payment to the original owners of the ships. (See finding 6.) Shortly thereafter defendant paid the further sum of $1,053,020 for the removal of the restrictions on the ships and has paid nothing since except $550,000 as an award which will be considered further on.

So far we have recited matters as to which there is no dispute. The plaintiffs allege in their petition that they transferred title to the ships to the United States with the distinct understanding that part of the compensation to be paid them for the transfer was the operation of the ships by them at the prevailing rate of commission, which was 5 percent of the gross freight receipts, that the United States has denied that the operation of the ships by the plaintiffs was a part of the compensation, and took and used the ships without the plaintiffs ever having received just compensation therefor.

The defendant enters a general traverse of the allegations of the petition and in argument contends that there was no other consideration for the sale of the ships than the price paid therefor; also in substance that the plaintiffs had no reason to understand or believe that they were to have the operation of the ships after they were sold; and finally, as a matter of law, it is argued that the written instruments signed and delivered by plaintiffs at the time the ships were purchased constitute the sole and only contracts between the plaintiffs and the defendant for the purchase of the ships and cannot be varied by oral testimony as to any understanding on the part of plaintiffs.

* * * * *

What we have here is a written contract in connection with which plaintiffs allege they understood there was an oral agreement. Defendant denies the existence of such an agreement and plaintiffs make no claim that it was made but content that the minds of the parties have not met and the written contract becomes invalid. If a written contract can be vitiated in this manner, then all that is necessary to be done in order to break a contract in writing is for one party to claim and testify that he understood that there was an additional oral contract upon which the written contract depended. Then, when the other party rests its case on the written contract, a "mutual misunderstanding" can be pleaded and the written contract held invalid although it is perfectly plain and unambiguous in its language.

* * * * *

The rule for which plaintiffs contend is in effect that when a written contract is entered into and nothing else is agreed, but one party believes that there was an oral contract preliminary to the written contract, this fact, if proved, invalidates the written contract. With this doctrine we cannot agree and we find no authorities that sustain it.

* * * * *

What we have said above is sufficient to dispose of the case but it may be that something should be added with reference to the claim presented to the Secretary of War by plaintiffs against the defendant for $7,500,000. This claim was made under what is called the Dent Act and set up the same matters that are now made the basis of plaintiffs' suit; namely, the failure of the defendant to turn the ships over to plaintiffs, and that at the time of the transfer of the ships there was no meeting of the minds between the parties to

the contract and therefore plaintiffs were entitled to receive the fair market value thereof less what had been paid. The War Claims Board denied relief but on July 16, 1921, the claim having been presented to the Secretary of War, John W. Weeks, he made an award in favor of the plaintiffs in the sum of $550,000. * * * The plaintiffs presented to the defendant through the Secretary of War a claim in substance and effect the same as that which they now make and upon which they seek to recover judgment. The plaintiffs were paid and accepted a certain sum in full payment and discharge of their claim.

Mr. Speaker, on August 13, 1940, this question was thoroughly debated in the House. The debate will be found in volume 86, part 9, of the CONGRESSIONAL RECORD starting on page 10258.

Prior to that time I received several letters in reference to this bill and without making any investigation I wrote and said I did not oppose ordinary private claims bills. While I do not have a copy of that letter nevertheless I evidently stated at the time that I would offer no objection to the measure, but after a thorough investigation I came to the conclusion that I certainly was not justified in supporting any such bill and I opposed it in 1940 for which I was criticized by some Members of the House who took the position that after writing a letter I should not have assumed such an attitude.

Mr. Carden and Mr. Herd, who are named in the bill, were not alone by any means in connection with the purchase and sale of the ships involved. The syndicate was organized and, as the debate in 1940 shows, members of this syndicate are the ones who advanced the money at the time of the purchase of the ships. At that time there was another bill pending before the House, introduced, I think, by the gentleman from Pennsylvania [Mr. WALTER], who wanted the members of the syndicate recognized.

Let it be remembered that these ships were not in possession of Mr. Carden and Mr. Herd or the syndicate 30 days before they were taken over by the Government. Not a dime had been spent on them in the way of repairs between the time the ships were secured from the Austrian Government by the syndicate and the time the Government took them over. Mr. WALTER in his statement said that all the evidence showed the ships were secured by a down payment of $730,000, which was advanced by the syndicate and he further stated not a dime was spent by Mr. Carden and Mr. Herd.

It will also be seen in the decision of the Court of Claims, which is included in these remarks, that the Government paid $1,053,020 for certain restrictions on ships and that, further, under the Dent Act the Secretary of War allowed Mr. Carden and Mr. Herd $550,000 additional over the amount the Government paid for the ships. There is no evidence to show that any part of this money went to the members of the syndicate.

In my long service in the House I do not recall where the Committee on Rules ever before on two occasions granted a special rule for the consideration of a private bill.

When this legislation was pending in 1940 I offered an amendment, which read as follows:

Provided no interest shall be included in the judgment rendered by the court.

The gentleman from North Carolina [Mr. WEAVER] accepted the amendment. That amendment certainly should be offered in connection with the pending legislation and I hope that the gentleman from North Carolina [Mr. WEAVER], who will be in charge of the bill when it is before the House, will again accept the amendment.

Owing to the fact that I am in the hospital at the present time, I might not be able to be present, but if I am not present some Member should certainly offer that amendment, although I will admit I would not even vote for the bill if the amendment were included. The report submitted with this bill does not contain the letter written by the Attorney General. In all fairness, that letter should be included in the report. That letter stated, in part, the following language:

On the other hand, after a full trial on the merits, the Court of Claims has held that there was no legal obligation on the part of the Government to pay to the claimants any compensation in addition to the amount which they had already received, to wit, $8,391,028.70. By the award of the Secretary of War, they realized a profit of $550,000 on this transaction. They now seek a further profit, for which they did not stipulate in their original contract.

As Messrs. Carden and Herd accepted the award of the Dent Board, certainly there is no legal obligation on the part of the Government to pay an additional amount. I sincerely hope that this bill will be defeated.

Nazi Atrocities

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Pvt. (1st cl.) William Vavra, of Madison, Ill., giving his eye-witness story from an American soldier's point of view, of Nazi atrocities. Private (1st cl.) Vavra's letter was published in the Granite City (Ill.) Press-Record. It follows:

PVT. (1ST CL.) WILLIAM VAVRA WRITES VIVIDLY OF NAZI HORROR SCENES

The following letter, vividly describing conditions in one of Germany's bomb-destroyed metropolitan cities, was written to E. A. Friedman by Pvt. (1st cl.) William Vavra, a former clerk in the Friedman store and now an M. P. somewhere in Germany.

"We rolled into the town on the heels of the Infantry. What had once been a prosperous city was now a mass of rubble-strewn streets. It was our job to route traffic through this bombed-out metropolis. At one glance I knew we had more than traffic to contend with. The streets were teeming with slave laborers. Most of them were roaming the streets aimlessly. After anywhere from 5 months to 5 years, they were free and they wanted to make the most of it. From some bombed-out wine cellar they were dragging huge wicker-cased bottles of wine and schnapps. The starved and beaten look was gone from their faces. They were like a bunch of children with some new toys. Everyone wanted to shake our hands and say a few words to the American soldats. The ones that could speak a little American lost no time in making it known. With it and my little knowledge of the Slavic tongue, this is what we gleaned.

" 'Me Russki flyer. I am here for 2 years. Work on farm 12 hours a day.' This came from a young muscular lad of 23. He wore German boots and riding pants. He had blond hair and looked more like a German than most of the P. O. W. I have seen. 'Me Polski. Five years I have been in Germany a laborer. Nothing to eat but soup and sometimes a little bread. Meat? What are you talking about, pani; never tasted it in 3 years.'

"There were Poles, Russians, Czechs, Croats, and Serbs. The majority of them were Russians and Poles. They were the ones who had been mistreated the most. Some wanted to go to America as soon as they would be allowed. They had heard how rich everyone was and had everything he needed. Most of them were content just to be free. They would be taken care of by the Americans. They had no more fears. As long as the American soldats were there they would be taken care of. It made me feel good just to see them in their enthusiasm. The next 4 hours I spent on duty. With heavy traffic and the civilians blocking the streets, I was kept busy."

SEE ATROCITY CAMP

"That evening after chow the fellows asked me if I had heard of the concentration camp and if I wanted to go and see the place. It was situated on the outskirts of the city and covered a good many acres. It had also been bombed and the buildings were in shambles. The Army had already taken over, and civilian workers were laying the bodies of the victims in rows.

"The stench was terrible. I'll never forget it as long as I live. The first rows of bodies consisted of the ones that had been starved to death. They were skeletons covered with skin. The joints of their bones were swollen to twice their normal size. Their faces were lined with pain and agony.

"Next came the bodies of the ones who had been shot or beaten to death for various reasons and had been stacked like cordwood in some of the buildings. Their features were unrecognizable as some decay had already set in. Long lines of civilians were bringing in more on makeshift stretchers. These bodies came from the fields and a small creek that bordered the camp. Some had been shot while trying to escape and some had been thrown into the creek after dying from some terrible torture.

"I even saw some burned ones. They looked like half-burned logs. My stomach started to turn. I had seen enough. By the looks on the faces of the other 'Joes' there, no one would ever forget. This was nazism staring us in the face. This is what we had heard about but didn't think actually existed.

"And then these same civilians have the nerve and gall to stop me on duty and want to know who is going to fix the windows that have been broken in their homes during the bombing or shelling of their city. What kind of people are they? Do they think we are blind? I wonder how many of them will be punished for these terrible crimes they have committed. What is to be done with such a race of people? I hate to think of

the job we have on our hands. I slept very little that night."

Private (1st cl.) Vavra is married and his wife, Mrs. Angela Vavra, resides at 1003 Washington Avenue, Madison. He has been in the service a little over a year.

Nazi Atrocities

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered last Sunday evening from the McDowell Pulpit of Foundry Methodist Church, in Washington, D. C., of which the Reverend Dr. Frederick Brown Harris, Chaplain of the United States Senate, is pastor:

When our American armies began liberating prison camps in Germany, General Eisenhower himself made a personal visit to the political prison camp near Gotha. He was so horrified at the atrocities committed there that he cabled General Marshall to invite a delegation from the Congress of the United States to see for themselves the real situation before time elapsed and it was cleaned up, in order that they might report their true findings to the Congress and to the American people.

Twelve Members of Congress—six Senators and six Representatives—were selected by the leadership of the two Houses to make an unexpected and hurried trip of inspection. It was my opportunity and duty to go on this unpleasant but necessary mission.

Most Americans, no doubt, by this time have read much in the press and have seen many pictures in periodicals and on the screen concerning these abominations. Although the reports are from reliable sources and pictures do not wholly lie, it is next to impossible to believe them. The whole sad and sordid story is so fantastic that it is beyond human comprehension. It staggers man's imagination.

I heard about it. I read about it. I saw pictures—but I could not believe it.

Being a Missourian, I have to be shown. And though I have seen with my own eyes, I still pinch myself and ask, "Is it true?"

For 14 days we flew over and rode through France and Germany, seeing for ourselves whether the stories about Nazi atrocities are true or false.

There is no artist skillful enough to paint, no linguist trained or clever enough to describe, the unspeakable scenes upon which we have painfully looked.

Only Buchenwald, Nordhausen, and Dachau have I personally visited. They are only three out of perhaps 100 camps in Germany, but they are typical. The same pattern runs through them all. The evidence is convincing and the conclusion is inescapable that the Nazis deliberately, intentionally, and in cold, calculated, premeditated manner, set out in an organized and systematic way to destroy all who dared oppose their sinister and satanic regime.

The cruel and universal weapon is that of starvation. Thousands upon thousands of miserable men have I looked at—with hollow eyes, fevered cheeks, emaciated bodies, with skin dried to the bone, and all hope died out of their eyes. Most of them were dead—and the living dead were more awful. They could still open their eyes, but they did not see. They had ears, but could scarcely hear. Their racked bodies and tortured minds had reduced them to a level below animals. They were helpless skeletons—hollow frames with departed souls.

The dead were more fortunate than these live corpses. They still breathed, but they did not live. They tried to smile, but did not have the strength. Some could barely lift their hands, but would murmur as a dying dog whimpers when you look into his hopeless eyes and speak a kind word.

All this made me sick. I was nauseated by the foul odors in these dirty, shabby barracks; by the squalor and filth of the bunks in which these overworked and underfed prisoners slept. One small building housed 2,300 of these poor, wretched unfortunates, who slept in long rows of 3 tiers. Six men occupied a single berth about 5 by 3 feet, and the bunks were too short for some men. They were literally packed in like sardines in a can and it was impossible for one to turn over. Many slept on bare boards and the best had only tattered rags to sleep on. Their bodies were covered with lice, which served as a blanket.

Tuberculosis was rampant, typhus widespread, and nearly all were suffering from dysentery due to undernourishment. Their day's ration usually consisted of a small piece of bread and a thin soup which was little more than water with a potato, a carrot, or a piece of cabbage drawn through it.

The prisoners at Buchenwald were compelled to work in a huge armament plant adjoining the camp. Incidentally, it is interesting to note that this factory which manufactured machine guns, small arms, and ammunition was totally destroyed by the precision bombing of our Air Force without many prisoners being killed. This was one of the pleasant sights we visited. It was the only bright spot in a very dark picture. One would think that the Nazis would feed these prisoners well in order to get the maximum work. A normal person would so treat an ox or a slave. This they did not do. These persecuted inmates worked as long as they had strength but when they became too weak to labor they were left to rot in their hovels and die of starvation and disease.

Prisoners were compelled to bury their own dead and we were told by those still able to talk that often they did not reveal for several days the death of a comrade in their own bunk in order to receive his slim rations. The insanitary conditions were indescribably shocking. There were only a few crude toilets and many victims were too ill and weak to walk to them. A pigpen would be preferred to these cesspools of hell. Again my soul cried out, "O God! How can humanity sink to such depths of moral depravity?"

For the slightest infraction these political prisoners were beaten unmercifully. Only the cruelest instincts of a sadist could inflict such barbarous punishment. Fifty-one thousand prisoners perished at Buchenwald alone and some reliable sources put the number as high as 75,000. I can well believe this after seeing many of the naked bodies piled high like cordwood, and trucks that were filled with dead men not yet removed.

Many of their burned remains I saw in great ovens in the crematory. Their bones and ashes were used for fertilizer. Their tanned human skins with their prison numbers and often their nationalities tattoed upon them were used for lamp shades by the vile and corruptible, the lewd and lascivious women of the Gestapo agents. When there was a coal shortage and the furnaces could not be fired, prisoners were forced to dig their own graves.

Thousands upon thousands were hanged, beaten, tortured, starved, gassed, shot, burned, relegated to oblivion, and I still wonder, "Can it be?"

Let us not speak of humanity because the human race is most inhuman. We have reverted to a thousand years of barbarism because Nazi rule was worse than the Dark Ages. All that is beautiful, sweet, dear, and decent to this life has been killed—and beastly men with brutal tendencies, with vile impulses and vulgar feelings, have robbed the world of its beauty, killed hope, destroyed faith, stabbed love in the back, and are no longer capable of human compassion. "The soul is a pearl of great price," but its dignity has been outraged.

Worse than the broken bodies of these prisoners are their broken spirits. Modern civilization in diabolical Germany is but a thin veneer covering the savage nature of men. One might expect these atrocities and enormities to be committed by a non-Christian, heathen nation like Japan, but it is unthinkable and certainly unpardonable for them to be committed by the German people. No doubt there are many people in Germany who knew little or nothing about these atrocities, due to the strict Nazi censorship and propaganda.

One of our lieutenant generals and a young Dutch doctor who had been a political prisoner for 4 years in several Nazi camps felt that many of the German people did not know about these heinous crimes. I agree with them, but I am also convinced that many of the most guilty now nervously profess innocence and falsely declare they had no knowledge of these horrible events. They are now cowardly trying to save their own evil hides. It is very strange and rather amusing that so few people in Germany today knew Hitler or care anything about him or his fate.

At Nordhausen the prisoners were compelled to work in the great underground factory which produced V-1 and V-2 bombs. Thirty-five thousand of these prisoners worked in the vast subterranean passages, 30 miles long, which were fully equipped with the most modern machine tools and would compare in size and efficiency with the assembly line at Alcoa, Boeing, or at Willow Run. The buzz bombs and rocket bombs were being produced on a gigantic scale when we liberated Nordhausen, and it is fortunate that we reached there in time. We saw the awful havoc wrought and the frightful destruction which these instruments of death caused both in London and Antwerp.

Three weeks before our armed forces captured this camp, 135 Russians were publicly hanged and their fellow inmates were forced to look upon the ghastly scene. No worker in this underground factory ever came out alive to reveal any secrets.

At Dachau near Munich, we witnessed even more gruesome scenes than at Nordhausen or Buchenwald. We arrived there only a few hours after the camp was liberated and saw thousands of dead men—50 carloads in 1 train with 14 to 20 men in each little car—with many corpses thrown on the right-of-way as we see ties scattered along railroad tracks in America. These prisoners were brought from Buchenwald, with other civilians from divers places, and were locked in cars for 2 days and nights without any food or water. Naturally, thousands of them in their weakened condition died before they could be unloaded at Dachau.

When we entered the camp itself, surrounded by a high electrified barbed wire fence, we saw innumerable dead bodies scattered all over the prison grounds. In the crematory with several furnaces and a gas chamber, called a shower bathhouse, about 20 feet square in which thousands perished, we saw at least 500 naked bodies promiscuously piled in 1 adjoining room and about 400 other bodies—some partly clad in rags—neatly stacked in another room.

The Americans moved in so quickly the SS guards did not have time to burn these bodies and fortunately some of the Russian prisoners succeeded in killing three of these

guards before the others escaped. Their dead bodies were the only pleasant sight in the midst of all this carnage.

Dachau has been a nightmare to me and I now almost faint when I think of it and the reeking stench of dead men. Oh, you cannot get the picture. You have to move and walk in the midst of all that—and touch it, and feel it, and smell it.

It must be pointed out that there was a vast difference in the treatment accorded political and military prisoners. On the whole our American prisoners of war in Germany were fairly well treated and I never spoke to one who had received cruel or brutal treatment. Germany tried, I believe, to live up to the rules of the Geneva Convention and gave our boys a fair amount of food—as much as conditions at the time and place permitted. Thank God for the American Red Cross for it kept many of our boys from starving.

On the other hand the political prison camps were filled with the most intelligent and democratic leaders from all the Nazi-occupied countries in Europe, including Germans themselves who dared to oppose Hitler and his murderous bunch of gangsters. Political prisoners consisted of four classes:

1. Those who rejected the Nazi philosophy or ideology of government.
2. Habitual criminals.
3. Religious or conscientious objectors.
4. Those who refused to work.

The most fanatical and ruthless members of the Schutzstaffel were selected as guards over these prison camps. Often the worst convicts in prison were released to carry out the executions of the prisoners and to burn their bodies. These hardened criminals were promised their freedom to work in these human slaughter pens. They were well fed and clothed during the time of their diabolical service, but when they gained too much knowledge they were given a new suit of clothes and were told that they were free. Before they could get out of the prison camps, however, some Gestapo agent always put two or three bullets in the back of their heads so that the convicts could not tell secrets to people on the outside.

Contrarily and surprisingly a few of the political prisoners who had rich relatives were given their freedom after paying a high ransom, but not until the prisoner was broken in body and spirit and then only that he might tell his friends back home of the fate awaiting them if they dared oppose the Nazis in the least degree. We now know why the German people have fought on so long and hard. They had a pistol held to their temple and a bayonet to their back. Terrorism and Nazism are synonomous.

Nazi Germany and old Germany are really quite different. Old Germany, with its Kant, Luther, Goethe, Schiller, and Hegel; its Wagner, Bach, Beethoven, Einstein, and Mann, was certainly different from Nazi Germany with its Hitler, Goering, Goebbels, Himmler, and Hess; its Henlein, Terboven, Quisling, Inquart, and Frank.

It is amazing to the most disinterested observer from an objective point of view to note the difference between men who have contributed much to the world's civilization and those who have all but destroyed it. The inconsistency and contradictory nature of the German people will make one wonder how they can be so smart and so dumb at the same time. Technically they are unsurpassed, but socially and politically they are near the bottom of the list.

Having studied in Heidelberg and Berlin following the last war, I thought I knew the German people, but between the two wars of our generation they have been changed by a pagan philosophy. Ideas are powerful weapons. Often they are more dangerous than dynamite. "As a man thinketh, so is he." Fed on a crass materialism, believing with Nietzsche in the superman and in the will to power, following Treitschke and Bernhardi with a slogan that "might makes right," these fanatical youngsters, without historical knowledge, without foreign travel, and with little experience, have blindly accepted and slavishly followed the poisonous doctrines of the Nazi Party.

Under one-party system of government and one-man rule, they have forgotten all about courts and parliaments and have followed only the fuehrer—their leader. To them Hitler was an indispensable man. He was a messiah—their saviour. This is the manner in which tyranny grows.

There is no indispensable man in any country in all this world. Men come and men go, but the world goes on. Thank God America is not a one-man country! This land of freedom under God is bigger than any man, party, or section of the country. As long as we have three branches of government in America, each to act as a check and a balance on the other two; as long as we have free speech, free press, and free worship; as long as we have the right to petition and a trial by jury of our peers, our liberties are safe. Our only hope or chance we have to avoid the fate of Hitler and Nazi Germany is to preserve the Republic by preventing one-party government or one-man rule.

So much for the atrocities committed in these political prison camps, which was our chief and really only mission. In closing, however, I want to make a few observations, and what I shall say is not in the least dogmatic, but is given from a troubled mind and a heavy heart, in order that I might stimulate your thinking and arouse your feelings, that out of our collective mind will come a sane solution of our baffling problems.

In the last war Germany was not invaded. Today she has been not only invaded but blasted to bits, overrun and thoroughly defeated. Heidelberg, an old university town without military value and with only 80,000 inhabitants, is about the only city in all Germany that is intact. The people there had sense enough to surrender.

One may travel from Mannheim and Ludwigshaven on the Rhine down through Darmstadt, Frankfurt-on-the-Main, past Coblenz, Remagen, Bonn, Cologne, Aachen, and Duren, and it will be difficult to find one habitable building standing. The utter devastation and complete destruction of Germany's industries and her large cities is as difficult to believe as the atrocities committed in their political prison camps. Not one or a few in isolated spots, but all the cities in Germany have been reduced to ruins. Hamburg, Bremen, Osnabruck, Kassel, Hannover, Halle, Leipzig, Berlin, Dresden, Nuremberg, Augsburg, Ulm, Munich, Stuttgart, Karlsruhe—all of them are a heap of ruins. It is altogether fitting and proper that Hitler should perish in the ashes of his own Reichschancellery.

Hitler promised the world that Germany, when conquered, would be a mass of rubble, rats, and ruin—and this promise was certainly fulfilled. The Ruhr with its vast and diversified industries has been blotted out. What our armies—the Eighth and Fifteenth American Air Forces and the R. A. F.—did not blast to rubble, the Nazis themselves wantonly destroyed; they blew up every bridge and sank every barge. Caught like rats in a trap these desperate men frantically carried out to the last their demoniacal dreams.

I do not have the time to describe in detail all the demolition and destruction, but it certainly will take years for Germany to rebuild her industries. I seriously doubt if many of their cities will ever be rebuilt, and it might be well for us to let the smoldering ruins remain as a monument to their colossal folly and as a living example that war is a crime and that crime never pays.

What are we going to do about it? Frankly, I do not have the answer nor have I met any man who has the solution. Of course, there are extremists—some of our blood-thirsty people—unfortunately some in Congress—would shoot every German and burn every home. This position is so irrational and unbalanced that it is untenable and needs no discussion. It is impossible, impractical, and even undesirable to destroy 70,000,000 people. For our own welfare, we need a strong, stabilized state in Central Europe. These extremists are fit subjects for the Nazi Party.

They have not learned that two wrongs never make a right and that we should not stoop to the level of our enemies. The other extreme view is to be complacent—forget and forgive everything. There are some silly sentimentalists who would allow these arch criminals who have sinned against God, civilization, and humanity, to go unharmed, and escape their just and deserved punishment. This, we must not allow.

Personally, I believe that every bona fide member of the Gestapo and member of the SS—who was not forced to join the organization in the last months of the war—as well as the high command of the Wehrmacht, the Potsdam Prussian military caste, should be liquidated. Rub them out.

Though German cities have been destroyed the spirit of the youth has not yet been broken. The old people and little children are to be pitied but we had better keep an eye on all persons, men and women, between the ages of 14 and 30. They are sullen, arrogant, and still defiant. They have never known anyone but Hitler. It is the youth of Germany which was poisoned by Hitler's philosophy and the Nazi doctrines that must be watched and controlled. It will require many years to make over these people but we must be patient, brave, just, and always alert.

I was highly pleased with a note which my fellow Missourian, our good President Truman, addressed to the Japanese people. He demanded complete and unconditional surrender but at the same time he promised, in good faith, that even the Japs who are worse, if possible, than the Nazis would neither be exterminated or enslaved. We are not seeking extermination or enslavement but we are going to do the right, honorable, and just thing by all men. America is a Christian land. As Lincoln once said, this fair Republic is the last, best hope of earth and America is God's last chance to make a world.

It is great to be an American. The more one sees of other countries the more he must love this one. Providence has smiled upon and blessed us. We have the greatest Army in the world. The cooperation and efficiency, the spirit of comradeship existing between all our officers and enlisted men is something that warms one's heart. Too much praise cannot be given them. All our field commanders and our Chiefs of Staff back home—these men who have fought and won this war—the ones who have suffered most, want it never to occur again. We shall trust God but keep our powder dry. We shall speak softly but will carry a big stick. We must, if we are wise, maintain a superior Air Force, the largest Navy, the best trained and equipped Army in all this world. We shall carefully guard against becoming militaristic but we have suffered too much not to learn some things.

Advice is cheap. It is easily given and difficult to follow. I am still not old enough to offer it and I am still too young to follow it. Perhaps we would do well to listen and to carry out the admonition of one of the greatest men of all time. St. Paul in Romans xii: 17–21 tells us:

"Recompense to no man evil for evil. Provide things honest in the sight of all men.

"If it be possible, as much as lieth in you, live peaceably with all men.

"Dearly beloved, avenge not yourselves, but rather give place unto wrath; for it is written, vengeance is mine; I will repay, saith the Lord.

"Therefore if thine enemy hunger, feed him; if he thirst, give him drink: for in so doing thou shalt heap coals of fire on his head.

"Be not overcome of evil, but overcome evil with good."

Wake Up! The Food Situation Is Critical

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, under leave granted to me by unanimous consent, I am bringing to the attention of the Members of the House and the country additional information as to the shortage of meat, lard, sugar, and other essential and necessary food products.

Many of us in the House and Senate have for some time urged the administration to modify its policies as to the production of food. The farmers and farm workers have been handicapped and obstructed in many ways in carrying out their farming operations and in the production of food. We have the greatest number of cattle, and perhaps the greatest number of hogs, that we have had on the farms at any one time in the history of this country. There is a great surplus of wheat and other farm commodities that are not reaching the legitimate markets and the people, because of the regulations, directives, and policies of those charged with aiding in the production, processing, and distribution of farm commodities.

The black markets have grown apace, and the American people are now in the clutches of these black-market racketeers in every town and section throughout the Nation.

The people of Canada are not threatened with a food shortage. The farmers of Canada are not hampered by a lot of restrictions, regulations, and directives that have been imposed on the farmers of the United States. There is no shortage of meat, lard, and other foods in Canada.

The food condition in this country can be placed squarely upon the shoulders of the present administration here in Washington. Unless the farmers are protected and encouraged and common sense is used, this Nation will find our food shortage growing; and if we should have a drought for any considerable period throughout any large section of this Nation, the American people will go hungry. This, of course, means that our war effort will be hurt and the American people who must produce our ships and other munitions of war and the people generally will suffer. Their productive capacity has been and is being greatly curtailed because of this shortage of food.

The scarcity of food is not confined to cities and populous centers. We find it everywhere.

The following letter comes from Mr. Samuel Caldwell, of Saylor, Ky., dated May 13, 1945. Mr. Caldwell is a very reliable farmer and businessman in a strictly rural community:

As the people in this community know of no other man to ask their questions of but you, they have asked me to write you this letter. What they want to know is, What are they going to do about some meat and lard? There are more than 300 families at this address that have no meat or lard and who want to know what they are going to feed their children on. I personally know of some families that haven't had any lard or meat for more than 30 days. Now, please, we don't know of any other man to appeal to but our Congressman, so please advise me so I can tell the people where the trouble is.

We received the following letter from Mr. C. C. Byrley, of Pineville, Ky., dated May 11, 1945. Mr. Byrley carries on an extensive business, and his business requires him to cover many counties of my congressional district. He is an intelligent, conservative person, and I can vouch for all that he has to say on this subject:

MAY 11, 1945.

DEAR MR. ROBSION: Although you may already know something about it but the shortage of meats and fats, especially lard and bacon, in our section is causing our people much concern, you know our people well enough to know that they use large quantities of pure hog lard and white bacon, they can do without beef much better than pork products, of course, breakfast bacon has been a thing of the past for some time, but working people can't produce on a vegetable diet without proper seasoning with white bacon or lard.

The writer was in Evarts last week and a working man came out of a store with 1 pound of lard, I was a stranger to him but he was so pleased at being able to get 1 pound that he had to break down and tell me that he had been to every store in Evarts trying to find either lard or bacon and this was the only store that could let him have 1 pound.

On yesterday a man well known to the writer who resides just outside of the city limits and his wife came to me and asked if I could advise him of any store here in Pineville that would let him have a pound of lard or a piece of seasoning bacon, he advised me that they had been to every store that sells this and could not locate or buy 1 single pound of either, some few people that have transportation go out in the country and can buy some home-killed bacon or lard by paying high prices, but this is becoming very scarce, country hams when they can be found are being sold as high as 60 cents a pound, poultry is high priced and very scarce.

I was talking with Dewey Asher who operates a mine in Clay County and he advises that over in Clay that it is almost impossible to buy any meat or lard, of course, I know you have many things to worry you, but I thought you would like to know of these conditions.

Kind regards,

C. C. BYRLEY.

We call your attention to the following editorial which appeared in the United Mine Workers Journal of May 15, 1945, which is most enlightening as to the effect that the meat and other food shortage is having on the production of coal:

UNLESS O. P. A. IS HOUSE-CLEANED STEM TO STERN, ALL PRICE CONTROLS-RATIONING WILL BLOW UP—PRESIDENT TRUMAN SHOULD ACT

Bert Williams, the greatest Negro comedian of all time, registered his greatest hit in the Follies singing You Can't Shake Your Shimmy on Tea.

Coal miners cannot produce coal on Coca-Cola, a doughnut, and a cigarette for breakfast; macaroni and peas, a peanut-butter sandwich, and a cookie for lunch; and for dinner, rice, beans, cabbage, potatoes, and coconut custard pie. It doesn't matter what the calories add up to, or what the professional dietitians say, or what the women who never saw a kitchen may assemble as menus and print in the columns of the papers and magazines, the facts are that the men engaged in coal mining, the most laborious work of all American industries, cannot produce unless they are furnished an adequate meat diet that builds and maintains muscle.

We have been trying to tell the O. P. A., the S. F. A., and other Government agencies that eventually coal production would decline unless the meat supply of American coal miners was increased. The Journal has repeatedly pointed to the decreased coal production in England resulting from a reduced meat diet.

Representatives of the British Government and of the British mine workers visiting this country have all said that it was a monumental mistake on the part of the rationing authorities to hold coal miners' meat and other rations to the same comparable amount allowed city workers and others employed in light industry.

Leaders of various U. M. W. A. districts have called upon the O. P. A. in Washington without results. It's always the same old runaround. It was already difficult for miners' families to spread the meat supply over various stews and macaroni dishes and boiled dinners before ration points were reduced and the total meat supply for civilians cut 20 percent.

In actual practice the reduced supply of meat furnished by packers to distributors in coal areas leaves many communities entirely meatless for a week or 2 weeks at a time. The local distributor can reduce his delivery territory by half and still not have enough meat to supply the customers served. There is an incentive for the distributor to do this. With his total volume of business being cut, he sees an opportunity to reduce his delivery costs, use less gas, and save wear on tires by limiting the territory he serves.

In a few isolated coal areas far-visioned operators had local slaughterers scour the countryside for cattle and buy cattle to serve their company-store requirements. But in the great reformation of the O. P. A. policy that was to put the city black-market racketeers under control, the O. P. A. boys, simply without regard for the necessities of local communities, canceled all local slaughtering permits. The result has been that operators in many coal regions, recognizing that production and working forces would continue to decrease unless an adequate meat diet is obtained, began appealing to the O. P. A. and the War Food Administration for relief.

The National Coal Association took the matter up with Government agencies, but like the U. M. W. A., it has run into a stone wall. The N. C. A.'s experiences have been the same as those of the U. M. W. A. Its representatives have been lied to and given the run-around. In all of Washington's history there probably never existed an agency which practiced deception and lacked the understanding of the adequacies and equations of a given situation to the same degree as Chester Bowles and his O. P. A.

Mr. Bowles is an advertising man. Some 35 years ago the advertising clubs of America created the slogan "Truth in advertising." It was a short-lived slogan. Only the clerks and copy-runners ever reckoned with it in the first place as possible of attainment. Insofar as our dealings, and all the dealings of those we know who have had dealings with the O. P. A., can be totaled, as the spirit or creed of an institution. * * *.

A bulletin prepared by N. C. A., now being sent to bituminous coal operators everywhere, asserts that—

"Reports are coming in from various sections that the stores serving miners have far

less meat than is needed and many have none. Working forces are being seriously reduced in many sections. * * * The men will not work without proper food. Coal production is being reduced by reason of insufficient food primarily needed. O. P. A. and the War Food Administration have demonstrated that pleas from management are of no avail."

Then the bulletin goes on to point out that there is nothing left but for the men to act for themselves and through their accredited representatives raise their voices and demand meat. The N. C. A. charges that this is just another "clean-cut case of bureaucratic bungling and impractical men handling matters in which they have no practical knowledge."

The N. C. A. then calls upon its membership to acquaint their representatives "in Congress with the facts—protests to the O. P. A. fall on deaf ears in this as well as other matters."

In Wyoming coal towns refrigerated cases are filled with locally slaughtered native beef and lamb. In this territory where the soil is not conductive to the growth of vegetables, and chickens and turkeys are novelties, miners' wives are forced to gaze upon the butchers' layouts and go home empty-handed because of the lack of red points, while the miners overtax their strength in an endeavor to produce coal on an inadequate diet.

The Journal believes in an over-all legitimate price control. We believe in equal distribution of food products, but under the scheme of price-fixing and distribution now in operation by the O. P. A., the people of coal regions as well as other segments of our population who most need protection become the innocent victims of bureaucratic incompetency.

Unless the O. P. A. reforms its methods and does it right away, the whole program of price-fixing, rationing and distribution is going to blow up. The people are fed up; they are tired of discrimination; they are tired of inefficiency. The present directing heads of O. P. A. have fully demonstrated their inability to meet the responsibilities of the duties imposed upon them.

It's a house cleaning job that only President Truman himself can perform, and regardless of how many statements Director Bowles gives out, or how many visits he makes to the White House to display the physiognomies of his regional directors, or financial or political support he has in the background for his methods, President Truman can no longer permit this cancerous agency to imperil his administration.

On May 16 I received the following telegram signed by Mr. Sam Caddy, president, district 30, United Mine Workers of America. Millions of tons of coal are produced annually in this district. He points out that two important mines have already closed down and there is a threat that others will close down because of shortage of meats and other foods:

Lexington, Ky., May 18, 1945.

Congressman JOHN M. ROBSION,
New House Office Building:

Two mines down on account of no meat or fats, employing 800 men. One of these mines, for 500 employees with twelve hundred and twenty-five population received 18 pounds of meat and 36 pounds of lard for 1 week. In a previous telegram I informed you this matter was serious as the people have waited for meat now for several months and have received no reply to their complaints, and have received no meat. While there are only 2 mines down today the demand is general and will likely involve 18,000 coal miners with 75,000 population. Miners cannot load coal for long without meat.

SAM CADDY,
President, District No. 30,
United Mine Workers of America.

These are only a few of the many complaints and warnings we have received from people in all walks of life from my district.

This situation is most critical. One of the very important battles that we must fight and win is to increase our food supply. We cannot wait until next winter. We must do it now.

Second Lt. Robert E. Femoyer

REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. ELLIS. Mr. Speaker, today I request my colleagues to join with me in saluting one of the outstanding heroes of this war.

Second Lt. Robert E. Femoyer, of Huntington, W. Va., has been awarded posthumously the Congressional Medal of Honor—the Nation's highest decoration—for fighting off death for 3 hours to navigate his crippled bomber home from deep inside Germany, the War Department announced a few days ago.

The 23-year-old son of Mr. and Mrs. E. P. Femoyer, formerly of Huntington and now of Jacksonville, Fla., died last November 2 at an Army hospital in England half an hour after the shell-torn Flying Fortress landed at an Eighth Air Force base.

The citation said that in fighting off death long enough to save the lives of eight fellow crewmen he "distinguished himself by service beyond the call of duty."

The target was the Leuna oil plant west of Leipzig, one of the most heavily defended targets in Germany.

Flak hit Femoyer's Fortress three times. The first burst smashed the nose of the plane, severely wounding him. Two other hits knocked out two engines.

Unable to maintain speed or altitude, the pilot dropped the bomber out of formation and ordered all possible equipment jettisoned to keep the plane aloft.

Mortally wounded in the side and back, Lieutenant Femoyer was hurled across the floor of the bomber along with all his maps, charts, and equipment. Successful return to the base depended on his charting a short route across the flak fields.

Too badly hurt to be moved but refusing sedatives which would have deadened the pain but dulled his senses, Lieutenant Femoyer asked to be propped up on the floor with the equipment laid out in front of him.

In that position, bleeding steadily, he worked for 2½ hours.

Lieutenant Femoyer gave the pilot six separate headings, recalled the route flak zones from memory, and computed the air speed and wind resistance so closely that the bomber landed with just enough gasoline to taxi to an ambulance. Only when the plane had arrived over the English Channel did he permit his comrades to give him a sedative.

While we mourn the loss of this great soldier, his act of heroism will live forever.

Treatment of German Soldiers

REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. SPRINGER. Mr. Speaker, a recent newspaper article published in this country relates a story of a further coddling of the Germans. According to this story, after the unconditional surrender of Germany on May 2, the remnant of that army at Bolzano, Italy, continued in authority for some 10 days thereafter, doing just as they pleased, but they did finally agree that the Eighty-eighth Division of our Army might establish a command post in the city; but the Germans continued in full authority, according to this widely publicized story, until the 12th day of May.

It is further reported that the G. I.'s, who had waged such a gallant fight under adverse conditions, and who had won the war in Europe, continued to ask the question, during that 10-day period: "Who won this war?" They were justified in propounding that question.

Mr. Speaker, no one in the War Department appears to have any information upon this subject. The story that was published apparently came from the theater of war. If that story is authentic, I am constrained to ask the question, "Why did any of our Army officers permit the Germans, in Bolzano, Italy, to continue in power after the unconditional surrender?" When we reflect on the horrors of the terrible German atrocities, ruthlessly committed, which have been publicized throughout the country, the people of this country are constrained to ask the question, "Why were the Germans permitted to continue in full power, and authority, in Bolzano, Italy, after the surrender?" The power of the Germans ceased immediately upon their surrender, and the victors were then in full command.

Mr. Speaker, it was further reported in the published story that all kinds of small arms, including rifles, machine guns, small mortars and other war materials were stored in buildings, and the Germans had charge thereof; that German youngsters, probably a part and parcel of Hitler's Youth Organization, goose-stepped along the main streets of that Italian city, singing "Hitler Is My Fuehrer" and "Horst Wessel" during that period of time, while our soldiers stood by and watched with much chagrin.

Since this story was published, the people throughout our country have been amazed at the apparent laxity on the part of our Army officers in that area who permitted a defeated country, and its people, to carry on in the manner related in that story after the surrender. When Germany surrendered that was the end of her authority. That was the time for our Army to take full and complete charge of the city of Bolzano, Italy, and of every function thereof. The minute Germany surrendered that was the time to stop the high-handed methods she had employed throughout this war. I am very anxious to know, and I am certain the people of this country want to know, why those Germans in that area were coddled and pampered by our military forces after the surrender, and this request is urgently requested since those German arch-criminals have so maliciously and shamefully mistreated our soldiers and sailors who were prisoners of war in their custody.

Therefore, Mr. Speaker, I demand that those in authority in our Army who were at Bolzano, Italy, make a full and complete answer to this entire matter in order that the people, and the fathers and mothers of our boys and girls in the service, may know all of the facts surrounding this highly publicized story.

Mr. Speaker, I ask unanimous consent to extend my remarks, and to include one newspaper article on this happening, published in the Washington Post, on Wednesday, May 16, 1945, which article follows:

IN BOLZANO—HANGOVER OF GERMANS IS ENDED

(By Sid Feder)

BOLZANO, ITALY, May 13 (Delayed).—The Nazis in this wartime nest of the SS have finally learned that the war is over and that Germany has been whipped.

For the last 10 days they have been swaggering around doing about as they pleased, granting the United States Eighty-sixth Division permission to set up a command post, driving through the streets in powerful cars, fraternizing with civilians or eating in restaurants catering almost exclusively to German soldiers.

But now the honeymoon is over.

DISTRICT OF COLUMBIA COLONEL TAKES OVER

Col. James C. Fry of 4801 Connecticut Avenue NW., Washington, D. C., assistant division commander of the Eighty-eighth, took over yesterday as commandant of the town and told the Nazis bluntly they were a defeated army and from now on would be treated as such.

I had written a story last week about what was going on in Bolzano—headquarters of both SS troopers and the German Army—after spending 2 days looking over the town and listening to our soldiers by the dozen asking, "What the hell's cooking—who won this war?" But the story was stopped.

There has been no official explanation of why the situation was permitted to exist for 10 days after the German surrender in Italy on May 2.

Until today Gen. Karl Wolff, head of the SS in Italy and in charge of Gestapo Chieftain Heinrich Himmler's personal staff, and Gen. Heinrich Von Vietinghoff-Scheel, German commander in northern Italy, retained elaborate headquarters here.

The officers and men in their outfits paraded around the streets and had everything just about their own way. The Eighty-eighth was told to keep its hands off.

For at least 3 nights groups of 15 or 20 local youngsters—obviously hold-overs from Hitler's Youth Organization—goosestepped down the main streets in the early evening singing "Hitler Is My Fuehrer" and "Horst Wessel." It amused the sidewalk-watching German soldiers and shocked the G. I.'s.

EVEN PRINTED PAPER

What is more, a German paper was printed here for several days after the surrender and our occupation.

Colonel Fry has cleaned up most of the situation now, but his broom is still busy.

Wolff has been placed in confinement and was evacuated today, along with most of his staff. The Germans still around have been ordered to keep off the streets unless they have passes signed by Fry's headquarters. The Germans also have been told bluntly they will be thrown in jail for any violations and tried by an American court.

The Congressional Expense Allowance Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1945

Mr. LUDLOW. Mr. Speaker, I have the highest respect for the proponents of this allowance of $2,500 for Members of Congress. I know their sincerity. In the 44 years I have been around this Capitol as a member of the press and as a Member of Congress I have never known a finer or a better representative of the people than the gentleman who has sponsored this proposal. And I thoroughly understand from personal experience, as well as from observation, the reasons which prompted the introduction of this legislation. I have been a Member of Congress 16 years and every year I have grown poorer. That is the usual experience. Few people realize the financial drains on Members of Congress.

But I have serious doubts whether this is a time to increase the compensation of Members of Congress. We have a line to hold against inflation and it is of the highest importance in the national interest that the line shall be held. I sincerely fear that the enactment of this legislation may imperil that line. How can we Members of Congress increase our income 25 percent and at the same time say to vast groups of our population who are in distress as a result of the high costs of living that they must be content with the pay they are now receiving?

I have many constituents in the Indianapolis district—thousands upon thousands of them—who are caught between the lower millstone of fixed wages and salaries and the upper millstone of increased costs of living, and who are just as much entitled to increased compensation as I am. I cannot find it in my heart to vote myself more compensation until their situation is ameliorated. I will take potluck with them.

Office of War Information

REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. GAVIN. Mr. Speaker, a grand opportunity awaits the Members of Congress when the $50,000,000 appropriation comes up for the Office of War Information. This war agency should be abolished to save $50,000,000 for the taxpayers and a lot of headaches to the American people.

On Monday, June 21, 1943, I stated on the floor of the House:

Now along comes Director Davis—and I am referring to O. W. I. Elmer Davis—and he threatens to resign unless Congress restores the funds to the domestic branch of O. W. I. If he wants to resign, he can resign, and I know the press will be only too pleased to record it under the heading of public improvements.

What I said then still goes now—double for the whole O. W. I. set-up. Mark me, there will be no threats to resign this time. The last suggestion made by O. W. I. Elmer Davis to bar henceforth all American newspapers and magazines from occupied Germany, a proposal that was vetoed by General Eisenhower and President Truman, is evidence enough to the Members of this Congress that this $50,000,000-a-year program should be blotted out and the O. W. I. definitely taken out of the picture and war propaganda turned over to the Army and Navy, where it belongs, and the distribution of domestic information back to the various departments of the Government.

Here is an opportunity to save $50,000,000 for the boys who are doing the fighting—boys who will come home to go to work to earn the money to pay the taxes to pay this wartime bill. When this appropriation bill for O. W. I. comes up let us give the boys a break and take a lot of literary genius out of lush pasture and let them go to work.

Certainly it is one of the wartime agencies that has outlived its usefulness and one that will never be missed—will never be missed.

[From the Washington Times-Herald of May 16, 1945]

CAPITOL STUFF

(By John O'Donnell)

This Capital's most distinguished graduate of Queen's College, Oxford, the worthy Dr. Elmer Holmes Davis, Director of the Office of War Information, has just had the seat of his pants booted way up between his shoulder blades by an official White House rebuke.

With the White House directness and candor that now makes a Presidential press conference a refreshing and informative session, President Truman "reversed" (to put it gently) an O. W. I. program which very pompously and with a "papa knows best" smirk Director Davis had proclaimed from his O. W. I. ivory tower only last Friday.

This was the Davis decision, handed down as an expert on the psychology of public information in wartime, which would bar henceforth all American newspapers and magazines from occupied Germany.

In their place Davis proposed to use Treasury funds to print newspapers in German cities staffed by some of the pay-roll patriots of O. W. I.—whose draft exemption had been requested and obtained months ago when they climbed aboard the gravy train.

The important fact behind all this is that President Truman's reversal of Director Davis may not only mean the end of Davis' turbulent wartime career but may also mean the end of O. W. I. and its $50,000,000 a year spending program.

And if that happens few of the working press in Washington will grieve.

The great majority would like to see the propaganda set-up of the O. W. I. turned over to the Army and Navy where it belongs and the domestic information branches handed back to the regular departments of the Government, where reporters get their news anyway because of the incompetence or inability of O. W. I. to deliver the goods either on time or accurately.

In making his original announcement about the decision to keep American papers out of the hands of Germany, Director Davis very frankly said that a reading by Germans of certain American papers would give the populace of the conquered area under American control the impression that there might be a division of thought and policy among the beloved Allies of the United Nations.

More importantly, Davis certainly gave the impression to correspondents that this was a decision reached by the United States military chiefs in Europe—meaning General Eisenhower—that the authority behind it was strictly of Army origin and that O. W. I. had merely "concurred" with the decision.

This writer, in his report, indicated that despite this statement it was his belief that the whole scheme was cooked up by Davis and some of his brother "psychological" experts in and out of O. W. I.—including such individuals of the propagandist gentry as Archibald MacLeish and other breast-beating hold-overs from the Roosevelt regime.

General Eisenhower, of course, had never heard of the Army policy barring American newspapers from Germany as announced by Davis until President Truman, moving with simple directness and common sense, called him up and asked the facts.

The blunt statement which Truman, standing before a group of White House reporters, read with such crisp vigor, was the harshest indictment yet made of O. W. I. He read:

"General Eisenhower has advised me that he has issued no policy or order dealing with the importation of publications into Germany."

In other words, the information handed out by the head of the Office of War Information was 100-percent wrong.

The Agency, set up under Davis and given millions to spend, was created to assure "an accurate and consistent flow of war information to the public and the world at large." Under it, the news of the surrender of Germany was ridiculously messed and botched.

Under it, British and Russian press had consistently scooped the American press on vital and important war developments—such as the meetings of allied leaders at Cairo, Teheran, etc.

The reason for all this is that O. W. I. from its very start has been cursed with an overload of propagandists, press agents, self-appointed psychlogists and advertising experts who wanted to sell the war to America, etc., etc.

The idea that if you're handling news and information it might be a good idea to have a few competent newspapermen around never got very far in O. W. I.

A few respectable members of the craft were lured into the Davis set-up to give it the window-dressing of journalistic respectability. But they were few and most of them quit in disgust.

In all decency they couldn't stand the phony atmosphere created by the breast-beaters and psychopathic crackpots, the sweepings of editorial rooms, the draft dodgers who battled to get on the O. W. I. pay roll, and the slobbering do-gooders and world-savers.

O. W. I., of course, wants to keep its gentry on the pay roll for as long as possible. But, viewing yesterday's developments, we think some of the boys might be looking around for a job—or possibly the younger and healthier having a heart to heart talk with their draft boards.

Transportation Restrictions

REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. HAND. Mr. Speaker, I rise to join with my colleague from South Dakota in a plea for a review on transportation restrictions. A telegram received this morning from the Atlantic City Chamber of Commerce states the case concisely, and I will read it:

Until the Government canceled its restrictions on horse racing, while denying the right of assemblage to legitimate public groups for a discussion of war problems and for the purpose of backing up our men who are now fighting in the Pacific theater, every group had conscientiously complied with all official requests for cooperation. But when the Government itself decides that transportation problems are so well solved that horses, and jockeys, and race track patrons can expend travel miles so freely, we feel justified in urging you, and all other representatives of the American public, to raise a vigorous voice of protest on the floor of Congress, insisting on the right of unrestricted assemblage within each State of essential groups for the purpose of furthering the war effort, and a discussion of peacetime problems in agriculture, industry, reemployment, public health, religion, veterans' assistance, education and community problems, all of which are no less important than the resumption of horse racing.

I have heretofore received pleas from a number of religious organizations who are restrained from convening to discuss their problems by the transportation ban, and they say, and rightly so, that their constitutional rights are thus being impaired.

Furthermore, there is now in effect a general rule against increasing seasonal travel to resort areas. This has a drastic effect on the great seashore resorts included within my district, and seriously interferes with the vacation plans of the American people. Recreation is highly important to the health and welfare of a nation's people, who have undergone and are still undergoing great strain.

It goes without saying that we are willing to continue our sacrifices for all necessary support of the war effort, but I most strenuously object that serious public conventions and travel for necessary recreation and health should be regarded by the Government as less essential than travel to race tracks.

I am immediately calling this situation to the attention of Mr. Vinson and Colonel Johnson of the Office of Defense Transportation, and I hope they will review this problem fairly and equitably.

The American Postal System

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. FLOOD. Mr. Speaker, with the unanimous approval of the Post Office and Post Roads Committee, H. R. 3035 is now before this honorable body. It is a tribute to the proud record of the Postal Service that there is today no serious opposition to this bill. I do not believe that there will be more than a vote or two against the measure in the entire House. By all means it should pass unanimously.

It is only fit and proper that at last the poorest paid of all the Federal employees should have an equitable adjustment of their pay rates, which certainly is long past due. By the same token it is well to point out that besides the raise in pay to the workers the Postal Service stands to benefit from this bill in the guarantee of maintaining a high degree of efficiency. The good and faithful worker of high quality and service will remain and an invitation is made to desirable personnel to enter the service. The problem of morale, of which so much is said, is a problem of the Postal Service and today this bill will go far in building up a proper morale among the employees of the Service who were beginning to think they were really the "forgotten men." This is a record for legal, faithful, and competent service. We are making a conscious effort to meet and solve the basic pay and adjustment of wages problem of the white collar, as well as the industrial worker of America. We are dealing with a branch of the Government that is near to the American people and in whose welfare they have deep concern. When you speak of big business do not forget the Postal Service is one of the biggest employers of men and women in the country. And of all the departments of the Government in normal times it is the greatest employer and Nation-wide.

The obvious inequalities that exist will be removed by this legislation, and those with a low-bracket wage scale will be placed at a reasonable, proper level in keeping with the work they do and in recognition of the cost of living and the standard of living desirable for our people.

I shall not dwell on the technical provisions of the bill. These were fully discussed before the committee and will be outlined more fully on the floor by the gentlemen sponsoring the measure. But I do mention the $400 per year increase over the present base pay in place of the

$300 temporary bonus about to run out on June 30 of this year. And I do mention as well the theory of longevity pay provisions in many of the Service agencies, and the equalizing of a number of unfair situations that were going on between different branches of the service. In the time and one-half provision and the 10 percent grant over the day rate for night work were a long desired improvement. Aud surely the 15 days with pay leave and the 10 days with pay sick leave sections are among the most desirable.

It is indeed high time that Congress acted on this law. I, for one, feel that the postal workers have been patient and long-suffering with their problem. In recognition of this fact, as well as because of the merits of the case, I know this House will meet its responsibility and give justice where justice is due.

I can say that the postal workers in my district have always been kind and friendly to me. Many times they have aided me in helping the good people of my district. Never have they failed me. Nothing is too small an effort for these exceptional public-spirited servants to undertake. I am proud to call them all my friends and doubly proud to number them among my constituents. Their noblest nature is the public good. And my experience has been the experience of every one of my neighbors back home, and I am sure it is the same throughout the Nation. Everyone is almost daily in touch with postal employees. The citizens know them as fellow citizens, friends, and neighbors, in rain or shine, fair weather or foul, in gladness and in sorrow. And they represent to most people the great Government of the United States of America.

Mr. Speaker, I am happy to be able to vote for this measure, H. R. 3035. I want to do my part in the vital public interest of preserving our essential and efficient postal system at American standards and in the American way for a truly great group of American workers.

Mother's Day Address

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me before Mother's Day mass meeting in Hooper School, at Endwell, N. Y., Sunday, May 13, 1945:

Today we pause to honor our mothers throughout the Nation. As we do so, we find that the war in the Pacific is edging nearer and nearer to Japan.

Not so long ago we saw the might of the Japanese stretching almost to Australia, to Guam, and making inroads into India. In simultaneous, deft thrusts, Japan extended her domain over untold thousands of square miles in Asia. Few conquerors ever took in more territory.

One by one, however, the island bases which comprised the outer circle of the yellow empire's defenses have fallen to American armies. A hundred blood-soaked beaches and stifling jungles represent the hardest-won land ever fought for by American troops.

On a day such as this, while we honor the mothers of so many heroic sons who have died conquering those Pacific isles, I think it is timely to ask a few questions regarding future American foreign policy.

What is to become of American possession of these hard-won areas? Will some power other than ours come in and tell us we have no right to hold these islands for which we spilled our blood and treasure? What reason have we to put forth for giving up one inch of land we take from Japan?

I wish to make it clear on this hallowed day, when mothers of our fighting sons hope they have not died in vain, that I believe Old Glory must continue to fly wherever our boys have planted her. On Iwo Jima, in the Aleutians, in the China Sea, American armies have broken the power of the Son of Heaven. We must not retreat from our duty to keep that power from rising again.

Let us keep what we have set out to make American and never haul down the Stars and Stripes in the East.

The Billings Market Week

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I feel it only proper that at this time I should once again call to the attention of the House that while restrictions have been lifted for the holding of horse races, the right of assemblage to legitimate public groups has been denied. I am referring specifically to such outstanding organizations as the Billings Market Week, which has been forced to go out of existence for the time being because of the supposed heavy drain on transportation and hotel accommodations.

Some weeks ago a delegation of Senators and Congressmen from the Rocky Mountain States met with Col. J. Monroe Johnson, Director of the Office of Defense Transportation, and pleaded with him that this market week be allowed to continue because of the fine, necessary, and economical service it rendered to the merchants of Montana, western North and South Dakota, and northern Wyoming. Even though this particular market week did not put a strain on the railroads going to Billings or the hotels in that city, our request was denied.

Mr. Speaker, I feel that this worthwhile project is being unduly discriminated against when restrictions are lifted on such nonessentials as horse racing. I feel it is only proper that legitimate public groups, such as the one mentioned, church groups, and fraternal and veterans' groups should have the right to meet within their respective States when they can show there will be no undue drain on the transportation systems and on the hotel capacities. These groups do a real good in the furthering of their respective interests, and I urge the House to give this matter its most earnest and serious consideration.

Improvement of the Arkansas River Valley

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by me at Little Rock, Ark., on May 7, 1945, before the Board of Engineers for Rivers and Harbors in connection with the proposed improvement of the Arkansas River. The statement is as follows:

Gentlemen, my name is FADJO CRAVENS. I am a resident of Fort Smith, Ark. Since 1939 I have represented the Fourth Congressional District of Arkansas in the Congress of the United States.

Availing myself of the invitation extended to interested parties by this board to offer information with respect to the comprehensive plan now under consideration for the protection, development, and improvement of the Arkansas River Valley I submit the following observations:

The city of Fort Smith is one of the principal cities situated on the Arkansas River. The agricultural lands in the valley in the so-called Fort Smith area are among the richest and most productive in this country. As a lifelong resident of Fort Smith and with a personal knowledge of the Arkansas River Valley in that and adjacent areas I feel that I can give the Board some helpful information as to the problems of the area and its inhabitants created by a treacherous and so far uncontrolled river. To say the least of the matter, and as one who has seen and suffered from the recurrent havoc wrought by the Arkansas River I can qualify as an interested party in any plan or project calculated to eliminate or reduce the existing hazards at the earliest possible time.

Based upon hundreds of contacts with people in the Arkansas Valley I am convinced that, without exception, they are chiefly and primarily concerned with protection against the damages occasioned by the recurrent, disastrous floods which have occurred in the valley at dishearteningly frequent intervals. This attitude is easily understandable when it is remembered that these people have, over a long period of years, seen human lives lost, witnessed incalculable damage to property, have faced pestilence and disease and famine, all of which unavoidably accompany or follow in the wake of a flood on a rampant and unpredictable river. The dangers they have faced and the anxieties they have lived through as a result of floods, naturally make protection against these disasters of paramount interest to them.

If we were forced to choose between the benefits of flood control, navigation, or the production of power, we would, I believe, unquestionably select flood control as our most urgent need and the thing we desire

above all others. We have, however, as a result of recent floods become intensely "river minded." What can be done to the Arkansas River to protect us from it and at the same time make that river an agent for the economic development of our area, has also come within the realm of our consideration on the subject. Most all of us feel that there can be fitted into the plan for the taming of the river features which will provide for navigation, the production of power and other benefits and that these things can be done without in any way jeopardizing the protection from floods. On the contrary, we are convinced that the complete all-purpose development of the river will enhance rather than endanger the flood-control phases of our objective. Our conclusion in this respect is supported by the development of the plan proposed, after careful study, research, and investigation by the Corps of Engineers of the United States Army, and which plan you now have under consideration. We cannot help but feel that the plan is sound and feasible. We know that without consummation of some such project we will continue to face the disastrous conditions of the past and present, and that the economic development of our area will be substantially retarded.

Granting the need for the consummation of the proposal under consideration, there naturally arises the question of how, by what means, and through what instrumentalities is the proposal to become a reality. While, as is to be expected, there is some difference of sincere opinion the conclusion is inescapable that an overwhelming proportion favor the discharge of this responsibility by the Army engineers. In the first place, it is widely known that the Army engineers have a vast experience in designing, developing and operating river projects and improvements; that they have already in existence trained personnel capable of prompt action; that their actions and policies are nonpolitical and are dictated solely by hard facts, realistic concepts, and a true devotion to a public duty. It is, moreover, recognized that river improvements cannot be based on considerations involving only one river or one area. An over-all, coordinated program of construction and operation is the only means by which satisfactory results may be assured. Dividing authority among different groups to be carried into execution, each in its own way, in various geographic divisions of the country, with each constantly jockeying for advantage over some other area or authority, will produce only confusion and chaos. Lastly, we know from experience, that the Army engineers not only have a knowledge and appreciation of our problems but have as well a sympathetic attitude toward them and a real desire to intelligently help us reach a solution.

Today the outlook for a river, controlled to prevent flood damage, and harnessed to serve our material needs, is nearer to realization than ever before. Those of us who recall the long years of struggle to improve the Arkansas River Valley cannot bring ourselves to believe that all the progress that has been made should be tossed out of the window and the process of development begun all over again under the auspices of an unknown, and as yet uncreated agency, about which we know nothing and about which we cannot learn until it may be too late. To cast aside certainty for uncertainty would be, in my considered judgment, but little short of tragic. This view, I believe, is shared by a great preponderance of those in the valley.

One further matter before closing. Some apprehension has been intimated that improving the Arkansas River to make it navigable would cripple and weaken already existing transportation facilities to their detriment and to the detriment of the public whom they serve. I venture the assertion that the effect would be exactly the opposite and I believe experience elsewhere will support my contention. With the general improvement of the economy of any area business is better for every individual person and concern in that area. Improvement of any industry feeds and nourishes other industries with the end result that each helps the other. It is a well known fact that river transportation is necessarily slower than other types and hence is utilized mostly in carrying bulky, raw materials where speed in reaching destination is not an important consideration. Water transportation is also cheaper, giving a competitive advantage to those who may use it in transportation of raw materials for further processing or other purposes. They are thereby enabled to increase production and new industry is attracted to the area. The transportation of this new and increased production creates an additional volume of business for established systems of transportation and thus, in the final analysis and in an ever increasing way, the use of all methods of transportation are enlarged to the benefit of their employees and others dependent upon the operation of the transportation system of the country and of the public.

I am grateful for this opportunity to lay before you the picture of the Arkansas River Valley as it is seen by many of us who reside in that valley. I hope that what has been brought out will be of some aid to you in the discharge of your duties. I hope and believe that these hearings together with the investigations heretofore made will conclusively establish the economic soundness of the plans for the Arkansas River Valley which you are now considering and will enable you to recommend that they be undertaken. You may confidently count upon the full cooperation of practically every man, woman, and child in the area involved.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein a talk given by a constituent of mine, Attorney B. J. Adamkiewicz, over radio station WISN, of Milwaukee, Wis., on the occasion of Polish Constitution Day, May 3, 1945:

My fellow Americans, in Milwaukee, and in communities throughout the land, the Polish Constitution Day observance will crystallize in patriotic manifestations. That is as it should be, for in the lives of Poles and Americans of Polish birth or extraction, May 3 always shall be a truly great day, just as July 4 always will be a great day to all Americans.

To the Polish people generally, May 3 had always been a day of great rejoicing for it ever brings to their mind the resplendent glories of their native land. For more than 5 years, Poland had lain racked in the torture chamber that was Nazi Europe, and more than 2,000,000 Poles had died so that the very shadow of disaster. Less than 5 years later, Poland was totally dismembered; democracy and civilization would live. Because that is Polish tradition. The Polish Constitution was drawn up by patriots in and for 121 years there was no Polish state. But the Polish nation did not die; the Polish spirit was not crushed. And every year the Poles everywhere celebrate Polish Constitution Day, as they are even now singing, defiantly their national anthem: "Poland Is Not Yet Lost," singing it with a fervor that echoes and reechoes throughout the world as they once more are witnessing another crime of a millennium—the fifth partition of Poland.

This year there is greater significance to Polish Constitution Day, and Polish hearts, yes, and American hearts too, are heavy. They are heavy with fear that Poland, which had fought so gallantly when its soil was torn by the invasion of Nazi hordes in September of 1939, is about to emerge from its ruins, even before peace is declared, comparatively a small and shrunken state, shrunken, yes, because Soviet Russia, with the approbation of Poland's allies, Great Britain and the United States, had seized and holds the eastern half of Poland, and has proclaimed it to be an integral part of her vast domain under the guise that she must have the boundaries of June 1941.

Why do the Allies countenance and participate in Russia's sinister designs toward Poland? It is wholly obvious that Russia is determined to have Poland emerge from the ruins of war weakened to such degree that she will be utterly unable to defend her renascent national freedom and territorial integrity in the future, and that she will become easy prey to Russia's imperialism.

During a pontifical high mass for the victims of Warsaw, the Reverend Monsignor James Griffiths said, and I quote:

"Poland and the Poles have unquestionably vindicated themselves as invaluable and loyal allies, and they have vindicated their rights to their lawful aspirations—nationhood." It is for this reason that Americans and people everywhere who believe in God, who love Poland, who have even a rudimentary regard for natural justice are today appalled as they witness the travesty on international justice which is being enacted as Poland is pounded between the diplomatic anvil and the imperialistic hammer, in the name of peace. It is all so redolent of the period of Poland's partitions, when Maria Theresa wept for Poland but with each tear drop took another mile.

Poland has time and again been called the bastion of western civilization. Today she is something infinitely more—she is the litmus test of our war aims. If she must of necessity turn red regardless of the wishes of her people—and it has become apparent up to the time the San Francisco Conference had been convened that the Allies sought to have Poland turn red, and become fully subservient to Moscow rule; if Poland must sacrifice her national sovereignty, her national aspirations, her national honor and independence to gratify and satisfy and appease the imperialistic greed, then truly has this war been fought in vain, and "all the blood and sweat and tears," of which Mr. Churchill had spoken so eloquently at the outset of the war, shed not only at Warsaw but at Dunkerque, at El Alamein, at Guadalcanal, at Iwo Jima, and Okinawa, will have been expended in vain—and Poland and western civilization will stand in perfect juxtaposition, where they were on September 1, 1939. If this should happen, then, as the Reverend Monsignor James Griffiths had further said, and I quote: "The Atlantic Charter must go down in history as a pact made not merely geographically but ideologically as well—at sea."

The Polish people have hailed the adoption of the Polish Constitution of May 3 as a great step forward, for under that Constitution the Poles, not unlike the American people under the Constitution of the United States, were endowed with the right to life,

liberty, and the pursuit of happiness. And today, with Poland once again threatened with extinction, even powerful Russia cannot usurp these rights, notwithstanding anything the San Francisco Conference may bring to the Polish people, be that life of partial or complete servitude under a despotic, tyrannical, and arbitrary government of Soviet Russia.

For many weeks now, much of our American press has been in a great make-believe campaign to sell to the American people our supposedly great diplomatic triumph at Yalta. Of course, we won absolutely nothing at Yalta, neither for ourselves nor for the cause we are fighting. And the defenders of this triumph, finding themselves out on a limb, excuse this by telling the American people that a perfectionist attitude is as bad as isolationism. Indeed, no one expected perfection. We were prepared to accept compromises. But there were no real compromises at Yalta; there was surrender, nothing else.

The Atlantic Charter was desecrated while it was praised. One-half of prostrate Poland was handed over to Soviet Russia outright, to be communized and absorbed into the Soviet orbit, without the Polish people being asked whether they would like to turn their homes and farms, their factories and stores, to the collectivist system and their personal liberty to the dictatorship of Mr. Joseph Stalin. And upon the remainder of Poland, a Soviet chosen government was foisted, with full American and British recognition. The Polish Government at London, which had organized and directed the Polish resistance to the Nazis, under whose banner thousands of Polish airmen had died over England and Germany, which was the acknowledged organizer and leader of the Polish underground movement, was deserted and thrown overboard.

Thank God that at least the Moscow-sponsored so-called Polish government was denied participation in the San Francisco Conference.

I repeat, therefore, that the Yalta Conference was not a diplomatic triumph for our Government, but the very synthesis of abject surrender. It is pitiful indeed that on the morning after Yalta we were presented with spheres of influence covering Central Europe. Poland was betrayed, Germany was to be divided into three parts, and the Russians were to hold sway in the Balkans.

What destiny is planned for the people of the 54 small nations of the world? Certainly the American people are entitled to know this. Have we any fear of war with any of these small nations? Only the Big Three can and will once again precipitate the world into another maelstrom of destruction if Russia is not checked in her imperialistic designs in Europe. That Soviet Russia is even now laying the foundation for a major war by her seizure of the eastern half of Poland is now beyond the peradventure of a doubt.

Whether Soviet Russia's determination to retain seized Polish territory as her own is aimed towards security, as she claims, rather than territorial imperialism, which is obvious, is at the moment not at issue. But it should be born in mind that beyond arguments and theories are hard facts, and the will of the Polish people to preserve their birthright is a hard fact.

The magnificent spirit displayed by the Polish people in the face of oppression and the spirit that emanates from the hearts of Poles and Americans of Polish birth who are now fighting in American columns against a common foe is a gleaming flash of that resolve that lifts the hearts of men and nations and springs from the spiritual foundations of life itself. The Poles are experiencing an ordeal which by far exceeds anything that can be pointed to in the darkest pages of history, yet they endure, eternally fortified in the thought that the Constitution of May 3 shall not have been in vain.

Textile Workers Oppose Reciprocal Trade Agreements Program

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement presented for the National Federation of Textiles, Inc., to the Committee on Ways and Means:

The manufacturers of rayon and synthetic yarn fabrics respectfully record their opposition to H. R. 2652, to extend the authority of the President under section 350 of the Tariff Act of 1930, as amended, etc., and in so doing also record their recommendation that section 350 not be renewed either in its original or proposed amended form, and that the flexible tariff principle be governed by section 336 of the Tariff Act of 1930, as originally enacted.

This statement is submitted on behalf of the rayon and synthetic yarn fabric manufacturers, members of the National Federation of Textiles, Inc. The manufacturer members of the federation produce over 90 percent of the rayon and synthetic yarn fabrics made in the United States. They operate textile mills in New England, New York, Pennsylvania, New Jersey, Maryland, Virginia, North Carolina, South Carolina, and Georgia. The mills represented are the former members of the Silk Association of America, Inc., and the National Rayon Weavers' Association. The total production of this group in 1944 was one and a half billion yards of fabric, of which an increasing percentage is going into clothing and equipment for the armed services. Of the total million and a quarter employed in the entire textile manufacturing industry, 90,000 are in the rayon weaving mills and their earnings total $143,000,000 annually. The industry is one in which the individual worker plays the major part in the production of goods.

This group is conscious of the importance of maintaining a liberal attitude in international trade. The textile industry is particularly conscious of this, as it is itself, perhaps, the most international of all industries. It is found in nearly every country where there is any industrialization. In the majority of cases it will probably be the first industry to be revived in the war-torn countries.

Continuation of section 350 of the Tariff Act, however, in its proposed form has the potential power of crippling the American textile industry. The American textile industry is sufficiently important as a source of employment to a million and a quarter workers in many localities scattered over a wide area and as an integral part of the economic life of this country, to be considered as a major means of livelihood for the people of the United States. Of special importance, from the viewpoint of present-day conditions, is the American textile industry's contribution to national security. The many articles of clothing and personal equipment of the servicemen are made possible by the products of the textile industry, but in this war we manufacturers of synthetic materials have not only provided materials for clothing, but have seen whole new chapters of military action made possible by the development of special synthetic textiles in this country. The industry was able to provide these millions of yards of fabric in the time of need only because it had been given an opportunity to develop in the United States in competition with the longer established textile industries of other countries of the world. That opportunity was through the use of tariffs on imported goods that would compensate in part for the vast difference in wages paid in this country and others. For example, wages paid to the American textile worker are from 3 to 10 times those received in other countries.

Without that American synthetic fabric industry, the armed forces of this and other countries would have found themselves without parachutes for men, supplies, and bombs; without tire cord for use with synthetic rubber; without vermin-proof netting for jungle use; without bullet-proof gasoline tanks; life-raft sails; decontamination cloth for chemical warfare; and without many other wartime specialties made from rayon and synthetic yarns. The ability of those manufacturers to supply fabrics to meet uses specified by the armed forces is a factor in the successful prosecution of the war that will be vouched for by the Air Corps, the Navy, the Quartermaster Corps, and the Ordnance Department, the Department of Chemical Warfare, and many other procurement agencies.

Our opposition to H. R. 2652 and to the present section 350 of the tariff act is based on the following reasons:

THE ECONOMIC CONDITIONS FOR WHICH SECTION 350 WAS ORIGINALLY ENACTED NO LONGER EXIST

Its original purpose, as stated in the first paragraph of the section is no longer tenable. The purpose says that it is "a means of assisting in the present emergency in restoring the American standard of living, in overcoming domestic unemployment and the present economic depression, in increasing the purchasing power of the American public, and in establishing and maintaining a better relationship among various branches of American agriculture, industry, mining, and commerce." Since the war we have seen the American standard of living rise to new heights. There is no domestic unemployment nor at present an economic depression.

A FLEXIBLE TARIFF NEEDS A KNOWN MEASURING STICK FOR FAIR ADMINISTRATION

Where there is need for an adjustment of tariffs to permit freer importation of products from another country, that adjustment should be based on a careful investigation as to costs of production in the countries concerned. The adjustment should be made only to the extent that it has been proved needed after investigation by the United States Tariff Commission of relative costs of production between the domestic article under consideration and the foreign article. Only where the results of such investigation show that the existing duties do not equalize the difference in cost of production shall there be an adjustment of rates. The system of change of duties, incorporated in section 336 of the Tariff Act of 1930 is the system that we consider the only equitable, safe method of adjusting rates.

RATE ADJUSTMENTS SHOULD APPLY ONLY TO COUNTRY TO WHICH ORIGINAL CONSIDERATION WAS GIVEN

Moreover, the adjustment should apply only to the particular country or countries whose costs were investigated. The standard of living varies widely in the world. For

example, an adjustment of duty agreed upon for Great Britain with a relatively high standard of living and wage scale should not be applicable to China with a lower wage scale.

MASS PRODUCTION OF AMERICAN TEXTILES FOR AMERICAN PEOPLE IS THREATENED BY PRESENT METHOD OF INTERNATIONAL BARGAINING

No single industry in this country should be considered expendable on the international trading counter. The textile industry appears to be fair prey in such negotiations. Because the worker plays so vital a part in production of each yard of fabric, every yard imported has a direct bearing on the daily wage of a million and a quarter American textile workers.

In the United States we have developed to a high degree mass production of textiles for the population at large—not the cheapest, not the most expensive, but the finest medium-priced and usable textiles anywhere. The clothing and home decoration use of textiles in this country, compared to the quality and amount used elsewhere in the world, indicate the high degree of success the industry has achieved in meeting the demands of American consumers. Our domestic consumption of textiles is part of our higher standard of living. However, textile manufacturing efficiency is not necessarily a monopoly of the United States. From the post-war competitive standpoint, we know we will have to meet the competition of not only our old competitors, Great Britain, France, Switzerland, Czechoslovakia, Italy, etc., but the many new countries, South America, for example, who have had a chance to see American machinery and to use American textiles. They will soon secure similar machinery either through their own highly skilled textile machinery engineers or, as is indicated by recent visits from British missions of both cotton and synthetic fiber men through the purchase of American machinery. Furthermore, in contrast to our heavy consumption of our own textile products, the lower standard of living in other countries forces them to export a large percentage of their output.

TARIFF RATES ADJUSTMENT MUST CONSIDER RELATIVE COSTS OF PRODUCTION AND EFFECT ON LARGE GROUPS OF AMERICAN WORKERS

Wages are the major item in textile cost of operation whether in the United States of America or in Russia. From pre-war experience the industry knows that the big advantage for the foreign manufacturer is the great disparity in wages, and the much lower standard of living that exists abroad.

During this war, the American textile worker's wages have risen rapidly. In 1939, the average weekly earnings for rayon and silk workers were $15.78. In November 1944 that average had risen to $30.04 or approximately 100 percent. This trend is one that progressive manufacturers welcome and intend to continue, if they can. Such a general rise in the American textile worker's economic position, however, makes all the more marked the wide disparity between his income and that of his foreign fellow textile worker. Before the war, this difference ranged from 3 to 10 times the foreign worker's wages. After the war, the difference will undoubtedly be even more marked. The danger to his economic welfare must be apparent if these differences are not kept in mind during international trade negotiations.

We advocate, therefore most urgently that adjustments of tariff rates be subject to the type of investigation on cost of production which unfortunately section 350 does not require. It is true that the President is under obligation to hold a public hearing before the final consummation of a trade agreement and that he is also instructed to "seek information and advice" from the Tariff Commission. But we believe that the coming years need a more definite and specific provision that duties shall not be increased or decreased until the costs of production in the countries to be affected, are carefully checked by an experienced agency such as the United States Tariff Commission. Section 336 of the tariff act provides such a method of procedure.

ANY RENEWAL OF SECTION 350 SHOULD BE LIMITED TO 1 YEAR ON EMERGENCY GROUNDS ONLY

If, from the emergency viewpoint, Congress wishes to give the President something to work with in the pending discussions with Allied National representatives and for that reason wishes to extend the present Reciprocal Trade Agreement Act, section 350, then we urgently recommend that the extension be limited to 1 year only. Under present wartime conditions, we do not know to what extent the textile industry of this country will have to provide employment for returning war veterans and returning textile workers from war industries. The textile industry as the country's second largest peacetime employer among the manufacturing industries has a major stake in that program. Therefore, it is advisable to us that a law affecting employment, as does the reciprocal-trade-agreement provision, should be continued only for a comparatively short period.

In the meantime, Congress will have an opportunity to consider the more specific method of adjusting duties, in section 336, and thus give American industry a chance to know what they have to measure up to in competing with corresponding industry in other countries. That competition affects only the million and a quarter people directly employed in the textile industry (on a peacetime basis) but also the small businessmen, the many thousands of people employed in service industries that depend upon the incomes of those workers in the hundreds of large and small communities in which textile plants are located. Other nations should be given a chance to supply us with what they can produce but not to the extent of injuring the operation of the corresponding industry in the United States and thus undermining the standard of living of many thousands of working people, disrupting local trade and community interests and endangering the national security in times of emergency.

BASE RATES SHOULD NOT BE CHANGED

Furthermore, if section 350 is renewed, it should certainly not be amended so as to make January 1, 1945, the base period for adjustment of rates. We do not know as yet the effect of rate adjustments already made in reciprocal trade agreements previously signed. These adjustments have never operated in a normal world market. They came into being when the major European textile countries were in the throes of war preparation.

What they will mean in peacetime operations such as the years, cannot be judged on the basis of records from 1937 to date. We believe, therefore, that if it is deemed necessary, for reasons of national policy to renew the reciprocal-trade agreements procedure at this time, there should be no pyramiding of changes above the 50 percent originally contemplated. The use of January 1, 1945, as a base period would have this result.

CONCLUSION

We are in hearty accord with Mr. Roosevelt's statement in his message to Congress of March 26, 1945, on this subject that "* * * we cannot succeed in building a peaceful world unless we build an economically healthy world." We believe that the present standard of living of American workers should be protected if we are not to find them the first victim of an economically unhealthy world. The Reciprocal Trade Agreements Act, either in its present form or in the proposed form, does not give the American worker or his employer a fair opportunity to meet the challenge of substandard wage in other parts of the world. If we are to make the rest of the world healthy economically, we must observe the greatest care in seeing that the products of those substandard wages, all other costs of production being equal, shall not be given the encouragement of unfairly low rates of duty so as to permit use of American markets as a dumping ground.

The answer is elimination of section 350 of the tariff act, and reinstatement of section 336, now inapplicable to any products covered by a reciprocal trade agreement.

Respectfully submitted.

Irene Blunt, secretary and treasurer, the National Federation of Textiles, Inc., New York, N. Y.; on behalf of the tariff committee: Paul Whitin, Paul Whitin Manufacturing Co., Northbridge, Mass., West Warwick, R. I., chairman; G. H. Conze, Susquehanna Mills, Inc., Sunbury, Pa., Randleman, N. C., Philmont, N. Y.; Franklyn D. Griffin, Cheney Bros., Manchester, Conn.; John J. Goldsmith, Hess, Goldsmith & Co., Inc., Kingston, Pa., Plymouth, Pa., Wilkes-Barre, Pa.; R. G. Emery, Dunean Mills, Greenville, S. C., Watts Mills, Inc., Laurens, S. C., Aragon-Baldwin Mills, Rock Hill, S. C., Victor-Monaghan Co., Inc., Greenville, S. C.; O. D. MAY 11, 1945.

America's Share in the Total Out-of-Country Purchases of All of the Principal Trading Nations of the World Grows Smaller Under the So-called Reciprocal-Trade Agreements Program. Instead of Expanding It, Our Foreign Trade Is Now Threatened With Extinction

---

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. GEARHART. Mr. Speaker, I have been so many times assured by earnest advocates of the so-called reciprocal-trade agreement program that our trade opportunities in the markets of the world were constantly improving under its beneficent influence, that it occurred to me that it might be well to make a study of various more important foreign markets to ascertain just how America has fared in each of them, first, under the bumper-protective tariff years of 1926 to 1929, inclusive, second, under the de-

pression years from 1930 to 1934, inclusive, and third, under the trade-agreement years from 1935 to 1938, inclusive.

According to figures which I have obtained from League of Nations sources, it is revealed that in nearly all of the countries of the world, our share in those markets has dwindled, the lowest figure usually appearing during the years that reciprocal trading has been the order of the day. Can we infer from this that the Trade Agreements Act has served us well? Well, let the figures speak for themselves.

Unanimous consent of the membership having been granted, I hand the results of these studies to the Public Printer to be spread upon the pages of the CONGRESSIONAL RECORD as a part of my instant remarks.

Mr. Speaker, the tabulations to which I have just referred are the following:

Value of total imports for specified foreign countries and the proportion coming from the United States

[Value of figures in thousands of dollars—old gold, 1926-32, inclusive; currency, 1933-38]

	Value of total imports	Percent	Imports from United States	Percent

The Over-all Picture of the Vocational Rehabilitation and Education Program for Returning Veterans

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a talk given by Maj. O. W. Price, Chief, Vocational Rehabilitation and Education Division, Veterans' Administration, before the State board of vocational and adult education and the directors of local vocational schools, Fond du Lac, Wis., April 26, 1945:

There is no problem so close to the hearts of all of the people as concern over the welfare of the returning veterans.

They must be provided with decent homes in which to live.

They must be given jobs whereby they may obtain the necessities and comforts of life.

They, if previously employed, must be restored to their former jobs with promotions which they missed.

They must be given a chance to make up for lost educational opportunities.

They must be given credit for their military education and experience.

If they return disabled, they must be given an opportunity to learn new skills and new knowledge whereby they may become useful citizens.

The returning veterans will have been away for a long time, they will have been busy fighting the most devastating war of all times against the most ruthless enemy of all times. After the hardships and sufferings which they have undergone, they will not be over impressed by the problem of post-war reconstruction. They will be realistic and practical; they will expect that we do without too much talk whatever needs to be done. They will not expect to find lack of planning for them while they were away; they will expect to find the schools ready to receive them with courses suitable to their needs and in occupations suitable for the post-war period.

These men have fought the good fight; they have kept the faith. It is up to us to show that we have kept faith with them. "Every citizen"—to use the words of President Wilson—"is endorser on the general obligation." Among the endorsers on this general obligation are the vocational schools of Wisconsin. They have had an important roll to play in winning the war and will have a still more important role to play after the war is won.

Never has a war required so much knowledge and skill as this one. It has been necessary to train millions of workers in how to make new weapons and millions of soldier and sailors in how to use them. When the Nation's call came, the schools immediately placed all of their resources at the service of the Government. Many thousands were trained in your fine vocational schools. Wisconsin's vocational schools literally went to war just as Wisconsin factories went to war. Your schools, like factories, will be faced with a problem of reconversion. There will need to be a retooling of subject matter and methods of teaching in order to adequately serve the post-war period. What happened after the last war has little relation to what we may expect this time. The situations are not analogous.

After the last war we had no law providing general educational benefits for all veterans. There is also a great difference in the educational levels of men of World War No. 1 and World War No. 2. In World War No. 1, 80 percent of the men were in the grade-school level as compared with 34 percent in this war, and Wisconsin would make a still better showing. In the last war 4 percent were high-school graduates; in this war 24 percent. In the last war only 5 percent were college men as compared with 14 percent for World War No. 2.

A scientific sampling made by the Army showed that 8 percent of the men in the armed forces had definite plans to enter school in full-time attendance and that 18 percent planned to take up schooling on a part-time basis. Of those who wanted full-time training, 92 percent were single and 93 percent were under 25 years of age. Those who signified their intention of taking part-time training were older men with many of them married men. These were the men who prefer to work at a job and attend school part time or to take training on the job where they may receive training wages in addition to the subsistence allowance provided in Public Law No. 346. A majority of the men who will attend part-time instruction will select vocational schools, commercial schools, extension courses, etc.

Let us take the above figures and break them down. Take 8 percent of the estimated 13,000,000 veterans after the war, and you have 1,040,000 who will want training full time. Take 18 percent, and you will have 2,240,000 who will want training part time. Make this same computation on Wisconsin's estimated 300,000 veterans after the close of the war, and you have 23,400 veterans who will want training full time and 84,000 who will want training part time. These figures are startling when you consider that there undoubtedly will be increased civilian demands for education. We have never had such a situation before. Never before in the history of our country have we had millions of people eligible for education up to the college level and beyond with all expenses paid. Heretofore education above the high-school level was generally dependent upon the parents' ability to pay the bill. How many will take advantage of educational opportunities no one knows. I do not believe that any survey at this time will accurately foretell—it all depends upon the availability of jobs. The number who take training will increase in direct proportion to the scarcity of jobs. Thus, you see an old-fashioned revival in education is in the making. Schools should get ready for it by retooling of subject matter to make it fit changed conditions, by revamping methods of teaching so that they will appeal to the interest of the adult veteran and by streamlining and tailoring to fit the individual needs of the veteran.

This has been a long war. These men will have lost valuable time in their careers—many will be married, with family responsibilities. I do not believe that they will tolerate loosely organized and time-consuming courses, but, on the other hand, will want well-organized courses, clearly outlined and closely focused upon an objective. One of the noticeable traits of the returning veterans now in training is impatience over having to wait so long before they are ready for employment. The armed forces, by streamlining and acceleration, as well as your own experience in training war workers, has shown that men can be trained in shorter periods of time than heretofore was believed. While such methods may not seem sound from the standpoint of traditional practices and as applied to certain courses, nevertheless, they will have an important effect on all educational policies in future years.

Individuals differ as to ability and application. The time required to complete a course should not be rigidly fixed at so many hours or years of education or training but, on the other hand, should permit acceleration on the basis of individual ability to acquire skill and knowledge. Especially should this be true of veterans who, because of maturity and experience, may be expected to advance much faster than the teen-age student or trainee. The ideal educational plan is one such as we use for the handicapped veterans, whereby we fit the individual's need on a basis of his education and expierence, ability, aptitudes, interests, social adjustment, and physical capacity.

In getting ready for the returning veterans, schools, of course, should study the post-war occupational needs, especially with reference to their local community. The veteran generally has better opportunities for employment in his community where he is rooted through family ties.

Emphasis in Wisconsin in recent months has been in the industrial field and especially in the metal trades. Will this emphasis continue? One important field which has been more neglected than any other is distributive education. Business leaders realize that the distributive trades bear a heavy responsibility in making future America prosperous. This field must furnish millions of jobs for veterans. Many thousands of veterans, entirely too many, I suspect, will want to go into business of their own under the liberal provisions of the G. I. bill. Statistics show that nearly 50 percent of all new businesses fail and that the principal cause of failure is lack of knowledge of how to successfully operate the business. Practical courses should be available which will appeal to the veteran, and I am pleased to know that you are developing such courses. Whether such courses should be 2 months, 6 months, 1 year, or 2 years is for you to decide. There are other fields, of course, which should be emphasized. Some occupational fields which appear better than usual include: Building and construction, retail merchandizing, transportation, recreation and amusements, teaching, medicine, social work, and the jobs growing out of electricity and chemistry. The veteran will expect sound advice in keeping out of overcrowded occupations.

Many hundreds of veterans will take training on the job. In many instances the place of training will be insolated communities not served by vocational schools. Most of these men should have related training. What should this related training consist of, and how can it be provided? This is an important problem affecting the vocational schools, the extension division of the university, and the superintendent of public instruction.

With casualties exceeding 1,000,000 the furnishing of rehabilitation training to the handicapped veterans imposes an important responsibility. These veterans must ever and always be given first consideration. We want these men to be trained broadly and thoroughly in order to enhance their employment possibilities. Courses which are too narrow or too limited, generally, are not satisfactory for the rehabilitation case. The vocational schools, in addition to providing instruction, can be of assistance to us in helping to rehabilitate the handicapped. For example, by assisting the veteran in locating suitable housing, by helping us to locate training opportunities, by creating favorable sentiment among employers in your community, and in many other ways which will be discussed at this conference. Incidentally, the housing situation for veterans is becoming acute in some of your cities.

While the vocational schools principally are concerned with training vocationally, we should not lose sight of the fact that all education is for citizenship. It is the duty and right of the veteran to equip himself to take his place in the community. In other words, courses should be available which will broaden and enrich the veteran's life. As to how far the vocational schools should go into this phase of education is for you to decide. It is highly important. It is one phase which was neglected by the Army and Navy. It is a phase of education in which the veteran may not be able to see its full value.

Individuals differ in native endowment and talent. Obviously, the first step in educational planning is to analyze the individual's abilities, interests, and needs. The next step is to design a training program which will enable him to realize his talents and ambitions. The Veterans' Administration has tried to make this plan possible. In order to provide a convenient service, we now have established branch offices at Madison, Eau Claire, Green Bay, and in downtown Milwaukee where free vocational guidance is available to all eligible veterans. At these branch offices we utilize, under contract, the counseling and testing services of the University of Wisconsin, Marquette University, Eau Claire State Teachers College, and St. Norbert's College. In talking to you school men, it should be unnecessary for me to stress the importance of this service, except to state that we feel that every veteran should be urged to take advantage of vocational guidance before embarking on any education or training program. Unless they do so, many will get into wrong courses and discouragement and failure will result. We feel that the veteran is entitled to the best vocational guidance that modern psychology can provide and are trying to make this possible.

We should not forget or neglect the distaff side of education. Several thousand women are in the armed services and many of them will want further education. Already a number are in training. More and more each year women are coming into prominence in the business and industrial world.

The responsibility for determining what schools and training establishments are approved for training under the G. I. bill is vested in the Governor of each State. This is an important responsibility. This means that the education of the returning veteran is placed in the hands of the educational authorities, and if it is not successful, the fault will be theirs. The Veterans' Administration will not in any way interfere with the operation of the schools.

In this State, Governor Goodland has designated an educational advisory committee composed of the following officials as the approving agency: The secretary, board of normal regents; the director of public service, University of Wisconsin; the president, Marquette University; the State superintendent of public instruction; the director, veterans' recognition board; the director, State vocational and adult education; the State supervisor of apprenticeship training; and the chief, vocational rehabilitation and education division, Veterans' Administration.

This committee is fully cognizant of its responsibility and has taken appropriate steps to see that the returning veteran's educational rights are protected. Inferior schools and fly-by-night schools, which might be set up as a commercial venture, thereby short-changing the veteran as well as the Government, are banned from operation in Wisconsin. Every shop, store, office, and garage is a potential training facility. Without control, schools could spring up overnight. Without proper administration and control the program could turn into "boondoggling" of the worst kind. Wisconsin is the only State that I know of where the leaders of the various educational fields, immediately after the passage of Public, No. 346, got together and are working on a program for providing the best possible education for the returning veteran. This is very important. We cannot afford to let this great educational program fail because of inadequate courses and poor training facilities.

Recently the State veterans' recognition board allocated $25,000 to the Governor's educational advisory committee to employ four liaison officers who will work, respectively, with the State vocational board, the university extension division, the State apprenticeship supervisor, and the State office of public instruction. These men will help carry out the policies of the educational advisory committee.

In conclusion let me state, as I did in the beginning, that the returning veteran has placed upon all of the schools a sacred obligation. The schools are endorsers on that obligation. As public service institutions they must give a good account of their stewardship. In this regard, I know the vocational schools of Wisconsin are going to keep faith. Your schools are the leaders in the field of vocational education. With your staff and our staff working hand in hand, the problem will be easier and the accomplishments greater.

British Imperial Preference Plan

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. REED of New York. Mr. Speaker, this presents only one of the discriminations practiced against the United States by Great Britain under the imperial preference plan by which England monopolizes the world trade by bringing a population of 394,235,338 within the orbit of her exclusive trade.

The idea of imperial preference started as far back as 1903 during the tariff reform campaign of 1903. The idea was further developed in 1915–17, and in 1919 a decree of imperial preference was instituted. This was on a limited basis but the principle had become well established by this time.

There is no uncertainty as to Great Britain's future with respect to the most-favored-nation clause. It was declared by the Empire Governments at Ottawa, that the grant of Imperial preference must override all considerations of the most-favored-nation treatment and that any such treaties that stood in the way of it should be denounced forthwith—Imperial Economic Conference at Ottawa, page 11.

Under leave to extend, I am inserting the following tabulation:

Countries coming under the British Imperial preference system and population of each

United Kingdom	47,888,958
Australia	7,177,590
New Zealand	1,631,414
Canada	11,506,655
Union of South Africa	10,708,500
India (British, 295,808,722; native states, 93,189,233)	388,997,955
Newfoundland	300,000
Southern Rhodesia	1,448,393
Agreements with limited purpose and scope	
Bahamas	71,474
British Honduras	61,068
Fiji Islands	220,787
Federated Malay States	2,212,052
Bermuda	32,451
Windward Islands	262,006
Leeward Islands	97,644
Barbados	197,956
British Guiana	354,219
Jamaica	1,241,420
Trinidad	506,316

Recovery Under Smoot-Hawley Tariff Act as Compared to Recovery Under the Trade Agreements Program

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. GEARHART. Mr. Speaker, there has been so much loose talk to the effect that economic recovery following the depression was very much more rapid under the trade-agreements program that it might be well, it occurs to me, to include in the CONGRESSIONAL RECORD a statistical statement which has just been furnished me by the United States Tariff Commission in which the results of their study of recovery from 1932, the bottom year of the depression, to 1938, the last normal prewar trading year, is set forth with a break-down which reveals the percentage of this recovery which occurred between 1932 and 1935, inclusive, under the Smoot-Hawley tariff bill, and, the percentage of recovery which occurred between 1936 and 1938, inclusive, under the trade-agreements program, this with a similar break-down in the figures from 1932 to 1939, inclusive.

It will be somewhat disconcerting to the proponents of this program to learn that, on the average, more than half of the total recovery from 1932 to 1938, inclusive, sometimes all of it and more, occurred in the years of 1932 to 1935, the years in which the trade-agreements program was yet unheard of.

In view of the fact that the average national income during the years 1932 to 1935, inclusive, was $47,129,000,000 and the national income for 1936–38, inclusive, was $66,879,000,000, the more favorable results obtained under the Smoot-Hawley tariff law becomes the more significant.

The statement of the Tariff Commission to which I have just referred, Mr. Speaker, is the following:

United States foreign trade: National income by industrial divisions and distributive shares, and farm income; actual and percentage increases in selected years

Item	Actual increase of various years over 1932, the low point of depression			Increase to 1935 as a percentage of total increase to—	
	1935 over 1932	1938 over 1932	1939 over 1932	1938	1939
Foreign trade of the United States:				*Percent*	*Percent*
Exports of United States merchandise	$667,000,000	$1,481,000,000	$1,547,000,000	45.0	43.1
General imports	724,000,000	637,000,000	995,000,000	113.7	72.7
National income (total) [1]	15,756,000,000	24,237,000,000	30,866,000,000	65.0	51.0
By industrial divisions (total):					
Agriculture	2,609,000,000	2,619,000,000	2,876,000,000	99.6	90.0
Manufacturing	6,573,000,000	7,353,000,000	10,748,000,000	89.4	61.1
Finance	380,000,000	1,391,000,000	1,496,000,000	27.3	25.4
By distributive shares:					
Salaries and wages	4,589,000,000	10,154,000,000	13,209,000,000	45.2	34.7
Net income of incorporated businesses	5,314,000,000	5,304,000,000	7,874,000,000	100.2	67.4
Net income of unincorporated businesses	4,627,000,000	5,273,000,000	6,302,000,000	87.7	73.4
Farm income and net cash available to persons on farms after farm expenditures:					
Cash income, including Government payments	2,916,000,000	3,425,000,000	3,941,000,000	85.1	74.0
Cash income from farm marketings (excluding Government payments)	2,343,000,000	2,943,000,000	3,134,000,000	79.6	74.7
WAGES, FACTORY AND FARM					
Wages, factory and farm:					
Factory (average weekly wages)	$3.08	$5.25	$6.81	58.7	45.2
Farm (average monthly wages without board)	1.36	7.30	6.94	18.6	19.8

[1] Average national income, 1932-35, inclusive, $47,129,000,000; average national income, 1936-38, inclusive, $66,879,000,000.

Cut of Billions in Extra Pay Hits Consumer-Goods Industry

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor:

CUT OF BILLIONS IN EXTRA PAY HITS CONSUMER-GOODS INDUSTRY

WASHINGTON, May 16.—A stake of $12,000,000,000 in national income is involved in overtime and extra pay now being paid American workers, statisticians of the Department of Labor here declare.

If present overtime pay is dropped in the present rush from war to peace conditions, millions of workers will lose fat overtime pay returns which mean the difference in their income from living in relative luxury, to just making both ends meet.

A slash of $12,000,000,000 in national income also means a blow to manufacturers of consumers' goods, who would see their potential market reduced by that much, if overtime pay is eliminated.

These are factors in one of the biggest struggles that is developing in the industrial transition period through which the country is now going.

Trade union leaders are putting up a stiff, but probably unsuccessful fight, to continue the same "take-home wage" for the normal peacetime 40-hour week, which workers have been getting for the 48-hour war week, in which time-and-a-half overtime is given for the extra labor.

TESTING PERIOD FOR UNIONS

American trade unions are facing a testing period of major proportions.

Most of the war industries, where machinery is used to the uttermost, are also organized by unions, and well paid. With the exception of the construction industry, the peacetime trades that will come into prominence with VJ-day, are less well paid, and less well organized.

Thus, John Jones, who goes from a war industry to a peace industry, is apt to move into a new environment. Hourly pay may be lower, overtime may be eliminated, and the union may be weak.

Many locals are expected to disappear, and some big unions will be sharply affected, notably the oversize Automobile Workers' Union, affiliate of the Congress of Industrial Organizations, which is swollen with war jobs.

MORE LEISURE, LESS PAY

The peace industries expected to show employment gains are construction, textiles, apparel, boots and shoes, and service and trade branches of all sorts.

Take the case of Mary Smith, who now faces demobilization in 6 months or so. She has been getting 85 cents an hour in an aircraft plant, amounting to $34 for 40 hours, plus time-and-a-half overtime of 8 hours weekly, amounting to $10.20. That is good pay—at $44.20 a week.

When the airplane plant closes down, as many are likely to, Mary Smith may have the choice of work in a store as clerk, or in a laundry with pay at about $25 a week, for 40 hours. Mary will have more leisure and less pay. She probably will long for her war job.

This is the situation that faces millions of workers. Widespread estimate here is that the Japanese war will be within sight of conclusion in another year. In any event, big war supply orders, poured out to factories when the Army took alarm at the "battle of the bulge" in France, are likely to be canceled soon. The Army probably has all the supplies it can handle in many lines, if present orders continue another 3 to 6 months. Informed opinion here is that drastic shut-downs and contract cancelations will develop around November 1, if not earlier.

That will be a time of test and strain. Later on a postwar boom may solve matters. In the meantime going may be hard.

In his economic forecast last week Fred M. Vinson, War Mobilization and Reconversion Director, included the following estimates:

Total civilian workers, 52,000,000.

Total in munitions plants, 9,000,000.

Jobs to be lost, next 6 months, 1,500,000.

Jobs to be lost, succeeding 6 months, 3,000,000.

Army to demobilize, within the next year, 2,000,000.

The sum total of workers who will lose their jobs and of soldiers demobilized would therefore reach 6,500,000, according to these rough estimates, in the next 12 months. Mr. Vinson does not think this means cumulative unemployment of that size, for new jobs will be open as others close down.

Twelve months from now he only anticipates 2,500,000 jobless, as against 1,000,000 at present.

The unemployment compensation fund, accumulated in the States, will cushion some of the shock of this transition. An estimated $6,000,000,000 has been set aside. This will be its first great test.

The funds have been accumulated on a State instead of a national basis, due to the exertions of Senator WALTER F. GEORGE, of Georgia, whose bill was substituted for the Kilgore bill, which would have set up a national system.

The unemployment compensation funds, accordingly, vary widely from State to State. An unemployed worker in one State may get as high as $22 a week, while in another it may be as low as $8 or $9 a week. Also, the period of compensation may vary from 20 weeks down to half that time.

A Prayer

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. HAGEN. Mr. Speaker, when war in Europe came to an end, Americans did not wildly celebrate the event. Instead most of us gave fervent thanks to our Creator that the butchery in Europe was at an end, and humbly implored the Almighty to so guide the leaders of all nations that a true and lasting peace would settle down upon the war-torn world.

Following out the suggestion of President Harry S. Truman, the churches throughout the country held special prayer services last Sunday, May 13.

My family and I worship at the church closest to the Nation's Capital—the Lutheran Church of the Reformation, the pastor of which is Dr. Oscar F. Blackwelder. I consider him one of the outstanding preachers in the world today. He is ably assisted by Rev. Roy L. Sloop.

In his incomparable, sincere style, Dr. Blackwelder delivered the main prayer of the service. The prayer was a revised version of a prayer service suggested by the Federal Council of the Churches of Christ in America for use by the churches at the end of the war in Europe.

Because it was so inspiring to those who heard it, I am making it a part of these remarks:

Almighty God, who has taught us to make supplications, prayers and intercessions for all men, we pray this day for all those who are hungry and without bread; for those made homeless by war's desolation; for separated families; for those whose kindred have been ruthlessly slaughtered; for orphaned children; and for all those who have suffered under the heavy scourge of war.

For the men and women of our armed forces at home and throughout the world; for the sick and wounded in the hospitals; for doctors, nurses, and all who minister to the sick and suffering; and for all those who are prisoners of war.

For our beloved Nation and all those whom we have placed in public authority; for our homes that they may be Christian; for all schools and the teachers of our children; and for all our American institutions and organizations that serve our country's welfare.

For the church of Jesus Christ, our Lord, throughout the world; for all ministers who serve in His name; for missionaries at home and abroad; for all chaplains in the armed forces; for those who have suffered for their Christian faith.

For the uprooting of all causes of war; for the ending of prejudices of race and nation; for the confounding of all those who delight in war and the strengthening of all peacemakers.

For the triumph of justice in every human relationship; for the enduring liberation of the oppressed and for the lasting freedom of all thy children.

For the coming of that day when all men shall know the Lord and the realms of this world shall become the realm of Jesus Christ; for the coming of the time when nation shall not lift up sword against nation nor learn war any more.

O Merciful Father, we beseech Thee so to send forth Thy spirit into Thy world that all leaders of men everywhere, the rulers and spokesmen of the nations, may be instructed in the ways of peace, kept clean of pride and evil ambitions, and so guided in all their doings that they may make Thy ways known upon the earth, Thy saving health among all nations.

Our father's God, to thee,
Author of liberty,
To Thee we sing;
Long may our land be bright
With freedom's holy light;
Protect us by Thy might,
Great God, our King.

Amen.

We now remember in pride, gratitude, love, sorrow, and tenderness the innumerable company of those whose courage and sacrifice have made this hour possible. They died for us. "Greater love hath no man than this that a man lay down his life for his friends." To those who have lost loved ones in this war, perhaps the words of Abraham Lincoln, written to a mother whose five sons died in battle, may be of comfort. He said, "I feel how weak and fruitless must be any word of mine which should attempt to beguile you from the grief of a loss so overwhelming. But I cannot refrain from tendering you the consolation that may be found in the thanks of the Republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement, and leave you only the cherished memory of the loved and lost, and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom."

To all who sorrow this day a greater than Lincoln has said, "Let not your heart be troubled; ye believe in God, believe also in Me. In My Father's house are many mansions; if it were not so, I would have told you. I go to prepare a place for you, and if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also."

Amen.

What Next?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Warren B. Francis, from the Los Angeles Times of May 13, 1945:

WHAT NEXT?

(By Warren B. Francis)

WASHINGTON, May 12.—Final arrival of VE-day brought not only incomplete announcements about industrial production cut-backs and initial reconversion steps but new proof of continued confusion and uncertainty about procedures for resuming normal manfacturing as well as still-existing disputes about disposal of Government-financed plants, excess real estate, and surplus goods worth many billions.

Despite the months of study and conversion in anticipation of the end of European hostilities, Germany's sudden collapse finds Federal agencies still grappling indecisively with a variety of policy questions and operating problems. Evidence of unpreparedness to outline the course for the second phase of the war was given this week in widely separated quarters.

BASIC QUESTIONS

The degree to which industrial production capacity diverted to war needs will be released for resumption of peacetime operations still cannot be gaged.

Aside from War Mobilization Director Vinson's sketchy remarks, few lines of enterprise yet can get answers to inquiries about acquisition of machine tools, availability of raw materials, easing of labor restrictions, and related topics of basic importance.

A case in point is the aircraft industry. Reflecting changed tactical requirements, the Army has curtailed orders and approved closing of certain plants. The War Production Board has advised makers of commercial models it favors stepped-up manufacture of these types at the earliest moment. However, industry even now has no concrete information on which to formulate plans or begin retooling.

ONLY MINOR STEP

Widespread worries of management are heightened by delays in making known vital features of the policies for liquidating the Government interests in factories of all kinds, stock piles of materials, costly machinery, and unused stores of articles ranging from ships' clocks to tractors.

Minor steps only have been made toward a solution of the disposal problem. Attorney General Biddle, holding broad power to influence the final policy, has made several advisory reports to Congress—for instance, he suggested immense Government-financed plants should be leased, not sold immediately, and turned over to enterprises which guarantee future operation at maximum capacity—and a special Senate investigating committee has sounded stern warnings about the dangers of indecision.

SPEED URGED

Aside from giving particular Federal agencies responsibility for getting rid of certain kinds of surplus goods, the Surplus Property Board has made slight progress in eliminating fears the United States Government may encourage some modernized "pro-

duction for use" scheme or dump on retail markets large volumes of articles badly wanted by the public.

More than 6 weeks ago the Senate investigators led by Senator HATCH (Democrat) of New Mexico, recalling the get-rich-quick scandals after World War No. 1, called for fast action to create the machinery and set the rules for dispasal of varied surpluses. The committee still is waiting for response to many of its criticisms and suggestions.

LABOR OBSTACLES

A still-muddled manpower situation stands in the way of seizing some anticipated opportunities to begin heading back to peacetime conditions. Until the military and naval needs are measured more exactly, concerns no longer required to turn out war items will experience trouble in returning to habitual operations because of labor supply obstacles.

To a large extent, the same is true regarding materials and machinery. While the W. P. B. has lifted restrictions on production of urgently needed items, like telephone equipment, the ingredients still are tied up by priority regulations. Outworn machinery cannot be replaced easily.

CONTINUED CONTROLS

Bit by bit, scarce articles will reappear in the stores, just as aluminum and iron cooking utensils have been coming back, but the continuing shortages of key materials like rubber and copper and tin will greatly delay resumed manufacture of a wide range of consumers' goods, even though the producers are freed from war operations.

The American people may discover eventually the real significance of O. W. M. R. Director Vinson's report on The War—Phase Two was not in the promises of more gasoline and immediate production of refrigerators and washing machines but in the softer warnings that many unpalitable emergency controls must be extended until after VJ-day.

The California Farm Bureau Opposes the Extension of the Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. GEARHART. Mr. Speaker, with agricultural imports mounting and agricultural exports dwindling under the so-called reciprocal trade-agreements program, it is not surprising to learn that the California Farm Bureau Federation should have taken a decisive stand in favor of tabling the pending proposal to extend the President's authority to negotiate more trade agreements under the Hull formula.

The reasons supporting this action which are cited by Mr. Ray B. Wiser, the able President of this famous agricultural association in his letter to me of April 12, 1945, are not only very interesting but of most timely importance, a circumstance which impells me to ask the consent of the membership to the inclusion of a copy of the communication in the CONGRESSIONAL RECORD as a part of my instant remarks.

The letter to which I have just referred, Mr. Speaker, is the following:

CALIFORNIA FARM BUREAU FEDERATION,
Berkeley, Calif., April 12, 1945.

Hon. BERTRAND W. GEARHART,
House Office Building, Washington, D. C.

DEAR MR. GEARHART: We have read with much interest H. R. 2652, a bill to extend the authority of the President under section 350 of the Tariff Act of 1930, as amended, and for other purposes.

We have also read the March 26, 1945, message of the President to the Congress on the subject of the Reciprocal Trade Act.

The position of California Farm Bureau Federation has been and still is in opposition to the principle of the Reciprocal Trade Act. Some of the more important reasons for our opposition are:

(a) The need for protecting the wage level and standard of living of the people of the United States.

(b) The transfer of functions of the Congress to the administration.

(c) The extension of negotiated benefits with one country to all the more favored nations.

(d) The import quota control of countries that can nullify any supposed advantages accruing to the United States.

(e) The Empire preference policy of Great Britain that can operate to cancel any supposed advantages to us.

(f) The foreign exchange control of countries which can be and is used as effectively as tariff rates.

Our members share vigorously in the general desire for a permanent world peace, but to date have not been convinced that a free trade or low tariff policy is at all essential to the accomplishment of this purpose.

May we suggest that consideration of the extension of the Reciprocal Trade Act be tabled until after the deliberations of the United Nations World Peace Conference at San Francisco.

It is of little moment if the act dies for lack of action by the Congress, as it is probable that no negotiations under the act would be undertaken for some months. If it is found later desirable to continue the reciprocal trade practice, it can be done by action of the Congress at any time.

At the close of the San Francisco Conference some clarification may be made of the Bretton Woods Monetary Conference and of the Economic Committee of the Dumbarton Oaks Conference.

If the outcome of the Peace Conference develops some new facts or proposes some new foreign policies that involve reconsideration of tariff policies of the United States, both the public and the Congress can give consideration to the proposals in the light of the over-all objective, and act with intelligence on a well-rounded policy on the whole subject, so that action can be consistent and constructive.

With kindest regards, I am,

Yours sincerely,

RAY B. WISER,
President.

Ecuador Honors Dr. Thorning

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. KOPPLEMANN. Mr. Speaker, it was with special pleasure that I read in the New York Times, the Washington Star, and the Americas, the latter a scholarly quarterly devoted to the cause of inter-American friendship, that my friend the Reverend Dr. Joseph F. Thorning, special lecturer on sociology in the Catholic University of Chile, had been awarded the national decoration of the Republic of Ecuador, known as the Order of Merit, by a decree of President José María Velasco Ibarra. This decree was countersigned by Dr. Camilo Ponce Enríquez, Foreign Minister of Ecuador. We in the United States are happy about the distinction that has been conferred upon one of the most fair-minded and conscientious North American scholars. When I say that Dr. Thorning is my loyal friend and a patriotic worker for the good-neighbor policy, I am basing my observations on an association and friendship of many years. Under leave to extend my remarks in the RECORD, I include the following notices from the New York Times and from the Americas:

[From the New York Times of April 13, 1945]

PAN-AMERICAN CELEBRATION—HOUSE WILL MEET TOMORROW TO MARK DAY SYMBOLIZING AMITY

WASHINGTON, April 12.—The House will meet Saturday expressly for its first celebration of Pan-American Day.

To deliver the invocation it has invited the Reverend Dr. Joseph F. Thorning, Catholic educator and co-founder of the Inter-American Seminars at the University of Havana, the National University of Mexico, and the University of San Marcos, Lima, Peru.

Ambassador Galo Plaza, of Ecuador, announced today that President José María Velasco Ibarra had awarded Ecuador's Order of Merit upon Dr. Thorning for "scholarly contributions to hemisphere solidarity as well as for his cooperation with Ecuadorian students in the United States."

[From The Americas of April 1945]

ECUADOR HONORS DR. THORNING

By a special decree, Dr. José María Velasco Ibarra, President of the Republic of Ecuador, has awarded the national decoration, Al Mérito, to the Rev. Dr. Joseph F. Thorning, co-founder and organizer of the Inter-American Seminars at several Latin American universities. According to the statement of President Velasco Ibarra, the decoration was awarded in view of "Dr. Thorning's contributions to hemispheric solidarity as well as his cooperation with Ecuadorian students in North American universities and colleges." Dr. Thorning was invested with the order in the Embassy at Washington by Ambassador Galo Plaza Lasso.

Resolution of Northeastern States Development Agencies Conference

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Northeastern States Development Agencies Conference, Hotel Roosevelt, New York City, May 3–4, 1945:

Representatives of the development agencies of the Northeastern States, including Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont, having conferred on matters of mutual concern and interest at a meeting held in New York City on May 3 and 4, have unanimously adopted the following resolution:

The Northeastern States were the cradle of liberty and economic progress and are the heart of the commercial and industrial life of the Nation. These States are the homes and workshops of nearly one-third of the people of the Nation and therefore America's greatest consumer market. At the same time they stand as the chief gateway for the exchange of goods between this country and the rest of the world.

We combine a rich experience in industrial skills, business judgment, and advanced labor relations with a wealth of youthful ideas and energy, and shall continue to expand our contributions to the benefit of the entire country.

We are continuing, as ever, to lead the way in progressive government and business measures for the benefit of all peoples, everywhere. Our histories have demonstrated that economic and political freedom are not merely compatible but complementary.

It is the sense of this meeting that the postwar prosperity of the Nation, particularly the reemployment of our returning service men and women, is the first order of business of the development agencies of the Northeastern States. To achieve this high objective the Nation requires the mature experience and skilled workmanship of the people of the Northeastern States.

In peace as in war, we take pride in the industrial development and prosperity of our entire Nation, and shall continue to give our best efforts and know how to the end that all States will profit from the contributions of each, so that economic expansion can be general.

We shall continue to resist any effort to destroy the national free market, the birthright of every American, or to erect artificial trade and industrial barriers between States or regions, or to grant any special privileges to any sections of the country at the expense of the others. Opportunity for growth is unlimited throughout America, and we shall all prosper as we expand together.

Crisis in Coal

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manchester Union, Manchester, N. H., of May 17, 1945:

CRISIS IN COAL

Secretary Ickes' order of Monday banning hard-coal deliveries to consumers having more than a 5-day supply on hand has now been followed by President Truman's word that the anthracite is to be mined despite the strike of 72,000 members of John L. Lewis' United Mine Workers. The President's statement that steps are to be taken to get the coal out is the kind of talk that New England, which makes up 6 of the 12 northeastern States affected by the Ickes' order, understands and appreciates.

Crises in coal are not new to New England, but this time the Solid Fuels Administration, of which Mr. Ickes is head, will have to change its tune. Hitherto it has sought to explain discrimination by talk about the war effort; and what makes this part of the country mad is the inference that we have failed to sense the war's demands.

That isn't so, of course. New England hasn't expected to obtain coal in normal amount. New England has reduced home temperature. New England has saved home fuel, tons upon tons of it. And New England knows that normal supplies cannot be obtained until after Japan is defeated.

But this new crisis in coal, it is to be reasserted, is not linked with the drive to victory. Indeed, the fact is that the labor situation that brought it about, and bureaucracy's failure, or inability, quickly to remedy it, penalize not only the conduct of the war but also bring increasingly grave worries to householders.

More than ever they are concerned about next winter. Prior to the strike their alarm was based on bureaucracy's decrees which again cut allotments—this time by 7½ percent, thereby limiting consumers to a maximum of 80 percent of the normal supply—and which made certain that orders received after March 31 were chargeable to the 1945–46 "burn."

As for the present, they are too well aware that shortages become accumulative. Anthracite not mined now cannot become a backlog for use when coal is needed most. The picture was disheartening before the strike. It is more so now. The longer the impasse, the more dismal it becomes. The more dismal and the more serious.

Homes must be heated next winter.

The Relationship of the Tariff Policy to Living Standards in the United States

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1945

Mr. GEARHART. Mr. Speaker, with the official reports of the United States Tariff Commission revealing that agricultural imports, the American farmers' competition, has increased from 1934 to 1940 by 57 percent and that the export of American agricultural products, the farmers' opportunity of making money, has fallen off during the same years to 10 percent less than our agricultural exports of the year the so-called reciprocal trade agreement law was enacted, a truly alarming situation, to say the least, it will be gratifying to the practical farmers of the country to learn that Mr. C. C. Teague, president of the California Fruit Growers Exchange, has publicly championed a complete reform of the trade-agreements program, one which will assure to the American farmer a better break in the international field.

Mr. Teague, widely recognized as one of agriculture's experts, has recently prepared a memorandum in which he advocates an amendment of the trade-agreements program which should have the sympathetic consideration of the country, a memorandum which, in accordance with the unanimous consent of the membership, I hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD as a part of my remarks.

Mr. Speaker, the memorandum to which I have just referred is the following:

Recent statements by Government officials and some business institutions indicate a further tendency toward free trade. Much of this thinking indicates that free trade will perhaps result in increased exports of manufactured commodities with a resultant shrinkage in the domestic production of agricultural commodities.

The United States Department of Agriculture in a bulletin issued January 1944, entitled "What Postwar Policies for Agriculture?" states the following: "We believe that, with due consideration for military necessities, we should evolve programs that will tend to reduce domestic production of agricultural commodities that cannot meet world competition and yield an American level of living to producers without tariffs." They further state that "There is no outlook for an enduring world peace except as it is based upon a relatively free exchange of goods and resources."

Much of the sentiment for free trade seems to arise from the hope that foreign countries will be greatly devastated, and will look to American manufacturers for supplies of manufactured goods. The fact that foreign countries, both Allies and enemies, have been able to produce untold quantities of mechanized war goods would definitely indicate their ability to produce peacetime manufactured supplies following the war effort. Both their economy and their labor will be geared to that type of production, and if given some freedom of action, manufactured goods will be produced perhaps in an even greater abundance than will agricultural commodities in most foreign countries. It is our opinion that the only exception to this will be under force, which was advocated during the past year by the Secretary of the Treasury. It was his pronouncement that Germany should be reduced to an agricultural Nation. Under such theory, Mr. Morgenthau undoubtedly had in mind the exportation of manufactured commodities from this country and from Great Britain in exchange for agricultural commodities which would be produced by German labor. History in this country has long since proved the necessity of a strong farm market if our manufacturing, transportation, and trading industries are to be kept in a sound financial condition. Certainly, the farm market in this country is much more important to commercial industries than are any postwar potential markets in foreign countries.

In connection with our tariff policy, we are frequently led to believe that imports and exports comprise a very substantial part of our total business operation. The facts are these:

During the prewar period from 1920 to 1940, 93 percent of everything we consumed in the United States was produced here. Of the 7 percent of consumer goods which was imported, only 40 percent paid any import duty. That represents 2.8 percent of our total consumption. Sixty percent of our imports which came in free of duty will perhaps continue in that category because it comprises such articles as coffee, tea, spices, and rubber, none of which with the recent exception of the latter commodity, are produced commercially within the United States.

From these facts it is evident that the great productive enterprises here have been developed and maintained by selling their products to people in the United States, who have had a high purchasing power, because the earning power of wage workers and producers was protected from the products of other countries with low wages and living standards.

Even with the protective policies which have been pursued until recently in this

country, the United States might well be considered a free trader compared to other large countries. The foreign trade of the United States for the period 1922 to 1941, inclusive, exceeded $132,000,000,000. That was more than the total of the foreign trade business done by all other industrial countries. Yet, in spite of this enormous volume of business, this country has derived during the past many years only about 6 percent of our national income from exports.

The problem of free trade versus a protective tariff policy for the United States simply comes down to this situation: Are we willing to reduce the standard of living of wage and salary workers and agricultural people to the levels of other countries? Unless we reduce such workers and agriculture to levels approaching theirs, it will be impossible to compete on an open world market basis. Wherever an exchange of goods and services can be made without a reduction in the living standards of American people, then such exchange should not be hampered. On the other hand, we should never lose sight of the fact that industry in this country, including the industry of agriculture, has been built to the present high level based upon protective tariffs. The competition between this and foreign countries can be on an equal basis only if American workers are willing to reduce their wages, increase their hours, and reduce their standard of living comparable to conditions both in Europe and in the Orient relative to the output per worker. Unless labor and industry are willing to make these sacrifices, certainly agriculture should not be placed on the auction block as was indicated some months ago by the Secretary of the Treasury.

As a specific recommendation we believe that tariff rates, including adjustments upward and downward, should be taken out of the administrative offices and be placed in the hands of a bipartisan tariff commission with the Congress having the right to veto. This then places tariff rates in hands of persons who are capable of analyzing the rates based upon sound economic conditions predicated upon the general welfare of all people in the United States.

Since the inauguration of legislation permitting reciprocal trade agreements and permitting the administrative branch of the Government to make adjustments downward and upward within the 50 percent limitation, no upward adjustments have been made. While some of these downward adjustments have been justified from purely economic point of view, it is believed that many of the adjustments have resulted from the desire to use the tariff policy of this country purely for diplomatic negotiations. The distorted world trade due to war conditions, which have existed since most of these adjustments have been effective, has given no opportunity to measure and appraise their effect upon our economy in times of peace.

Synthetic Organic Chemical Manufacturers Association Opposed to Trade Agreements

---

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following statement before the Ways and Means Committee, House of Representatives, by the Synthetic Organic Chemical Manufacturers Association of the United States:

The organic chemical industry in the United States is a beneficiary and also an outstanding illustration of the wisdom of a soundly conceived tariff policy. You will recall the fact that we had no such industry when the First World War began.

A striking illustration of the economic value of the industry is shown in the fact that prices of chemicals and allied products in the First World War went from an index figure of 100 in 1914 to 245 in 1918, whereas, in the present war, prices have risen from 100 in 1939 to 130 in 1942, and have since declined somewhat.

The value of the industry from the standpoint of public health and national defense is common knowledge and need not be stressed.

H. R. 2652, while a tariff measure, is said to be part of a grand plan intended to promote world cooperation, both political and economic. Like other Americans, we favor the objective of greater international cooperation in the hope that the goal of a more stable, prosperous, and peaceful world can be attained.

Any legislation planned to implement the fine objectives must be examined to determine whether it gives fair promise of accomplishing the desired ends. Likewise, we want to be sure that in our desire to accomplish one thing we do not follow a plan which will cancel out or seriously interfere with the realization of another objective of even greater importance.

It is still obscure as to whether the concept of H. R. 2652, and some of the Bretton Woods proposals are not contradictory. On the other hand, we can all agree that full employment in the United States after the war is of the very first importance. Unless this is attained, it is futile to expect that the United States can carry its own burdens, much less contribute to the help expected by the rest of the world.

Proponents say that H. R. 2652 will create jobs to make the things we will export. Obviously this can only be true if the things we import do not displace more jobs than the exports provide. We have no objection to the vast number and quantity of commodities we always import which do not displace jobs.

The very nature of H. R. 2652, however, indicates an intention to import commodities that we now produce for ourselves. It naturally follows that if we import enough of such competitive goods to be of substantial benefit to other nations, we will of necessity displace a great many American jobs.

It is not merely the question of the consumer price lowered to the last point of possible profit. If a reduction is sufficiently large, the total supply can be imported and the domestic production scrapped, since no quantitative limitation of imports is proposed. On the other hand, if duties are not reduced far enough to benefit the foreign producer, then the whole thing is a futile gesture.

Compare the manufactured commodities we export with those we import. There are more jobs for each $1,000 value of textiles produced than in the same value of automobiles. So, if we increase imports of textiles in order to provide dollars with which the other nation can pay for our exports of automobiles, we are displacing, not creating, employment.

United States exports of ten billions yearly are talked of, and, of course, that means imports of the same value, if the exports are to be paid for.

Even during the war years, and despite high prices, our imports have only slightly exceeded $3,000,000,000 a year. It seems very unlikely that the United States can import more than three times this amount without seriously crippling domestic production.

It should be clear that if we can import and use commodities in addition to what we produce ourselves, the effect on employment in the United States will be quite different than if the increased imports only replace what we now produce. H. R. 2652 is aimed directly at replacing what we now produce. If full employment is a prime necessity, even if it entails huge Government expenditure in an attempt to bring it about, it becomes even more important that no unemployment be created through a mistaken import policy.

Obviously the prime purpose of H. R. 2652 is not to ease our procurement of needed materials, for many, if not most of these, are now free of duty. The real purpose is to open our markets so that other nations can sell us more competitive goods by reason of the additional 50-percent reduction in duty.

It is a proper objective if its limitations are realized and if it does not result in mere displacement of employment in the United States in order to provide employment somewhere else.

These considerations point up some of the original weaknesses in the Reciprocal Trade Agreements Act of 1934 that still exist. They need reviewing, for surely we can base our efforts at world cooperation on a far better foundation.

The act, in our opinion, was clearly unconstitutional. There was tacit admission of that fact when it was so framed, that there could be no judicial review. The name was deliberately misleading because had they been truly reciprocal, the trades would have been between two nations. There was no reciprocity involved when reduced rates were made available without quid pro quo to all nations of the world, except Germany.

Actually, the act of 1934 was an indirect attempt at repeal of the Tariff Act of 1930, and H. R. 2652 would complete the job.

We are not arguing for a return to the rates of the Tariff Act of 1930, or for any change in the rates reduced since 1934, unless some changes are or will later become necessary to carry into effect the objectives of that tariff act to encourage the industries of the United States and to protect labor.

We believe those objectives are entirely sound today.

The important point we want to bring out is that Congress should again clearly define the economic basis on which any changes in rates shall be made.

We agree that free, unrestricted trade among all people everywhere is a fine ideal. But an even greater ideal is high living standards for those people. Up to the present the standards of the United States have not been equaled anywhere else. It should be realized that there must be some equalization in standards as these affect unit costs, either bringing others up or else lowering ours, and that this must be a condition precedent before free trade can be put into practice. Otherwise, the cart is put before the horse and the result can only be ruinous to us.

It seems to be generally overlooked that many nations could not adopt free trade even if they wanted to. Most of their government revenue is produced by tariff duties.

Besides, the record shows a trend quite opposed to free trade, for all about us we find nations increasing tariffs and tightening other restrictions. What does it profit us to pretend otherwise?

It has been said that in the miracle of our war effort, Americans efficiently organized on a mass-production basis, can outproduce and undersell the world and so need no tariff. Unquestionably we have outproduced. But have we undersold? What of the essentials—food, clothing, and shelter? Which of these are cheaper today? The fact is that despite rigid price controls, prices of all commodities are about 140 now contrasted with 100 in July 1939.

As we read Government plans, the trend is toward higher wages and shorter hours. And there seems little expectation of drastic reduction in taxes. This does not point to low production costs. Wage levels in this industry are higher than the average industrial wage level in the United States. Wage levels in the chemical industry of other countries were very substantially lower than those in the United States up to 1939. Efficiency of the foreign worker was also lower than that of the American, but the difference in efficiency was not nearly so great as the difference in wage.

And, of course, any comparison of wages or tariffs is absolutely meaningless in the absence of stability of currencies and exchange.

The changes in exchange value of the currencies of France and the United Kingdom, are good illustrations.

The United States made trade agreements with each of these countries. By contrasting the exchange rate at the time the agreements were signed with the later depreciated rates, it can be seen how a foreign country can, through a change in exchange rate, give to itself the equivalent of a further drastic reduction in American tariff.

French trade agreement, May 6, 1936

French franc:

May 6, 1936	$0.0658
June 1, 1937	.044
June 1, 1939	.026

United Kingdom trade agreement, Jan. 1, 1939

Pound sterling:

Jan. 3, 1939	$4.626
June 1, 1943	4.035

Temporarily, we in the United States have more productive facilities than anyone else. That condition may not continue very long once the war is over, for many of these are Government plants solely for implements of war. And it certainly does not mean that existing facilities have everywhere else been destroyed. Besides, when destroyed plants are rebuilt they will be modern. In many cases the equipment and the know how will be furnished from the United States.

Free traders and protectionists both have their theories, but who actually knows what amount of tariff will be needed by the United States after the world once again gets down to work?

More than 1,200 reductions in the rates of 1930 have already been made since 1934, but as war began in 1939, there has been no normal trade since. Yet, House resolution 2652 would open the way to even more drastic reductions before the effect of those already made can be known.

This, in fact, involves something far more important than the mere determination of what rates of duty the United States should impose. It brings into focus the question of whether we shall have a government of laws or a government of men. Which is to have first priority in our economic policy, world politics or domestic welfare?

If Congress fails to recover and perform its constitutional duty in respect to tariffs, world political considerations will inevitably be dominant over the domestic economic considerations which should govern. In the laudable desire to reduce unnecessary tariffs these facts should be given proper weight. A fatal weakness of the Trade Agreements Act is the lack of such an essential economic basis on which to determine a change in rate. Congress had provided it in section 336 of the tariff law but the Trade Agreements Act discarded it, making possible a political rather than an economic basis of determination.

Our principal objectives in the United States have been and will continue to be:

High living standards.

High wages.

High level of social security.

With such objectives we must devise plans which, while promoting international economic cooperation, will on the other hand not defeat our domestic objectives.

The objectives thus become the yardstick by which to measure the effectiveness of the plans devised.

Full employment in the United States is paramount both for the realization of our domestic objectives, as well as to make fruitful our cooperation in international affairs.

We recommend the following:

1. As we believe that the Reciprocal Trade Agreements Act is unconstitutional and that H. R. 2652 asks Congress to further abdicate its constitutional duty to regulate commerce, we suggest that a more suitable plan can be devised.

2. We ask that Congress preferably write a new bill, or if the framework of the existing section 350 (Trade Agreements Act) is to be used, amend it so that in either case a constitutional method of rate making will be provided.

3. The Congress should provide the economic basis or yardstick which is to be determinative in (a) deciding whether an existing tariff rate is too high or too low, and (b) the amount of change to be made. Such changes in tariff could be made in return for substantially equivalent changes by other nations.

4. Any changes, in accordance with purposes and rules laid down by the Congress, should be made by a reconstituted Tariff Commission. These should then be promulgated by the President, unless Congress by an adverse vote within a specified time rejects the proposals in whole or part.

5. The Congress should provide for mandatory action under the antidumping law of 1921 and under sections 337 and 338, dealing with unfair practices and discriminatory treatment.

6. Congress should provide (and this is very necessary if we plan to be as liberal as possible without detriment to our internal economy) that American producers shall at least have the right of judicial review and prompt redress if injury results or if satisfactory evidence can be produced showing that injury will result because of a changed rate.

7. Provide for the restoration to full force and effect of sections 336 and 516 of the Tariff Act of 1930.

8. Provide automatic adjustment of rates to equalize undue fluctuations in exchange rates between currencies. The power to nullify United States tariffs through wide changes in exchange rates should be removed. United States tariff rates, whether or not reduced in trade agreements, should be deemed to apply on the basis of exchange rates in force at the time the rate was made. There should be provision for compensatory rates to apply wherever exchange rates vary substantially.

Respectfully submitted by the Synthetic Organic Chemical Manufacturers Association of the United States—August Merz, president; C. A. Mace, secretary.

APRIL 16, 1945.

We Fought a War To Save Free Enterprise

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. CARLSON. Mr. Speaker, in the April issue of the National Grange Monthly there appears a very timely article written by Fred Brenckman, national legislative representative of that organization entitled "To Regulate Coal Industry."

As there are several bills pending in Congress providing for the regulation of prices in the bituminous coal industry, I want to commend this article to the Congress. Legislation similar to that proposed is contrary to the basic fundamental policy of free competition which has made our country great. The future success of the coal industry depends upon its having a full and free opportunity and incentive to mine and sell coal at a profit. The coal industry is not a national monopoly any more than farms or timber, and if Congress is to set minimum prices based on cost of production for this national resource, would it not be logical to do the same for petroleum, farm products, and factory products. This, of course, would lead to regimentation and a bureaucratic controlled domestic economy. We have just defeated German national socialism at an unparalleled sacrifice of blood and treasure. Why support a measure here that leads down the road to serfdom?

The article by Mr. Brenckman reads as follows:

TO REGULATE COAL INDUSTRY—PENDING MEASURES IN CONGRESS POINT TOWARD DANGEROUS POSSIBILITIES

Farmers, together with other consumers of coal, both domestic and industrial, have a vital interest in several bills pending before ways and means committee of the House of Representatives to reenact legislation for the regulation of prices in the bituminous coal industry. As many disinterested people view it, these proposals are part and parcel of the movement for Government control of industry, as opposed to our traditional system of free enterprise.

It is worthy of note that Socialists, both of the right and left wings, endorse regimentation of the bituminous coal industry in their common hostility to competition and in their desire to replace it by a managed economy. If this legislation should be enacted, the precedent thus established for the coal industry would likely be extended to other industries allegedly charged with a public interest.

ENCOURAGES COST INCREASES

The proposed legislation encourages cost increases to the point where the price of bituminous coal will be pushed to such levels as to force the consumers, during normal periods of supply and demand, to turn to competing fuels, thus tending to decrease rather than to expand the existing market for bituminous coal. On the face of it, this would appear to penalize the industry as a whole for the benefit of high-cost producers.

In a nutshell, it is the cartel system, more or less disguised. Advocates of that system, who assert that free competition leads to chaos, fail to recognize the essential role that competition plays in the functioning of a system of free enterprise. Some of the ablest students of the question take the position that the attempt to stabilize prices arbitrarily, the attempt to keep inefficient high-cost producers in business, leads to chaos.

The stated objections of the proposed coal legislation are: To conserve the natural resources of the Nation and to promote interstate commerce in bituminous coal. This implies that price fixing should be done with a view toward encouraging efficiency; otherwise, the stated objectives would be fundamentally misleading.

WOULD PROMOTE UNSOUND POLICIES

The estimated coal reserves in some sections of the country are good for over 500 to 700 years; in other parts for from 2,000 to 3,000 years at the present rate of consumption. Other competitive fuels are much more in need of preservation. This being true, our purpose should be to promote

greater use of coal through efficient means of production, and to encourage the conservation of competitive fuels, such as oil, which in many sections of the country is already nearing the point of exhaustion.

Under the Guffey Coal Act, which expired some time ago and which was not renewed under the stress of wartime conditions, the contrary procedure was followed. That would be the case under the pending bills, which are closely modeled after the Guffey Act.

A price-fixing plan is prescribed, not on the low side, but on the high side; in other words, the proposed legislation would abolish competition and legalize a series of organized monopolies under Federal regulation.

The declared purposes of Congress as set forth in these bills are ignored by the establishment of inflated cost regulations that would result in a protective wholesale price, and a scheme for the benefit of certain coal companies, which would be placed in a position to overcharge the consuming public.

Members of Congress who believe in our American system of free enterprise will find little difficulty in justifying themselves for voting against this proposed legislation, if and when it is reported out of committee.

FRED BRENCKMAN.

House Concurrent Resolution 50

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. BREHM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement showing the necessity for passing House Concurrent Resolution 50, if we are to maintain equity regarding oil production in America:

INTANGIBLE DRILLING COSTS

The decision of the Fifth Circuit Court of Appeals in the F. H. E. Oil Co. case, filed March 6, is the immediate reason for the introduction of House Concurrent Resolution 50.

The court held invalid section 23-m (16) of the Treasury Regulations relating to Federal income taxes, which provides that certain drilling and development costs in the case of oil and gas wells may at the option of the taxpayer be deducted from gross income as an expense.

Section 23 of the revenue act permits the deduction from gross income of necessary business expense. It would be impractical for the statute to enumerate all items of expense. Hence, the Congress delegated authority to the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury to promulgate regulations. The regulation granting the option above referred to has been in existence for more than 25 years and has been followed and recognized by the Congress, the courts, the Treasury, the Commissioner, and the taxpayers.

The circuit court of appeals and the Supreme Court have had occasion to consider the regulation in more than a dozen cases and have directly or inferentially approved the validity of the regulation. The Congress has enacted and reenacted the revenue laws since 1918, without substantial change of the provisions of section 23. In 1940, the excess-profits tax was made a part of the income-tax laws, and by section 711 the Congress expressly recognized the opinion of the taxpayer to treat intangible drilling and development costs as an expense. In 1942, representatives of the Treasury advised Congress that the regulation had by long usage become embedded in the statute and urged enactment of language that would change the regulation. This Congress refused to do.

On petition for rehearing the Fifth Circuit Court of Appeals on May 4 withdrew the original opinion in the F. H. E. Oil Co. case and filed a substitute opinion eliminating the question of the validity of the regulation from consideration. If the original decision had been followed by the Bureau of Internal Revenue as the law, it is reliably estimated that it would have placed an immediate tax burden for current and open tax years on the oil industry of more than a billion dollars. The future ability of the oil industry to serve the public interest, in war or peace, would have been injured to an incalculable extent.

In 1944 the industry drilled 22,477 wells, including 3,881 exploratory wells and 18,586 development wells. P. A. W. estimates that 27,000 additional wells in 1945 will be necessary to maintain our necessary production. Abolition of the producers' right to charge intangible drilling cost to the expense of finding and producing oil and gas and requiring such cost to be capitalized would, according to estimates of the industry, reduce exploratory wells by one-third and development wells by two-thirds, and would have a similar continuing effect.

The action of the Fifth Circuit Court has so disturbed and confused the industry that it is imperative that the situation be clarified by passage of House Concurrent Resolution 50. This confusion and uncertainty will seriously deter drilling activity. House Concurrent Resolution 50 is designed to remove existing doubt and confusion, and eliminate uncertainty as to the question.

McCarran-Sumners Bill

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, I am advised that at an early date the bill known as H. R. 1203, now before the Judiciary Committee, will come to the floor of the Congress for attention.

I am receiving from time to time resolutions strongly endorsing the passage of this legislation, and under unanimous consent I introduce into the RECORD a resolution which has been forwarded to me from the Cass County (N. Dak.) Bar Association, expressing their approval and recommendations of the passage of this legislation:

Be it resolved by the Cass County Bar Association at its meeting held at Fargo, N. Dak., on April 12, 1945, That this association having studied and carefully considered the McCarran-Sumners bill "to improve the administration of justice by prescribing fair administrative procedure," now pending in the Senate and House of Representatives (S. 7 and H. R. 1203), and finding that said bill contains the fundamental requirements for fair hearings and decisions before administrative agencies of the Federal Government and that its passage now and without waiting for the termination of the present war is essential and in the public interest;

We do hereby approve said bill and recommend its immediate passage by Congress, and urge our Representatives and Senators to actively support said bill and diligently work to secure its prompt passage;

That copies of this resolution be transmitted to Senators LANGER and YOUNG and Representatives LEMKE and ROBERTSON by the officers of this association.

O. P. A.

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter in reference to the O. P. A.

The letter follows:

PASADENA, MD., *May 12, 1945.*

Hon. DUDLEY G. ROE,
House Office Building,
Washington, D. C.

DEAR MR. ROE: Please accept my heartiest congratulations for your courageous stand in advocating the termination of the O. P. A. No doubt thousands of Americans who have suffered financially and in other ways as the result of the impractical activities of the O. P. A. and other bureaus agree with you. However, I believe a new organization should take its place.

A board should be established in all economic centers to supervise prices and production. That board should consist of a legal department as a member of the board, of inspectors and clerks, and mainly of persons with practical experience in the kinds of business that the board would attempt to control.

As an illustration, let us consider the rent division. On the board covering these activities should be persons who operate rooming houses, converted apartment houses, larger apartment houses, small hotels, and large hotels. That board should be the enforcement agency and should hear all reports of violations, all defenses of operators, all complaints from tenants, and all prayers of operators for relief. At the present time those who are attempting to control various kinds of business know nothing about the problems of that business. The result is persecution for business operators, unfair and un-American activities, and evils that are worse.

Among those evils are the severe shortages in the necessities of life, that have prevailed in the past and continue to this day—shortages of sugar, coffee, gasoline, tires, meats, cigarettes and other things—shortages in the midst of plenty—artificial shortage caused by the dreams of incompetents who supplant practical experience with untried theories. The O. P. A., together with other bureaus have achieved nothing good. They have caused inflation, have created black markets that the people must patronize or do without, and have caused severe shortages in food.

Any group of nitwits can claim to hold down prices by making them so low that businessmen cannot operate. Today Americans are starving for meat and other foods and our returning war heroes will meet a kind of prohibition that is even more sinister and evil than the kind our armed forces met here after the last war. It required 18 years to rid ourselves of that yoke; the parasites who infest our Federal bureaus today will cling to the body politic like

leeches, sucking the life blood from decent Government, from business, and from the American way of living, for years after this war, unless brave patriots like you end this farce and unnecessary expense right now.

No time is to be lost. Trouble is brewing. Law violations, persecutions, race troubles, and riots. Already the saying is going the rounds that if gentiles need anything they must go to a Jew to get them—in the black markets. That's not only evil, but unfair to many noble Jews, but it's being said and broadly. When Americans know a law or legal methods are unfair, unjust, and contrary to their wishes they unite in breaking such laws, just as they did with prohibition during and after the last war. They are doing that today, in large measure, with the rules and regulations of the O. P. A., and it is foolish for our legislators to ignore that fact.

Therefore, I plead with you to continue your fight in trying to influence your colleagues in the right direction—at least, try to save Baltimore and other large cities from a race war that is being agitated by special groups of racketeers in real estate and other activities. In this connection I refer you to a copy of my letter to Mr. Paul Patterson, president of the A. S. Abell Co., publishers of the Sunpapers. The letter, in part, relates to the attack by the Sun (evening) on your fight to abolish the O. P. A.

It might not be a bad idea to start an investigation of the activities of the Sun and other newspapers as to ownership and rates charged the owners for advertising which are said on good authority to be discriminatory and contrary to Federal laws. It certainly is time to start a serious investigation of activities in the award of contracts, of prices, of the condemnation of various products, and of their disposal through salvage companies. In the last war we had our Hog Island and other scandals; in this one there are worse evils, but our political rulers appear to hide them and to protect those lawbreakers of a special group who perpetuate a reign of graft and lawbreaking.

Knowing you personally, although you will not remember meeting me in Sudlersville and other places when I represented a large organization of Americans and was making an investigation in the county seats of Maryland, I am confident that no newspaper editor or any other person will intimidate you or force you to refrain from doing what, in your opinion, serves the best interests of all Americans.

Respectfully yours,

LEE UHLER.

Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. McGEHEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Parkersburg (W. Va.) News of April 21, 1945, in which the question is asked "Are Farley's services to this Nation being fully appreciated?"

I heartily agree with the thought expressed by the editor in this comment on the wonderful services rendered by James A. Farley in behalf of our Nation and its people and feel sure that as time goes on the people of our country will the more realize his unselfish and outstanding service.

The editorial follows:

ARE FARLEY'S SERVICES TO THIS NATION BEING FULLY APPRECIATED?

We wonder if the significant service now being rendered to the American people by former Postmaster General James A. Farley is being fully appreciated. He has been going about the country in recent days, praising the virtues of private enterprise, and in general leaning toward democracy of the Jeffersonian type, rather than the near-totalitarianism too often practiced by the New Deal. In an address which he has just made to the Maryland Bankers' Association, he warns of perils from self-styled friends of free enterprise, and deplores the constant Government goading of business.

It will be interesting to watch the further career of Mr. Farley. It is unlikely he will forego the principles that he has espoused which led him to break with the higher leadership of the New Deal. Doubtless now he will enlist his resources in a formidable fight to re-orient the policies of his party in order to bring it more in line with traditional American principles, rather than to go in the direction that Henry Wallace apparently wants to go. Mr. Farley's political talents are concededly of a high order. It is quite possible that he and those associated with him will be able to regain leadership of the Democratic Party, in opposition to the Wallace-Hillman-Browder group. The outcome certainly will be watched by the Nation with a keen degree of interest.

Therefore his remarks, as follows, before the Maryland bankers will arouse more than passing study:

"Just as there has been no absence of convincing assurance that all possible effort will be made to balance the budget after the war, so we are left to speculate on the questions of the post-war attitude of government toward private business. Businessmen are aware of the challenge confronting them. Their appreciation of the importance of maintaining high employment is evidenced by the fact that they speak of the number of post-war jobs which they hope to offer as an objective of at least equal importance with the volume of goods which they plan to produce. It can be said with certainty that business leaders are in a frame of mind to make free enterprise work more effectively than ever before. But what will be the attitude of government? Will business be encouraged to go forward, to expand and improve plants, and to make commitments with labor, with producers of raw materials, and the distributors of finished products? This question is uppermost in the minds of bankers and businessmen throughout the Nation. Nor that we are fearful of the avowed enemies of the free-enterprise system. They are few in number and they seldom attain positions of power. The men who will bear watching are those who profess to believe in free enterprise, but with certain conditions always attached, such as provided it is helped by government, supplemented by government, regulated by government, protected by government against its own weaknesses, etc., etc. These are the same self-styled friends who say, 'If industry doesn't provide full employment, government must step in and take over,' having all the time a plan for that purpose in their inside pockets, ready to be flashed on the public the minute industry fails to perform to their liking.

"This constant goading of business, of threatening more regulation and more Government competition has prevented us from realizing the full benefits of a free economy. You bankers have had first-hand experience with Government competition.

"I understand that in the lending field you are required to compete with 46 different public agencies, and that you are now being threatened with more. You have indeed had a full experience with that technique by which officials soberly proclaim that credit for this and that is needed, and that unless the bankers meet the situation government will do the job. This kind of announcement, as we have seen many times, is an invitation to all groups to come in and ask for help. Soon a new pressure group is organized, and free enterprise is threatened with the loss of another foot of precious ground.

"In the early years of the depression it was necessary for government to supply credit for certain purposes which could not for good reasons be satisfied by private leaders. The need then was obvious to everyone. Today the situation is entirely changed. Our capital markets are functioning vigorously and effectively, both as regards equity and long-term debt. The banks are on the job looking for chances to lend money. I know that you are pounding the pavements and pushing into the byways looking for businesses requiring bank credit. I have been particularly interested in reading of the formation by banks in various parts of the country of your so-called bank-credit pools. The wisdom of adopting these measures is clearly apparent. By these means you have made certain that no credit application need be denied before it has been carefully scrutinized by a group specially set up to find ways of satisfying credit requirements which for one reason or aother fail to meet the tests of a particular lending institution. To me, and I am sure to many people, these credit pools are symbolic of the desire and determination of bankers to make sure that no legitimate business will be hampered by lack of bank financing in the great program of production and employment to which we look forward after the war."

Proposed Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, perhaps no State in the Union is more deeply concerned with the uses to which the waters of the Missouri River and its tributaries can be put than is the State of North Dakota. It should be obvious to all who are concerned with the problems of the midcontinent, that full and complete use should be made of the streams to buttress the country against the recurring drought periods which have happened since the beginning of time.

These sections of the country have been reasonably heavily populated, and in many instances with large herds of cattle. The natural advantages to come to the country as a range country are impaired in these excessive drought years. It is imperative, therefore, that steps be taken to fortify and to supplement the country against these recurring droughts.

This can best be done by the use of the great Missouri River and its tributaries, by proper development of irrigation, and reclamation. This work can be accomplished by existing agencies, or it can be accomplished as proposed under the

Murray bill, S. 555, known as the authority bill.

I am receiving expressions on both sides of this issue from various groups of people in the State of North Dakota. Under unanimous consent, I include the resolution adopted by the Lions Club of Dickinson, N. Dak., in which they express their disapproval of the principles of Federal authority.

LIONS CLUB,
Dickinson, N. Dak., May 15, 1945.

The following resolution was adopted by the Dickinson, N. Dak., Lions Club on regular motion at its regular meeting on May 1, 1945:

"Whereas the proposed Missouri Valley Authority region appears too large and diverse in interest to be administered "workably" by an authority, and

"Whereas the subjection of industrial growth and agricultural development to complete domination by a Federal corporation clothed with the power of government and exercising autocratic control over the two most important basic economic resources of the areas; i. e., land and water, is deemed unwise and a complete departure from the laws and customs under which this country has developed and prospered, and

"Whereas we believe the rights of the States involved can best be preserved, their resources wisely developed and their economy advanced most soundly by control exercised by and through representatives chosen by the interested States, acting together in concert and in full cooperation, as heretofore, with the United States Bureau of Reclamation, the Corps of Army Engineers, the Department of Agriculture, and other tested, experienced and regularly constituted agencies of the Federal Government, and the above relationship has worked satisfactorily and should be preserved, and

"Whereas the creation of a Federal supercorporate authority with vast powers in the lands of three men appointed by the President for 9-year terms is not in the public interest: Therefore, be it

"*Resolved*, That the Dickinson, North Dakota Lions Club recommends that the proposed legislation establishing a Missouri Valley Authority be defeated."

DICKINSON (N. DAK.) LIONS CLUB
M. V. A. RESOLUTION COMMITTEE,
FRANK P. WHITNEY, *Chairman.*

ROY PULVER.

The Postal Bill

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. HAND. Mr. Speaker, this bill is an act of simple justice to postal employees and is long overdue. I have supported it from the beginning, and supported it in committee. It is useless to speak further in favor of it, because it will receive the unanimous approval of this House. I rise only to compliment the committee on the excellent work that it has done, and particularly my distinguished colleague the gentleman from New Jersey [Mr. HARTLEY], who is the ranking minority member of the committee. He has devoted his time and energy very generously to the preparation and passage of this bill.

An Unanswerable Protest

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Toronto Globe and Mail of April 27, 1945.

AN UNANSWERABLE PROTEST

The latest proof of the harm done to the prestige and name of Canada in the United States by the King Government's vacillating and piecemeal policy on manpower comes from a speech delivered last Monday in the House of Representatives at Washington by Mr. L. H. GAVIN, a Republican Member from Pennsylvania. Mr. GAVIN is no habitual critic of the British Commonwealth, and he gave unstinted praise to the valor, fortitude, and brilliant exploits of the fighting forces of Britain and her Dominions. But, in common with millions of other Americans, he cannot understand why there should not be uniformity of contribution and sacrifice in the partnership in the common struggle, and he resents the attitude of Canada, with whom he links Australia, in keeping in her draft law reservations which permit physically fit men of military age to decide for themselves whether they will fight overseas or stay at home on some garrison duty, and prevent the full use of her available fighting power.

"I feel," Mr. GAVIN said, "that national service acts of our allies should be on the same footing as ours, and no reservations made in any of the Allied countries. Certainly, we made no reservations. There should be no reservations. I feel that, if the British Dominions and our allies have equal voting rights in world affairs, they should amend their national service acts so that they should have equal fighting rights."

No fair-minded Canadian can take issue with this protest. Our Government has poured out huge sums of money to publicize in the United States the details of our national war effort, which is highly creditable to the people. But the effectiveness of this expensive propaganda largely has been nullified by the half-hearted mismanagement and culpable inadequacy of our so-called manpower policy. Moreover, episodes like the dismissal of Mr. Ralston from the Cabinet because he advocated unlimited conscription, the desertion of thousands of "zombies" on eve of embarkation for overseas, and the anti-draft disturbances at Drummondville, Quebec., and other places have created a most unfavorable impression in the United States about the ardor of the Canadian people for prosecuting the war to a victorious conclusion.

Undoubtedly this unfavorable feeling must have been deepened by the announcement of our Prime Minister that Canada's contribution to the war in the Pacific would be kept on a purely voluntary basis. A large body of the American people have all along been more concerned with the fortunes of the Pacific war than with the struggle in Europe, and the American casualties in the long series of bloody battles fought to wrest islands in the Pacific from the Japanese have been very heavy. But Canada is a Pacific power and, as Mr. GAVIN points out, being nearer to Japan than the United States, should be even more interested in the suppression of the evil war lords of Japan. Britain, which is far distant from Japan, has, through Mr. Churchill, given a solemn pledge that as soon as the European war ends she will throw all her available fighting power and resources into the battle in the Pacific.

When Canada refuses to do likewise, it is little wonder that Americans like Mr. GAVIN complain about her laggardness and suggest that her Government's claims for a greater voice in world affairs would come with a better grace if it agreed to a uniformity of her sacrifices with those of her partners. The great majority of the Canadian people want such uniformity, but their Government forbids it and exposes them to the humiliation of such reflections on their national repute as Mr. GAVIN has made.

The Higher Cost of Victory

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Wakefield (Mass.) Daily Item of May 3, 1945. From the great number of letters I am receiving from constituents endorsing the editorial I am satisfied that the sentiments expressed therein are very widely held by our people. They are willing to pay the cost but they want to be assured that the assessment is just.

The editorial follows:

THE HIGHER COST OF VICTORY

Anyone who discounted the warning here, weeks ago, that victory would cost us more in both money and food probably changed his mind after reading the side-by-side dispatches from Washington on May 1.

Sugar will be first slashed (to us) that America may feed the liberated nations of Europe.

There will be no increase in meat, nor will any Army demands be diminished for 6 months.

"We must tighten our belts"—again—because Judge Rosenman, the "White House adviser," says so and because an inter-agency committee says so, "if pressing needs of liberated Europe are to be met."

And there you have it.

It may be wholly necessary, it may be partly necessary, it may be partly a scheme to keep America under rationing after victory, that the specializers in planned regimentation may keep and increase their authority and keep and increase the jobs. It may be all three.

Meanwhile, we know that there is plenty of beef in Argentina, with that country all ready to bargain where she can get the best deal for it.

We all know there is plenty of meat—and butter—for our neighbors to the north, Canada.

We know that while America may have to operate the cash register and food dispenser to prevent chaos in Europe, in all probability later we'll have our ears kicked off, as we did the last time.

We have saved the British Empire.

We have saved Russia, the country that held the bloody hand with Germany until it became necessary to do otherwise.

The British Empire is a vast storehouse of food and wealth. Except for the British Isles, little if any of it has suffered to any extent.

How much are these nations, which we have saved, going to contribute to prevent chaos in Europe?

It is time we knew.

It is time we sent a nonpartisan, or bipartisan, committee of real experts to Europe to find out just what we must do, and it is time we started telling our beneficiaries what they are expected to do to help themselves and to help those whom we have liberated with our sons' blood, our food, our munitions, and our money.

It is time we checked up on estimates and opinions of what and how much we should do from people who have a personal interest in Europe, either here or there.

It is time we stopped believing the bunk that they held the fort for us until we had time to get there. They got themselves into it, and it is time they realized who got them out.

And it is time we began to watch closely for future propaganda that to prevent revolution, anarchy, or something, we must start feeding the enemy, the Nazis. We did that 25 years ago and nurtured the brats who (as we learn from first-hand stories in this paper from our own American prisoners) fed our "liberators" a crust of rotten bread and a bowl of dog-meat soup once or twice a day.

We know from first-hand soldier and war correspondent stories that the Germans fed pretty well on their own products and what they stole from other nations—and, what is worse, on what they stole from the American Red Cross boxes our money and loving hands prepared for them.

We know that even in the conquered country of France our "liberators" found the people much better fed and dressed than anyone dared suppose.

If the Nazis could do this while they were at war, why not make them continue to do it, for their own and for their victims?

Every American sympathizes with the afflicted people of Europe and is shocked by the pictorial and printed revelations of what has taken place there. Nevertheless, as a good many far-seeing writers and some courageous statesmen have pointed out, America cannot bankroll the universe, and a bottle-fed economy, with Uncle Sam as the milkman, cannot do anything but produce parallel conditions in this country.

VE-Day

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith copy of a radio speech made on VE-day, May 8, 1945, by direct wire over radio station WOL, Washington, to radio stations WNOE, New Orleans, La., and KNOE, Monroe, La.:

It is a privilege to speak today, VE-day, to the good people of Louisiana, and particularly to my friends and constituents of the Fifth Congressional District. Humbly do I join with you in giving thanks to Almighty God on this occasion.

Today, May 8, 1945, VE-day to you and me, is one of the great days in history. It marks the crumbling and unconditional surrender of the most ruthless, the most barbaric, and inhuman dynasty in history. Nazism; its evil founder—one Adolf Hitler and his sneering, cruel, bully-boy followers—are no more. The myth of the superman has been exploded. Right, God-fearing right, has triumphed through the might of Allied arms, the brilliance of American and Allied leadership, plus the unmatched resources and industrial skill of the American people.

You, fellow Louisianans, have contributed mightily to this great victory. The farmers, in spite of the shortage of labor, machinery, and equipment, and the pestilence of floods, have contributed untold tons of food. Industry and labor have contributed ships and planes and lumber and pulp and tires, chemicals, gasoline and fuel, and lubricating oils. Commerce has flowed through our great Gulf ports. All of you have given your loved ones to the armed forces. Many have fallen, but we pray that by the grace of God and farsighted, unselfish leadership it will not be in vain.

To these fallen and to their families we humbly pay grateful and unstinted tribute.

We now turn our energies to the Pacific war with the prayerful hope that there, too, we may soon celebrate VJ-day and the return of our boys to the bosoms of their families and friends. May it be soon—very soon.

Meantime we must not falter in our determination to carry on for God and country to an everlasting peace.

A Solution of the Meat Problem

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1945

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that, in order to try to help solve the critical meat shortage in the United States I have introduced in the House of Representatives a joint resolution for the suspension for a period of 90 days, all orders, regulations, and directives issued under the Emergency Price Control Act of 1942, as amended, or any other provision of law of temporary operation, insofar as they impose requirements, limitations, or other controls with respect to the allocation, slaughtering, sale, distribution, or processing of livestock for meat or of meat or meat products, but it is provided, however, under the joint resolution that the same shall not have the effect of suspending or making inoperative any such order, regulation, or directive insofar as it relates to the allocation, slaughtering, sale, distribution, or processing of livestock for meat or of meat or meat products for the armed forces of the United States or for any other governmental use.

Mr. Speaker, it is generally agreed that the Office of Price Administration has bungled the meat program, and with more livestock available than in former years, many of the people of our country are unable to obtain any meat, except through the black market, and that notwithstanding all of the protests of the Members of the United States Senate and the Members of Congress, no solution has been brought forward to give the people any relief. In my opinion the situation is unwarranted and since the governmental agencies do not seem able or willing to offer a plan or program, except the one now in effect, which is unworkable and has brought about the present situation, then it is the responsibility of the Congress to take some action to give relief to the country in the critical circumstances.

Mr. Speaker, I am informed that in my own home town the only packing house there, and all places handling meat except two, have closed, and only a few regular customers are able to obtain meat. This condition is general throughout the country, and in an effort to make it possible for the civilian population to obtain a reasonable amount of meat of which they have been deprived, I am offering this resolution to suspend all regulations of the Office of Price Administration and other agencies for 90 days, in which time it is my opinion that the committees of Congress will recommend to the Congress some plan to solve the situation.

Mr. Speaker, with your permission I request that my joint resolution be printed in the RECORD along with these remarks.

House Joint Resolution 197

Joint resolution to provide for temporary suspension of the controls affecting the distribution and sale of meat for civilian consumption

Resolved, etc., That, for the period of 90 days beginning with the day following the date of enactment of this joint resolution, all orders, regulations, and directives issued under the Emergency Price Control Act of 1942, as amended, or any other provision of law of temporary operation, insofar as they impose requirements, limitations, or other controls with respect to the allocation, slaughtering, sale, distribution, or processing of livestock for meat or of meat or meat products, are suspended and shall be inoperative: *Provided, however,* That this joint resolution shall not have the effect of suspending or making inoperative any such order, regulation, or directive insofar as it relates to the allocation, slaughtering, sale, distribution, or processing of livestock for meat or of meat or meat products for the armed forces of the United States or for any other governmental use.

Industrial Wire Cloth Institute Opposed to Trade Agreement

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 18, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum relative to H. R. 2652:

WAYS AND MEANS COMMITTEE,
Seventy-ninth Congress,
Washington, D. C.

Memorandum re H. R. 2652.

SIRS: The members of the Industrial Wire Cloth Institute are not in favor of an extension of the Reciprocal Trade Agreements Act.

Their objection is based on the fact that in the 1939 Canadian agreement, the United States rates of duty on industrial wire cloth, 90 mesh and coarser, were cut by 50 percent despite protests by the industry against that action. To reduce by a further 50 percent the meager tariff protection thus left to this industry, it is urgently felt, would be—for

the following reasons—inimical to the best interests of our country.

Industrial wire cloth is an obscure, but nonetheless vital factor in our prosecution of World War No. 2. It is on the War Manpower Commission's list of critically essential materials. For the past 3 years the urgent demands of our own Army and Navy, as well as from England and Russia, have far exceeded the industry's capacity to produce. And its production has been zealously fostered by the War Production Board.

There has been, and still continues to be, hardly a single military production program that is not dependent upon industrial wire cloth; either as a specific component or as a vital element in absolutely essential processing and manufacturing operations.

Industrial wire cloth is a "must" adjunct to the production of powder for all types of ammunition; it is an important factor in the cracking process employed in the production of high octane gasoline; it is used for the grading and sizing of raw materials such as mineral ores, coal, and coke; and it is employed in the processing of flour, salt, sugar, rice, and innumerable other basic and secondary food products. Industrial wire cloth is an important factor in the production of synthetic rubber; it is extensively used in the manufacture of chemicals and plastics; and it is essential to the production of aluminum, copper, steel, chromium, manganese, molybdenum, and tungsten.

Every drop of blood plasma administered to our wounded men, in the field and behind the lines, has to be filtered, at the time and place of application, through a screen of industrial wire cloth. Industrial wire cloth cleans dust and dirt out of the air which passes through the carburetor and into the engine of every military airplane, tank, truck, tractor, jeep, and motorized artillery unit. And oil for the crankcases of all such equipment is strained through industrial wire cloth. It is reliably said that without air filters our planes would have been grounded for overhaul after only one mission through the sand and dust of the African campaign.

On the farm, industrial wire cloth is used in threshers, reapers, hullers, fanning mills, corn shellers, and other grain harvesting, cleaning, and grading equipment.

Facilities for the production of industrial wire cloth cannot be created overnight. It takes from 2 to 4 years and more to train a competent weaver of industrial wire cloth, dependent upon the type of material to be produced. His is an entirely different skill from that of a textile weaver, and the equipment upon which he works is radically different from the ordinary textile loom.

The industrial wire-cloth industry is not large; its total production in this country before the war being only something like seven or eight million dollars. All United States industries, however, small or large, should be considered on the strategic importance of their products rather than in terms of dollar value of output. And by "strategic importance" is meant strategic in terms of our peacetime economy as well as in war.

Repercussions from the 50-percent reduction on industrial wire cloth in the Canadian agreement of 1939 were minimized by the outbreak of war in Europe. From the industry's experience with foreign competition on finer than 90-mesh wire cloth, however—competition which, in 1938, equaled in dollar value the entire quantity of that grade of wire cloth produced in this country—it is reasonable to assume that we would have found ourselves in distressing difficulties as a result of the 1939 50-percent reduction in our tariff protection on wire cloth 90-mesh and coarser.

This industry feels that its vitally important relationship to present war needs and continuing preparedness against future aggression, coupled with the normal peacetime economic need for adequate United States production of industrial wire cloth, and the obvious desirability of post-war full employment of labor, entitles it to relief from a very real threat of extinction due to the provisions for extension of the Reciprocal Trade Agreements Act as incorporated in H. R. 2652.

THE INDUSTRIAL WIRE CLOTH INSTITUTE,
RALPH W. BACON, *Secretary.*
NEW YORK, N. Y., *April 16, 1945.*

Tribute to Franklin D. Roosevelt

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1945

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute to Franklin D. Roosevelt by Rev. Joseph I. Gulick, pastor of the First Presbyterian Church in Idaho Falls, Idaho, delivered in the Trinity Methodist Church in Idaho Falls, Idaho, on April 14, 1945.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

A TRIBUTE TO FRANKLIN D. ROOSEVELT

(By Rev. Joseph I. Gulick)

When a great man leads, leader and people are bound in the bundle of life together. Perhaps that is why the heart of America seemed to miss a beat when the word flashed across the Nation last Thursday that the President's great heart had ceased to beat.

For so long he had been so large a part of the life and spirit and pulse beat of America. Even still, our hearts, like muffled drums, go softly as we think of him. Seldom has national sorrow reached so widely, or penetrated so deeply.

Since the hour he left us, tributes and eulogies have been heaped, like fragrant flowers, upon his memory. The official services in the Nation's Capital have just ended. But in thousands of cities and towns throughout America, and in countless homes and hearts throughout the world, the lamp of sorrow burns.

He was the good neighbor to humanity—an intimate, throbbing part of the life of the world.

Our service here in Idaho Falls today is but a continuing note in the chorus of universal sorrow and of universal tribute.

Who was this man?

And what gave him such a hold upon human hearts?

Thinking of him, I find my own thoughts slipping back to a windy March day in the Nation's Capital in 1933.

It was the day of Mr. Roosevelt's first inauguration. We were a part of that great throng of tens of thousands of American citizens lining the avenues and hoping to catch a glimpse of this man, who spoke as the prophet of a new order of things in the Nation, and who seemed to have taken the hearts of the Nation's people by storm.

In a throng, packed so densely that one hardly had power of motion, people pressed against the restraining ropes along the driveway to Capitol Hill. Others seated in cars and piled on top of cars, waited for hours and watched the passing parade. There were airplanes, helicopters, and giant dirigibles overhead. There were bands and Army trucks and tanks and infantry and cavalry on the march below. But all this was inconsequential to a crowd waiting for its first look at the new President.

Finally, a thrill ran along the avenue, and in a moment a big open car swung slowly up Capitol Hill, and thousands had their first glimpse of Mr. Roosevelt, the president-elect.

Smiling, friendly, human—and massive—he seemed that day as he sat in the rear seat of the big limousine. The crowd went tense as he passed. I noticed the men around me were excited. They were enthusiastic, and a man in working clothes right beside me in the throng said: "Look at him. Look at him. There's a man for you."

So he began his career as President 12 years ago. The man of the hour. The hope of a troubled and distressed Nation.

And now he has come to the end of the trail. And once again the crowds—the great world crowds—no longer jubilant and hopeful; but hushed, reverent and half fearful and wondering, do him honor.

Truly, he was one of us, and our hearts might well skip a beat, when his heart ceased to beat.

For him, the presidential trail led over a longer road and through more changes in American history than any other President has known. It led him through 12 years of time. It led him through unprecedented power and victory as party chieftain. It led him through revolutionary changes in American agriculture, business, and industry. It led him into the tragedy of a second World War.

No former chieftain traveled the presidential trail for so great a length nor—for good or evil—wrought such revolutionary changes in the American way of life. And in all these changes Mr. Roosevelt was sincere. I think even his opponents will admit that. History will have to judge of the wisdom of some of his innovation, but history will never question his sincerity. He strove constantly for the welfare of the Nation, and for the good of the common man. And when he had no chart, and knew not what would work, he tried out something.

Truly, he was a great American, a great President, and a great internationalist. His humanitarianism, his courage, his indomitable will, his social charm and persuasiveness of spirit—sometimes his opponents would refuse to meet him in personal conference or would cut his voice off the air lest his very tone and frankness and sincerity of manner persuade them to his way of looking at things.

Admittedly Mr. Roosevelt had his faults, as all mortals have. But as Mr. Hoover said: "In the regrets of death all things are buried."

And so he came to the end of the trail—America's most revolutionary President.

"As in the falling dusk he heard the final bell
And went out in answer to its summons."

What now is left to us—to the Nation he led—to the people he loved? What is left to us? Two things—two great things, among innumerable lesser things, are left to us: First, a name, a memory, a character with the perspective of history already bright upon it. This is left to us. "What will history say of him?" Often doubting men asked that question during the past 12 years. So many differed with him. So many knew not how to rate him. "Genius or demagogue? Realist or visionary? Statesman or politician? What color—what color will he take when the light of history shines upon him?"

As an apprentice in the blacksmith shop many years ago I used to watch the master forgeman heat the steel and hammer it upon the anvil to the desired shape and pattern, and then heat it again and thrust it for an instant into the cooling vat. And after that initial thrusting of the steel into the water he would hold it up and watch it intently to see what color the metal would take. And if a line of blue began running up across the blade, his face would break into a smile and

he would say, "Good stuff. Good stuff. Real steel." And he would watch while the line of indicating blue ran clear across the blade, and then he would plunge it a second time into the cooling vat, and would lay it upon the anvil—thoroughly tempered metal, the finest steel, every forgeman's pride.

What color will he take in the light of history? Friends and enemies alike asked that often concerning Mr. Roosevelt in the years gone by. But when, after the hammering and the forging and the furnace heat of 12 hard years, a sovereign power plunged his spirit into the chill river of death—in that first night, and in the lengthening hours since, we have watched the color tint that history is to give him. Watched it come out in clearer, brighter blue.

Shall he take his place in history as one of America's immortals? To that question the Nation's heart has already answered, "Yes; yes."

Now that he is gone there is left to us a name, a memory, a character with the blue of royalty shining from it—and to shine with increasing brightness in the lengthening perspective of history.

And then something else is left to a lonely America and to a wondering world, now that he is gone from us. And that something is a mood. What kind of a mood? As near as one can sense it or analyze it, there is in the Nation today a mood which thousands once felt in the open-air amphitheater in Arlington on Memorial Day.

It was nearly 12 years ago. It was Mr. Roosevelt's first visit, after he became President, to the Memorial Day services in Arlington.

Memorial Day in Arlington. It seemed as if a thousand emotions thronged the hearts of those who walked in Arlington for the first time that day. I can never forget it. We had gone out early, ahead of the crowds. We stood at the Tomb of the Unknown Soldier. We walked around the tower commemorating the sailors from the battleship *Maine*. We moved on the carpet of green among the rows of markers above the graves of the soldier dead. On each grave was a red poppy. They seemed like drops of crimson blood sprinkling the vivid green of the cemetery.

We passed under the oaks, the maples, the cyprus, and lotus trees. The crows sent forth their mournful calls in the distance. The baptismal drops of rain fell from the heavens—the scattered drops, like tears from the angels above, fell on the graves of the hallowed dead. And the long, long thoughts of history and of destiny were full in our hearts that day.

And then we came back to the amphitheater, where the crowd was assembled. It was a round marble structure with many arches for entrances, and chiseled in the top of the marble the old Latin phrase:

"Dulce et decorum est
Pro patria mori."

"It is sweet and fitting to die for one's country."

In the amphitheater the President was seated. And how anxious everyone was for a glimpse of him. Young mothers with children lifted their tiny tots up to see him. A grown daughter maneuvered her short, diminutive mother this way and that to help her catch a glimpse of him through the standing crowd. People were wistfully eager to see the President that great day.

The Secretaries of War and of the Navy each delivered an oration. The Marine Band played a wonderful elegy. And all hearts were swayed like harps under the spell of that patriotic pagentry for a country's dead.

And one could see that Mr. Roosevelt was touched and moved by it all.

But the most wonderful moment in that day of sorrow and of memory was that moment when, just at the close of the service, something stirred. (Was it a breeze across Alexandria's valleys?) And the flags, scores of them which had hung limp, dead, in the gentle sprinkle of rain during the morning—and the flags, just at the end of the service, suddenly came to life. They became rustling, creeping things in the arches above us and all around us in the amphitheater.

It was startling, almost electric, in its effect. These limp colors suddenly becoming flags afloat. Living things of the Nation. Stirring with a new impulse caught at the close of that day of sorrow. It was a thrilling moment. A never-to-be-forgotten experience when something stirred and the limp flags came to rippling, waving life again.

Shall it not be the same today, oh citizens of America? After these moments of memory, after the tears from a Nation's heart have fallen for him, our leader? Shall there not be a sudden stirring through all our pulses? Faint at first, then stronger. And then running, thrilling from heart to heart—from city to city—through the arches of the States, far across the Nation, and clear around the world. The stirring of a mighty purpose born from out of our sorrow and from our memory of him. Shall not this be the permanent mood to possess America henceforth?

Today we say, "God be thanked for a strong man and for an adequate leader in our country's hour of need. God made him great, and strong, and adequate for an hour of need. And God crippled him to give him the human, sympathetic touch with all mankind."

But now that he has finished his work and has been gathered to the Nation's fathers, now God make America great and strong and adequate. She must not rely always, and only, upon great leaders. Under God she must be great in her own right. To that end let there be great stirrings in American hearts of every faith and of every party.

And let the urge and the impulse from the lives of these great leaders—the men God sent us for the crisis hours—Washington and Lincoln yesterday, Wilson and Roosevelt today, America's immortals, henceforth—let the strength of their wills, the vision of their minds, the pulse and purpose of their great hearts, let it stir in us, and let it carry on, and let it carry through, and bring victory in war and in peace.

Postal Salaries

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. RIVERS. Mr. Speaker, this legislation is a matter of the utmost urgency to all the faithful employees of the postal service. For those who have invested their very lives in this extremely essential and important service, and have linked the security of their families to it, it is a matter of survival. I wish to point out and remind you that these people have been patient, that the 20-year gap between their incomes must, in justice to them, be brought to the 1945 level and not left hanging as they were in 1925. Living costs have increased. Standards of living must be maintained and improved insofar as it is possible to do so.

The functions of the postal service are too often taken for granted and seldom given due credit for the splendid public service being rendered by this Department. We are all aware that the services, even under many handicaps imposed by our present national emergency, are most commendable. We must not be unmindful of this worthy and deserving cause. We should and must rally to it. In view of the fact that the measure now before this body provides for the authorization of a justifiable and deserving increase in pay for these patriotic people, I urge each and every Member of this House to support it without reservation, and I am confident that upon careful consideration of all the merits of the legislation you will support it. I feel that it deserves to be passed by a unanimous vote.

Reemployment of Veterans

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a radio speech delivered recently by myself on Fraser Gardner's For the Veterans' program over radio station WINX:

We are fighting a war to preserve our democratic institutions. But the job will be only half done with the winning of the war itself. Peace will bring with it the danger of social tensions as great as any this Nation has ever experienced.

The period of economic readjustment will, in all likelihood, coincide with the time when millions of our fighting men are being brought home and demobilized. They will have a right to expect every consideration and assistance in finding useful jobs. But, momentarily, at least, jobs will be scarce.

In such a situation unscrupulous demagogues may try to win the support of the veterans by promising them other people's jobs. They may seek to provoke a head-on clash between veterans and the labor movement. Remember that wherever fascism won power the first institutions destroyed were the trade unions.

Some, at least, of our men in uniform are aware of the danger. The Army weekly, Yank, in an editorial published some months back, mentioned the "unscrupulous people who would like to see a wild scramble between veterans and civilians for jobs after the war." Yank then went on to say: "It is going to be tough enough reconverting to full civilian production without starting a fight among the men who will do the producing. And if you begin by setting veteran against civilian, you will end by setting Protestant against Catholic, Catholic against Jew, white against Negro—and you will wind up by having the very thing we are fighting the war to destroy."

That process will never start if the veteran gets a chance to learn how much labor is doing on his behalf. I think it is safe to say that no group in our population has been more concerned than the labor movement to do everything that lies within its power to protect the veteran's rights while he is away and to ease his readjustment to

normal, satisfying, and productive life upon his return.

It is natural that labor should do this. Some 3,000,000 union members are in the armed forces. Additional millions in military and naval service are the sons, husbands, and daughters of union members.

By its collective-bargaining agreements labor is closing the loopholes in the reemployment provisions of the Selective Service Act and backing up enforcement with the full power of the unions. Union agreements guarantee protection of the veteran's valuable seniority right during his absence and provide that such rights accumulate until his return. The law also provides this, but forces the veteran to go to court to secure his rights. Grievance and arbitration machinery in union agreements provides for swift settlement of the veteran's claims without the delays, the technicalities, and the expenses that court procedures involve.

The law gives no protection to the veteran disabled in military service who is unable, as a result, to perform the duties of his former job. The AFL and CIO worked out an agreement with one of the major veterans' organizations providing that to the maximum extent possible this situation will be remedied by union contract. The labor organizations are seeking, and in many cases have already obtained, agreements with employers providing that disabled veterans should be reemployed in other jobs which they can handle at the prevailing wages for the jobs they receive. That point about wages is important. It avoids the danger that some grasping employer will pay less than the prevailing wages for the job because the veteran is receiving a disability allowance from the Government.

The law makes no provision to compensate the veteran without reemployment rights for the opportunity to acccumulate seniority and all the privileges that go with it which he had to forego during the time he was in uniform. I doubt whether there is any way this could be done by law. Large numbers of veterans had no jobs when they entered the armed forces. They were unemployed, or students, or on the family farm. Others may not want to go back to their old jobs and will lose their legal seniority protection if they do not. An agreement, already embodied in many union contracts, provides that such veterans will be credited with seniority rights month for month for the period of their military service back as far as September 1, 1940, in the first job that they get after leaving the armed forces.

Union agreements with some employers provide severance pay allowances for workers entering the armed forces. Many union agreements call for the payment to men in the armed forces of annual vacation allowances and Christmas bonuses to which they would have been entitled if they had remained in the plant. Veterans' rights to wage increases granted in their absence are protected by union contract and they will receive the higher wages when they come home. Under many agreements all promotions made during the veterans' period of service are temporary. The veteran, upon his return, will get a "crack" at the better job which he might have gotten had he not left the plant in defense of his country.

Under some union agreements, the disabled veteran is given plant-wide seniority so that when lay-offs occur in his plant he can go from department to department remaining at work perhaps long after the last worker in his regular department has been laid off. In other cases, union agreements provide that the disabled veteran who cannot resume work immediately following his discharge from service will be given an extended leave of absence and that his seniority will acccumulate during that leave.

Some of you may wonder, perhaps, why there is all this stress on seniority. To the worker, however, it is one of the most important attributes of his job. The courts have held seniority to be a property right protected by the Constitution. Franklin D. Roosevelt called it "an institution in American industry." Congress deemed it sufficiently important to provide specific protection for it in the Selective Service Act.

You see, then, that the union's concern to safeguard the veterans' seniority is not by any means much ado about nothing. It is one of the most valuable services the unions could perform. Seniority means security, for the greater the worker's seniority, the less is the danger that he may be laid off. Seniority means opportunity, for in many cases promotions are based on length of service. Seniority means job privileges, because wage increases, vacations, and rights to pensions and insurance benefits are frequently based on length of service.

While protecting the veteran's job rights, the unions have not, by any means, neglected to protect his rights within the union. Most unions exempt their members from dues while they are in military service. Most also preserve his right in death benefits and similar funds maintained out of the union treasury. Some permit members in uniform to vote in union elections held during their absence. Most have already decided to waive payment of initiation fees by veterans who apply for membership after discharge from military service. A number of unions have established special veterans' departments to help the veteran with all the problems that will confront him in making the readjustment to civilian life. They are prepared to do everything from helping him to get his benefits under the GI bill of rights to finding him a place to live.

Unions have established special funds to aid in the rehabilitation of the disabled veteran. Unions have established special training and refresher courses for veterans. These will help skilled workers to catch up with new developments in their field of work, teach them to use new implements devised during the war, and help them to polish up skills grown rusty from disuse. One large union is providing all its returning veterans with a tool kit.

There is one other activity of labor of such importance to the disabled veteran that it must be mentioned. Some of you may know that employers hiring handicapped workers may have to pay higher premiums for workmen's compensation insurance. The result, naturally enough, is that employers are reluctant to employ the disabled. Yet we owe it to the disabled even more than to other veterans—and Lord knows we owe all of them far more than we can ever hope to repay—we owe it to the disabled veteran particularly to help him find as good a job as he can fill.

Yet many of them will have no job at all unless our workmen's compensation laws are amended to prevent the employer from being penalized for hiring the disabled. Labor is in the forefront of the campaign to amend workmen's compensation laws so as to protect both the employer and the disabled employee, be he veteran or nonveteran.

Though I have been able to tell only a small part of the story of what labor is doing for the veteran, there is enough to make clear how tragic it would be if irresponsible and misleading propaganda provokes a post-war clash between veterans and labor.

The working veteran will have the same interests as any other worker. The veteran, like other workers, will want security, decent living standards, and the freedom to speak up for his rights without fear of reprisal by his employer. Some 15,000,000 American workers have found it necessary to form and to join unions to pursue these objectives. That many people are not likely to be wrong about where their interests lie. The 15,000,000 workers now in unions eagerly await the time when millions of veterans will join with them. The union activities I have described tonight are tokens of the bond of fellowship between organized labor and the veteran.

Farmers and Cooperation

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. VOORHIS of California. Mr. Speaker, I am glad to include with my remarks in the RECORD a speech on farmers and cooperation recently delivered by Mr. C. Maurice Wieting, of the National Council of Farmer Cooperatives:

Farmer cooperatives in the United States have been a powerful factor in raising the standard of living of the over 25,000,000 people who live on the more than 5,500,000 farms in our Nation.

What is more, farmer cooperatives by improving the quality of farm produce and by the elimination of unnecessary middlemen, have long made it possible for city consumers to purchase higher quality farm products at lower prices.

No movement of the people in the world today offers greater promise of increasing mass buying power, both for the farm producer and for the ultimate consumer.

WHAT ARE FARMER COOPERATIVES?

Cooperation has always been part of the tradition of the American farmer; neighbors have always helped one another with barn raisings, harvesting, threshing. This has made it possible for farmers to perform tasks efficiently which would have been impossible if they had worked alone or competed with one another. There are examples of farmer cooperation in the United States as early as 1810, though the greatest development has come in the past 50 years.

"Agricultural cooperation is a method of doing business," says L. S. Hulbert in his book Legal Phases of Cooperative Associations. "An agricultural cooperative association is a business organization, usually incorporated, owned and controlled by member agricultural producers, which operates for the mutual benefit of its members or stockholders, as producers or patrons, on a cost basis after allowing for the expenses of operation and maintenance and any other authorized deduction for expansion and necessary reserves."

Most recent statistics of the Farm Credit Administration show that there are 4,390,000 members of 10,300 farmer cooperative asscciations, who in 1944 did a business of $5,160,000,000. Farmer marketing amounted to $4,430,000,000, and purchasing to $730,000,000, the latter figures rising to $1,010,000,000 when the purchasing business of marketing associations is considered.

NATIONAL COUNCIL

Today, the National Council of Farmer Cooperatives speaks for almost 2,300,000 farmers who are members of 4,600 local cooperatives, which in turn belong to the 99 regional organizations which are direct members of the national council. It is the aim of the national council to promote "the interests of cooperative business organizations of farmers in the United States by serving as a medium

for; (a) a developing bond of friendship, understanding, and mutual helpfulness among farmer cooperatives; and (b) formulating and advocating policies of common concern affecting agricultural cooperation." It has consistently pursued these objectives throughout 16 years, marked by the continued expansion and growth of the council in which it has constantly helped farmers organize and maintain cooperative association.

Because the cooperative movement is dynamic and growing it is being attacked by powerful business interests who have a selfish reason for wishing to monopolize farm busines. The National Council of Farmer Cooperatives is taking the lead in defending the interests of all farmer cooperatives and in assisting small farmer groups.

IMPORTANCE OF FARMER COOPERATION TO A BALANCED ECONOMY

Few urban people realize that the average farm in the United States has but 87 tillable acres, and that the average cash income per farm family was only $1,398 in 1939, the last normal pre-war year. Even in 1944, it is estimated that average cash income per farm family was only about $2,000. With the nearing end of the war, farm prices already have begun to decline, and they may fall disastrously again as they did in the 1920's.

"Full industrial employment can hardly be hoped for unless the purchasing power of the agricultural population can be maintained at high levels," Randolph Paul, former Under Secretary of the Treasury, said in a recent statement.

The need for agriculture, industry, labor, and all consumer groups to work for free economy production at a high level has long been recognized by the members of the National Council of Farmer Cooperatives and other farm organizations.

HOW FARMER COOPERATIVES HELP FARMERS

Farmer cooperatives have made it possible for farmers in the United States to preserve the advantages of the family-owned and family-operated farm, while through their cooperative associations they have been able to secure the benefits of pooling their marketing and purchasing activities.

Acting as an individual, the farmer is at a disadvantage in the marketing of his product, he is forced to accept almost any price the marketing agency offers him—often far below true value.

Through marketing cooperatives farmers are enabled to combine their operations so they all benefit by the savings to be obtained by large-scale shipping, grading, packing, and bargaining.

Farmers have formed cooperative purchasing associations because individual farmers acting alone are forced to purchase their supplies at retail prices and sell their products at wholesale levels. Working together cooperatively, farmers now are able to pool their needs and secure feed, seed, fertilizer, oil, and all types of farm production supplies at wholesale prices.

John H. Davis, executive secretary, of the National Council of Farmer Cooperatives, has summarized the benefits of farmer cooperatives in this way: "Cooperative management is interested in maximizing farm production income through providing better and cheaper farm production supplies; facilitating economical and efficient distribution; reducing market gluts and shortages; minimizing spoilage of products; stimulating better grading; improving varieties; developing better and cheaper transportation and storage; and encouraging fair competition."

HOW FARMER COOPERATIVES HELP CONSUMERS

Traditionally the farmer has received about 50 cents of the consumers' food dollar, though only 10 to 15 cents of his cotton and tobacco dollar, with the remainder going to processors and distributors. These costs of transportation and communication, processing and manufacturing, warehousing and storage, finance and banking, advertising and salesmanship, wholesaling and jobbing, and retailing are costs which cannot be eliminated, but they can be drastically lowered.

Farmer marketing cooperatives have largely done away with the evils that once were associated with the selling of farm produce, and many unreasonable margins have been eliminated. However, farmers have just begun to extend their operations to the fields of processing and moving food and fiber through their cooperatives from the farm to the consumer. Here real savings can be made to both producers and consumers.

As Anthony Lehner of the Pennsylvania Farm Bureau said so well in the Pennsylvania Co-op Review for May 1945, "If cooperative marketing means anything at all it means ownership of as many intervening agencies of distribution and processing as is practical and economically sound."

Farmer marketing cooperatives are now giving consumers higher quality of goods at a fairer price because many of them have accepted the modern challenge of gathering, processing, and marketing the food and fiber farmers produce. Some of the unnecessary "toll gates" that have always stood between the farmer and his city brother have thus been eliminated.

For example, consumers have benefited by greatly lower per unit prices for many farm products, such as avocadoes, citrus, cranberries, dried fruits, and nuts, because of increased production stimulated by farmer cooperatives. Quality has been improved by grading and marketing practices which have been pioneered in by farmer cooperatives. Highly perishable products have been brought to the market in an orderly manner.

FARMER COOPERATIVES AS AN EDUCATIONAL FORCE

There is no more powerful educative force in America today than the cooperative movement. Both on the farm and in the city earnest groups of men and women are coming together to form cooperative associations, which are founded on long and continued study of economic fundamentals.

In Ohio, the Farm Bureau Cooperative Association has 1,006 active advisory councils, groups of 12 or more families which meet once a month to discuss cooperative and other problems. Over 16,000 farmers attended such meetings in March 1945. Study meetings of farmers who belong to cooperatives are common in Missouri, Minnesota, Wisconsin, Michigan, North Dakota, in fact, wherever the movement is strong.

The fact that every cooperative is a democratic organization operating for the benefit of its members, gives every member an opportunity to play a part in its operation. Annual business meetings of the 10,300 farmer cooperative associations do much to awaken farmers to the economic issues of monopoly, supply and demand, prices, advertising, grading, monetary control, international trade, and the need for world peace.

SUMMARY

Farmer cooperatives increase the mass buying power of both producers and consumers. Their continued growth is to the best interests of the United States.

American farmers have never been able to consume to capacity because of their low incomes. Farmer cooperatives by helping in the marketing of farm produce and the purchasing of farm supplies, provide a double-barreled approach to increasing farmer purchasing power.

American consumers benefit by a strong farmer cooperative movement which improved quality of farm goods, and by added efficiency in processing, lowers many costs to consumers.

The Low Tariff Assassination of Defense Industries

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. REED of New York. Mr. Speaker, the failure to protect our watch manufacturing industry from foreign imports has struck directly and disastrously at a national-defense industry. Lest this fact be disputed by the State Department free trade officials I insert under leave to extend a press release of the Navy Department as follows:

TIMEPIECES PLAY VITAL ROLE IN WAR

Modern naval war is above all a war of timing. Just as the effcient performance of each individual ship and plane in the fleet is absolutely dependent upon accurate timepieces, so is the success of every large-scale operation, where huge sea and air forces must be coordinated for split-second action.

A vast undertaking like one of our major amphibious operations in the Pacific, involving hundreds of fighting ships, escort vessels, landing craft, transports, supply vessels and auxiliaries, hundreds of carrier-based and land-based aircraft, and many thousands of combined personnel of the Army, Navy, Marines, and Coast Guard, would be utterly unfeasible without the close integration made possible by reliable time-keeping instruments. The very fact that such a tremendous assault on enemy territory can be staged with the utmost precision is in itself a splendid tribute to the men and women engaged in producing fine timepieces for the armed forces. So important is the element of timing in an invasion, in fact, that every member of the Navy's amphibious forces is now provided with a waterproof, radium-dialed wristwatch, so that each man can carry out his combat task at the exact second.

On a warship, the chronometer and stopwatch are as vital as guns, for without these timepieces, safe and unerring navigation would be out of the question. The chronometer, used in connection with celestial navigation, is essential in determining the ship's position at any specific moment. The stopwatch, one of the most important of the navigation officer's instruments, is indispensable not only in taking sights, but also in identifying light by timing the intervals between flashes. It is likewise valuable for checking chronometers and ship's watches against radio time signals.

When it is realized that a slight error in timing might prevent an important rendezvous and thus foredoom a naval engagement to failure, it can be easily understood why the men of the fleet attach so much significance to the accuracy of their timepieces.

To insure maximum efficiency of our big naval guns, it is necessary that the timeclocks on various types of fire-control equipment be constantly checked by stopwatch. This instrument also times the rapidity of

fire and the flight of projectiles, among its other vital functions in naval gunnery.

One of the little known but highly essential uses of a stopwatch aboard our fighting ships is to determine how quickly battle stations can be manned when the alarm sounds over the battle-announcing system.

On our submarines, in addition to the navigational aid rendered by various kinds of timers, stopwatches are often used as a check on their torpedo fire. By timing the run of a torpedo until the explosion, it is possible to discover which "tin fish" hit which target, even when operating conditions prevent such determination by visual means. The stopwatch is also employed in timing submarine dives, as well as in keeping tabs on the length of time the valve is open when firing a torpedo, in order that no excess water enters to upset the delicate "trim" of the craft.

On the other hand, the stopwatch is also an invaluable aid to our anti-submarine vessels in tracking down Axis undersea raiders, since it helps them figure the rate of speed of the enemy craft they are pursuing.

Timing devices are equally indispensable to our fighting planes. With the flight of all aircraft strictly limited to fuel capacity, it is imperative that the planes be provided with accurate instruments to register elapsed time. Therefore, the elapsed timeclock is standard equipment on our planes to determine the elapsed time on long missions, such as long-range bombings; while an aviation stopwatch is used in much the same manner for shorter operations. Besides these standard timing devices, our big bombing planes use master navigation watches for celestial navigation, and in conjunction with them, special stopwatches.

But these do not represent the full complement of timepieces which our combat planes must have as regular equipment. A usual installation on all aircraft is the standard aircraft clock, and every pilot and crewman wears a wrist watch of proven accuracy.

One of the most common uses of the stop watch is, of course, the timing of many kinds of athletic events. The Navy places great emphasis on building strength and stamina through competitive sports, and stop watches are widely used in the intensive physical-fitness program to prepare men for the rigors of combat.

In these and many other ways, the workers manufacturing timepieces for the Navy and the armed forces in general are making an invaluable contribution to the war. Millions of these varied timekeeping instruments are required to regulate our combat effort on the firing line. They are needed not only to help insure victories but to safeguard American lives. Final victory will come sooner if the men and women in the watch and clock factories continue to give unstintingly of their skill and energy in order to meet these critical requirements.

Mr. Speaker, if there is doubt in any person's mind as to the extent to which the low-tariff bureaucrats have assassinated a national defense industry, I invite the attention of such person to the table prepared by the Tariff Commission, which I am including under unanimous consent, showing the importation of watch movements and parts by numbers, value, calculated duties, and equivalent ad valorem—percent:

Watch movements and parts: United States imports for consumption, 1931–44

Year	Watch movements (all widths)					Total movements	Watch cases (all types)	Jewel bearings imported separately	All other watch parts and assemblies
	1 or no jewels	More than 1, not more than 7 jewels	More than 7, not more than 15 jewels	More than 15, not more than 17 jewels	More than 17 jewels				
	Number (thousands)								
1931	35	385	251	177	2	850	148	12,862

Opportunity for the West

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. KNUTSON. Mr. Speaker, under permission granted, I desire to insert in the RECORD an editorial from the Daily Missoulian, Missoula, Mont., as follows:

OPPORTUNITY FOR THE WEST

The West saved the Nation once. It can do it again if given the opportunity. That is the thesis of Representative HAROLD KNUTSON, of Minnesota, who, summing up the situation soon to confront the United States, says:

"We had the same problem of debts and demobilization at the end of the Civil War, and then we solved them by the same means which are at our command today. To understand just what those problems were, think of what we would have had to do in 1865, if the Mississippi River had been the western boundary of our war-wracked Republic, and if the Pacific Ocean had come to the Twin Cities and St. Louis.

"The factories of the North were as surcharged in 1865 as they are now with war contracts which peace would cancel. To find work for the million Union soldiers who returned from the battlefields, 2,000,000 workers would have been dropped from the overloaded pay rolls. No governmental relief that was then available could have bridged such a gap.

"What did we do? We opened the great frontiers of the West. We gave each soldier a certificate good for $200 worth of land and told him to go out and find it. Citizens who were not soldiers could buy the same homestead at the land office for $1.25 an acre. We gave these men no further help—no Government-guaranteed loans, no pledge of unemployment relief, no subsidy. We said, 'Go west, young man,' and the ambitious men who went west to open that prairie frontier converted our Western States into the world's greatest agricultural empire. For 35 years—to the turn of the century—it absorbed all our surplus money, energy, and men, and half of Europe's.

"The miracle of that day can be repeated now by reopening the same frontier of the West, this time as the frontier of an industrial empire instead of an agricultural domain. For the West has resources in raw materials and power for industry greater than its resources for agriculture. Its mines and quarries, its oil wells, and its water power are richer than its farms and its forests."

The logic of that should appeal to all. Mr. KNUTSON, for 30 years Representative of his State in Congress and at all times a student of western affairs and possibilities, knows of what he speaks. The West again is a frontier, this time in an industrial way, and it has great potentialities. They need only to be developed. They can be developed by the manpower and capital easily available. The West again could be a beacon to the returning soldier, to the civilian with energy and hope. "The miracle of that day," says Congressman KNUTSON, "can be repeated now." Amen to that

Here is something else that Mr. KNUTSON said: "They tell us that private enterprise, individual initiative and ambitious manhood were all right when the country was young. Then land was free. Then the Nation was being built. But the building is finished and there is nothing left to be done today. We have reached the farthest frontier. The farthest horizon lies under our feet—only the abyss of disaster beckons the daring man who would march farther.

"Nonsense. America has just begun to grow. Our future lies ahead. The troubles that lie behind us—even the two World Wars into which we have poured our manhood and our wealth—are but the childhood sicknesses of the greatest Nation in the history of the world."

There speaks the courage of America, the renewed spirit that made the West what it is and established possibilities hardly imagined today. The "greatest Nation in the world" can be even greater. America can remain American. It will, we think.

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from Commerce reports of February 17, 1940, issued by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce:

RESULTS UNDER THE RECIPROCAL TRADE AGREEMENTS PROGRAM DURING 1939

(Prepared by the Trade Agreements Unit, Bureau of Foreign and Domestic Commerce)

There are given below tables showing the trade of the United States with trade-agreement countries and non-trade-agreement countries in 1939 compared with 1938, as well as the average for the postagreement years 1938 and 1939 compared to the average for the preagreement years 1934 and 1935. In addition to a summary table showing total trade with the two groups of countries, detailed statistics are given covering trade with the agreement countries and the principal nonagreement countries individually.

During December 1939 total United States exports reached the highest monthly figure recorded since March 1930. The increase was particularly marked in exports to the agreement countries, and as a result the statistics for the full year 1939 show an increase of 8.1 percent for this group compared with 1938, whereas for 11 months the increase was only 4.9 percent. In the case of the nonagreement countries, a decrease in exports of only 4.5 percent is shown for the full year, compared to the decrease of 7.9 percent shown for 11 months.

On the side of imports, both groups of countries also improved their position during December. Imports from trade-agreement countries for the full year 1939 show an increase of 20.1 percent over 1938, compared to the increase of 17.5 percent shown for 11 months, and imports from nonagreement countries for the full year show an increase of 15.6 percent, compared to the increase of 13.2 percent shown for 11 months.

In the analysis of trade with the agreement and nonagreement countries during the first 11 months of 1939, which was published in Commerce Reports of January 20, 1940, appropriate comments were made on the important changes that had taken place in the composition and direction of the foreign trade of the United States during that period. With few exceptions, these comments are equally applicable to the 12-month period, most of the tendencies previously shown having continued throughout December.

In the latter month exports of aircraft were valued at $28,900,000, compared to only $5,700,000 in the same month of 1938, the total increase for the year compared to 1938 having been $48,700,000. Exports of iron and steel semimanufactures, including scrap, and of

advanced iron and steel manufactures also showed heavy increases in December, which brought the total increase shown by these groups for the year up to $57,700,000 against an increase of $39,800,000 for 11 months. For metalworking machinery, the increase in exports for the year was $15,800,000, compared to the increase of $12,700,000 for 11 months, and for lubricating oils $22,100,000 compared to $14,700,000. Exports of passenger cars and motortrucks and accessories continued to decline in December, showing a decrease of $18,100,000 for the year, compared to the decrease of $12,300,000 for 11 months.

In the case of agricultural products, exports of raw cotton for 11 months were $9,800,000 below the corresponding period of 1938, but the exceptional increase of $24,700,000 shown by December exports left a net increase of $14,900,000 for the full year, compared to 1938. Also, in the case of corn, December shipments were somewhat above the December 1938 level, thereby slightly reducing the decrease that had been shown for the 11 months' period.

On the side of imports, the only major products showing an appreciably greater rate of increase during December than appeared for the first 11 months of 1939 were crude rubber and tin. For the full year rubber imports increased $48,500,000 over 1938, whereas for 11 months the increase was $34,500,000, while tin imports increased $25,700,000, against an increase of $17,000,000 for 11 months.

TABLE 1.—*United States trade with trade-agreement countries and with all other countries, 1939 compared with 1938, and 1938–39 compared with 1934–35*

[Values in millions of dollars]

Items	Comparison of 1939 with 1938				Comparison of 1938-39 with 1934-35			
	1938 value	1939 value	Change		1934-35 average value	1938-39 average value	Change	
			Value	Percent			Value	Percent
EXPORTS, INCLUDING REEXPORTS								
Total, trade-agreement countries	[1] 1,758	[1] 1,901	+142	+8.1	[2] 757	[2] 1,232	+475	+62.8
Total, nonagreement countries	1,336	1,277	−59	−4.5	[3] 992	[3] 1,306	+314	+31.7
Total, all countries	3,094	3,177	+83	+2.7	2,208	3,136	+928	+42.0
GENERAL IMPORTS								
Total, trade-agreement countries	[1] 1,155	[1] 1,387	+233	+20.1	[2] 774	[2] 942	+168	+21.6
Total, nonagreement countries	806	931	+125	+15.6	[3] 772	[3] 868	+97	+12.5
Total, all countries	1,960	2,318	+358	+18.3	1,851	2,139	+288	+15.6

[1] Including the 18 countries (and colonies) with which agreements were in operation during the greater part of the last 12 months. Only 1 of the agreements was in operation throughout 1935, 6 throughout 1936, 14 by the end of 1936, 16 by the end of 1937, 17 by the end of 1938, and 18 by the end of 1939, including the agreement with the United Kingdom (covering also Newfoundland and the non-self-governing British colonies). The agreement concluded with Turkey became provisionally effective only on May 5, 1939, and the agreement with Venezuela only on Dec. 16, 1939. Statistics for these countries are therefore not included in the above calculations.

[2] These figures do not include Ecuador, the United Kingdom, Newfoundland, and non-self-governing British colonies, Turkey, and Venezuela with which agreements have been concluded but where the period during which the agreement has been in effect is too short to justify inclusion for purposes of comparison.

[3] The apparent discrepancy shown by these figures in comparison with the other totals is due to the noninclusion of trade with Ecuador and the United Kingdom and its Crown colonies.

GENERAL NOTE.—Percentage changes have been calculated upon fuller figures in thousands of dollars.

Total, nonagreement countries		[5] 992	[5] 1,306	+31.7	1,336	1,277	−4.5	[5] 772	[5] 868	+12.5	806	931	+15.6
Total, all countries		2,208	3,136	+42.0	3,094	3,177	+2.7	1,851	2,139	+15.6	1,960	2,318	+18.3

[1] These figures include Surinam (Dutch Guiana), the trade with which is too small to warrant individual listing.

[2] United States statistics show only a small portion of the actual exports to Switzerland, most of which are transhipped through third countries and are shown as exports to those countries. Therefore, too much significance should not be attached to the statistics of exports to Switzerland.

[3] These figures include all French colonies. Only France proper is listed separately.

[4] Countries with which agreements have been concluded but where the period during which the agreements have been in effect is too short to justify inclusion for purposes of comparison.

[5] The apparent discrepancy shown by these figures in comparison with other totals is due to the noninclusion of trade with Ecuador and the United Kingdom and its Crown colonies.

GENERAL NOTE.—Percentage changes have been calculated upon fuller figures in thousands of dollars.

Union of South Africa	49	70	+41.7	70	69	−1.4	3	22	+566.8	16	29	+79.7
Other nonagreement countries	28	34	+50.6	33	35	+5.9	16	27	+78.6	28	31	+36.0

[1] For statistical purposes, trade with Austria beginning May 6, 1938, and trade with the Sudetan area beginning Nov. 10, 1938, as far as ascertainable, has been included with Germany, while trade with the other Czechoslovak Provinces occupied by Germany, Hungary, and Poland has been included with these countries since Mar. 18 or 19, 1939.

[2] Reciprocal trade agreements with Turkey and Venezuela became effective on May 5 and Dec. 16, 1939, respectively.

[3] Since Aug. 6, 1939, a commercial agreement has been in effect between the United States and the Soviet Union under which the latter country expressed its intention to purchase annually American goods to the value of at least $40,000,000 and, on its part, the United States undertook to accord to the commerce of the Soviet Union unconditional most-favored-nation treatment.

GENERAL NOTE.—Percentage changes have been calculated upon fuller figures in thousands of dollars.

Water Pollution

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. SUMNERS of Texas. Mr. Speaker, the two letters which are tendered herewith to be printed in the RECORD deal with an important aspect and an important cause of the concentration of governmental power in the Federal Government.

Mr. J. E. Sturrock, general manager of Texas Water Conservation Association, wrote me in opposition to certain proposed Federal legislation dealing with water pollution.

My reply to that letter and his further communication are as follows. His letter reflects a fine, commendable spirit, which the people and officials of the States must demonstrate they have if they are to retain these governmental powers:

APRIL 24, 1945.

Mr. J. E. STURROCK,
General Manager, Texas Water Conservation Association, Austin, Tex.

MY DEAR MR. STURROCK: I am in receipt of your letter of the 16th indicating the opposition of your association to Federal legislation dealing with water pollution.

I am very much in sympathy with the general attitude of nonextension of Federal power. One of the things, however, which I have discovered from an examination as to the causes of the shift of governmental power from the States to the Federal organization, is the failure of the States properly to discharge their governmental responsibilities. I do not mean that the failure of the States to discharge governmental responsibilities within their power would justify the Federal Government taking over; but I have observed that the power to govern, like all other powers, is not disposed to remain where it is not properly exercised.

The river between Fort Worth and Dallas, for instance, is so polluted that during considerable part of the year it is black, it stinks. From Dallas south it is the same condition. That condition has obtained for many years. People complained to me about it, and nothing seems to be done by the State authorities. I do not know whether or not that condition obtains with reference to other streams. But this is an outstanding example of the failure to exercise a State power, and is the sort of thing that makes it very difficult for those of us who are trying to prevent a further concentration of power in the Federal Government to do it, much less bring about a necessary decentralization of government.

You are at liberty to give this letter whatever publicity you feel would be helpful to you in the work which you are doing.

Sincerely yours,

HATTON W. SUMNERS.

TEXAS WATER CONSERVATION ASSOCIATION,
Austin, Tex., April 27, 1945.

HON. HATTON W. SUMNERS,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I have your letter of April 24 regarding the resolutions adopted by this association in opposition to Federal legislation dealing with water pollution.

I appreciate your position and have advanced the same argument over and over for the last 10 years. If this State does not exercise the power vested in it with respect to the development, conservation, protection, and utilization of our water resources, then the Federal Government is surely to step in and do the job itself; as our water resources mean too much to the welfare of this State and Nation.

I am taking the liberty of inserting your letter in the next issue of our Bulletin.

With kindest regards and best wishes, I am,

Yours very truly,

J. E. STURROCK,
General Manager.

Department of Veterans Affairs

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the National Broadcasting Co. system on May 18, 1945:

ANNOUNCER. We have in the studio the Honorable EDITH NOURSE ROGERS, Representative to the United States Congress from the State of Massachusetts.

She is, currently, a member of the House Committee on Veterans Affairs, but for many years Mrs. ROGERS has been both personally and officially interested in what happens to

fighting men when they stop fighting and return home—what happens to the families of those who do not come back.

Mrs. ROGERS. Thank you, Mr. Ludlam.

Last month I introduced into the Congress a bill to establish a Department of Veterans Affairs which would place the Veterans Administration on a level with other governmental divisions of Cabinet status such as the Department of War, the Department of Labor, and the other departments. The Veterans Administrator would be a member of the Cabinet, and would be known as the Secretary of Veterans Affairs.

Question. Before explaining the implications of this bill, Mrs. ROGERS, I wonder if you would give us a thumbnail sketch of the present size of the Veterans Administration.

Answer. Sixteen years ago veterans' affairs were consolidated under one agency. Now, in addition to a huge central office in Washington, the Veterans Administration has 95 hospitals throughout the country; 53 regional offices, 9 area offices, branch offices, and numerous suboffices and stations. To staff this large organization, the Veterans Administration has 56,000 employees, more than any other Government agency except the Department of Agriculture. Appropriations for the Veterans Administration in the current year exceed by four hundred and seven millions the combined sums appropriated for the Department of Agriculture, the Department of Labor, and the Department of Justice.

Question. Mrs. ROGERS, had the work of caring for the veterans of World War No. 1 slackened off considerably for the Veterans Administration before the second World War began?

Answer. On the contrary, Mr. Ludlam, hospital care for World War No. 1 veterans had not yet reached its peak when the present war started. The peak load of World War No. 1 patients will not be reached until 1949. The number of World War No. 1 veterans living today is nearly four millions.

Question. How has World War II expanded the work of the Veterans' Administration so far?

Answer. World War II veterans have been granted the same rights to hospitalization and domiciliary care as World War I veterans. These include service-connected and nonservice-connected cases. Admissions to Veterans' Administration hospitals throughout the country are so numerous that over 79,000 are receiving treatment and 2,000 nurses are needed immediately—today—to care for present patients adequately. And the present situation is but a beginning of a constantly increasing patient load.

Today the Army keeps men in the service because beds are not available in the Veterans' Administration hospitals.

In addition to over a million claims for pension or compensation filed on the basis of World War I and prior wars, plus the regular peacetime establishment, for World War I cases, there were over 716,000 disability claims and nearly 150,000 death pension claims filed through February of this year. Also, there are claims for insurance; hospitalization and domiciliary care; vocational rehabilitation of World War II service-connected disabled; burial allowances; educational benefits; guaranty of loans for homes, farms, and business purposes; or readjustment allowances under the GI bill of rights. These benefits should be given to the veterans immediately.

Benefits for veterans and their dependents are delayed because of the lack of personnel in the Veterans' Administration. There should be no excuse for that.

There are hospitalized over 18,000 World War II veterans. One million five hundred thousand World War II men and women have been discharged from service.

By the end of this war, a Veterans' Administration statistician informs me that services for 12,000,000 men and women will be handled by the Veterans' Administration. Some years later services will be handled for 15,000,000 persons, including widows and dependents.

Question. Has the tremendous new burden on the Veterans' Administration been recognized legislatively in any effective way so far?

Answer. Not until December 1943 was there recognition of this important war and postwar organization as a war agency. Then, the GI bill of rights contained the first statutory provision requiring recognition, second only to the War and Navy Departments. This amounts to a priority for necessary materials and in the hiring of personnel. But as a matter of fact, the Veterans' Administration is not getting that priority.

And despite the priority gesture, the Veterans' Administration as it now stands, has not the necessary organization, the personnel, or the proper space to meet the enormous demands upon it.

I sometimes wonder what a returning veteran thinks when he sees the dingy old and overcrowded building which houses the Veterans' Administration, where he goes for his rights, and looks across the street at the large and handsome and modern building which houses the Reconstruction Finance Corporation, where business goes to secure its loans.

That the Veterans' Administration is not now prepared to do the huge job already burdening it is becoming more obvious each day. Detailed criticism of both the medical and nonmedical activity of the Veterans' Administration is appearing daily in the press, and the public is beginning to be informed of the many inadequacies in the present situation, and the public is becoming impatient. Immediate drastic action is essential to assure a broader concept on the part of the Veterans' Administration of the job to be done, and to activate a complete overhauling of the outmoded organization, methods and paper work of the Veterans' Administration.

Question: Mrs. Rogers, how will your bill to create a Department of Veterans' Affairs aid in solving this problem?

Answer. It is my firm belief that regardless of the granting of authority to the Veterans' Administration in its existing status as an agency, the fact that it is given inadequate power and dignity compared with departments under Cabinet officers, introduces organizational and administrative weaknesses which frustrate the agency from accomplishing the purposes of the Congress. It is my belief that the change and improvement necessary at this time will be made possible by creating a Department for Veterans, and in this way will be accomplished the full intention and purpose of the Congress to insure the most satisfactory and prompt service to veterans and their dependents. The veterans deserve the best there is of everything. I can see no other way of making the Administration strong enough to care promptly and adequately for veterans' needs.

Question. Would you explain in some detail what your bill would provide?

Answer. My bill would establish an executive department to be known as the Department of Veterans' Affairs. At the head of this Department there would be a Secretary of Veterans' Affairs who would be a member of the President's Cabinet.

In the Department there would be an Under Secretary and five Assistant Secretaries, one of whom would be a Surgeon General for Veterans, a doctor, who would be completely responsible for the Medical Section of the Department. I have been fighting for a long time for an outstanding permanent Medical and Nurses Corps. Constant expert nursing care often means the offchance for life. The new organization would also provide excellent opportunity for the strengthening of other sections of veteran activity which needs streamlining.

With the establishment of the Veterans' Administration as an executive department, the head of the Department would become a member of the President's Cabinet. The present contacts of the Administrator with the President and the Cabinet members are not and cannot be as effective and convenient as they would be with the head of Veterans' Affairs in the status of Cabinet member. As a Cabinet member, he would sit around a table at the Cabinet meetings and discuss veterans' affairs informally with the other Cabinet members and the President of the United States—and then and there secure help for the veterans. Many of the matters of policy now handled through the devious channels of correspondence could be determined promptly by direct contact.

Question. Mrs. ROGERS, is it not likely that objection will be voiced to setting off the veterans as a separate class in creating a special department for them?

Answer. First of all certainly the veteran group who have fought for us deserve their own Department. Further, my answer to that criticism is that there are already separate departments for labor, for commerce, for agriculture, all of which could be accused of segregating certain groups of our population.

Question. Is there any precedent for the proposal of a separate department for veterans?

Answer. The proposal to handle veterans' affairs on a Cabinet level is not an original idea. Our neighbor to the north has proven the feasibility of such an arrangement—for Canada has successfully operated such a department for some time.

My bill H. R. 2920 would accomplish what I, and numerous others who have studied the question, consider a necessary purpose. It insures more efficient administration by enhancing the authority of the head of the organization, and by providing an opportunity for overhauling the entire Administration.

This is a question, by the way, that is of paramount importance to you and to me, for the answer to it will eventually affect the welfare of some member of every family in the United States.

I believe that now is the time to take action to assure the veterans and all concerned that the Congress will provide adequate organization, authority, and status to the department responsible for administering veterans' rights and benefits.

We talk so much about being grateful to the service men and women. Let us prove it by giving them every care and assistance possible, and giving it before it is too late.

Rural Electrification Extensions

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting excerpts from the regulation issued by the War Production Board which you will

see relaxes the restrictions on the use of materials for rural power lines.

You will note that under this new regulation any such project may be constructed that does not cost more than $25,000.

This will enable the cooperative power associations to build many thousands of miles of lines that are badly needed throughout the country.

I hope it is only a matter of a very short time until all restrictions on the construction of rural power lines are removed; so that we can proceed to electrify every farm home in America—at rates the farmers can afford to pay.

The matter referred to follows:

PART 4500—POWER, WATER, GAS, AND CENTRAL STEAM HEAT

[Utilities order U–1 as amended May 12, 1945]

UTILITIES

Schedules

Schedule A. Material Classes.
Schedule B. [Deleted August 31, 1944.]
Schedule C. Limits on Practical Working Minimum Inventory.
Schedule D. [Deleted August 31, 1944.]

SEC. 4500.1 Utilities Order U–1—(a) Definitions: (1) "Producer" means any individual, partnership, association, corporation, governmental corporation or agency, or any organized group of persons, whether incorporated or note, located in the United States, its territories, or possessions, supplying, or having facilities built for supplying, directly or indirectly for general use by the public, one or more of the following services:

(i) Electric power.

(ii) Gas, natural or manufactured, exclusive of the production and transmission of natural gas up to the point of its entry into gas transmission lines from field gathering lines.

(iii) Water, other than exclusively for irrigation purposes,

(iv) Central steam heating, or

(v) Any of the foregoing services but not for general use by the public, if a specific direction from the War Production Board entitles such person or agency to apply the ratings herein assigned. Application for such a specific direction should be made by letter to the War Production Board, Washington 25, D. C., Ref.: U–1.

(2) "Material" means any commodity, equipment, accessory, part, assembly or product of any kind.

(3) "Controlled materials" means controlled materials as defined in Schedule I of CMP Regulation 1.

(4) "Maintenance" means the upkeep of a producer's property and equipment in sound working condition. It does not include any plant addition.

(5) "Repair" means the restoration of a producer's property and equipment to sound working condition after wear and tear damage, destruction of parts, or the like have made such property or equipment unfit or unsafe for service. It does not include any plant addition.

(6) "Plant addition" means the construction or installation of new facilities or the replacement of existing facilities with facilities of greater capacity.

(7) "Minor plant addition" means a plant addition having a net material cost of not more than $25,000. No job or project may be subdivided to come within this limit.

(8) "Major plant addition" means a plant addition having a net material cost of more than $25,000.

(9) "Net material cost" means the cost of material incorporated in plant less the cost of material removed from plant, priced in accordance with the producer's regular accounting practice.

(10) "Operating supplies" means material, other than fuel, which is used or consumed in the course of a producer's operations, except in maintenance, repair and plant additions.

(11) "Inventory" means all material in the producer's possession, without regard to its accounting classification, excluding, however, (i) material incorporated in plant, (ii) appliances and merchandising supplies, (iii) fuel, (iv) water purification and treatment material except equipment, (v) gas chemical material, (vi) material segregated for use in approved major plant additions, (vii) scrap and (vii) war surplus materials purchased.

(12) "Class" means any one of those categories of material established as a basis for classification of inventory in Schedule A of this order.

(13) "War surplus materials" means material designated as surplus to the war effort and offered for sale by any Federal Government agency having jurisdiction over their disposal.

How To Obtain Material

(b) Preference ratings. (1) A preference rating of AA–1 is hereby assigned to orders to be placed by a producer for material (other than controlled materials), for use in maintenance and repair, as operating supplies, and for minor plant additions for which the net material cost is not more than $10,000, in every class except (i) the transmission and distribution class and (ii) the meter class.

(2) A preference rating of AA–1 is hereby assigned to orders to be placed by a producer for material (other than controlled materials), for use in the repair of an actual or imminent breakdown, in (i) the transmission and distribution class and (ii) the meter class.

(3) A preference rating of AA–3 is hereby assigned to orders to be placed by a producer for material (other than controlled materials), for use in maintenance and repair, as operating supplies, and for minor plant additions, except where an AA–1 rating is assigned in paragraphs (b) (1) and (b) (2) above.

(4) Material obtained with the AA–1 rating may be used for purposes which are assigned lower ratings, but it may be replaced in inventory only by applying the lower rating to an equivalent dollar value of material in the same class. Material obtained with the AA–3 rating may be used for purposes which are assigned the AA–1 rating and may be replaced in inventory with either the AA–1 rating or an authorized AA–3 rating. The provisions of this paragraph (b) (4) supersede those of section 944.11, paragraph (a), of Priorities Regulation 1.

(5) Preference ratings for major plant additions may be obtained by filing an application on Form WPB–2774.

(6) The preference ratings herein assigned may not be applied by producers to acquire material for uses not permitted by paragraphs (h) and (i) of this order.

(c) CMP allotment symbol. (1) The CMP allotment symbol U–9 is hereby assigned to orders to be placed by a producer for controlled materials for use in maintenance and repair, as operating supplies and for minor plant additions. Allotments of material for major plant additions may be obtained by filing an application on Form WPB–2774.

(2) An order for controlled materials for use in maintenance and repair, as operating supplies and for minor plant additions bearing the CMP allotment symbol U–9 and the certification required by paragraph (d) of this order shall be deemed an authorized controlled materials order. This CMP allotment symbol shall constitute an "allotment number or symbol" for the purpose of CMP Regulation 3.

(3) The allotment symbol U–9 herein assigned may not be applied by producers to acquire material for uses not permitted by paragraphs (h) and (i) of this order.

(d) Certification. The ratings assigned by subparagraphs (b) (1), (2), and (3) of this order and the CMP allotment symbol U–9 may be applied by a producer only by the use of a certification in substantially the following form unless an order of the War Production Board affecting a particular item of material requires some other form of certification:

"Preference rating ------, CMP allotment symbol U–9. The undersigned producer certifies subject to the penalties of section 35 (A) of the United States Criminal Code, to the seller and to the War Production Board, that, to the best of his knowledge and belief, the undersigned is authorized under applicable War Production Board regulations or orders to place this delivery order, to receive, for utility uses under Utilities Order U–1, the material ordered, and to use the preference ratings or CMP allotment symbol which the undersigned has placed on this order."

The certifications set forth in Priorities Regulation 3 and CMP Regulations 1 and 5 may not be used but the standard form of certification provided in Priorities Regulation 7 is permissible if the producer adds a statement saying that material ordered is for utility uses under Utilities Order U–1.

Restrictions Ordering Material

(e) Scheduling deliveries. Except as permitted by paragraphs (f) and (g) below, no producer shall schedule for delivery to it any material to be used for maintenance and repair, as operating supplies, or for minor plant additions, unless the following conditions are satisfied:

(1) [Deleted August 31, 1944.]

(2) The producer does not have reason to believe that its inventory of material in the same class is or will, by virtue of its acceptance of the delivery when made, become in excess af a practical working minimum. A practical working minimum inventory is that amount of material which a producer, exer-

cising prudent operating judgment, considers the smallest quantity of material it can hold and render service in accordance with sound and economical operating standards. It may be less than the values established in schedule C but it shall in no case exceed them.

(3) No producer may place an order for any item of material, including material for major plant additions, if the required item or a practical substitute therefor is in the producer's inventory in excess of minimum requirements for that item.

(f) Exceptions to paragraph (e): (1) The restrictions of paragraph (e) do not apply to a producer so long as its inventory does not exceed $25,000 in value, except that such a producer must restrict its inventory to that amount of material which in the exercise of prudent operating judgment, it considers the smallest quantity it can hold and render service in accordance with sound and economical operating standards. Each purchase of material by such a producer, however, must be treated as the purchase of a short item, and is subject to the provisions of paragraph (g) below. A producer engaged in furnishing more than one of the services named in paragraph (a) (1) may consider its inventory for each service separately for the purposes of this paragraph.

(2) The restrictions of paragraph (e) do not apply to material excepted from inventory by the definition in paragraph (a) (11).

(3) [Deleted August 31, 1944.]

(4) [Deleted August 31, 1944.]

(5) The War Production Board may from time to time establish specific limits for permissible inventory for individual producers, modifying the provisions of Schedule C.

(6) [Deleted August 31, 1944.]

(7) Notwithstanding the restrictions of paragraph (e) or of paragraph (g) below a producer may schedule an item of material for delivery in a minimum procurable commercial quantity, and in the case of cast iron, carbon steel, and nonmetallic pipe, may schedule for delivery a carload quantity.

(g) Short item deliveries: Even though it cannot schedule deliveries without exceeding the limits of paragraph (e), a producer may schedule for delivery material which it will require for use in maintenance and repair, as operating supplies and for minor plant additions during the 90-day period following the date it expects to receive such material, so long as the producer's inventory of the required material, together with material already scheduled for delivery, will be insufficient to meet requirements during such 90-day period.

(1) [Deleted August 31, 1944.]

(2) [Deleted August 31, 1944.]

Restrictions on Use of Material

(h) Restrictions on use of material for maintenance and repair: A job which can be classed as maintenance or repair, as those terms are defined in paragraphs (a) (4) and (5), may be done without regard to the dollar value of the material required when the following standards are met:

(1) The job must be necessary to maintain or restore service in accordance with sound and economical operating standards or to prevent damage to facilities from serious overload, deterioration, storm, flood, climate, soil conditions, or similar contingencies.

(2) Design must emphasize economy of manpower and material as well as the substitution of the more plentiful for scarce material.

(3) [Deleted May 12, 1945.]

(i) Restrictions on use of material for minor plant additions: A job which is a plant addition, as defined in paragraph (a) (6), rather than maintenance and repair, may be done without special permission from the War Production Board, if it is a "minor plant addition"; that is, if its net material cost does not exceed $25,000. Paragraph (a) (9) explains what is meant by net material cost. However, all minor plant additions are subject to the following restrictions:

(1) [Deleted May 12, 1945.]

(2) Design must emphasize economy of manpower and material as well as the substitution of the more plentiful for scarce material.

(3) New facilities must be necessary for rendering service in accordance with sound and economical operating standards, or to restore the producer's facilities to safe and economical operating condition.

(4) No extension of a line to consumer premises may be made or connected by a producer as a minor plant addition unless the following conditions are satisfied:

(i) The extension does not duplicate an adequate service of the same type already installed or constitute a standby service.

(ii) In the case of an extension of gas facilities, no extension may be made to serve a consumer not permitted to accept delivery of gas under Order U-7.

(5) [Deleted May 12, 1945.]

(j) Restrictions on use of material for major plant additions. No material may be used for a major plant addition unles the job has been authorized by the approval of an application filed on Form WPB-2774. In an emergency approval may be obtained by telephone or telegraph. Confirmation must be obtained, however, by the submission of an application on Form WPB-2774.

SELLING MATERIAL

(k) Sales of material: A producer may sell material which is in its inventory or which it acquired for major plan additions to any person. However, the preference ratings or allotment symbol assigned by this order may not be used to replace in inventory material sold by a producer unless the sale is to another producer or to a customer of a producer for the repair of the customer's facilities. Producers may sell material pursuant to this paragraph (k) or in accordance with the provisions of PR-13.

(l) [Deleted May 12, 1945.]

INVENTORY REDISTRIBUTION

(m) [Deleted August 31, 1944.]

GENERAL PROVISIONS

(n) Appeals: Relief from any of the restrictions of this order may be requested by filing a letter with the War Production Board, Office of War Utilities, Washington 25, D. C., Ref.: U-1, stating the reasons why relief is necessary. If the relief requested involves an uprating or other special assistance for material needed for urgent requirements, the request should be filed on Form WPB-2774.

(o) Records: In addition to the records required to be kept under Priorities Regulation 1, each producer who applies the preference ratings or allotment number hereby assigned shall maintain a continuing record of inventory and of segregated material in his possesson.

(p) Communications to War Production Board: All reports required to be filed hereunder and all communications concerning this order shall, unless otherwise directed, be addressed to: Office of War Utilities, War Production Board, Washington 25, D. C., Ref.: U-1.

(q) Violations: Any person who willfully violates any provision of this order, or who, in connection with this order, willfully conceals a material fact or furnishes false information to any department or agency of the United States is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of or from processing or using material under priorities control and may be deprived of priorities assistance.

(r) Applicability of WPB regulations: This order and all transactions affected hereby are subject to all applicable regulations of the War Production Board, as amended from time to time, unless there is a conflict between this order and such regulations, in which case this order shall govern, if it specifically so provides. No producer is, however, subject to the restrictions of CMP Regulation 5, nor may any producer in any way use the preference ratings therein assigned.

(s) Special inventory directions: Nothing in this order is intended to supersede any special inventory base established by a specific direction from the War Production Board to a named producer. All such directions shall remain in effect unless modified by a further specific direction to the producer affected.

(t) Special provisions relating to Form WPB-2774 approvals issued prior to May 12, 1945: With respect to WPB-2774 authorizations issued prior to May 12, 1945, and involving not in excess of $25,000 net material cost, producers may:

(1) Use the preference ratings and CMP allotment symbol assigned in paragraphs (b) and (c) of this order in lieu of those specifically assigned on such Form WPB-2774 authorization.

(2) Treat as segregated under paragraph (a) (11) any material to be used pursuant to such a WPB-2774 authorization.

Issued this 12th day of May 1945.

WAR PRODUCTION BOARD,
J. JOSEPH WHELAN,
Recording Secretary.

SCHEDULE A

MATERIAL CLASSES

Material in the inventory of any producer which has an inventory, as defined in paragraph (a) (11), in excess of $25,000 shall be carried on the producer's own records and reported to the War Production Board as may be required, classified as follows:

WATER PRODUCERS

Class 1: Material for sources of supply, water treatment plants, reservoirs, elevated and pressure tanks, pumping and booster stations, including related pipe, valves, valve parts, and fittings.

Class 2: Meters.

Class 3: Transmission and distribution material (excluding meters), such as cast iron, steel, and wrought iron pipe, copper and brass pipe and tubing, lead pipe, pipe fittings, valves and valve parts, hydrants, parts for meters and hydrants, and other transmission and distribution material and supplies except pipe, valves, valve parts, and fittings included in class 1 above.

Class 4: Other material and supplies.

GAS PRODUCERS

Class 1: Production and pumping station material.

Class 2: Meters and house regulators.

Class 3: Transmission and distribution material (excluding meters and house regulators), such as cast iron, steel, and wrought-iron pipe, copper and brass pipe and tubing, pipe fittings, valves and valve parts, governors and regulators, parts for meters, regulators, and governers, other transmission and distribution material and supplies.

Class 4: Other material and supplies.

ELECTRIC POWER PRODUCERS

Class 1: Generating-station material.

Class 2: Switching and substation material, such as power transformers, other station equipment, parts, and material, and other material and supplies.

Class 3: Wire cable, and bus bar, such as bare copper and aluminum weatherproof copper, underground cable, aluminum and copper shapes.

Class 4: Wood poles and cross arms.

Class 5: Meters.

Class 6: Transmission and distribution material (excluding classes 2, 3, 4, and 5 above),

such as iron and steel poles, towers and parts, line hardware, distribution transformers, meter and transformer parts, and other line material and equipment (including insulators, lightning arrestors, etc.).

Class 7: Other material and supplies.

CENTRAL STEAM HEATING PRODUCERS

Class 1: Production plant material.

Class 2: Transmission and distribution material.

Class 3: Other material and supplies.

[Schedule B deleted August 31, 1944.]

SCHEDULE C

LIMITS ON PRACTICAL WORKING MINIMUM INVENTORY [2]

For purposes of paragraph (e) (2) a practical working minimum inventory (except for producers having a total inventory of $25,000 or less, who are exempted by paragraph (f)), may in no case exceed the following dollar values:

WATER PRODUCERS [2]

Class 1. The dollar value of items of material of this class in inventory on the most recent date in 1940 on which the producer's inventory was taken, increased proportionately to the increase in system output in the 12-month period preceding the current quarter over output in 1940.

Class 2: Four-thirds of the dollar value of authorized withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

Class 3: Sixty percent of the dollar value of material in this class in inventory on the most recent date in 1940 on which the producer's inventory was taken.

Class 4: Two-thirds of the dollar value of authorized withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies", as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

GAS PRODUCERS [2]

Class 1: The dollar value of items of material of this class in inventory on the most recent date in 1940 on which the producer's inventory was taken, increased proportionately to the increase in system output in the 12-month period preceding the current quarter over output in 1940.

Classes 2 and 3: Four-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies", as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

Class 4: Two-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

ELECTRIC POWER PRODUCERS [2]

Class 1: The dollar value of items of material of this class in inventory on the most recent date in 1940 on which the producer's inventory was taken, increased proportionately to the increase in system output in the 12-month period preceding the current quarter over output in 1940.

Class 2: The dollar value of items of material of this class in inventory on the most recent date in 1940 on which the producer's inventory was taken.

Classes 3 and 4: Four-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.

Class 5: Fifty meters at each operating headquarters plus 1¾ percent of the meters installed in plant on the first day of the preceding calendar quarter.

Class 6: Four-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

Class 7: Two-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

CENTRAL STEAM-HEATING PRODUCERS [2]

Class 1: The dollar value of items of material of this class in inventory on the most recent date in 1940 on which the producer's inventory was taken, increased proportionately to the increase in system output in the 12-month period preceding the current quarter over output in 1940.

Class 2: Four-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

Class 3: Two-thirds of the dollar value of withdrawals in this class made during the last 9 months of 1942 for use as "maintenance, repair, and operating supplies" as those terms were defined in Utilities Order U-1 as amended September 24, 1943.[1]

[Schedule D deleted August 31, 1944.]

MAY 10, 1945.

The construction or plant addition described in this application appears to be authorized under the provisions of Utilities Order U-1, as amended May 12, 1945. If this is the case, the preference ratings and the allotment symbol U-9 assigned by Utilities Order U-1 may be used to obtain material required for the purpose described in this application, subject to all applicable restrictions of that order. The application is therefore returned to you unprocessed.

PAUL B. VALLE,
Administrator, Utilities Order U-1.

---

[1] These definitions are reprinted here for convenience in reference; please note that they differ from definitions used in the current order:

"Maintenance" means the upkeep of a producer's property and equipment in sound working condition.

"Repair" means the restoration of a producer's property and equipment to sound working condition after wear and tear, damage, destruction of parts, or the like have made such property or equipment unfit or unsafe for service.

"Operating supplies" means (1) material which is essential to the operation of any of the industries or services specified above and which is generally carried in a producer's inventory and charged to operating expense accounts, and (2) material for an addition to or an expansion of property or equipment (including a minor extension of lines), provided that such addition or expansion shall not include any work order, job, or project in which the cost of material shall exceed $1,500 in the case of underground construction and $500 in the case of other construction, and provided that no single construction project shall be subdivided into parts in order to come below these limits.

Tariff Barriers in Reverse

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. REED of New York. Mr. Speaker, it was loudly proclaimed by the free-trade officials of the State Department in 1934 urging the adoption of the trade-agreement program that it would, aside from assuring world peace, remove trade barriers and discriminations in the field of international commerce. The program has failed in every one of its objectives to the injury of our country.

The free-trade negotiators have made concessions to 26 nations in tariff rates without a quid pro quo, and in no agreement has there been the elimination of export taxes imposed by those to whom concessions have been made.

Under leave to extend my remarks, I include an article written by an eminent jurist, Michael G. Heintz, Cincinnati, Ohio, in which he points out the extent to which the people of the United States are being flimflammed by the export duties imposed on what we import from foreign countries:

TARIFF BARRIERS IN REVERSE

(By Michael G. Heintz)

The Boston tea party of December 16, 1773, was a livelier affair than the modern cocktail party. It had the charm of a Mardi Gras masquerade. The uninvited guests met at Faneuil Hall, disguised themselves as Indians, boarded a cargo ship in Boston Harbor, and threw overboard a shipload of tea.

The provocation for this act of sabotage was an export tax on tea. King George III and his Ministry, led by Lord North, had previously set up a comprehensive Stamp Act. Hardly anything in writing was legal unless it was writen on stamped paper, furnished by the mother country. The paper work of the colonists was nothing compared to the printing, typing, and manifolding of the present, but it was too much of a tax for the American patriots to stand for. The fiery speeches of John Adams, Patrick Henry, and John Otis alarmed the Ministry and the Stamp Act was repealed.

An export tax on tea was substituted, not with the hope of balancing the British budget, but solely as a face-saving gesture. As a face saver, it was a dismal failure. At Charleston the tea was stored in damp cellars until it spoiled. At New York and Philadelphia, the tea ships were returned to London, while in Boston the tea was dumped into the brine. The good women of Massachusetts sought cheer, but not inebriation, in a sort of moonshine tea made of raspberry leaves. It is said that the Connecticut traders began to adulterate raspberry leaves with weeds, and the Yankees quit drinking tea and took to coffee. All of this resulted from a small export tax on tea.

The United States is the largest consumer of coffee in the world. No coffee is grown in this country. However there is a Kentucky coffee-berry tree, whose fruit was used as a substitute for coffee beans in the days of Daniel Boone.

The largest coffee growing country is Brazil. It raises about 65 percent of the entire world's supply. The United States takes about 60

percent of Brazil's entire crop. Only a small part of the coffee grown in Brazil is consumed in that country. Consequently the growers depend on the export market.

During the past 15 years the production of Brazilian coffee has been entirely out of balance with the export demand. The average yearly production is something over 20,000,000 bags of 132 pounds each, while the export demand is seldom over 15,000,000 bags. This leaves over 5,000,000 bags annually which can not be sold.

To get rid of this coffee, the Government of Brazil buys it up for elimination. Following the example of the Boston Tea Party of 170 years ago, some of the eliminated coffee rests on the bottom of Rio de Janeiro Bay. More of it has been used to pave streets and roads and, of recent date, it has been used in the manufacture of plastics. Thus about one coffee bean in four has been eliminated.

Who pays for this eliminated coffee? The consumer, of course. You would naturally expect the cost of the destroyed coffee to be reflected in some way in the price paid by the coffee drinker. We plowed under every third row of cotton to raise the price of the rest of the crop. We killed pigs to raise the price of surviving swine. But the Brazilian plan is simpler than that. The Brazilian states levy an export tax on the coffee which goes to the world's markets and use the proceeds to pay the growers for the coffee which is destroyed. It is so simple that he who runs may read. Presently the export tax is on an average of slightly more than seven-tenths cent per pound. You pay that tax every time you buy a pound of coffee.

This tax costs the coffee consumers of the United States about $8,000,000 per year for the tax alone. How much it costs for the administration of the tax is not known.

The United States is the only Nation in the world which cannot levy an export tax. Article I, section 9, clause 5 of the Federal Constitution provides: "No tax or duty shall be laid on articles exported from any State." This prohibition against the levying of an export tax was the result of compromise. Without it the Constitution probably could not have been adopted. The wise men who drew the Constitution did not have before them the example of any other nation which had prohibited its government from levying export taxes. Gouverneur Morris stated in the Constitutional Convention that all countries having peculiar articles, taxed the exportation of them, as France her wine and brandies. Indeed, Virginia and some of the other Colonies had been levying export taxes, particularly on tobacco, and had found it a convenient, if not a necessary, method of raising revenue.

This compromise was the handmaiden of the compromise on slavery. Its author was Mr. Charles Pinckney, of South Carolina. It should have gone out of the Constitution at the time slavery made its exit via the thirteenth amendment in 1866. If Thaddeus Stevens had had his way in this matter, as he did in many others, this Nation would now have the power to tax our exports as many other nations do theirs. On December 5, 1865, Mr. Stevens introduced in the House of Representatives a proposal to repeal the provision of the Constitution prohibiting export duties. This proposal was referred to the Committee on the Judiciary and died there. On the next day Mr. John A. Bingham, of Ohio, offered a similar proposal, with the same reference and the same result.

A pamphlet issued by the Department of Commerce in 1927 contains a list of all the articles on which export taxes are levied by foreign governments. It required more than 200 pages to list these articles, together with a few explanatory paragraphs. Almost every known commodity is found in one or more of these lists. There is a monotonous repetition of articles which we do not produce, but which we import in large quantities, as rubber, tin, coffee, sugar, tea, olive oil, almonds, bananas, ivory, tapioca, cocoa, spices, mahogany, diamonds, and a great variety of chemicals. Even now Cuba levies an export tax on sugar. I have been unable to get from the Department of Commerce a list of such taxed exports later than the one issued, called Export Duties of the World. It would seem that a list of these duties brought up to date will be essential for the use of the Commissioners who are to sit at the peace table at the conclusion of the present war.

While we cannot levy export taxes by way of retaliation against those nations which levy taxes on commodities imported by us, the door is now open to reach the same result by negotiation. Congress recently authorized the President to renew the reciprocal trade agreements for a period of 3 years. We have had a trade agreement with Brazil since 1935. It contains no provision with reference to export taxes. Brazil imposed export taxes on coffee, before, as well as after the execution of the trade agreement. The United States made no effort to end the impost by negotiation.

We have trade agreements with 27 nations. In not one of them is there a relinquishment of the power to levy export taxes on articles imported by the United States. With the proposed payments of a subsidy to reduce the cost of coffee has never occurred to the Department of State to negotiate with Brazil to waive the export tax on the coffee exported to her largest customer.

From the correspondence I have had with the Department of State, I am of the opinion that no effort will be made in the renewal of the trade agreements which are now being negotiated, to terminate this tariff in reverse. Scarce as coffee is at our tables, we, the consumers of 60 percent of the coffee of Brazil will continue to pay seven-tenths cent per pound to cover the cost of coffee beans, thrown into the ocean, used to make roads, or turned into plastics, called caffelite.

The present trade agreement with Brazil contains the following clause:

"Similarly, natural or manufactured products exported from the territory of the United States of America or the United States of Brazil and consigned to the territory of the other country shall in no case be subject with respect to exportation and in regard to the above mentioned matters, to any duties, taxes, or charges other or higher, or to any rules or formalities other or more burdensome, than those to which the like products when consigned to the territory of any third country are or may hereafter be subject."

It would be very simple and withal reasonable to insert a clause in the several trade agreements to put an end to this one-sided tax. We are prohibited by our own Constitution from levying such a tax. We should call upon all the other nations to assume a like restriction in the reciprocal trade agreements. That would be real reciprocity. A clause in the agreements like the following would do the work: "No export tax shall be levied on any article listed in the schedules hereto attached."

Since this short cut to remedy an intolerable situation finds no response in the Department of State, I suggest the longer road of going to the Congress and the legislatures with a proposal to amend the Federal Constitution as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following amendment to the Constitution of the United States of America be and hereby is proposed to the States, to become effective when ratified by the legislatures of the several States as provided by article V of the Constitution, to wit: That section 9 of article I of the Constitution be amended by striking out the words 'No tax or duty shall be laid on articles exported from any State.'"

Many of our States now levy sales taxes. It is a convenient method of raising revenue. The Federal Government has not yet resorted to that method of taxation, but it has many advocates. The Supreme Court of the United States has held that a sales tax on articles sold for export, and in fact exported, is an impost or duty on exports and is therefore void. Such was the ruling of the court in the case of *Levick* v. *Pennsylvania* (245 U. S. 292). The State of Pennsylvania had passed an act requiring retail merchants to pay an annual tax of 1 mill on each dollar of the volume of business transacted, and a tax of half that amount on wholesale dealers. The Supreme Court of Pennsylvania had declared the law constitutional, but the Supreme Court of the United States held that the tax was a direct burden on foreign commerce and therefore void.

As a result of the above decision, Congress has enacted appropriate legislation to exempt exported articles from the excise taxes which have been imposed on many commodities and has provided for drawbacks, where the vendor has already paid the excise tax and subsequently the commodity is sold for export and actually exported.

These exise taxes are levied now on a large number of items. Thus an American citizen must pay excise tax on any of these articles which he may purchase, while a Canadian, a Mexican, or a Brazilian may buy a similar article free of the tax.

If one of our fellow citizens, building a house, buys lumber he pays a tax of $3 per 1,000 feet board measure, while the foreigner gets the lumber tax-free. If he buys an automobile for $1,000 he pays $20 excise tax and if the purchaser lives in Ohio, he pays a State sales tax of $30, while the foreigner buys the same make automobile for $50 less. Mr. Citizen pays $3 on a thousand on cigarettes, while the foreign smoker pays nothing.

When the Constitution was adopted in 1787, sales taxes had not come into style. Had the framers of the Constitution known, that in time, a large part of the national revenue would be raised by such taxes, and had they suspected that our highest court would hold that section 9, article I, of the Constitution prohibits the levying of an excise or sales tax on articles exported, they would have realized that this clause discriminates against Americans and in favor of foreigners. The men who wrote this clause into the Constitution were not internationalists. They did not put it there because they wanted to favor Europeans. We should not keep it there to penalize ourselves, and favor foreigners. Whatever was the motive for its inclusion, it was a mistake. That it was a mistake was sensed by Mr. Madison and Mr. Washington, members of the Constitutional Convention. The vote on its adoption was by States. There were seven ayes, to wit, Massachusetts, Connecticut, Maryland, Virginia, North Carolina, South Carolina, and Georgia; four nays, to wit, New Hampshire, New Jersey, Pennsylvania, and Delaware. Neither New York nor Rhode Island voted on the proposal. While Virginia voted in favor, Mr. Madison and Mr. Washington took the pains to record their votes in the negative. It seems clear that their judgment has been vindicated.

Address by Hon. Kenneth McKellar, of Tennessee, at Thomas Jefferson Day Celebration, Knoxville, Tenn.

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1945

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid address delivered by my distinguished colleague the senior Senator from Tennessee [Mr. MCKELLAR] before a large and enthusiastic audience in Knoxville, Tenn., on May 17 last, at a delayed Thomas Jefferson Day celebration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, I am very happy to be in Knoxville on this occasion. Knox County and east Tennessee, though normally Republican, have always been good to me, and my Democratic friends here have stood by me since my first race way back yonder in 1915. I never think of the first reception that I got in east Tennessee that I do not think of the Biblical quotation:

"For I was an hungered, and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and ye took me in."

You and all Tennesseans have been far better to me than I ever deserved, but I appreciate your confidence, your friendship, your support, and I can assure you that the greatest pleasure in life that I have is serving you and the people of Tennessee.

And, confidentially, this is so whatever some outsiders who are temporarily in Tennessee may have to say about it.

God and Tennessee have certainly been good to me. Insofar as I know, the only two personal enemies that I have are not Tennesseans, but are merely two men from other States temporarily sojourning here for whatever personal benefit they can get out of our State. When I see and read of some of their foolish statements I sometimes feel that I ought to be a Christian and pray God to "do good to them that hate you, and pray for them which despitefully use you, and persecute you." At all events, I hope God may forgive them and that they in turn will stop despitefully using me and persecuting me.

They have certainly abused and vilified me for reasons entirely unknown to me ever since they have been in the State. I not only get along fine with all Democrats of Tennessee, but I pride myself sometimes that I get along pretty well with my Republican friends who are Tennesseans also. Insofar as my public duty is concerned, I try to be fair to all, for there are good people in both parties.

Speaking seriously, my friends, we are here tonight to talk about a great American, one of the very greatest Americans. We know Jefferson is great, because he was in a class which included perhaps the greatest, most courageous, most versatile, and most honest of them all, our own Andrew Jackson.

Thomas Jefferson was not a Tennessean, although he has been called one. He was a Virginian. He was born on April 2, 1743, and died July 4, 1826. His father was Peter Jefferson, a Welshman. Thomas Jefferson married Martha Skelton, a widow. She was the daughter of John Sayles, of Williamsburg, a lawyer of large practice who owned a dozen plantations and over 400 slaves. In Jefferson's own writing he said he "loaned Mrs. Skelton 10 shillings 2 days before the ceremony; paid 40 shillings for the marriage license; gave 5 pounds to the Reverend Mr. Cloutts, the minister who married them; and then borrowed 20 shillings from the parson before the close of the day. He gave 10 shillings to the fiddler, and 5 shillings to each of the servants of the household." Times have changed since then. Two days later they took up their abode at Monticello. About a year after his marriage the death of his father-in-law brought him 40,000 acres of land and 135 slaves. The Natural Bridge in Virginia was included in this property. Jefferson inherited 1,900 acres of land from his own father. Thomas Jefferson was born in sight of Monticello. Monticello was the first mansion in that section of the State. It was built on the Doric plan of architecture in 1770 and not finished until 1802 and only cost about $7,200 but money had much more purchasing power in those days than it has now. Mr. Jefferson was President when the house was finished. He was the best educated man in Virginia and probably in the whole United States of his day. He was a great linguist and incidentally he was a great musician. He was a violinist of note. He was a gentleman born and bred and remained so all his life. Although one of the greatest Democrats of his or any other age, all of his views were liberal. He was a revolutionist against the British Government from almost the beginning and as everybody knows he wrote the Declaration of Independence and took the greatest part in establishing the American Government. He was not here, but was a minister to France, at the time the Constitution was written or no doubt he would have had a great part in drafting that great document. Probably he did have quite a part in it indirectly. When John Adams was elected President he was elected Vice President and presided over the Senate for 4 years. Then he was elected President in 1801 and served from March 4, 1801 to 1809. He had a contest with Aaron Burr, of New York, over his first election and it was decided by one vote in the House of Representatives as the Constitution requires.

That was a great day for democratic government in America. Mr. Jefferson was responsible for the treaty with France by which the United States acquired Louisiana, the treaty being known as the "Louisiana Purchase" and it included Louisiana, Arkansas, Missouri, Oklahoma, Kansas, Nebraska, Iowa, North and South Dakota, Minnesota, Wisconsin, Montana and Wyoming. It was one of the outstanding accomplishments of his administration. He made an admirable and splendid President. He taught us what a real democracy or a real republic was.

Mr. Jefferson was a great thinker and a leading philosopher. He was wealthy and did not have to work for a living. He had time to do a great many things and he did a great many things. He was a member of the House of Burgesses in his early life. He was also a member of the Continental Congress and took the lead in its deliberations during the Revolutionary War.

For years he was a minister to France. He became Vice President in 1797, President in 1801, and retired in 1809.

The young Republic of America made great strides during his administration.

He knew Patrick Henry at Williamsburg and afterwards in the House of Burgesses and he was a great admirer of Henry's oratory. Mr. Jefferson himself was never a great speaker though he was a wonderful writer. This inscription written in his own handwriting is on his tomb: "Author of the Declaration of Independence of the Statute of Virginia for religious freedom and father of the University of Virginia."

Jefferson was a graduate of William and Mary College and was one of the most prolific writers of his day. He had an accurate knowledge of all subjects. Politics was just one of them. He excelled in everything. He lived to 83 years old and died on the 4th of July the birth date of the Declaration of Independence which he wrote.

Ladies and gentlemen, there are several other topics beside the splendid life of Mr. Jefferson that I want to talk to you about very briefly tonight.

The first, of course, is the war. Before preparing this speech I looked over the speech that I was to make here on the 13th of April. Many things have happened since I prepared that speech. I did not know, of course, that President Roosevelt was to pass away, nor did I know that Germany would surrender so soon although I predicted in that speech that she would have to give in within 60 days.

America with the help of Russia and with the very much smaller help of Great Britain has won the greatest European war ever fought among men. We did not declare war; war was declared on us both by Germany and Japan. We were not prepared for war when they made war on us. Some preparation had been made, of course, but after war was begun against us we went the limit. We raised the greatest Army in the world—the best, the bravest and most successful Army that ever fought in the world. We built the greatest Navy and greatest Marine Corps. We built the greatest Air Corps. We produced more supplies for this war than all the rest of the nations put together. But for America and American materials the war could not have been won. We have fought it for more than 3 years and the greater half of it has already been won completely. Just as we said would happen when the war began, Germany has had to surrender absolutely and without conditions.

THE JAPANESE WAR

Now as to the Japanese war. If Japan expects to remain as a nation she will have to surrender and surrender soon otherwise she will be annihilated just as Germany has been annihilated. And I think her ruling powers should be tried and put out of the way.

At this point I want to call attention again to the European war. In waging that war our country has not made a single mistake. We have won every feature of this war. We have not lost a battle. We won in Africa, we won in Italy, we won in Corsica, we won in France, we won in Belgium, Holland, Denmark, Norway, and finally in Germany. No general from General Marshall down to the last general has made any serious mistakes. Every soldier has done what he set out to do. Our boys have made the greatest body of soldiers that ever faced an enemy in the world. I made this statement to some gentlemen not long ago and one of them interposed with the question: "What about our set-back at the Belgium Bulge?" I replied that that was a mere incident. It resulted in a great loss of lives to our boys and that was tremendously to be regretted but that set-back caused us to go forward with greater activity, with greater speed, than ever before and it really shortened the German war and instead of being a set-back it was a success as it turned out. Our Army, our Navy, our Marine Corps, and our Air Corps have all done everything that could possibly be expected of them and even more. They have not even faltered.

THE PEOPLE BACK HOME

Nor must we forget the people back home. Our country has furnished the materials, the food, and the clothing to carry on that war. Our manufacturers have done their full part. Labor has done its full part. There have been "Belgium bulges" at times, but they were mere incidents and no country has ever produced like American manufacturers and labor have produced. Even more to be praised is what our farmers have done. They have produced more food, bread,

meat, and every other kind of food, than was ever produced in the history of the world and their efforts have been crowned with the most signal success.

Lend-lease has made good too. As you remember Russia was almost conquered. The Germans had reached Stalingrad but there, through lend-lease, our arms, ammunitions, tanks, guns, and every other kind of material were furnished the Russians and they made probably what was the most remarkable military come-back in all history. They had been defeated time after time. They had been driven across the most important parts of their country, but when they got our ammunitions, materials, and food they turned the Germans back, and Russia, to my mind, has taken second place in this war. I do not like the Russian form of government. With many of her ideals I have no sympathy, but every candid and honest man must admit that Russian conduct in this war has earned for her the respect, esteem, and admiration of the world, and I take off my hat to her. I do not want her peculiar ideas of government implanted in this Nation, but if they suit her that is her matter. We cannot help but admire what she has done.

As to Great Britain, she took an honorable part in the European war. She came very near being conquered by Germany. She would have been conquered by Germany but for America. She suffered greatly, it is true, but in the great fight against Germany she had possibly only 1 army to 15 armies of America and Russia.

Taken as a whole, however, the Allies have won the greatest war in history, and I am proud of all of our Tennessee boys from the highest ranking officer to the last private. They have done their full duty. All honor and all glory to them.

PRESIDENT ROOSEVELT

I cannot go further without expressing my admiration for another great leader in this war.

Not knowing that his life was in danger this is what I intended to say about him in my speech on April 13:

"Some of you, possibly the most of you, like him. Some of you may not; but I am one of his greatest admirers. As a planner, as a diplomat holding all the Allies together, smoothing out the rough places, always in the lead in everything that means the winning of the war, he has the highest place. Of course, I refer to that great man who has been President of the United States longer than any other individual ever was and who has made not only a wonderful success in governing the United States but he has made a wonderful success in winning this war. I refer to Franklin D. Roosevelt, our own President and Commander in Chief."

I reiterate those words now: Mr. Roosevelt was a military leader as well as a civil leader. He had the means of waging war and everyone will admit that he was the great leader of this war. He looked after its every detail. Crippled though he was, he went to all portions of the world in furthering the interests of this war, and my greatest regret is that he did not live to see his final unconditional surrender of Germany and that he will not be here to witness the final and unconditional surrender of Japan, which inevitably must come.
